"Ex-Abbé" Loisy, it seems, must now be said. No Modernist, however confident, can for one moment suppose that the two new bulky volumes—"Les Evangiles synoptiques" and the small book of personal defence, "Simples réflexions," on the Holy Office's decree and the Pope's encyclical letter—announce anything short of exodus from the Church. For more than a year the abbé has not been allowed to say mass or engage in any priestly function. In these volumes there is even an apparent disavowal of all revealed religion, so far as Christians have hitherto understood the word Revelation. That this is the author's real mind, under much learning unrelieved by lucidity of either style or method, seems evident from his peremptory sayings under stress of controversy and in self-defence against accusation. The main personal argument brings us back curiously to the days of Port Royal, where the five propositions condemned by the Pope as Jansenist obstinately refused to be found in the works of Jansenius. M. Loisy proves in detail to the Pope's counsellors that they apply no scientific higher criticism to his writings, "which have furnished the greater number of the propositions censured by the Holy Office." After the present publications, however, there can be no doubt that his propositions, even as rectified by himself, will meet with as little favor as ever, not only among Papists, but even with Presbyterians or the immediate disciples of Channing. Only Theodore Parker could admit them to Christian communion.

A Judean crisis, according to M. Loisy, called for a prophet; John the Baptist awakened Jesus to the vocation. Jesus began preaching the coming of the kingdom of heaven after his mother Mary was a widow with four other sons and two daughters. "No member of this family seems to have accepted the Gospel until after the death of Jesus." The preaching of Jesus lasted at most a year, perhaps only a season. The author continues:

> The priests and doctors of Jerusalem reckoned only the inconveniences which such an agitation would have, from the side of Roman authority, the Messianic color of the movement and the popular emotion being likely to disquiet the governing authorities. They arrested the agitator and had him condemned by the procurator, Pontius Pilate. . . . We may suppose that the soldiers took down the body from the cross before evening and put it in some common pit, into which they threw pell-mell the remains of all who were executed. . . . None of the disciples was present at the death of Jesus; none saw his body dragged to the charnel. . . . We ought not to forget that the Apostles had the same mentality as their fellow-citizens of Capernaum or Bethsaida, who asked whether Jesus might not be Elias or some prophet risen from the dead. . . . The inner working of their enthusiastic souls was sufficient to suggest to them the vision of what they wished. . . . Peter first acquired the conviction that his Master was living. He had seen him one day at daydawn as he was fishing by the Lake of Tiberias. Doubtless, he assembled the eleven, and, with his own ardor, reanimated their wavering faith. Once the impulse had been given, the faith grew by the very need which it had to be strengthened.

In an interview, M. Loisy has reduced all this to a few words: "History shows Jesus only as a man, without consciousness of divinity."

An outsider cannot help wondering at the effort so long made to teach such doctrine under cover of the Church whose faith is built on the resurrection of the dead. Spinoza would have appreciated the conclusions of the book on the Gospels. Renan wrote such pages—after he had left the Church for ever. In logic, the Pope can scarcely be blamed for his inability to distinguish their new "immanentism" from the old Pantheism, as M. Loisy bitterly reproaches him:

> The dream of Jesus was as frail and narrow as is our own science. It seems absurd to us, just as our dearest ideas will seem to our grand-nephews. But it also contained the most precious germs of human truth, the most fruitful principles of human progress: namely, that the golden age of humanity is not in its past, but in its future; that the worth of man is in the sentiment animating his conduct; that true religion is that of the heart; that such religion consists essentially in love, the love of one's neighbor in God or of God in one's neighbor; that God—that is to say, the living law of the universe—is goodness; that the abnegation of each is necessary to the good of all; that, in case of need, we must be ready to risk all in the order of material goods and temporal life to gain all in the order of spiritual goods and spiritual life; that sacrifice is the root of all happiness; finally, that our ephemeral existence floats on an ocean of life wherein it plunges to endure for ever, from the instant it seems to cease to be. If the last word of all things be not nothingness—and it cannot be nothingness—then the Gospel has the appearance only of a chimera and Jesus did incarnate in man the wisdom of God and his death could only be a passing into immortality.

S. D.

NEWS FOR BIBLIOPHILES.

The discovery of a work in Martin Luther's autograph, in the library of the Russian Prince Lwoff, recently deceased, has excited considerable interest among European palæographers. Prince Lwoff was a man of scholarly tastes, well known as a bibliographer and discriminating collector of rare books. The manuscript in question is a volume of 552 pages of heavy paper bound in vellum, and its contents consist of miscellaneous theological treatises chiefly exegetical, written in Latin, although a few annotations on the last pages are in German. They have never been printed, at least they are not found in any edition of Luther's works. On the fly-leaf are the words:

> Manuscripta Theologia Miscellanea Wolfgangus Musculus dono dedit Johannj Parsimonio tandè Abbat. Hirsaug 2 Augusti Año 1547.

Under this inscription is the seal of Wilhelm Gmelin. The suggestion that this manuscript became the property of Prince Wolfgang of Anhalt after Luther's death on February 18, 1546 is at first sight quite plausible, since the Prince was an ardent promoter of the Reformation and a personal friend of the Reformer. A little closer observation would have shown him that it belonged unquestionably to Wolfgang Musculus (Meusslin), who was born in Lorraine, 1497. His father was a cooper, but the boy, having a passion for learning, led the life of a vagrant student. When only fifteen years of age he visited his aunt in Lixheim, went with her to vespers in the Benedictine cloister and joining in the singing attracted the attention of the prior, who induced him to enter the cloister. It is well known that after Luther had nailed his ninety-five theses against the sale of indulgences to the door of the Schlosskirche in Wittenberg, October 31, 1517, his writings began to be widely diffused. Wolfgang Musculus, then about thirty years of age, received from a friend, whose name is not given, a package of Luther's writings, which he read with eagerness and final conviction, and in 1527 left the cloister to join the Reformatory movement. It is possible that the manuscript, recently come to light, may have been in this package, and this supposition is rendered all the more probable because it evidently contains some of Luther's earlier Biblical studies. After a varied career as preacher in Augsburg, Zurich, Constance, and Basle, Musculus was appointed professor of biblical exegesis in the University of Berne, where he died August 30, 1563. Before leaving Augsburg, he gave the Luther manuscript, as recorded on the fly-leaf, August 2, 1547, to Johannes Parsimonius (Johann Karg) afterwards Abbé of Hirsau in Würtemberg. The words "tandè [tandem] Abbat. Hirsaug" in the inscription were not written when the gift was made, but were added by another person at a later period as is evident from the character of the script and the manner of their insertion. We may add that the title of abbé does not imply that Parsimonius was either a Catholic or a celibate; on the contrary, he had become a Protestant and was the father of a family. His daughter Judith Karg was married January 9, 1600, to Wilhelm Gmelin, who inherited the manuscript and stamped it with his seal, as already stated. Nothing more is known of the history of this manuscript, nor is it possible to ascertain when or where or how it came into the possession of Prince Lwoff. Of its genuineness there can be little doubt. It can be clearly traced for a century and a half after Luther's death as we have already shown by brief notes on Musculus, Parsimonius, and Gmelin, through whose hands it passed successively and by whom, as ardent adherents of the Reformation, it would be highly prized. The fact that a prominent German dealer in antiquities and especially in palæographs has offered 10,000 marks ($2,500) for it proves that he does not regard it as spurious.

It might have been supposed that the bibliography of Longfellow had by this time been pretty thoroughly worked out, and that collectors were well-informed about his first editions. Several important, privately printed first editions are, however, practically unknown. Among the extracts from Longfellow's diary, printed in the "Life," by his brother, is this, under date of December 2, 1852:

> It seems to me that I shall never write anything more. I am therefore thinking about a volume of old matters collected from corners of reviews and magazines, to be called Driftwood. Write a short preface for the same.

To this entry Samuel Longfellow adds a note: "This was partially printed but never published. Some parts of it, under the same title, are printed in the Complete Works." No copy, however, seems now to be known and perhaps no portion was actually printed.

In 1856 Longfellow's friend, Scherb, suggested the writing of "a poem on the Puritans and the Quakers," and Longfellow noted that it was "a good subject for a tragedy." Within the next few days he read up Besse's "Sufferings of the Quakers" and other books on the topic. On August 27, 1857, he had "finished the first rough draft." His thoughts then turned to "Miles Standish" and not until after that was published did he come back to his "New England Tragedy." Originally written in prose, it was put into type in that form in 1860, and a few copies were run off on small sheets on a hand press. One of two known copies was acquired by the late J. C. Chamberlain, and it is among the gems of his collection. It consists of a title-page, "The | New England Tragedy. | Boston: | Ticknor and Fields. | MDCCCLX." One leaf for the "Dramatis Personæ" and pages 1-130 of text. Apparently nothing was done with this book for almost eight years. In January and February, 1868, the first tragedy was rewritten in verse and given the title "Wenlock Christison;" and a second tragedy, of witchcraft, "Giles Corey of the Salem Farms," was written. These were put into type, and, before Longfellow's departure for Europe (in May), ten copies were printed. Two copies he apparently took abroad, one for Routledge's use in bringing out an English edition and the other for Tauchnitz's Continental edition. It was arranged that Ticknor in Boston and Routledge in London should publish simultaneously on October 10. In the Boston edition (with which collectors generally must be satisfied), the title of the first of the tragedies is "John Endicott." In the London and Leipzig editions it is simply "Endicott"; and there are other differences. No one of these special ten copies has ever come upon the auction market. The copy given by Longfellow to his friend George W. Greene, with inscription dated May 6, 1868, was acquired by Mr. Chamberlain; and the copy given to a Quebec admirer, George Stewart, with inscription dated February 20, 1878, was acquired a few years ago by Mr. Spoor of Chicago. Thomas Wentworth Higginson, in his Life of Longfellow in the American Men of Letters Series, evidently got the two private issues mixed. After saying that "Wenlock Christison was finished on August 27, 1857," he adds:

> It was more than ten years (October 10, 1868) before it was published, having first been written in prose, and only ten copies printed and afterwards rewritten in verse.

The Jahrbuch der deutschen Bibliotheken, which has just made its appearance for 1908, contains information about the work undertaken by a committee of the Berlin Royal Library, which is to furnish a "Gesammtkatalog der Wiegendrucke," containing the full bibliography of all the products of the printing press during the fifteenth century. A beginning has been made by collecting all the data available from the public and private libraries of Germany. The work is under the direction of the Oberbibliothekar of the royal library in Berlin, Prof. Konrad Häbler, assisted by four librarians in Leipzig, Munich, and Berlin, and by Isak Collijn of the University library in Upsala.

On March 6 the Anderson Auction Co. of this city offers an important collection of first editions of American authors. Bryant's "Poems," 1821, is in flexible paper covers (it more often occurs in stiff boards); "The White-Footed Deer" is the copy which brought $220 in the Alfred B. Street sale; the "Hymns" is the earliest issue, 1864, and is a presentation copy. Kendall's "Sermon at the Ordination of H. G. Goodwin," 1830, containing "The Right Hand of Fellowship" by Emerson, his second writing to appear in a book, is in original paper covers, uncut. It seems to be the copy which brought $100 at Peyser's sale, 1906. The Hawthorne books, include "The Sister Years," 1838, (the rare "Carrier's Address to the Patrons of the Salem Gazette"), the first copy offered at public sale in New York; "The Gentle Boy," 1839; and "Mosses from an Old Manse," in the two parts, with paper covers. Among the Holmes books are "The Harbinger," 1833; "Poems," 1836; and the rare large type "Oration before the City Authorities of Boston," 1863. Among the Longfellow items are presentation copies of "The Belfry of Bruges," 1846; "The Golden Legend," London, 1854; "Tales of a Wayside Inn," 1863; and "Divine Comedy" 1867. The "Ballads" of 1842 is in the original boards, with label, rare in this condition. The "Poems of Maria Lowell," 1855, and Lowell's first book "A Year's Life," are among the rarer Lowell items. There are two copies of Thoreau's first book "A Week on the Concord and Merrimack Rivers," 1849, one a presentation copy having a pencil correction on p. 396. In making up into pages three lines were omitted at the bottom of p. 396, and these three lines were sometimes written in by Thoreau. Whittier's "Legends of New England," 1831, is a desirable copy in the original boards uncut: and "Moll Pitcher and the Minstrel Girl," 1840, is in its original printed cover.

Sotheby, Wilkinson & Hodge, London, sell on March 10 and 11, a collection of autograph letters. Included are a series of letters of the Earl of Beasonsfield, addressed to his father and his sister; an A. L. S. of Charles I. and one of Charles II.; signatures of Queen Elizabeth, James I., Cromwell, and Queen Anne; and nine letters of Thackeray.

Correspondence.

NUMBERS AS AN EDUCATIONAL IDEAL.

To the Editor of The Nation:

Sir: President Woodrow Wilson's severe arraignment of our educational policy, in a recent public address, seems to have struck many as a bit of extreme and intemperate criticism. It does, however, voice a widespread, if not general, feeling of disenchantment with the present system or lack of system, among those who, from the inside, contemplate the results of our so-called higher education. We have been gradually forced to the conviction, though we are not often frank enough to say so, that our colleges and universities do not succeed in giving to the majority of their foster children either intellectual power or moral earnestness. They fail to train them properly either for the work or leisure of life.

The reason is not far to seek. We started out with certain ideals, borrowed partly from England and partly from Germany. We lived up to them as best we could. The results, if not entirely satisfactory, were certainly better than they are now. But the cry of "monastic exclusiveness" was raised against us; we were not in touch with the nation's practical needs; we were out of joint with democracy. Since then, we have grown more "democratic"; "we have passed through a period of dissolution of the standards of education." One by one our ideals have been thrown to the winds and we have given ourselves over to reckless experiment, drifting aimlessly on the tide of what we conceived to be popular demand, until now we are very much at sea. Lacking convictions of our own or unwilling to take responsibility on ourselves, we have substituted for the old standards what our critics choose to call the democratic ideal of "doing as one likes." We are still old-fashioned enough to require that the student pass in a stipulated total of hours before we give him his degree; but we soften our tyranny by spreading before him a most tempting bill of fare, with variety enough to please the most fastidious palate —solid and substantial food, but with it dainties, tid-bits, garnishings a-plenty. But alas for the choice! "Natural selection" for the majority of young people means indolent selection; and we are dismayed to find that the democratic doctrine of free election in education, as in theology, means in practice that the student is urged to take what he likes and is damned if he does.

And yet it is not entirely for lack of conviction that we are where we are. It is, let us be honest, for lack of courage. We are at least agreed that the present system, the present practice, is absurd, and if we continue our policy of *laissez-faire* it is only because we are afraid to run counter to the popular worship of *numbers*. Unfortunately, bigness is the one proof of excellence which impresses the public, and numbers is the one effective plea which wins substantial support from wealthy philanthropists and indifferent legislatures, sources upon which many of our colleges and universities still depend for their very existence. Public opinion is, therefore, the great sophist which has sophisticated us all. We have abandoned our "aristocratic aloofness" with a vengeance. We open our doors to the fit and the unfit, and we make it easy for them to remain when they come; we advertise our indiscriminate hospitality by all manner of methods, dignified and undignified; nay, we go out into the highways and byways seeking whom we may persuade.

And we succeed—too well. We have more guests than we can serve. Most of our institutions are crowded beyond their capacity to do effective work. The growth of the teaching force lags far behind the growth of the student body. A hundred freshmen and more are crowded into a single class, making direct supervision, effective teaching, and systematic training impossible. Immature students are left largely to their own devices, and if in the end some of them come out well educated it is owing, as Plato would say, not to their environment but to the grace of God.

The result of all this is a pleasant, easy-going atmosphere of "college life," where the man who takes his work seriously is held up to student scorn. Better the "flunk" than the "grind." The student's interests are not in his books, his lectures, which he regards as a conspiracy against his happiness and peace of mind, but in things of his own devising to which his energies are given. Hence, those "evils" of college life against which our academic authorities legislate with such amusing diffidence. Such problems as those presented by excessive interest in athletics, social distractions and dissipations, could hardly become serious in an institution of high standards where systematic work was made an imperative requirement and idleness a disgrace.

The present conditions we know are a perversion of all good sense. The evils exist, we admit, nor are we blind to their cause. They are, however, winked at as incident to a necessary, though temporary, stage of growth. We must have institutions of learning, and we must get support for them. When we reach a certain size, when we are established firmly and independently, then, and not till then, we can build "according to the heart's desire." But in the meantime, the poison works; the habit grows strong upon us, and we cannot throw it off when we would. We move in a vicious circle; we get more students to get more money to get more students to get more money, and so without end. Our worship of numbers has become an established faith.

But is it not possible—welcome the thought—that on this subject, to use Emerson's phrase, "life is ahead of theology and the people know more than the preachers teach"? A recent writer on "Externalism in American Universities" laments the lack of a prophet to cry aloud to us: "Woe unto that which is big!" Such a prophet, it is feared, would meet the usual fate in his own country. But would he? Are we not waiting for him? If one or more of our higher institutions of learning should have the courage to sacrifice numbers to standards and assume amid the shifting ideals of American democracy a position of wise, conservative leadership, "proving all things and holding fast that which is good," would there not probably arise such a chorus of popular commendation as would prove that what we take to be the voice of the people is but the buzzing in our ears of an *idée fixe* by which we are obsessed, *tintinnant aures sonitu suopte?*

GEORGE NORLIN.

University of Colorado, Boulder, February 15.

PROTECTION THE MOTHER OF SOCIALISM.

TO THE EDITOR OF THE NATION:

SIR: The Republican party seems determined to cleave to Protection as the old Democratic party in the South clung to slavery, in spite of all warnings. Such obstinacy is the sign of an institution far gone in decay. Protection—we have it on the best authority—is the Mother of Trusts. That it is also the Mother of Socialism was foreseen two generations ago. Since that time Socialism has made immense strides, until to-day there is no sober-minded man who does not perceive that it may soon become the foremost issue in our national life. It is interesting, therefore, to quote the following paragraph from a famous speech made by Count Cavour in the Piedmontese Chamber of Deputies on April 15, 1851. Cavour, recently come into office as Minister of Agriculture, was carrying through a series of commercial treaties with England, France, and other countries, on the basis of a free exchange. After contrasting the method of freedom with the method of restriction, or governmental interference miscalled Protection, he says:

> Gentlemen, I affirm that the most powerful ally of the Socialist school—I refer, of course, to the intellectual order—is the Protectionist doctrines. They start absolutely from the same principle: reduced to their lowest terms, they assert that it is the right, and consequently the duty, of the government to interfere in the distribution and employment of capital, that the government has the mission, the power, of substituting its will, which it deems more enlightened, for the free will of individuals. Were this accepted as an unshaken truth, I know not what we should reply to the laboring classes and to their champions, when, appearing before the government, they put forward the following argument: "You believe it your right and duty to interfere in the distribution of capital, in the regulation of capital; but why do you not interfere to regulate the other element of production—wages? Why do you not organize labor?" And in truth I think that, if we admit the Protectionist system, there follows logically the necessity of admitting if not all, at least many, of the Socialist doctrines. "Discorsi," Vol. III., pp. 381-2.

If Cavour had had before him as examples the most recent American phenomena, he could not have spoken more pertinently. It is as illogical to beat the Trusts with one hand and to pour out wealth to the privileged protected interests with the other, as it is to destroy private initiative by substituting governmental control and yet to deny the claims of the Socialists.

WILLIAM ROSCOE THAYER.

Cambridge, Mass., February 23.

A NEW METHOD OF PHOTOGRAPHING MANUSCRIPTS.

TO THE EDITOR OF THE NATION:

SIR: Among recent improvements in photography, none is of such value for the scholar and librarian as the *méthode Graffin*, which permits, at a nominal price, the reproduction of manuscripts and rare books. This invention is a god-send to higher instruction in history, philology, and literature, especially in America. It will give added importance to palæography. Since American universities can now obtain for a small sum, ranging from five dollars or less up to twenty, photographs of almost any manuscript, the young men who present themselves for advanced work in our universities will be increasingly supposed to know something of palæography, just as they are expected to be able to read several foreign languages.

The new process, sometimes called *procédé blanc et noir*, is due to the inventive genius of Mgr. Graffin, professor of Syriac in the Institut Catholique of Paris. He has given his improvement gratis to the world, and his only reward has been a medal from the French government. It has been suggested by the Abbé Rousselot that his name ought to be preserved in a verb, *graffiner*, a proposition to which many will subscribe. The apparatus for the *méthode Graffin* consists essentially of a prism, or mirror, inclined at an angle of 45 degrees, in front of the object glass of the camera, in order to reverse the image before its passage into the object glass, in such a way that, twice reversed, it is reproduced as a positive on the sensitive paper. The proof will be negative; the black letters of the manuscript or book copied will appear in white against a black or dark background. The order of the letters and their position will be normal, by reason of the double reversal. The plate-holder contains sheets of bromide paper, preferably rapid. One great advantage of the method is that the manuscript or book to be photographed may be placed horizontally on the table or chair, or on the floor. The work is done with rapidity, almost as fast as one can turn the pages. Only one copy can be made by this process, which cannot therefore serve for the production of a large number of copies.

The following photographers at Paris are skilled in the new method: Berthaud Frères, 31, rue Bellefond; M. Mayer, 67, rue des Batignolles; P. Sauvanaud, 45, rue Jacob. The prices, which depend somewhat on the size of the page, have been augmented recently by a decision of the government requiring two copies of all photographs of manuscripts taken to be deposited for distribution among French libraries. Including this additional cost, the prices range from 1 franc to 1.50 franc per single page, for an entire manuscript or book of fifty pages or more. Of course, only a few sheets cost proportionately more. For copying at the British Museum, a letter addressed to J. A. Herbert, manuscript room, would be given to one of the photographers who are allowed to work at the Museum.

Copies of manuscripts taken by the *méthode Graffin* have been utilized for several years in the Universities of Wisconsin and Missouri. The University of Wisconsin is said to have recognized the new reproductions as coming legitimately under the head of library equipment for graduate study. I am told that the method is described in a book by Krumbacher, published in Germany, but I have not seen the volume.

RAYMOND WEEKS.

University of Missouri, Columbia, Feb. 20.

"NEVER PUT OFF TILL TO-MORROW."

TO THE EDITOR OF THE NATION:

SIR: Who deserves the credit for originating the famous maxim, "Never put off till to-morrow what you can do to-day"? Hoyt and Ward's "Cyclopedia of Practical Quotations" and Bartlett's "Familiar Quotations" (ninth edition) give the credit to "Poor Richard's Almanack" (1732-57). Dalbiac ("Dictionary of Quotations," 1899), however, assigns its origin more particularly to Chesterfield, who uses it in the letter to his son dated February 5, 1750. I have not been able to consult any more recent dictionaries of quotations than those just mentioned; but in the absence of any other information, I beg to submit the following discoveries made by me in this connection. In the first place, Henry Fielding comes in for some consideration. In his *Champion* article for January 12, 1740, we read: "Put not off until to-morrow, what you can do to-day." But in all likelihood Fielding derived his use of the maxim from Addison, for in his *Spectator* No. 469 (dated August 28, 1712), this sentence occurs:

> The maxim which several have laid down for a man's conduct in ordinary life should be inviolable with a man in office, never to think of doing that to-morrow which may be done to-day.

Incidentally, the varying forms in which this maxim appears yield an added interest to this subject, in the light of your recent article on misquotations.

LOUIS N. FEIPEL.

Annapolis, Md., February 25.

Notes.

April 2 is the day set in London, and presumably in New York, for the publication of Swinburne's poem "The Duke of Gandia." It will be brought out in the same form as the complete works issued by Harper & Bros.

There is to be another volume of FitzGerald letters. The new book will be called "Edward FitzGerald and 'Posh,' Herring Merchants," and will tell the story of the friendship between the poet and his favorite boatman.

Next month Houghton, Mifflin & Co. will bring out a volume of studies in Italian life and letters by W. M. Thayer, to be called "Italica." It contains an essay on Fogazzaro's masterpiece, "The Saint." A companion volume will be Nathan Haskell Dole's "A Teacher of Dante and Other Studies in Italian Literature," to be published by Moffat, Yard & Co.

On tthe twelfth of this month Harpers will publish two novels of importance, Mr. Howells's "Fennel and Rue," and May Sinclair's "The Judgment of Eve."

Forbes & Co. of Chicago are about to publish two books on the Indians. One, "What the White Race May Learn from the Indian," is by George Wharton James, who is an adopted member of the Havasupai tribe. The other is Frederick Starr's "In Indian Mexico," and is said to describe a region hitherto untouched by travel authors.

Thomas Whittaker, Inc., is publishing a book for the special use of those who keep the Lenten season. It is a series of readings for each day, prepared by the Rev. A. W. Snyder, and called "Through the Forty Days."

J. Lowes Dickinson, than whom to-day no one is writing better and more thoughtful English, has a new book with the McClure Company, which will be issued this spring, probably under the title of "Justice and Liberty." Mr. Dickinson has been appointed to deliver the Ingersoll lecture at Harvard in the spring of 1909.

"Coleridge's Literary Criticism" will soon be added to the Oxford library of Prose and Poetry. The Introduction, furnished by Professor Mackail, ought to make the edition a notable one.

A life of the late ex-Gov. Daniel H. Chamberlain of South Carolina being in preparation, his son will be indebted to any persons possessing letters of interest from him if they will kindly send them to Paul C. Chamberlain, No. 10 Torrington Square, London, W. C., England. The utmost discretion will be exercised in their use, and care in returning them as soon as copies can be made.

The Early English Text Society has sent out two volumes in its Extra Series of re-editions, viz.: the "Romance of Emare," edited by Edith Rickert, and the Middle-English "Harrowing of Hell" and "Gospel of Nicodemus," edited by Prof. W. H. Hulme. Besides these the "Magnificence" of Skelton, with Dr. R. L. Ramsay's Introduction, is printed, and Dr. R. Dyboski's edition of the carols and songs of Richard Hill's MS. at Balliol is in type.

William Stanley Braithwaite's "Book of Elizabethan Verse," reviewed in the *Nation* of January 17, 1907, has been enlarged and thoroughly revised, so that in its present form, as issued by Small, Maynard & Co., it is practically a new work.

Charles Scribner's Sons have issued Vols. III.-VI. in the New York Edition of Henry James's "Novels and Tales"—"The Portrait of a Lady" and "Princess Casamassima," in two volumes each. The prefaces, in spite of the exasperating style, continue as interesting as in the first volumes of the set. Mr. James tells us that the "single small corner-stone" for the "large building of 'The Portrait of a Lady'" was his "conception of a certain young woman affronting her destiny." He elaborates at some length his theory that the story must grow out of the characters: "I might envy, though I couldn't emulate, the imaginative writer so constituted as to see his fable first and to make out its agents afterwards." In the course of his argument Mr. James gives us a significant reminiscence:

> I have always fondly remembered a remark that I heard fall years ago from the lips of Ivan Turgenieff in regard to his own experience of the usual origin of the fictive picture. It began for him almost always with the vision of some person or persons, who hovered before him, soliciting him, as the active or passive figure, interesting him and appealing to him just as they were and by what they were. He saw them, in that fashion, as *disponibles*, saw them subject to the chances, the complications of existence, and saw them vividly, but then had to find for them the right relations, those that would most bring them out; to imagine, to invent, and select and piece together the situations most useful and favorable to the sense of the creatures themselves, the complications they would be most likely to produce and feel.

Thus Mr. James's story has grown up about Isabel Archer:

> I seem to myself to have waked up one morning in possession of them—of Ralph Touchett and his parents, of Madame Merle, of Gilbert Osmund and his daughter and his sister, of Lord Warburton, Caspar Goodwood and Miss Stackpole, the definite array of contributions to Isabel Archer's history.

In considering the result, Mr. James decides that this novel is the "most proportioned of his productions after 'The Ambassadors.'" In like manner "The Princess Casamassima" grew up about Hyacinth Robinson, who should watch the show of public life in London, but, "so far as all the swarming facts should speak of freedom and ease, knowledge and power, money, opportunity and satiety, he should be able to revolve round them, but at the most respectful of distances and with every door of approach shut in his face." Mr. James's explanation of the return to life of the Princess Casamassima is a striking passage:

> Certain of a novelist's characters, more or less honorably buried, revive for him by a force or whim of their own and "walk" round his house of art like haunting ghosts, feeling for the old doors they knew, fumbling at stiff latches and pressing their pale faces, in the outer dark, to lighted windows. I mistrust them, I confess, in general; my sense of a really expressed character is that it shall have originally so tasted of the ordeal of service as to feel no disposition to yield again to the strain. Why should the Princess of the climax of "Roderick Hudson" still have made her desire felt, unless, in fact, to testify that she had not been—for what she was—completely recorded?

The question of Mr. James's alterations and additions in these reprints we reserve for future discussion.

The trend of literature from one year to another is indicated by such publications as the "Annual List" of new and important books added to the Boston Public Library. The one just published is larger by thirty-five pages than the previous issue, the increase being mainly in works on fine arts, languages, science, religion, medicine, and rare old books and incunabula. There are fewer additions of books on political and social science, philosophy and education, while fiction remains about the same. The biographical index and that of authors, editors, and subjects add much to the value and usefulness of this publication as a book of reference.

"Selected Readings in Economics," by

Prof. Charles J. Bullock (Ginn & Co.), sustains the high character of the series to which it belongs, Selections and Documents in Economics. The choice here offered evinces catholic taste and good judgment. Just enough economic history is included to illuminate the industrial morphology of the present time. The remainder of the material bears either on the essentials of economic theory or on the more important problems of to-day. So vast is the literature of the subject that any compilation of this character must omit some of the cardinal classics. It may be suggested that an excerpt from Hamilton's Report on Manufactures might properly be included in a future edition. Questionable also would appear the excerpt from Mill on the accumulation of capital, though the needful corrective is given in Hobson's adverse criticism of Mill's doctrine. The most serious omission appears to be the virtual neglect of the more recent developments in economic theory commonly associated with the Austrian school. Jevons, it is true, is cited by sample, but the excerpt is isolated; the more recent intensive criticism of the older notions of capital is slighted; and the prominent rôle assigned to the time-element in abstract economic theory is not emphasized. These, however, are minor defects. It is doubtful whether any other equal group of selected readings would prove more generally acceptable or serviceable.

"Internal Taxation in the Philippines," by John S. Hord (Baltimore: Johns Hopkins University Studies in Historical and Political Science, Series XXV., No. 1), is rather an explanation of the new internal revenue system adopted in 1904 as a basis of argument for opening the markets of the United States to Philippine products than it is a carefully prepared monograph on the subject its title covers. We are told how the 1904 law, designed chiefly by Mr. Hord, who is Philippine internal revenue collector, was meant to meet lower customs receipts following free trade with the United States, and how such free trade would be of benefit in the Philippines as in Porto Rico. The pamphlet sets forth very well the content of the new Philippine internal revenue law and its administration, but gives it slight consideration from the point of view of the student of taxation theories and practice. The summary of internal taxation under Spanish rule in the Philippines is incomplete and faulty.

In a slender little book Clarence A. Palmer gives "A Compendium of Parliamentary Rules," with special adaptation to the needs of business meetings. In general the laws of procedure accord with "Robert's Rules of Order." Perhaps the most useful part of the book is that which shows how the chairman can expedite business and avoid friction. (St. Paul: The Minnesota Typographic Co.)

The noble series of "Early Western Travels," edited by Reuben Gold Thwaites and published by the Arthur H. Clark Co., is brought to a conclusion by a full "Analytical Index" in two volumes (XXXI. and XXXII.). In the preparation of this invaluable appendix Dr. Thwaites has had the active coöperation of Annie Amelia Nunns, Louise Phelps Kellogg, and Lillian Jane Beecroft. The Preface explains the system used in indexing.

In a single compact volume Harper & Bros. have a new edition, revised and enlarged, of Justin McCarthy's "Short History of Our Own Times." The period embraced is from the accession of Queen Victoria to that of King Edward VII. It is late in the day to say how entertainingly this history is written; it is never too late to protest against the printing of such a volume without maps or chronological tables.

The Rev. Dr. M. H. Harris has added a "History of the Mediæval Jews" to his lengthening series of school histories in the same field (New York: Published by the author). Within the compass of about 300 pages he has given a fairly readable and trustworthy summary, whose interest for the average young person is probably not increased by a slightly homiletic flavor. It is none the less a marked improvement on the few existing text-books on the subject, and is equipped with useful maps, tables, and references for further reading.

Israel Abrahams's "A Short History of Jewish Literature" (Charles Scribner's Sons) is an improvement on his "Chapters on Jewish Literature," 1899. He gives a clear and succinct outline of Jewish literature from the final fall of the Temple to the era of emancipation (1786). The difficulty in such a work is less to steer between the academic and the popular than to condense without disproportion. Mr. Abrahams has succeeded in presenting his subject in sufficient detail and with sober discrimination. Perhaps in a new work, under preparation, he may devote more attention to the points of contact between Jewish thinkers and their contemporaries in the outer world, and the profound influences exerted on Jewish thought by external forces. There is, however, ample material in the present volume to surprise the general reader who has no idea of the Jew's intellectual development in early and later eras, and his fertility and versatility in lines other than purely theological. He had his classic epoch in Spain, in poetry, philosophy, science, centuries before the dawn of the English epic.

Everyman's Library (E. P. Dutton & Co.) has recently been increased by four volumes devoted to "Ancient Hebrew Literature, being the Old Testament and Apocrypha," arranged by the Rev. R. Bruce Taylor. The topical order has been followed so far as the books are concerned, and the apocryphal books are mingled with the canonical writings, Daniel being dislodged from its customary place and included in apocalyptic literature. Such disarrangement seems rather arbitrary. The text is practically that of the King James Version; the customary divisions into chapters and verses have been dropped, and there are other changes, all probably to emphasize the literary rather than doctrinal character of the work.

"Little Bits of Judaism," by "Amiel" (Baltimore: Fleet-McGinley Co.), is a series of short essays, in general superior to articles of their class. They touch on themes like prayer, patriotism, intermarriage, spirituality, and the need of leadership.

Toward the end of his "Apologia Diffidentis" (John Lane Co.), W. Compton Leith writes:

> Turning back over these pages, I am conscious that I have failed to give real experiences their proper life. Describing solitude I have been dull; I have fixed the rushing flames of emotion in poor flamboyant traceries.

In these last words the author has laid his finger upon the defect of the book. The style is so carefully elaborated, at times so precious, that it suggests insincerity. Mr. Leith is a man of education and wide reading. He has apparently studied the manner of De Quincey, Ruskin, Stevenson, and especially Pater. He has an ample vocabulary, and he has uncommon skill as a maker of phrases. He says what he has to say so well that it is a pity his message is so insubstantial. The book runs on, without chapter divisions, for over two hundred pages. The career of the diffident man as a youth in England, and as a young man in India is presented with much detail of pictorial description. The writer is evidently aware that his descriptions are uncommonly vivid. Then comes an explanation of the causes and consequences of diffidence, followed by an exposition of the resources of the diffident man—the study of nature and of books, the consolations of stoic philosophy, and so on rambling to the end. The first fifty pages, fluent and sometimes almost brilliant, give the impression of a book of genuine distinction in style and of subject matter above the mediocre. But the additional hundred and fifty pages of much the same thing, still fatally fluent, grow rather monotonous and trite. The pose of graceful melancholy, of almost morbid introspection, and of gentle self-pity yielding to stoicism ceases to charm. Perhaps the book, if taken in small doses, would seem a thing of firmer texture.

From Armand Colin of Paris comes a well-informed and thoroughly sympathetic study of "Sully Prudhomme," by Ernest Zyromski. Of the philosophy of the book we cannot speak so favorably. M. Zyromski begins with a fair analysis of romanticism, and shows in what way it springs from a delirium of sensibility. The office of Prudhomme was to heal this disease of the ego and to set forth in his verse the reconciliation of man with nature. So far, good. But it is not always clear that M. Zyromski quite understands this malady of the soul out of which Prudhomme worked his way into the healthy region of natural law. It is disquieting to read the names of Plato and Lucretius and Alfred de Musset thrown together as if their theories of love in any way coincided. And he does not seem to have considered that this escape of the poet from himself into nature may be only the passage from one cell to another of the same prison. However, these are matters too large for discussion in a note. M. Zyromski has written a book which can be read with profit by any one interested in the higher currents of thought of the nineteenth century.

The avowed object of the two French journalists, Raymond Gros and François Bournand, in "L'Oncle Sam chez lui: mœurs américaines" (New York: Imported by Lemcke & Buechner) is "to make known a great people, with their virtues, their vices, their comeliness, and their ugliness." There is a chapter on the American man, and another on the American woman; one about marriage, and, of course, another about divorce. Works of charity are considered, the authors concluding that, "if the American is a man of business *par excellence,* he is also the most human of men." Then comes a thesis on lynch law, which is reënforced by a lengthy treatise in an appendix, showing why the negro is born to be hanged. Education, national faults, social vices, as well as American art and the stage, are all discussed, and there is a catalogue of the curiosities of American life. Many of the seventy-three illustrations in the text are of personages scarcely known to the public, or of scenes or incidents of American life not at all typical. Indeed, the *galerie de tableaux* reminds one of a lecture on America recently delivered in England, when the one picture illustrative of American homes showed the residence of James G. Blaine! The Indian and the cowboy figure conspicuously among the engravings; Ballston Spa is famous, not because of its mineral springs, but because one of its fair daughters was kissed there 1,236 times in fourteen years, and finally brought suit for $3,000 damages, getting *"10 fr. 42 centimes par baiser."* Football, Andrew Carnegie with his L-I-B-R-A-R-Y building blocks, and golf are the prominent features of our educational system depicted by the artist; and the Beef Trust and the "grafter" are given many pages, with copious and fearful foot-notes.

Even Francesco d'Ovidio finds something more to be said about Alessandro Manzoni, and under the title "Studii Manzoniani" (Hoepli: Milan) has just added a third entertaining and instructive volume to those which established his reputation as a student of Manzoni and made him a fit editor of the "Brani inediti dei Promessi Sposi," published two years ago. The new volume is made up chiefly of a careful study of the character of Ermengarda in the drama "Adelchi," including an exhaustive criticism of the celebrated chorus on her death.

Students of American aboriginal folk-lore will find much to interest them in Knud Rasmussen's recent book (Copenhagen and Chicago: The Gyldendal Publishing Co.) entitled "Under Nordenvindens Svöbe" (Under the Lash of the North Wind). It contains a large number of myths and fairy tales of the Greenland Eskimos. Mr. Rasmussen, who himself has some Eskimo blood in his veins, took part, some years ago, in the so-called Danish Literary Greenland Expedition, under the leadership of Mylius Erichsen, and at that time he collected the material of the present volume. Half of the book deals with the West Greenlanders, the other half with the eastern branch of the race.

Dr. W. Staerk, one of the theological teachers in the University of Jena, has just published (Göttingen: Vandenhoeck & Ruprecht) a book entitled "Das assyrische Weltreich im Urteil der Propheten." In his investigations of the prophets of the eighth and seventh centuries the author takes a decided stand against the current critical school. Dr. Staerk furnishes also an entirely new translation and commentary on the prophetic books in question.

In the series known as Religionsgeschichtliche Volksbücher (Tübingen: J. C. B. Mohr) we now have "Richard Wagner's Religiöse Weltanschauung," by Prof. O. Schmiedel of Eisenach, in booklet size. The volume offers a clear-cut view of the ups and downs of Wagner's philosophical and religious thinking.

"Ausgewählte kleine Schriften" of Heinrich Gelzer (Leipzig: B. G. Teubner) is a collection of ten papers, most of them based on research in Oriental church history. Special interest attaches to the seventh and eighth papers, detailing the author's personal recollections of Ernst Curtius and Jacob Burckhardt.

Prof. Theobald Ziegler of the philosophical faculty of the University of Strassburg will soon issue (Strassburg: Karl J. Trübner) a large volume on David Friedrich Strauss and his work, in commemoration of the one hundredth anniversary of the birth of the author of the "Leben Jesu."

The Vienna Academy of Sciences has entrusted to the Belgian scholar Germain Morin the preparation of a new and critical edition of the works of Cæsarius of Arles, the great churchman of Gaul in the fifth century. Morin is making his preliminary research in Munich.

Prof. H. Diels, in behalf of the commission that is preparing the "Thesaurus Linguæ Latinæ," reports to the Berlin Academy of Sciences that the third volume is in type down to Carmen, the fourth down to Conventus, and the proper names, separated from the rest of the material, to Cæsidius.

In September, 1909, the fiftieth meeting of the Versammlung deutscher Philologen und Schulmänner is to be held in Graz. A new section for *sachliche Volkskunde* is to be added, to deal with the occupations and utensils of primitive man.

At the February meeting of the Hellenic Society in London Louis Dyer read a paper on "The Olympian *Theatron* and the Battle of Olympia." The *theatron,* he said, was mentioned by Xenophon in bounding the battlefield of 364 B. C. No "theatre" of the usual type could be meant, for none such ever existed at or near Olympia. Long before the day of theatres and stadiums, however, Olympian worshippers witnessed from the Terrace of the Treasuries (1) athletic contests; (2) processions, sacrifices, and the like. In 476 B. C., presumably from this *spectatorium-theatron,* Pindar (O. x. 101) saw Agesidamus win "alongside the Olympian Altar." In 450 B. C. a quadrilateral running-field, with fields adjacent for onlookers, was provided for athletic contests. The old *theatron* was left, however, overlooking all other spectacles, and to it was made, for the same uses, an enormous addition—(a) the Painted Colonnade, (b) the front Colonnade of the Southeast Building—intersecting it at right angles in the northeast corner of the Altis. From that corner these Colonnades stretched southward to the Council-House, while the Terrace extended westward to the Shrine of Hestia. Thus the Terrace and the Colonnades formed two sides of the triangular battlefield of 364 B. C., described by Xenophon (Hellen. VII. iv.) as the space "between the Council-House, the Shrine of Hestia, and the *theatron* adjoining these buildings." Dr. Frazer, requiring a stone theatre and not finding one, suggests that the Council-House and the Theatre are still somewhere unexcavated—a desperate solution since it withdraws from human comprehension Xenophon's whole account of the fighting, and leaves the perfectly identified remains *in situ* of the Council-House to shift for themselves. Dr. Dörpfeld clearly accounts for the fighting, but requires that Xenophon in bounding the lists should momentarily have been bereft of common sense and of his gift of consistent and perspicuous diction. These views were then reënforced in a short paper by E. N. Gardiner, who had reached Mr. Dyer's conclusions about the Olympian *theatron* independently, and on other grounds.

Henry Loomis Nelson, professor of political science at Williams College died in this city February 29. He was born in New York in 1846, and was graduated from Williams in 1867. Though admitted to the bar, he devoted practically all his time after 1878 to journalism. He was a correspondent at Washington and an editorial writer here and in Boston. From 1894-98 he was editor of *Harper's Weekly.* Among his books are "Our Unjust Tariff Law," 1884; "John Rantoul," a novel, 1884; "The Money We Need," 1896.

The death is announced of David Syme, proprietor of the Melbourne *Age.* Mr. Syme was born in England in 1827, and emigrated to California in 1850, and from there two years later to Victoria. He published several books: "Outlines of an Industrial Science," "Representative Government in England," "On the Modification of Organisms," "The Soul—A Study and an Argument."

THREE STUART BIOGRAPHIES.

The King Over the Water. By A. Shield and Andrew Lang. New York: Longmans, Green & Co. $4.20 net.

James Francis Edward, the Old Chevalier. By Martin Haile. New York: E. P. Dutton & Co. $4 net.

The Romance of George Villiers, First Duke of Buckingham. By Philip Gibbs. New York: G. P. Putnam's Sons. $3.50 net.

That the Old Pretender should have waited until to-day for a biographer to defend him against Thackeray's defamation in "Henry Esmond" is, considering the amount of Jacobitism that has lingered on among Scottish writers, one of the curiosities of literature. Perhaps the sight of two champions, fully armed with documents, rising together upon the novelist, will rouse the proverbial feeling of two against one. It must be said emphatically that Miss Shield and Mr. Haile agree in their characterization of James III., that their conclusions are fully supported by evidence, and that they utterly demolish Thackeray's picture of the tipsy, dissolute Chevalier. We may regret the diminution of our pleasure in "Henry Esmond"; we cannot but welcome to the gallery of eighteenth-century portraits this grave, pathetic figure, dull and earnest, with nothing of the hero about him save his patient sufferings, shuffled to and fro like a play-king among the real sovereigns of Europe, vexed by charlatans and dissemblers, baffled by the self-seeking of pretended friends, his own incompetence, and by the malignant ill-luck of the Stuarts, but preserving through all temptations and disappointments his devotion to the Roman faith, the white flower of chastity, and his kingly dignity.

So far the two books are in accord. In their methods they are somewhat different. The first-named, written by Miss Alice Shield under the guidance of Mr. Lang, who also condensed and revised the manuscript, is the better work as literature, and offers a more minute account of the Chevalier's personal life at St. Germains and Bar-le-duc; perhaps its briefer treatment of the domestic concerns during the later Italian years is due to the skilled and, to the reader, merciful hand of Mr. Lang. Mr. Haile's work is less intimate in its biographical details (save in the wearisome quarrel of Queen Clementina with the Hays), but dwells at much greater length on the political intrigues and combinations throughout Europe that kept the exile in constant hopes of restoration. In a word, Miss Shield has written the better life of James III., Mr. Haile the fuller history of Jacobitism.

It must be added that Miss Shield, in so far as she touches on political matters, shows the truer historic sense. Both writers are in sympathy with the Chevalier, and betray a distaste for the boorish character of the first and second Hanoverian; to which no one can take objection. Both dwell on the strange ill-luck that attended the adventures of the Stuarts; both recognize the lack of impelling force in the Chevalier; but Miss Shield is a little more open to his entire incapacity for judging and controlling men, and to the consequent discord and inefficiency that ruled all the doings of his court. Mr. Haile exhibits more completely the tragic incompetence of Mar as a soldier, but Miss Shield again explains more clearly the ruinous defection of Berwick. Nowhere does the difference between the two biographers come out more clearly than in their treatment of Bolingbroke. Miss Shield acknowledges the great ability of that arch-traitor and almost, if not quite, admits that under other circumstances he might have remained loyal to the Stuart cause, and with the aid of Berwick's military genius, if such an event were at all possible, steered that rudderless vessel to port. Mr. Haile has nothing but contempt for Bolingbroke, and, indeed, dismisses him as an utterly unimportant factor in the game. And the reason for this is easily divined. In his famous letter to Sir William Wyndham, Bolingbroke attempted to prepare his way back to England by exposing the hopelessness of the Stuart pretensions, and so alluring the ultra-Tories from their opposition to the government:

> Here (he says, meaning the courts of the Regent and of James) I found a multitude at work. Hardly one would lose the air of contributing to a restoration by his own intrigues. Care and hope sat on every busy Irish face. No sex was excluded from this ministry. Fanny Oglethorpe, whom you may remember in England, has a corner in it, and Olive Trant is the great wheel of the machine, etc., etc.

Now Bolingbroke had no thought of the scandalous inferences which might be drawn from such a passage, and which, as all the world knows, Thackeray did draw from it. As a matter of fact, a little royal license on the part of the Pretender would have been no disability in the eyes of Henry St. John or of most Englishmen, whereas his sturdy refusal to barter his religion for a crown was always inexplicable to his libertine advisers. It is not on this score Mr. Haile is incensed against Bolingbroke, but because that powerful writer and cynical man of the world exposed so relentlessly the confusion of counsel prevailing about the Pretender and the petticoat influences which, more by the fault of the Orleans than the Stuart court, were so disastrously predominant. Mr. Haile could not forgive Bolingbroke for jeering at his idol's feet of clay. Again, the two biographers differ somewhat in their estimate of the enemy's character. Mr. Haile thinks the evidence sufficient to convict Lord Stair absolutely of two attempts to make away with James, at Nonancourt and at Avignon—and that evidence is indeed black; but Miss Shield leaves open a loophole of doubt, being in general more disposed to grant honesty of purpose to the anti-Jacobites.

From both books, as they supplement each other, may be gathered a pretty full and accurate account of the division of England against itself which furnishes the key to the political tangle of the first half of the eighteenth century. History is commonly written from the Whig point of view so exclusively that the real danger to the Hanoverian succession and the immense ability displayed by Walpole in warding it off are somewhat obscured. Not much is said by either biographer about that parliamentary bulldog, but from their minute view of Jacobitism one is taught to harbor greater respect for his power and more leniency for his methods of corruption. There is also, of course, the opposite temptation of exaggerating the danger, and into this snare both writers—Miss Shield less than Mr. Haile—have fallen. Neither of them distinguishes sharply enough between the mere spirit of discontent against the ruling powers and the spirit which would really have welcomed a change. To read the letters and reports of the Jacobites in England one might suppose that practically the whole people was clamoring for James; yet somehow when the opportunity of acting arose, these agitators were strangely inert. And there are plenty of pamphlets of the day that betray the secret of this paradox. Take, for instance, Sir Richard Blackmore's "True and Impartial History of the Conspiracy against the Person and Government of King William III. in the Year 1695," composed soon after the event, but not published until 1723—it contains a perfectly accurate study of the fever of discontent.

In fact, the chief interest in this study of Whigs, Tories, and Jacobites ought to be, but never or rarely ever is, psychological. We speak lightly of the treachery and time-serving of those men, and undoubtedly they were marvellously dexterous in riding one horse and then the other, or both horses at once. We do not realize the conditions. On one side, with the Whigs, lay the practical prosperity of England, the hard facts, the forces of time, so to speak; on the other all the appeals of loyalty and of the imagination—it is significant that almost all of the higher literature of the age was Tory, if not Jacobite. The cruelty of the situation was this, that an honest man might be divided within himself by these two impulses; and thus, while he talked and schemed for one side, at the crucial moment he would abandon dreams for facts. Some were narrow enough in sympathy, like Walpole, to lean always to one side; others, such as Halifax in the preceding years, were clear enough in self-knowledge to trim with honor, if not with ultimate success; too many, in the difficulty of deciding on principle, turned to this party or that as the momentary advantage to themselves seemed the stronger. A satisfying psychological study of that age is still to be made.

For their general accuracy of statement both Miss Shield and Mr. Haile are to be commended. The former should know better than to accent Fénélon (*sic*) throughout her book; the latter should not say that "Maria Theresa's title as . . . Empress of Austria was at once opposed by the Elector of Bavaria, who claimed the empire for himself," for it was her claim to the Austrian possessions that the Elector disputed, whereas her husband aimed at the head of the Empire. A few other slips might be pointed out, but not many.

If, without leaving the field of biography, one wishes to read the first act of this Stuart tragedy whose fifth act closed with the death of James III., one may find it in the life of George Villiers. That evil genius of the Stuarts shows more fully even than does either of his masters the causes of their ruin. It is sometimes supposed that the fall of the Stuarts was due to the attempt to introduce a new régime with the new dynasty; whereas it was really caused by too faithful an adherence to Tudor precedent and by lack of that kingcraft "which alters when it alteration finds." It was the sluggishness of the Stuarts that destroyed them, with the exception of the second Charles who, alone of his family, could adapt himself to circumstances. The character of the Tudors was a boundless egotism and a passion for dramatic action; and in these they were in harmony with their age. One of these traits, the egotism, was carried over by the Stuarts into a century when, among the English people, the notion of irresponsible personality was giving place to that of law and solidarity, and to unimaginative rationalism. James I. was fond in his way of pageantry, but the passion for splendid dramatic action, denied him by his poor pedantic mind, was supplied by his favorite, the first Duke of Buckingham, who thus complemented the inadaptability of the Stuarts.

There is not much philosophy in Mr. Gibbs's memoir of the duke, and, as in almost all these present-day biographies, the old tradition of literary taste is lost; but he has got his materials well together, and has made a book that can be read with interest. Naturally, while not disguising his hero's notorious sins, he is inclined to show greater lenience of judgment than would be expected from a general historian such as S. R. Gardiner. This can be excused as pertaining inevitably to the *genre* of writing. And, in fact, we can agree with him in a certain human admiration for the insolent magnanimity, if the phrase be permitted, and hot-blooded impulsiveness of Buckingham; after all, he was but a spoiled beauty. To hold that he poisoned James is preposterous, and, unless pushed too far, he was a loyal friend to those in adversity and an open enemy to those who thwarted him. But Mr. Gibbs does not sufficiently recognize the terrible evils brought upon England by Buckingham's domestic and foreign policy, on the one hand by cultivating the personal irresponsibility of his masters, and on the other by entangling them in the fatal French alliance. Who can say how much of England's calamities through the seventeenth century and the resulting intellectual poverty in the eighteenth, were due to the ruffling, imperious beauty of the young Villiers, who, at the age of twenty-one, came up to London almost in rags; at thirty-one was with Prince Charles in Madrid, shocking the Spanish grandees by his pranks and insulting Olivares to his face: at thirty-three was in Paris on another and more fatal marriage embassy, dazzling France with his magnificence, and making love to the Queen, almost under the nose of her husband; and at thirty-six by the knife of John Felton expiated the crime of attempting to oppose his vanities and passions—if these two were not one trait—to the current of the age. More perfectly than his master, James I., he introduces the drama that drags its slow pathos to an end with James III.

CURRENT FICTION.

The Mother of the Man. By Eden Phillpotts. New York: Dodd, Mead & Co.

Not long ago we noticed a collection of short tales by Mr. Phillpotts which seemed to possess the merits of clever experiment rather than of such firm achievement as may be expected of him in his familiar field. To this field he here returns, to the study of human nature and character as they are to be seen among the simple folk of a bit of Dartmoor countryside. This writer works best with such material, not so much because he consciously or unconsciously holds a brief for rural life or character, as because he clearly discerns here the free working out of those everlasting problems of human experience which are so compromised or obscured by the veilings and quibblings of sophistication. These people have no manners; their motives and moods are absolutely bare to each other and to us. The game is played hands down, and has none of that element of intellectual titillation for the observer to which the masked skill (or is it rather legerdemain?) of urbane fiction has perhaps accustomed him. None of these people have "cultivated" minds. We have not to solve them as intricate puzzles, but to watch them unfold in character and meaning, simply and beautifully, by what they say and do—rather than like Mr. James's people, complexly and often beautifully, by the play of his fancy about them.

The man Ives Pomeroy is at first sight a crude and on the whole repellent shape of human clay, a selfish and graceless yokel, an idler, a braggart, and something of a libertine. It is only as we are able to see him through his mother's eyes, with her knowledge of his nature and inheritance, that we discern dimly what time may make of him. It is a slow work, and in the end he has not been transformed into a hero of romance; but his mother's faith in him has been justified, and if he remains a yokel with rude manners, he has become a strong man. There is no romantic conversion, the process of his development is gradual and natural—inevitable, even, his mother knows. For she recalls her own youth and recognizes much of herself in him. The foes he has to contend with are within: pride, anger, untamed desire, have long the upper hand. They are the ebullitions of a generous nature of which a profound sense of justice is to be the salvation. His resentment of the world's injustice finds at last its healthy complement in a fine scorn of his own selfishness. For such a son no mother content with wise saws and modern instances could have done much. Avisa Pomeroy has one of those firm-poised, high-hearted natures which are to be found oftenest among the heavy-laden of whatever social class—a radiant influence making for good by dint of its sheer indomitable optimism. There is more than the grief of physical loss to be heard in the broken fragments of threnody with which Avisa Pomeroy's death inspires her rough son:

> 'Tis all one to the lamp when it goes out —but them that be left—the darkness. . . . But us—us that walked by the light of her —and must go blind evermore. . . . Her work's done, her wonderful, beautiful deeds are all ended now, and she've led a better life than any born woman did afore. She've done with the business of being alive. 'Twas worth while to the earth her being alive.

Without this love passing the love of men, this understanding passing the understanding of merely good women, a nature like that of Ives Pomeroy might have been driven into enmity of its kind. As it is, he is destined to become not a man of piety and small tendernesses, but a man of wholesome activity and even authority in the sphere to which he has been called.

The Hemlock Avenue Mystery. By Roman Doubleday. Boston: Little, Brown & Co.

It is hard to write a detective story that is not interesting. Given a murder, two gentle ladies suspected of the guilt, a multi-millionaire suspicious of his wife, and a young reporter who unravels all and thereby gets his own reward—who could write a dull book with such material? We must demur, however, against a disposition in the present entertainer to disregard the rules of the game. The erroneous suspicions should not depend on a series of coincidences, each alone credible enough, but in the mass impossible; nor should we in the end be mocked by finding there was no murder at all. The art of the detective story is to eliminate chance altogether. The reader thus lays down this mystery of Hemlock Avenue with some resentment against the author for having cheated him, but only after a couple of hours of exciting play.

The Footprint and Other Stories. By Gouverneur Morris. New York: Charles Scribner's Sons.

By reason of the publisher's dictum that collections of short stories are not popular, it has been the fashion of late to weave separate tales with some thread of continuity so that in combination they may take on more or less successfully the aspect of a novel. Mr. Morris must have the credit of letting his stories stand on their individual merits. There are eleven in the present volume, and they cover incidents in the Gulf of California, San Francisco, Paris, a pirate island, the Carolina swamps, the tenements and the palaces of New York, and the North Pole. They show Mr. Morris to excel most of the short-story writers of the day in his use of the Stevenson manner, which he combines with Edgar Allan Poe matter. The knack of descriptive narration he has in an uncommon degree, whether his pictures be first hand or not. There is, for instance, an excellent bit of this kind at the beginning of the title story, where five weary and parched American adventurers on a sand spit of Lower California watch the arrival of the fat, rich, jovial Chinaman, who, as it turns out, has come on his forty-fifth birthday to be strangled in fulfilment of a parental promise to the High Gods.

The subjects, however, are generally ignoble, even to an occasional Shandean touch. Those who read the stories because they are in the vernacular of adventure will note that there is not an honest stand-up fight in the collection. The noble motives come to grotesque anti-climaxes. The explorer who reaches the North Pole only to die of small-pox on the spot, lies down beside the frozen bodies of seven predecessors who had all—from 1798 down—attained the pole to die there. The roguery is equally futile, a scoundrelly elopement ending in an opium dream. This sense of futility is the chief defect of what are otherwise capital tales.

My Lady of Cleeve. By Percy J. Hartley. New York: Dodd, Mead & Co.

This is a romantic tale, the period of which is just subsequent to the Great Rebellion, when England was rife with plots for the restoration of the Stuarts. Capt. Cassilis, soldier of fortune in the service of "Dutch William," has orders to take possession of Cleeve Manor, where a French plotter is said to be in hiding. In the performance of this mission he receives a momentary check from Lady Grace, whom report holds to be the most beautiful, as she assuredly is the most haughty, daughter of English nobility. She attacks Cassilis with her riding whip. And then:

> If ever there was all hell in a man's heart, it was in mine that night. . . . That I—I of all men—should be struck by a woman! And in public! . . . Oh, to hurt her! to humble her pride! to see her at my feet begging for mercy—and to refuse it! I gloated over the thought.

How he secured his revenge upon his lady, and how, in the end, instead of gloating, he humbly sued for her hand and heart, and how his service was most gloriously rewarded, it were no less than sin to disclose here. The lovers of second-rate historical romance must not be deprived of their immemorial privilege of finding out these mysteries for themselves.

The Red Feather By Theodore Roberts. Boston: L. C. Page & Co.

It would be hard to suggest by way of comment the sheer delightfulness of this tale. Let him who is wearied with the sweetened and diluted literature now commonly prepared "for the young" apply himself with assurance to this strong and wholesome brew. It is not a story for children in the sense of being unfit for grown-ups. It is a fairy tale and an Indian tale and a little manual of kindly and ripe philosophy in one. In short, we really do not see why it should not win a place on that small beloved shelf where Grimm and Alice and the Water-Babies and how few others! stand in quiet and perennial disproof of the pap-theory of juvenile fiction. No doubt its persons are the stock characters of fairy romance. The "littlest warrior," to whom the magical red feathers are presented in infancy, is simply our friend the fairy prince. The red feathers themselves, as well as the "moccasins of the air" with which they are destined to vie, are variants of the seven-league boots and the magic carpet of familiar lore. The long conflict between the good magician and the bad magician, and the eventual victory of the good one, is quite by the card. But the air of the whole thing is so simple and spontaneous that one instinctively accepts recognizable items as elemental rather than commonplace. For a marvel, one does not feel them to be shabby and tiresome properties trotted out in the name of a convention. The story is told with a fine and gentle simplicity of style—that is, of mood and phrase—which marks it as literature of a high order.

The Development and Chronology of Chaucer's Works. By John S. P. Tatlock. London: Published for the Chaucer Society by Kegan Paul, Trench, Trübner & Co.

It is gratifying to note that a thorough examination of all the questions that pertain to Chaucerian chronology, such as we have in Professor Tatlock's treatise, has resulted in confirming in all essentials the views on the relative chronology of the poet's writings, which have generally prevailed since Prof. Ten Brink's famous discussion of the subject, although in some important instances arguments are here advanced for new datings of individual works. The revolutionary changes which Prof. J. L. Lowes has in recent years proposed in the chronology of Chaucer's middle period have not stood the test of a closer examination. Professor Tatlock's treatise is distinguished by such an unusual combination of acumen and judgment that one cannot but look forward with interest to the promised continuation which is to deal with the evolution of the "Canterbury Tales," the grouping of these tales, the question of revision by the poet, etc. Our author was well-advised in disregarding in the present work the minor poems and in discussing those only of the "Canterbury Tales" whose dates have been most frequently the subject of debate.

Indisputably the most important change of date which Professor Tatlock proposes is in the case of "Troilus and Criseyde," which he would place between Chaucer's return from his first Italian journey and 1377, the probable date of composition of the passage in Gower's "Mirour de l'Omme" which contains the allusion to the "geste de Troÿlus et de la belle Creseide." In this he is only urging, of course, an idea which he had advanced several years ago, but the argument here is fuller and the author has endeavored, moreover, to meet the objections to his interpretation of the passage raised in the interval by Professor Lowes.

We agree with Professor Tatlock that this "geste" should be identified with Chaucer's poem, for, as he properly maintains, the fame of the love-story of Troilus and Cressida only begins with Boccaccio, so that Gower must have had in mind either the "Filostrato" or Chaucer's poem; and since there is no reason whatever to suppose that he understood Italian, he must have been referring to the latter. In support of Professor Tatlock's contention that the love-story in question was not famous before Boccaccio, we may cite from the thirteenth-century French romance, "Amadas et Ydoine," lines 5,857 ff., the long list—fifteen in all—of women who had proved faithless in love. This list includes Iseult, Audain, and others, and the omission of Cressida from it is all the more significant, inasmuch as three of the names are drawn from the legend of Troy—Œnone, Helen, and Polyxena. The author is even impudent enough to charge with disloyalty characters like Penelope, who were really types of fidelity. We have noted two or three similar lists in the Arthurian prose romances, also, but in none of them is Cressida mentioned. As regards Professor Lowes's suggestion that Gower might have known of Boccaccio's poem through Chaucer, before the latter had begun his "Troilus and Criseyde," one may answer that Chaucer was unlikely to delay adapting the "Filostrato" after he had once mastered the contents of the poem. He doubtless brought back a manuscript of it from Italy with him in 1373, and it seems singular that with the admiration which he conceived for Boccaccio's masterpiece he should only have determined to adapt it after so considerable a number of years as is generally assumed. To be sure, there is no absolute reason for supposing that the adaptation was complete at the time that Gower penned the allusion in the "Mirour," for Chaucer and he were in all likelihood closely associated in this period of their lives and might well have often discussed the "Troilus and Criseyde" together during the course of its composition. But in view of the length of time that had elapsed since Chaucer had become familiar with Italian, the allusion is more likely to be to the completed poem.

Coming to the "Legend of Good Women" we observe that Professor Tatlock accepts the so-called F version of the "Prologue" as the earlier form and strengthens the recent arguments of Professor Lowes on the subject by the plausible suggestion that the changes which have rendered the later version inferior were made after the death of Queen Anne of Bohemia and are due to a consideration for the well-known morbid feeling of the King in regard to the memory of his wife, all specific reminders of her being omitted in the revision. But, after all, Queen Anne, who, as our author himself allows, is unquestionably the Alcestis of the "Prologue," is too intimately connected with the poem ever to be effaced from it. Is Chaucer, then, likely to have attempted the impossible?

As to the "Canterbury Tales"—we find ourselves in agreement with Professor Tatlock when he takes 1387 as the year in which they were begun. Whether their composition was carried on as late in the life of the author as is maintained in this book, is too difficult a question to be discussed here. On the possible relations of the "Canterbury Tales" to Boccaccio's "Decameron" we note that Professor Tatlock omits to mention the most serious argument that has yet been made to connect a story in the former collection with one in the latter—namely, that of Pio Rajna with reference to the "Franklin's Tale" in the thirty-second volume of *Romania*. The authority of the writer's name renders this article worthy of particular consideration.

Annals of St. Michael's: Being the History of St. Michael's Protestant Episcopal Church, New York, for One Hundred Years, 1807-1907. Compiled by Order of the Vestry. Edited by John Punnett Peters. New York: G. P. Putnam's Sons. $3.50 net.

The history of St. Michael's Church of this city is more than an account of the founding and growth of a particular parish, with its petty trials, its varying fortunes according to the abilities of its leaders, and its trivial enterprises of merely parochial significance. Such narratives have their place as contributions to local history, and are of interest to those immediately concerned in the affairs described. But the story of St. Michael's constitutes an important part of the history of the development of the upper part of New York city, its old families, its marvellous material changes, its schools, hospitals, orphanages, and institutions for the variously afflicted. Not even the extension of transit facilities in the city can be adequately recorded without the assignment of considerable space to a description of the activities of this parish; and any sketch of the progress of Semitic learning in America and American encouragement of Oriental archæological research would mention with honor the present rector, the author of this volume.

St. Michael's is among the few churches of New York city which have served a particular locality throughout their history. Founded in 1807, in the old Dutch Bloemendael, as a parish of ease for summer residents and families who fled their aristocratic homes on Wall and Broad Streets on account of the ravages of yellow fever, it led a feeble existence until about the middle of the last century. Thomas McClure Peters (father of the present rector), who served the parish for over fifty years, was the leader who gave St. Michael's its great influence in the upper part of this city. The institutions which he founded and conducted with industry and skill, the Sheltering Arms, the Children's Fold, the City Mission Society, the House of Rest for Consumptives, gave him a wide reputation as a philanthropist. The present rector was associated with his father as assistant for ten years. Such a long period of parish leadership, continued in one family and characterized by eminent ability, is very rare if not unique in America. Dr. Peters seems to make good the claim that St. Michael's was the first free church founded in New York, and the first Protestant body to establish a sisterhood. It is noteworthy that both he and his father largely increased their influence through their ability to preach and conduct services in German.

The story is told with fidelity to fact, skill in narration, and with an enthusiasm that sustains the reader's attention throughout.

Dante's Vita Nuova. The Società Dantesca's Critical Edition. By Michele Barbi. Pp. cclxxxviii, Milan: Ulrico Hoepli.

In 1896, five hundred and seventy-five years after Dante's death, appeared Pio Rajna's critical edition of "De Vulgari Eloquentia," the first excellent edition of any of Dante's works. The end of 1907 was again brilliantly marked for Dante scholars by the publication of Michele Barbi's edition of the "Vita Nuova." Since this volume was announced, fourteen years have elapsed; but every student of Dante will rejoice at a delay which enabled the editor to avail himself of a manuscript discovered not long since in the Capitular library at Toledo. This manuscript, which came from the hand of Giovanni Boccaccio, is the fountainhead of all the manuscripts of the "Vita Nuova" traceable to Boccaccio; it reveals his wonted care, and, though it varies little from other ancient versions, it does away with many doubts. The editor was twice lucky; for, as this volume was on the verge of publication, the lost manuscript from which the edition of 1829 derives, also came to light, and Signor Barbi could insert a correction of the statements made in the section (No. 5) devoted to this edition. Not one word in Dante's handwriting is known to survive; but, as the oldest manuscripts substantially agree, we may now read this love story of the poet's youth in a text essentially as it was completed by Dante.

A fact which may interest even those familiar with the Inquisition is brought forth in Barbi's chapter on the Sermartelli edition, Florence, 1576. That the "Decameron" should have seemed to need censoring in those days of the fierce counter-reform, should excite no surprise; but, as the editor observes, that any one should find in the "Vita Nuova" things that might offend religious feeling, is wonderful. Yet such is the truth: the Inquisition caused every allusion to the Deity, every word belonging to sacred usage, every scriptural quotation, to be changed or removed. *Osanna in excelsis* was cut out, and *beato* was altered to *contento*. It had even become a heresy to call Beatrice "one of the very beautiful angels of Heaven"; she became "*like* one."

The task of collating thirty-nine complete manuscripts and some thirty-six fragments, involving, as it does, the fixing of their relations to each other, is of itself so perplexing that a few defects can be forgiven, though not overlooked. The absence of a full index, for example, and the almost total lack of cross-references, render verifications and corrections difficult. As a whole, however, this volume, second in the series to which it will belong, and first of the Società Dantesca's critical editions of Dante's Italian works, is a good specimen of Italian book-making, and an honor to Italian scholarship. It virtually renders every other text obsolete. There is no commentary, except what textual criticism necessarily involves. It should be added here that Signor Barbi has devoted many pages to *Ortografia*, and on that subject has gathered data extremely precious to those who are endeavoring to ascertain the true character of Tuscan sounds and forms about the year 1300.

Mexico and Her People of To-day. By Nevin O. Winter. Boston: L. C. Page & Company. $3.

One is glad to find at last a book on Mexico written by one who is more than the superficial tourist. The latter, too often hurrying through the country, goes home to jot down his impressions, describing Mexico as "a land of lace and lice and love; of flowers and fights and fleas." Mr. Winter writes with the sympathy and insight of one who knows his subject thoroughly. The reader is given briefly the story of Aztec land, of the Conquest, and of the founding of the republic; and, more at length, a picture of the Mexico of to-day—including the climate and scenery as well as the life of the people. The peon is, perhaps, more sympathetically and fully pictured than is the patrician. But this is hardly to be wondered at, for Mexico is the land of the peon. He is as much a part of the landscape as his faithful burro and as the soaring vultures.

Other topics recount the economic resources of the country—agriculture, railways, and mines. Americans should read the following description of business methods in Mexico. Speaking of an Englishman who was a fair example of the successful European drummer, Mr. Winter says:

> He had made this route for years, and was thoroughly conversant with the language, and understood the ways of the people. His methods were a good illustration of the reason why English and German houses have for many decades controlled trade in Spanish America. For several days after arriving in the town, he did nothing but make social calls on his customers, take them to the theatre, and entertain them in a general way. During the next few days he invited them to his room to inspect his stock, which was large and varied. Then he began to take orders. This method seems like a waste of time, but the orders secured were large and well repaid for the time taken. The American drummer could not have controlled his impatience to be on the move and would have made a failure.

It is to be regretted that so admirable a book should contain many sentences as careless as the following: "Arrived at Vera Cruz, the purser still befriended him, he got ashore in a launch loaded with cargo, disguised as a Mexican sailor, while a detachment of soldiers in boats was waiting for him." The illustrations, which are from photographs, are artistic and well chosen, and the entire make-up of the book is attractive.

Science.

A History of Nursing: The Evolution of Nursing Systems from the Earliest Times to the Foundation of the First English and American Training Schools for Nurses. By M. Adelaide Nutting and Lavinia L. Dock. 2 vols. New York: G. P. Putnam's Sons. $5 net.

As the secondary title suggests, these handsome volumes treat of the nurse herself and of her training, and touch but lightly on the care of the sick, as found in the records of the past. The authors, well known for their active participation in the schooling and organization of nurses, have gathered a large amount of material with much industry and from a great variety of sources. For the most part, well chosen works and compends are freely drawn upon, but here and there, particularly for the more recent periods, there is some use of original sources. The outcome is an instructive as well as entertaining story of many of the endeavors to carry out systematically definite plans for the care of the sick and needy. The first volume brings the narrative from the "pre-Christian" period down to the "pre-Fliedner" movements in the early part of the nineteenth century. The second volume begins with the humble founding of the establishments at Kaiserswerth, in Rhenish Prussia, and the revival of the order of deaconesses. Here stress is laid upon the fact that the wives of Fliedner—Friederike and Caroline—are entitled to much of the credit ordinarily given him for the upbuilding of Kaiserswerth. Then comes a scanty "pre-Nightingale" period, followed by a long, but perhaps not too long, account of Miss Nightingale and her work. She is regarded as the true founder of the training school, the originator and patron saint of the really trained nurse. Later developments are considered briefly, the story of quite recent times being left for another book, which the authors hope to publish. Let us add that these two volumes are pleasantly written, barring some reportorial fancies in the second volume, and are liberally illustrated with pictures germane to the text, even if not always necessary. The picture of the greater Béguinage at Ghent (I. 258) is misleading, that site being no longer occupied by the community, which removed to other buildings outside the city more than thirty years ago.

Even a casual reader will hardly fail to note, what is also mentioned but too little emphasized, how largely the earlier charitable and sanatory undertakings almost without exception depended upon personal influence or somewhat local conditions, and how frequently they flourished only so long as the impulse given by a strong personality lasted, and then, sometimes rapidly, sometimes slowly, degenerated into undesirable or useless establishments. And the central thought of the book seems to be that the nurse of earlier times was herself the product of circumstances, of more or less accidental conditions; that she came and went with certain social tides, and reflected in her status and success the changes in the relation of woman to the social order; while the modern nurse, on the other hand, is the product of training carefully planned and deliberately undertaken, and stands for the solidarity of an occupation or "profession," for the furtherance of individual aims, rather than for the work of a school or order. How this individualism, and all that goes with it, is to affect public interests and the practice of medicine is a question of great import, which has already caused some discussion. Here and there our authors plainly indicate high ideals concerning the occupation of the nurse. To some they may perhaps seem to magnify their office and to desire to treat nursing as an independent part of medicine, coördinate with recognized specialties. Just what they, as representative nurses, really wish will probably come out more fully in the later volume to which we shall look forward with interest.

W. S. Harwood has prepared a second edition of his account of Luther Burbank and his work, "New Creations in Plant Life" (The Macmillan Co.). In the preface he notes: "Statements in this volume, both those which have a scientific and those which have a practical bearing, stand unreservedly vouched for by Mr. Burbank." Comparatively few changes have been made, so that one can say of this as of the first edition, that it is a readable account of a remarkable man.

The title of "Nature and Development of Plants," by Carlton C. Curtis, instructor in botany in Columbia University (Henry Holt & Co.), seems unintentionally misleading. It deals with the nature and development of plants, to be sure, and with nothing else, but it so deals with them as to render the work an excellent handbook for serious beginners, who might perhaps infer from the title that this is a mere volume of reference, rather than a pleasant guide to their lecture-room and laboratory work. The first part, devoted to the "Nature of Plants," is a capital introduction to vegetable morphology and physiology; the second part treats of the great groups of flowerless and flowering plants. A careful examination has shown the treatise to be trustworthy. It is, moreover, interesting, and it should be very useful.

In "Comparative Electro-Physiology," a handsome book of 760 pages and many illustrations (Longmans, Green & Co.), J. C. Bose of Presidency College, Calcutta, gives an extension and conclusion of his studies on responsive phenomena, begun some years ago, and already partly made known in two other books as well as in various addresses and communications to scientific societies. With much patience and great ingenuity the author has examined the behavior of plants under the influence of various stimulations, and has extended the investigation to animal structures and also to metals. He seeks to show not only that his earlier assertion of the absence of any real distinction between "sensitive" plants and others is correct, but also, as a far-reaching generalization, that the responses of all living substances are similar, and that responses are to be found even in inorganic substances. The similarity depends on some common fundamental reaction of matter. The response is recorded largely by electrical methods. Motor responses are also considered, particularly in plants; but they are treated also rather less fully in animals. In this connection astonishing observations are reported, which show a nerve stimulated by tetanizing currents to be capable of "a contraction of as much as 20 per cent." There is much to arouse interest and provoke controversy, for many of the author's conclusions are far from being in accord with the prevailing views. A discussion of these conclusions, or even the briefest statement of them and of the experimental evidence on which they are based, would be too special for these columns. It is, however, not hypercritical to say even here, as has been said elsewhere concerning some of the earlier work of the author on plants, that an independent confirmation of many of these observations is very desirable.

"The World's Peoples," by A. H. Keane (G. P. Putnam's Sons), recalls to some degree that author's "Ethnology" and "Man Past and Present"; it is, however, more available as a text-book. It would be still more valuable if its professed intent had been adhered to; for his intention was the selection of "really typical 'samples' from a multiplicity of claimants," and the avoidance of perplexing or debatable topics. In general the latter object is attained, and there is, at least in the early part of the book, a strenuous attempt to be simple and clear. This is well; and success might here have been greater if the first-named purpose had also been carried out. But, like Peschel and Ratzel, to name only the most prominent authors of ethnographies, Mr. Keane has too little system and perspective, and exhibits too little power of renunciation. It is as if the author, debating with himself as to whether or not a certain imperfectly known tribe or group should be included, was led to decide in the affirmative because some choice bit of material that appealed to him chanced to lie among his notes. The result is that the student or reader learns nothing tangible or distinctive about the tribe in question, and that the impression of confusion, which must at best be strong enough, is needlessly heightened. Now that anthropology is coming more and more into its own, the need of a good college text-book in ethnography is pressing. Before one can go far with the development of human institutions, he must have a body of concise and systematized information concerning the early forms of the industrial organization, marriage systems, etc. This is not furnished in the volume under review. Mr. Keane gives about a third of his space to illustrations, which are of varying quality, some extremely poor. There is no map, which is a pity, for ethnography, least of all the social sciences, can be studied apart from geography.

Dr. Irving Wilson Voorhees has written a little book of analysis and eulogy on "The Teachings of Thomas Henry Huxley." Those who are interested in the writings of that brave champion of what he regarded as the truth will find Dr. Voorhees's chapters a useful guide to Huxley's central ideas (Broadway Publishing Company).

The first International Laryngo-rhinological Congress will be held in Vienna, April 21 to 25.

Drama.

Henrik Ibsen. By Edmund Gosse. New York: Charles Scribner's Sons. $1.

The Collected Works of Henrik Ibsen. Volume I.: Lady Inger of Östråt; The Feast at Solhoug; Love's Comedy. Volume XI: Little Eyolf; John Gabriel Borkman; When We Dead Awaken. With introduction by William Archer and E. H. Herford. New York: Charles Scribner's Sons. $1 each.

Fate has not been kind to Ibsen in picking his champions within the English-speaking world. Another illustration of this fact is furnished by Mr. Gosse's contribution to the Literary Lives Series. The book marks at the best a chance missed. If the failure be not complete, it is because the field was practically virgin. The only similar work with which Mr. Gosse has had to compete is that of Henrik Jaeger, written in 1888; and only since that date has the best material for the study of Ibsen's life become available. Of this material Mr. Gosse has possessed himself with an industry that cannot be denied; but the results are not correspondent to the effort. Mr. Gosse's book is more complete than those of Jaeger and Rudolph Lothar, and it is also more concise; but it falls short of both in understanding and in sympathy. Indeed, the most serious fault of Mr. Gosse's work is in its tone, which often becomes petulant. The only possible explanation of this strange attitude seems to be that by suppressing enthusiasm he is trying to prove his scrupulous fairness. But he succeeds only in making the reader doubt the sincerity of his respect for Ibsen. Another shortcoming is a pedantic preoccupation with detail. Mr. Gosse often steps aside from the straight path of his narrative to attack some critical theory that he does not approve. As a rule the issues involved are insignificant.

Mr. Gosse is also convinced that he knows more about the workings of Ibsen's mind than did the dramatist himself. For example, the various prose writings from Ibsen's second Christiania period give abundant evidence of the considerations that led to his choice of form for such dramas as "Olaf Liljekrans" and "The Feast at Solhoug." All this evidence is disregarded by Mr. Gosse, who asserts, on his own authority alone, that Ibsen "set himself, as a task, to write in the manner of Herz." If, however, Mr. Gosse had profited by the work of those Scandinavian critics whom he holds in such slight regard, he would have seen that there was just cause for the dramatist's irate disclaimer of indebtedness to the author of "Svend Dyrings Huus," while on the other hand his debt to Johan Ludvig Heiberg was as great as it was freely acknowledged. Although Mr. Gosse constantly speaks as if he had personal knowledge of what Ibsen knew and did not know, most of his information on this matter is evidently drawn from John Paulsen's "Samliv Med Ibsen." But, why he has accepted some and arbitrarily contradicted other statements of the Norwegian writer is hard to understand. Thus, Paulsen says explicitly that Ibsen was familiar from childhood with Schiller and Goethe, and he adds, in his chapter on "Ibsen and Goethe": "Ibsen spoke rarely of Goethe, to whom he owed so much, but when he did so, it was always with admiration." Yet Mr. Gosse writes that Ibsen "was strangely ignorant of Schiller and Heine, and hostile to Goethe." Paulsen explains that Ibsen had a strong aversion to certain phases of Goethe's personal life, but that this aversion in no way affected his judgment of Goethe's work.

Taking it all in all, the figure of Ibsen reflected by the curved mirror of Mr. Gosse's mind is almost a caricature. Still the book is not without merits. It is briskly written, though not always in good taste, and it gives a fairly just estimate of the plays.

Of the first and last volumes of the translation of Ibsen's works, completing the set, little need to be said in addition to our comments on previous volumes. The inclusion of Professor Herford's translation of "Love's Comedy" is a great gain. Besides the usual introductions to each play by Mr. Archer, the first volume contains in a general preface his defence of the policy of preferring literalness rather than adequate literary equivalence in the translations. For this policy he takes on his own shoulders the whole responsibility.

Thomas Y. Crowell & Co. bring out together three new volumes of their First Folio Shakespeare, edited by Charlotte Porter and Helen A. Clarke, viz.: "The Tragedie of Othello," "The Winter's Tale," and "The Tempest." There is undoubtedly at the present moment a tendency to exaggerate the importance of every reading shown by the First Folio, and at least three editions reproducing the spelling of that text are now going through the press. Of these the above-named edition is the most convenient and for the general reader decidedly the best. We have already had occasion to praise the admirable work of these editors, but it will not be amiss to set forth once more the method employed by them. First comes an Introduction, sometimes, we confess, a little too much in the air for our pedestrian taste. The text follows, reproducing the spelling of the First Folio, with the important variants ancient and modern below; especially to be commended is the scheme of printing the equivalent of obsolete words in the immediate margin where the eye catches them at a glance. Successive appendixes give the "Argument," "Sources," "Duration of the Action," "Date of Composition," "Early Editions," "Literary Illustrations," "Glossary," "A List of Variorum Readings," and "Selected Criticism." Everything is compact, and the general arrangement the most convenient known to us. The type is clear and the volume pleasant to hold.

Mme. Vera Komisarzhevsky of the Dramatic Theatre of St. Petersburg, who made her first appearance in this country in Daly's Theatre on Monday evening, fully justified her claim to be regarded as an actress of the first rank by her performance of Norah in Ibsen's "A Doll's House." It is a pity that she did not select some play calling for a higher order of emotional interpretation, but such power as she exhibited is welcome under almost any circumstances. She and her company have been working together for many years, a fact which accounts for the remarkable smoothness and naturalness of the representation. It was delightful to note the easy and unaffected grouping of the players and the entire absence of anything like theatrical formality. Her Norah was chiefly remarkable, perhaps—especially in the first half of the play—for its realism. Finished as it was, to the nails, with an amount of minute elaboration seldom seen upon the modern stage, it was so spontaneous and natural, that it conveyed a very strong illusion of reality. Particularly noteworthy were the variety of gesture and the eloquent changes of facial expression, not only in the more stirring episodes, with Torvald or Krogstad, but in the quieter intimate conversations with Fru Linde. Mme. Komisarzhevsky proved herself capable in expressing both violent emotion and lighter sentiment. In the crisis of the Tarentella she played with an intensity of suppressed agitation that was exceedingly impressive; and she created her effects with assured ease and certainty of execution. If she made no brilliant demonstration of tragic power, it was probably because the play afforded no opportunity. In general conception her Norah was at least as plausible as that of any of her predecessors, while in richness of detail it perhaps excelled all of them. Undoubtedly Mme. Komisarzhevsky is a performer of rare skill as well as a woman of much charm. All persons capable of appreciating fine acting ought to see her and her company. But it would be useless to ignore the fact that she must depend chiefly upon her own countrymen for active financial support, and unless they prove more enthusiastic than the Italians did in the case of Novelli, it is difficult to see how she can carry out her engagement without heavy loss.

"Samson," the new play by Henri Bernstein, author of "The Thief," will have its first American production in the Lyceum Theatre of this city September 8.

Music.

Claude-Achille Debussy. By Mrs. Franz Liebich. New York: John Lane Co. $1.

Mrs. Liebich appears to have labored under serious disadvantages in preparing this volume on the most conspicuous of the younger French composers. His most important work, "Pelléas et Mélisande," not having been heard yet on the operatic stage in London, she has been obliged to rely on the piano-forte version of the score; and of Debussy's life the details given barely suffice to fill a page. We are told that he was born at St. Germain-en-Laye on August 22, 1862; that he studied at the Paris Conservatoire; that he received several composition prizes, and, finally, in 1884, the Grand Prix de Rome; that he is unapproachable to strangers, but popular with his intimates, because of his geniality, his fantastic imagination, his rare powers of improvisation and entertainment; that of late years circumstances have enabled him to gratify his love of travel. Regarding the intimate details of his career he is stubbornly silent. Apparently, Debussy is not greedy of contemporary favor; at any rate, he is credited with this remark:

> Can you imagine anything greater than a man unknown through long centuries whose secret is accidentally deciphered? To have been one of these men—this is the highest honor fame can bestow.

This honor, alas! has been denied him; he is now in the limelight of publicity. He still obdurately refuses to be photographed, yet Mrs. Liebich has succeeded in getting a good frontispiece for her volume, taken from the picture by Jacques Blanche. In fine, Debussy's attempt to hide his light under a bushel has failed miserably. His partisans are proclaiming from the housetops that he is revolutionary and epoch-making.

While Mrs. Liebich does not try to trace the musical genealogy of Debussy any more than his personal ancestry, she does tell us of the composers whom he has admired most, and who therefore were the most likely to influence him. Bach he liked at an early age because of his elasticity and freedom; Weber, because of his love of the fantastic and his affinity with the unfathomable soul of nature. As a student in Rome he ardently studied the music of Russian composers, especially that of Moussorgsky. In Wagner's "Ring" operas he disliked the leading motives, and, to cite his own words, "the long moments of ennui. . . . Then suddenly the most supremely lovely music, irresistible as the sea, surges into one's ears and criticism flies to the winds." More important, however, than his impressions of other men's music in forming his own mind were, apparently, the overtones of bells and bugles which he heard as a youth while serving with his regiment at Évreux. Those dissonant upper partial tones "were keenly observed by him and annotated for future use." In her second chapter the author makes a futile attempt to show how, by utilizing these dissonant overtones, Debussy enriched modern harmony. As a matter of fact, there is little that is new in his dissonant chords, except his anarchistic disregard of musical morals and grammar. His trademark lies in certain progressions of unrelated augmented chords. His trick is easily copied and parodied; nothing is more usual at musical gatherings to-day than the playing by some clever pianist of a popular tune *à la* Debussy in such a way as to make everybody laugh.

In the piano-forte pieces, which are only just coming into vogue, one meets with this same trademark. Of the songs our author gives an eloquent account; she finds much to admire in them. Of "Le Tombeau des Naiades," for instance, she says:

> The clear-cut tonalities of the accompaniment, with its reiterated shuddering groups of ascending semi-quavers, the sustained uniformity of clear utterance, the accacciatura in front of the chords, all combine to produce an effect of chill and cold and the uniformity of a snow-swept landscape.

In the last chapter Debussy is considered as a writer and critic; he contributed criticisms to the *Revue Blanche* and *Gil Blas* for two years, and in this work his individual point of view is always conspicuous. To cite only one instance: he expresses a dislike of unnecessary applause at concerts. "In looking at a sunset," he remarks, "has it ever occurred to you to applaud?" The question is more apposite than it may seem, for much of Debussy's music is as ethereal and evanescent as a sunset—"a sonorous impressionism." J. F. Millet expressed the wish to make others hear "the songs, the silences, the rustlings of the air." Debussy has endeavored to do this in his tone poems.

The Baroness Pauline Walhofen-Lucca, a famous prima donna in her day, died in Vienna February 28. She was born in Vienna in 1841 of Italian parents. While still in her teens she entered the chorus of the opera. Her first rôle was Elvira in "Ernani." She was extremely popular in

Europe, and in 1872 she visited the United States, where she repeated her triumphs.

Art.

Below the Cataracts. Written and illustrated with sixty plates in color by Walter Tyndale. Philadelphia: J. B. Lippincott Co. 8vo. Pp. xi, 271. $3.50 net.

This is one of the most beautiful of recent books on Egypt. It is the work of an artist possessing not only technical ability, but a facile pen. His illustrations are all excellent, and some of them are gems. They are in color, and as a rule are beyond complaint. If one must criticise, it is in the matter of the clarity of the tints used, due probably to the great difficulty of giving accurately the subdued or dimmed effects wrought by time. Some of the pictures, too, are composite in one respect: where figures are grouped, the costumes of the subjects are evidently chosen from types which surely exist, but which are seldom seen all at the same moment. But as this method serves to illustrate actual costumes which one may see in the course of a stroll in Old Cairo, it may be accepted as an advantage to the reader.

The pictures deal in the main with Cairo and Thebes, the rest of Egypt being left for a subsequent volume. One is taken the round of the picturesque streets and scenes of the native portion of Cairo, to mosques, markets, shops, courtyards, doorways, and houses. It is vain to attempt to catalogue all that is given. And accompanying the pictures is the text from the hand of a sympathetic and intelligent observer, one whose eye is open to artistic effects and whose hand is ready to record them both in color and in ink. After reading what Mr. Tyndale has to say about the technical artistic ability of the Egyptian native artist of the early ages, one is in a better position to appreciate what one sees. It might be wished that every intending visitor to the Nile-land might read some sections at least of this book. The observer who stands before a wall painting, for example, which contains a representation of a player on a lute does not realize the skill of the artist who drew separate free-hand lines to represent the strings of the instrument and it takes the educated eye to see the harmony of design and the skill of execution shown in the composition of a huge relief on an outer temple-wall. With such guidance as this book affords one can enter into the spirit and appreciate the delicacy and excellence of the performance.

To visitors of the Metropolitan Museum in New York his text will have a special interest, in that he gives an account of the methods employed and of the success attained in making plaster casts of the reliefs which depict the famous expedition sent out by Queen Hatasu (Hatshepsu) from Thebes by way of the Red Sea to the land of Punt (the Somali coast), which are intended to adorn the walls of the Egyptian room in the Museum. The series promises to form one of the most striking exhibits in any museum in the world, and it will probably be as near to the original as can be expected in the case of work of such extreme difficulty and delicacy both in respect of execution and coloring.

In her old-fashioned quarto, "Flower Grouping in English, Scotch, and Irish Gardens" (E. P. Dutton & Co.), Miss Margaret Waterfield, author of an attractive earlier volume, "Garden Colour," offers fifty-six sketches of gardens, with decidedly impressionistic effect. In no case has she sought detail. Broad washes of color, with practically no definition in the foreground, give only the merest general suggestion of the plant groups, while the trees and other objects in the background are even more indistinct. It is questionable whether any one familiar with gardens could possibly identify more than one-half of the flowers here depicted. The author has produced charming color effects, and the photographic reproducer has accomplished his task well. The accompanying text is from many friendly hands, but there is no editing to speak of. And yet that matters little in illustrated garden literature. Even the most inexperienced amateur has something to say which is of interest to somebody. In their attachments, garden lovers are not unlike those whom Miss Caroline Fuller describes in more serious matters:

> Every girl in [we refrain from mentioning where] is engaged to some man all the time, and all of the men some of the time, so as to keep on the safe side. It is just like a well-appointed dinner, where you are never left without a plate before you.

In the attractive and ample supply of garden literature, every garden lover ought to find abundant companionship.

Bobbin lace-making is the least expensive of handicrafts, its only necessary equipment being pillow, thread, and bobbins, with which even a neophyte can produce an article possessing both practical and artistic value. Since its reputed invention by Barbara Uttmann, in 1561, it has become an extensive industry on the Continent, and with time has developed a considerable literature of its own. In this country, however, although there are authoritative books for the collector, the bobbin lace worker has had to rely upon scattered articles in magazines and upon inadequate instruction books published by manufacturers of linen thread or of lace looms. The American edition of "Pillow Lace, a Practical Handbook," by Elizabeth Mincoff and Margaret S. Marriage (E. P. Dutton & Co.), changes all this. Those who desire to know and apply the principles underlying a large class of laces, will find it an almost inexhaustible treasure house. Though a little bulky, it is a practical manual. One-fifth of its space is devoted to an excellent summary of historical facts more or less familiar to students of lace, and the remaining four-fifths to patterns and directions. The authors divide bobbin lace into four general classes: Tape Lace, whose design is formed by a curved tape, as in modern Russian lace; Plaited Lace, formed by lines made with one or two pairs of bobbins, a type familiar in sixteenth and seventeenth century patterns; Grounded Lace, consisting of solid figures on a lighter net background—an aristocratic class including Mechlin, Valenciennes, and Chantilly; and Guipure, of solid figures connected by plaits and twists—a large variety represented by Cluny, Maltese, and Saxon. When blended with tape lace, Guipure produces Honiton, Duchesse, and Brussels. For the most part the directions are so plain that she who runs may weave. Those for Russian lace could be followed by any child; but the Torchon directions, on the other hand, might be simplified by numbering the bobbins from the left instead of calling them "pair from A," "pair from B," etc. There is a useful table comparing the sizes of thread from different manufacturers, a glossary of French and German terms, and a valuable bibliography. The only pity is that the title "Pillow Lace" should have been chosen to designate the laces made with bobbins, since all laces, even needlepoint and knotted, employ a pillow.

Word has been received from Dr. Randall MacIver, head of the University of Pennsylvania's expedition to northern Egypt, announcing the discovery of a vase whose inscriptions indicate that it belonged to Cleopatra. The vase was in a niche of one of the ancient tombs at Anibeh, and with it were found two ebony boxes containing toilet articles of ivory and gold. Dr. MacIver has also found specimens of pottery and metal articles of the early Roman period. They will soon be shipped to this country and exhibited in the university museums.

A memorial exhibition of the work of Saint-Gaudens is now open at the Metropolitan Museum of Fine Arts. The collection will remain on view for at least six weeks. Many of the smaller objects have been lent to the Museum, and large pieces of statuary are represented by plaster casts or photographs.

Paintings by Bruce Crane are on exhibition at the Pratt Institute, Brooklyn, till March 14. Among the exhibitions at the dealers' galleries are paintings by Walter L. Palmer, Noé's, March 14; pictures by George H. Storey, Powell's, March 14; etchings by Bracquemond and Félix Buhot, Frederick Keppel & Co.'s March 25.

At an auction at Christie's, London, February 15, the following prices were paid for drawings: Rosa Bonheur, Peasants and Sheep, £357; Vicat Cole, Harvest Time, £126; C. Fielding, Llyn Tal-y-Llyn and Cader Iris, £147; Birket Foster, The Rialto, Venice, £105; J. Holland, In Venice, £126; J. Israëls, Sailing a Toy Boat, £325. A painting, Dolly, by Sir Luke Fildes, brought £220.

Finance.

RECOVERY FROM PANIC DEPRESSION.

Even while the recent financial panic was still acute, the length of the resultant period of trade reaction was eagerly discussed. Naturally, therefore, when panic itself has disappeared, but when business has contracted, production has been curtailed, and laborers have been discharged, the probable duration of the depression has become a still more vital topic. The consensus of opinion has been that the period would not be so long as it was after 1893, when continuous recovery did not come until 1897, or as it was after 1873, when revival on a large scale was deferred until 1879.

This belief in a shorter term of "hard times" was based chiefly on the three great advantages possessed by the country now as compared with either 1873 or 1893—its sound currency, the strong position of the national treasury, and the independent wealth of the agricultural communities. Some of the financiers whose opinions were published at the opening of the year went so far as to predict that depression would be ended by next July. When the productive industries, which had all but stopped during the two months of suspension of cash payments and paralysis of credit, began cautiously to resume in January and February, the habitual optimism of the community asserted itself. In some quarters, it was said that the "boom" of 1906 and 1907, interrupted by the breakdown of credit in October, would now be resumed on its former scale. Announcements from nearly all branches of trade, that business was showing great improvement, were taken as proof of this belief.

The inference was rather hasty. It is true that trade is more active than it was; but that is in comparison, not with this time last year, or even with last August, but with the complete stagnation of December. In the steel and iron industry, for example, production a year ago was going on to the full extent of the country's capacity; orders could not even be taken in hand except after long delay. During December, on the other hand, barely 28 per cent. of the producing capacity was at work. In February, the ratio had risen to 50 per cent. That is to say, the mills were nearly twice as busy as in the month of suspended payments, but only one-half as busy as in February, 1907. In another very different line, dry goods, the arrival of many jobbers in New York in February, when they had hardly troubled themselves to look over agents' price lists in December, was described in some current reports as the renewal of a "commercial boom." In actual fact, neither the number of buyers nor the volume of purchases came anywhere near the figures of twelve months before; prices had been cut 20 to 30 per cent. in order to attract trade; and the sudden appearance of these jobbers was largely a consequence of the almost total suspension of purchases during the panic months.

In short, the practical business man has discerned, as some of the more enthusiastic critics have not, that the course of events in general trade has been precisely that of the stock market; which, indeed, on this occasion as on others, had foreshadowed and is undoubtedly now foreshadowing, the conditions for a somewhat later date. On the Stock Exchange, the market reached its lowest prices on the panic day, October 24; remained in a state of suspended activity during November; advanced and declined uncertainly in December; burst into sudden activity, with rapidly rising prices, during January; and in February fell into such dulness and inertia as had not been seen in four years or more. To-day, it is drifting idly, with prices 25 to 75 points below those of March, 1907, and with volume of business 70 per cent. smaller.

These are the plain facts; they leave the question open, what the next general movement will be, and when sustained activity and prosperity may again be looked for. For one thing, the country is not troubled by the financial disorder which was prevalent in 1894. In February of that year the currency and the treasury began to suffer the full effects of the shock of 1893. Secretary Carlisle had been forced by the scanty surplus and by the rapidly diminishing revenue, to use for ordinary expenditure the gold reserve maintained against government notes. From the stipulated $100,000,000, this reserve was thereby reduced to $65,000,000. The Treasury offered $50,000,000 bonds to make good the loss; the loan nearly failed, and when it was taken, subscribers presented United States notes at the Treasury to get the gold with which to pay subscriptions. The standard of value was confessedly in peril, and consequently every semblance of confidence in business disappeared. In these regards, conditions to-day are radically different from those of fourteen years ago. Public revenues are, to be sure, decreasing as rapidly as in 1894; but the Treasury still has $220,000,000 on deposit in national banks, and the government notes are protected by $150,000,000 gold, absolutely set aside for the purpose. Moreover, the prospect of depreciation of the currency itself, one primary cause of delay in recovery after 1893, is no longer present.

The sequel to 1873, however, was equally free from such difficulties; and, what is more interesting, perhaps, the tone of popular discussion, at the same distance from the panic, as that at which we stand to-day, was distinctly hopeful. Similar predictions of quick reaction, based on similar incidents, were heard in February, 1874. The wheat and cotton crops were above the average, and the increasing excess of merchandise exports over imports, of which much is made to-day, was more than paralleled by the turning of the $119,656,000 excess of imports, in the fiscal year 1873, into $18,876,000 excess of exports in the ensuing twelvemonth. Yet it was more than five years before prosperity had returned in full vigor.

It will naturally be asked, whether, in other respects, the present case so closely resembles that of 1873 as to indicate so long a depression. In some points—notably in the violence of the strain on capital, and the over-exploiting of credit—there is much resemblance. The country is facing some extensive liquidation, just as after 1873; and the buying capacity of the nation must accordingly be curtailed. Aside from this reaction after inflation, the length of the period of depression after 1873 was due to three important causes: a depreciated currency; the financial weakness of Europe, which prevented a stimulus to our industries from that quarter; and a serious collision between capital and labor. The first of these three causes is not present to-day. The second is certainly a smaller factor; for in the seventies France was exhausted by the Prussian War. The relations of capital and labor, as affected by slackening activity and fall in wages, remain for future solution. One further cause has been sometimes alleged for the slowness of recovery after 1873—the decrease in the world's production of gold during 1874, when the output of the precious metal was $5,500,000 short of 1873 and $17,500,000 short of 1871, the greater part of this decrease occurring in the United States. But it must be remembered that gold production, both in America and in the world at large, increased very rapidly after 1874—as it also did, in fact, after 1894. Yet this increase seemed to have no definite influence in shortening the period of depression.

A Star of the Salons

Julie de Lespinasse

By Camilla Jebb

8vo. With 20 Full-page Illustrations. $3.50 net.

Of all the fair, frail, fascinating, and elegant women of the French eighteenth century none was more amiable, none still exercises over our sympathies a spell more potent than Julie de Lespinasse. It is Julie who is the heroine of this volume, which introduces us to the famous salons—those especially of Mme. du Deffand, Mme. d'Epinay, and Mme Geoffrin, not to mention Julie's own salon—which exercised so potent and, on the whole, so beneficent an influence upon the social and intellectual life of the time.

The Nation.

NEW YORK, THURSDAY, MARCH 12, 1908.

The Week.

One aspect of Secretary Taft's candidacy is interesting—the revival of third-term talk. Perry Belmont reports to the newspapers, what we have heard from several other sources, that the President is telling people with heightening emphasis that, if the Chicago Convention does not take Taft on the first or second ballot, it will have to take him. This is not so much a prophecy as it is a threat. It is with a distinctly minatory purpose that the President allows this talk of his to leak out. He wants to frighten reluctant people into acquiescing in Taft's nomination, lest a worse thing befall them. Presumably, he is succeeding to a certain extent. This accounts in part for the increasing confidence of the rich men friendly to Taft that they will be able to persuade heads of corporations to support him. But in how strange a light does this leave the Taft candidacy. It makes it seem not only dictated, but ambiguous—as if the big, strong, and independent Secretary were being used by the President for his own purposes, and would meekly step aside without a murmur if Roosevelt gave the signal for his own nomination. One would not think that any friend of Mr. Taft's could so describe his position. No doubt, however, the Taft candidacy has made great headway. The plans for it in the South have not been executed with the success expected, but elsewhere it has displayed nearly as much strength as its promoters counted upon.

After Ohio with Taft's platform, comes Nebraska with Bryan's. The latter is very long, and four years ago would certainly have been called very radical. To-day, however, it has a mildly conservative flavor. It hits out pretty hard at "predatory wealth," but that unhappy punching-bag has been so bethumped by a more vigorous arm, that it will be inclined to think Bryan's buffets mere love-taps. Still, there is no discounting the seriousness of Mr. Bryan's candidacy. The Populists of his State are for him.

Although the Minnesota Democratic State Committee has endorsed Gov. Johnson for the Presidency, the astonishment with which this news appears to be received, and the prominence it is given among current happenings, are tributes to Bryan's strength. That the Chief Executive of a State, with a notable record for efficiency and popularity, should obtain the endorsement of that State's Central Committee for a higher office, with or without a formal announcement of candidacy, would ordinarily occasion no surprise in any quarter. Favorite sons enjoy certain understood immunities, even this year, on the Republican side. But for a Democratic committee to endorse any one but Bryan is a marvel, if not a portent. We would not minimize the significance of the Johnson endorsement. Every little helps the men who are trying to impress on the Democracy the reasons why John A. Johnson would be an eminently fit standard-bearer for the party. On the other hand, the committee meeting brought into relief the bitter and factious spirit of the Minnesota Bryanites. If there are any Democrats who did not realize before, that Johnson was a highly eligible candidate for their party, and Bryan an autocratic ruler, they may now see a trifle more clearly. Most of those open to conviction, however, knew these things already.

The present exceptional exertions of Federal, State, and local authorities against anarchists differ only in degree from those which followed the assassination of President McKinley seven years ago. The results achieved seem as little likely to solve permanently a perplexing problem. Such new legislation as was passed for the discouragement of attempts against the head of the nation are of no help at all in the present situation. The police in Chicago and other cities throw out their "drag-nets" and arrest numbers of men and women who in few or no cases have the remotest connection with the crimes of violence actually committed or attempted. The Federal authorities, meanwhile, have to rely on a statute which was really intended to repair slips in the administration of the immigration law. Anarchists are not supposed to pass our gates, but since it is practically impossible by any methods this country is likely to adopt to sift them out from the mass of arriving immigrants, we exercise the right to deport them, if caught within three years after landing. The sole policy on which all the members of the immigration commission are said to agree had a hearing in the House of Representatives last week, when Representative William S. Bennet of New York moved to suspend the rules and pass his bill requiring that all aliens convicted of felony in this country shall be deported after they have served their sentences. He secured a majority of 64 to 52 in favor of the measure, though not the two-thirds necessary for suspending the rules. The opposition appears to be based chiefly on supposititious cases in which the deportation law would work hardship and injustice. Doubtless, the family of the criminal will suffer when he is sent back to his own country, just as it suffers when he is sent to prison in the first place. The penal system which leaves the innocent unscathed has yet to be invented. The Bennet bill, which has the support of the National Liberal Immigration League, embodies a principle which this country has long applied to those aliens who become public charges. Let Giuseppi run a stiletto into his neighbor, or Abraham explode a bomb in the street, and, after a term in prison, he is free to return to his old haunts, and possibly his old practices. But let either of them ask for too many nights' lodging at the public shelter, and, unless he has been in the country for more than three years, back he goes to the old country. Secretary Straus has announced his purpose to "rid the country of alien anarchists and criminals falling within the law relating to deportation." Could there be a fitter time for making that law include all criminals, instead of the small minority who come under its scope at present?

The opening statement of Chairman Overstreet of the Committee on Post Offices and Post Roads, in laying the Post Office Appropriation bill before the House shows how much has been done toward reducing the postal deficit without resorting to any of the drastic measures so much discussed last year. There is, first and foremost, the "change of divisors," for railway mail transportation—that highly original, not to say startling, method of dividing a week's totals by seven instead of six to determine a day's average. The estimated result of this is to reduce the cost of hauling the mails by $4,619,285.85 for the coming year. By enacting that carriers shall be paid at a lower rate when the amount of mail hauled exceeds two and one-half tons daily, Congress saves an estimated $1,740,494.63 more. A change in the rate of payment for railway post-office cars saves $935,074.09, while, by sending empty mail bags, furniture, and equipment by freight, as any commercial concern would do, instead of at the highest rates on the fastest trains, $805,679.13 is cut off. Here is a total of over $8,000,000 saved in a single year in a single branch of post-office expenditure. Last year's deficit was only one-quarter more than that. A single additional reform, a system of crediting the post office with the work it does for the other government departments, would change the deficit to a substantial surplus.

The *Railroad Gazette* has some sensible remarks on the difference between natural and artificial conditions of recovery after a panic. It is one thing for manufacture and transportation to creep slowly and painfully back to health under the operation of economic law; it is quite another process when executive or legislative interference hinders the work of nature. After 1873, as the *Gazette* points out, business was left to dig itself out of the wreck and build anew. There was retrenchment, reorganization, receiverships, with, of course, heavy losses involved and much suffering; but in the end the unpleasant but necessary work of recuperation was done. And it was done in accordance with the laws which political economy lays down. There were in operation none of those "artificial and extraneous agencies" which are to-day threatening to retard, at the very time they think to hasten, the recovery. The reference is tolerably plain to the letter of President Roosevelt directing the Interstate Commerce Commission to look sharply after reductions of wages on railroads. So far as this indicates a kind heart, there is nothing to be said against it. So far as it betrays anxiety to win the labor-union vote, there is nothing to be said for it. But so far as it seeks to check the inevitable process of economizing and saving, it is a wholly wrong-headed policy, which is sure to fail, though not until after having made needless mischief. A sharp cutting down of expenses is not only compelled by the financial present; it is the only way to assure the financial future. Our trouble has been an overstrain and waste of capital, and we must now set about accumulating new capital. The chief way to do it is by saving. But saving means pinching somewhere. Despite the President, the thing has to be done even on the railways. With the pay of clerks and the higher officers scaled 10 per cent., the laborers will have to submit to reductions, too. On the Boston and Maine system, the men have agreed to a 5 per cent. cut in wages. On other roads a similar policy is being quietly enforced. In the case of men who work for a daily wage, there are various ways of mitigating the hardship of dull times. They may be kept on at the old wages, but working only half-time. This is the policy adopted by many factories in New England. Where it is desirable to hold the working force together, in the hope of full resumption later, the plan has obvious advantages for both employers and men. But natural law will have its way.

The public generally is to be congratulated on the arrangements for resumption of business by the Knickerbocker Trust Company. That the hardships imposed on the 17,000 depositors through indefinitely tying up their resources, will thereby be in a measure averted, is the most obvious ground for felicitation. Beyond even this, we should suppose that the sentimental influence on financial conditions generally would be considerable. Resumption will be taken as visible evidence that the process of recuperation is well under way—all the more so in that the Knickerbocker failure not only precipitated last October's panic, but was perhaps its typical incident. If the resumption of business proved nothing else, it would at least prove that the wreck of values and impairment of assets were not, even in this most conspicuous instance, sufficient to ruin outright the fiduciary institution involved. That the resumption was made possible, not through the immediate meeting of liabilities, but through what the foreign money markets call a "moratorium," every one is aware. The condition of resumption was that the depositor should surrender his absolute claim to 30 per cent. of his credit, the payment of that percentage being made a first charge on future surplus profits; while of the 70 per cent. remaining only 10 per cent. should be paid in cash immediately, the balance becoming available at stated intervals during the ensuing two years and five months. This long delay the reorganization committee explained as necessitated by the fact that, of the Knickerbocker's assets, "few can be collected within thirty days to six months, more of them fall due or are collectible between six months and one year, and a great many must be carried between one and two years, while others can only be reduced to cash between two years and two years and six months." The explanation is convincing; but it has also impressed many people as fresh proof of the unsoundness of the position created, in advance of last October's panic, by the trust company law and practice. To have conducted an investment business, such as the committee describes, on the basis of $46,000,000 deposits subject to withdrawal on demand, and with an actual cash reserve on hand of barely 10 per cent., was an experiment in hanging over the financial precipice such as had hardly been witnessed in American banking during the past half-century. Looked at from this point of view, the very circumstances of the Knickerbocker resumption ought to bring support to the bill to reform and safeguard the business of these companies, now pending at Albany.

As might have been expected, organized labor is not going to sit still under mere decisions of the Supreme Court defining its status. President Gompers of the American Federation of Labor has called a conference of labor leaders "in the interest of the working people of our country." Now, as always, the effort of the unions is to create the impression that they speak for the workers of the country in general. This is natural, because the effort to secure a special set of laws and exemptions for a certain class in the community can be made to appear less hateful the larger the class benefited. But what relation does union labor really bear to the mass of the toilers? There were in 1900 rather more than twenty-nine million persons engaged in gainful occupations in this country. More than seven million were engaged in "manufacturing and mechanical pursuits" and a million and a quarter of others in those branches of "trade and transportation"—namely, the telegraph, trucking, steam and street railways—which are in the special field of unionism. With the increases of eight years, nine millions would certainly be a low estimate for these classes of workers. Yet the American Federation of Labor, with all its 117 subordinate national and international unions, reported on November 11, 1907, a total paid membership of 1,538,970. It is this organization, embracing about one-fortieth of the population old enough to work, one-twentieth of that actually at work, and one-sixth of the membership of the industries where it is most active, that is now gravely weighing the claims of the Supreme Court to consideration.

The new Constitution for Michigan, to be voted on at this year's spring or fall election, as the courts may decide, inevitably invites comparison with that adopted by Oklahoma last year. They are as widely different as two such instruments could be. Oklahoma began her career as a State by embodying in her organic law a large number of reforms, more or less urgent, for which fights are being made in many State Legislatures. On the other hand, the Constitution which the Michigan convention has drafted is confined to general prescription of powers and duties. Instead of being a statute book, it is simply a frame of government. This is no more than saying that the Michigan plan is to trust future Legislatures and State officials, while that of Oklahoma is to put as many important questions as possible out of reach of their meddling. In many respects the widest divergences in State laws and practices are to be welcomed because of their experimental value. Practical trials of conflicting policies often furnish valuable information. Many of the chief measures before Congress to-day, like the proposal for physical valuation of railway properties and the guarantee of bank deposits, embody principles that are being tried by State governments. But the adoption of a conservative, possibly an ultra-conservative, Constitution by Michigan—the Detroit *Free Press* remarks that "the public's first impression of the revision is decidedly favorable"—would be a refutation of those who so confidently saw in Oklahoma's daring innovations the signs of a new dispensation. The rest of the country is waiting to see how the forty-sixth State's notions are going to work after they have lost their novelty. Indeed, Oklahoma's readiness to try many of these debatable policies may be an argument why others should sit back and watch.

A hearing has just been given at Albany on the proposed act "to prevent cruelty, by regulating experiments on living animals." The subject is one on which disputants on either side have been prone to extreme statements. There are those who would entirely prohibit vivisection. But to them the reply is that it is essential to the progress of medical research and to the discovery of new cures for the diseases of men and women. Against that good, the evil of suffering by rabbits and guinea-pigs cannot be allowed to stand. But there have been undoubted abuses of vivisection; needlessly cruel experiments have been performed; animals have been tortured only to show what was already perfectly well established. It is a humane instinct which protests against all this; and, in our judgment, those champions of experimentation who would resist every proposal to safeguard it against wanton cruelty, take an indefensible position. The bill actually drawn and introduced in the Assembly by Mr. Lee may not be a flawless measure. But in general, the proposed act is a comprehensive and reasonable plan for permitting all the good possible to be got out of vivisection, while preventing the evils. It makes ample provision for necessary experiments. They may be conducted by a college, hospital, laboratory, or board of health. Furthermore, any accredited individual may obtain a license from the State Commissioner of Health to perform the experiments. Certainly, this is broad enough. What the bill aims to prevent is merely vivisection at the hands of irresponsible persons, and to do away with such shocking cases of needless animal torture, in the name of science, falsely so called, as from time to time are brought to light. We understand that the names of 700 physicians, largely from New York and Brooklyn, have been signed to a petition asking that the bill be passed This does not look as if the act were one against the interests of the medical profession. No sane man would wish to hamper the labors of such men as Pasteur and Koch and Behring and Flexner. But physicians cannot draw apart as a class immune from criticism. They have to justify themselves to the humane feeling of their age. Hence we think that they ought to welcome, rather than oppose, the passage of a bill to remove from their profession the reproach which unregulated vivisection tends to cast upon it.

In Germany the Modernist movement is coming off only second best in its contest with Ultramontanism. At the congresses of Würtzburg, held in August last, and of Cologne, the German episcopate waxed fervent in its protestations of absolute submission to the Papal will. "Only by yielding obedience to it and taking it as our guide can the Church be served," was the declaration at Cologne. In all the sees there have been established commissions of control, with inquisitorial powers, for the surveillance of clerics suspected of the Modernist taint. These commissions find valuable collaborators in the newspapers of the Centre party, which have been zealously attacking those members of the priesthood whose adherence to the papal encyclical has been only lukewarm. In Bavaria, particularly, the campaign has been actively carried on. There the Catholic press is in the hands of the *Hitzkapläne*, or fighting chaplains, and university professors or private theologians of questionable orthodoxy have received little mercy. Even Catholic journals of such high standing as the *Germania* and the *Kölnische Volkszeitung* have not escaped censure. In reaction against this revived policy of heresy-hunting the liberal Catholic element in the Rhine provinces has organized itself into a "German Party," with national as opposed to ultramontane tendencies; but its influence is not as yet formidable.

There seems little doubt that the Congo problem, so far as it concerns the issue between the Belgian Parliament and Leopold, is on the eve of a settlement. The King has given way on the chief mooted point, the maintenance of the Crown Domain, with its present special privileges; and its dissolution by royal decree is expected. The minor matters of finance involved do not greatly concern the world at large. Many factors had combined to make this notable victory for progress and justice possible. The thorough awakening of the Belgian national consciousness, the force of public opinion in Great Britain and the United States, and King Leopold's years and growing infirmities made it inevitable that within a comparatively brief time a solution of one of the gravest political and moral problems of our time should be found. Undoubtedly, the firm stand taken by the British Parliament hastened a settlement. Interest will therefore soon shift from the struggle for the redemption of the Congo to the manner in which Belgium proceeds to discharge her new responsibilities.

The international gendarmerie, the creation of which was hailed as the first step in the rescue of Macedonia, has degenerated into a farce. This is not because of the inefficiency of the foreign officers who were appointed as commandants of the several districts. They are good men, who have striven to do their duty, often at the peril of their lives. To understand their position, we must remember that they are usually miles away from responsible authorities, in wild districts and at the mercy of their men, who are the scourings of Asia Minor. Only last autumn, an Italian officer in charge of the district of Kitchevo, hearing that troops were ravaging a Bulgar village, rode at once to the scene, arriving while the massacre was at its height. He plunged bravely into the thickest of the fighting, striking out at the Turkish soldiers with the flat of his sabre, begging and beseeching them to fall back. They threatened to shoot him, and at last by main force carried him to a secluded corner and imprisoned him there until they had finished their work. If the Powers really desire to put a stop to outrages in Macedonia by the Bulgarians, Servians, Greeks, and Turks, the next step would seem to be the organization of a foreign constabulary, together with a staff of European district magistrates. No matter how zealous an officer may be, he cannot be in every section of the district under his command at the same time, or make sure that his men are behaving themselves. The officers of the international gendarmerie cannot depend upon their Turkish rank and file, who are aided and abetted in every act of lawlessness by the Turkish civil and military authorities.

The French Academy last Thursday elected successors to Berthelot, André Theuriet, and Sully-Prudhomme. The new members are Francis Charmes, a member of the French Senate and successor of Brunetière as director of the *Revue des Deux Mondes;* Jean Richepin, the Romanticist poet and playwright, known to us as author of "Le Chemineau," which Otis Skinner played some years ago under the title of "The Harvester," and part author of "La du Barry"; and Henri Poincaré, whose rank among mathematicians and physicists is of the highest. This leaves but one unoccupied armchair in the Academy. Of the new members, the eldest, Richepin, is sixty, Charmes is fifty-nine, and Poincaré fifty-four—an average appreciably higher than that for other recent elections, which have included such comparatively young men as Maurice Barrès and Maurice Donnay. To be one of the Immortals is, after all, not to be immortal. Thirteen members of the Academy have died during the last five years, and of the forty members for the year 1895 only thirteen are alive now. Of the first five members in 1901, in the order of priority of election, four are still alive. These four—Émile Ollivier Alfred Mézières, Gaston Boissier, and Victorien Sardou—have seen many younger men enter the Academy after them, and pass away before.

FOREIGN ANTI-LIQUOR MOVEMENTS

The prohibition wave which has been passing over the South and West during the last two years has its counterpart in a general movement against the use and abuse of liquor in Europe. England's Licensing Bill, which proposes, within a period of fourteen years, to reduce the number of her dramshops by 30 per cent., has already given rise to a bitter contest in which moral principle, financial interests, and vested rights are seemingly to play equally important parts. In France the increase of alcoholism has been coupled with a rapid increase of crime. An added factor is the growth in the consumption of beer and distilled liquors, with a corresponding decline in the consumption of wine, a change in the national taste which is regarded as reprehensible from the point of view of patriotism and hygiene. In Russia the problem of drunkenness is one with which the government, sincerely or no, has been attempting to cope for the last thirty years. The question has recently been brought up in the Duma, but long debates have resulted only in testifying to the appalling magnitude of the evil. In Finland, on the contrary, the establishment of universal suffrage, with the admission of women to the reconstituted Diet, has been followed by the enactment of a rigid prohibition law.

A feature common to the anti-liquor crusade in this country and abroad is that in both it involves a reform whose ultimate result must be a decrease in public income. But there is this important difference between conditions here and in Europe: that the fight for prohibition is carried on, in our own case, by the States, which are only one of two parties deriving revenue from the liquor interests, whereas in England and elsewhere in Europe it is the central government that is asked to lay the axe to the root of the tree from which it alone plucks the fruit. Thus it is conceivable that our Federal government's enormous income from the tax on the manufacture of spirituous liquors might be wiped out by the separate action of the States in enforcing total prohibition. The strain between moral principle and monetary interest is evidently easier on the conscience of any single one of our States than it might be on that of the Federal government or actually is on the British government. With us each State, as it progressively cuts down its revenues from the liquor traffic, presumably undertakes at the same time to readjust its finances in accordance with its income. But the British government, or the Russian government, if it should make the attempt to restrict the consumption of alcohol, would thereby be compelled to face the task of financial readjustment on a vast scale.

The "war against alcohol," as it is known in Continental Europe, is thus, from the point of view of government, an unprofitable one; in the last analysis it is the moral gain that is to compensate for the financial loss; but the practical statesman must undoubtedly hesitate long before assailing the revenues of his country. A recent cartoon in *Punch* shows two topers discussing contemporary politics. "If 'e takes our beer away," says one, "where will 'e get the money for our old-age pensions?" What it would mean to public finances to take the poor man's beer or whiskey from him is shown in the following figures: The Federal government, for the fiscal year ending June 30, 1907, derived $216,000,000 from the liquor tax, out of a total national revenue of $665,000,000, or almost 33 per cent. The United Kingdom, for the fiscal year ending March 31, 1906, obtained from the excise on beer and liquors the sum of £29,500,000, or a little over 20 per cent. of its total revenue. The Russian government in 1906 derived from its liquor monopoly and certain taxes the sum of 600,000,000 rubles out of a total revenue of about 2,000,000,000 rubles, or 30 per cent. A decrease of 30 per cent. in the excise would mean for the United Kingdom a loss of £9,000,000, which is sufficient to disturb the most robust of budgets. In the same way, for the Russian government to combat alcoholism is to decrease its profits as purveyor of liquor at a time when navies have to be rebuilt, the interest on a huge war debt must be paid, and costly agrarian reforms have been promised. A Russian minister of finance has been known to speak of the increasing income from the vodka shops as a hopeful feature of the financial outlook.

That the "war against alcohol" has nevertheless been declared, argues the growing impetus of moral forces. Abroad it is not the older prohibition movement that counts, but an awakening of the masses to the destructive effect of alcoholism on national efficiency. "Degeneration" is closely bound up with the liquor problem. Startling figures have been recently brought forward of the prevalence of the drinking habit among the English factory population, even among women. France attributes to alcoholism her stationary population and her difficulties with army discipline. "Of all countries," says a writer in the Paris *Petit Journal*, "France ought to be first able to give her opinion of alcoholism, because her increase in crime is directly due to it; and confining ourselves to military facts, we are forced to declare that the majority of the soldiers sent to Africa to atone for their crimes, committed their crimes when drunk or because drink had degraded them to a point where crime was possible." In Russia, vodka has been held partly responsible for the peasant's poverty, his shiftlessness, and his incapacity to withstand disease.

LORD CROMER ON GEN. GORDON.

No part of the Earl of Cromer's work on Egypt, which has just been published, and which is reviewed in another column, will be read with more eagerness than his chapters on Gen. Gordon. The sending of that officer to Khartum in 1884, and his unhappy fate there, have been the subject of bitter controversy. On the one hand, we have had the picture of that chivalrous Christian soldier, the "hero of heroes," as Mr. Gladstone called him, basely ordered to abandon the Egyptian garrisons in the Sudan, and then, when he would not, basely abandoned himself by the government responsible for his safety. On the other, we have been told of a headstrong, vacillating, and insubordinate officer, who grossly mistook the nature of his problem, miscalculated his own powers, flatly disobeyed orders, and brought his cruel end upon himself. For twenty-four years the argument has raged, and books and pamphlets and magazine articles have hurtled about; now comes Lord Cromer to write concerning events in which he himself played a great part. What has his clear head, his calm judgment, to tell us of the Gordon tragedy?

There is but little actually new material which Lord Cromer has to furnish. He gives several private telegrams of his own, with a few of Gordon's, not before published. More important is his account of personal interviews with Gordon. But the chief value of the seven chapters which he devotes to the Sudan expedition lies in his judicial review of all the evidence. With singular elevation of spirit, he detaches his own personality from the historic dispute. Gordon's "Journal" had some severe things to say of Sir Evelyn Baring, as he then was; Lord Cromer puts all that aside. He introduces himself when it is necessary to show his responsibility for what was done, or his share in the mistakes that were committed, but except for that, he writes with the high impartiality of an entirely disinterested person. Whatever one may think of his conclusions, one can but admire his restraint, his dispassionate analysis, his unruffled temper.

Looking before and after, Lord Cromer's conclusion is that no Englishman at all should have been sent to Khartum, at the time when the Mahdi was sweeping everything before him to south, east, and west; and that if any Englishman was to be sent, Gen. Gordon was the last man who should have been chosen. This is a hard saying, yet the evidence which Lord Cromer marshals goes far towards justifying it. He shows to demonstration how almost impossible it was to work with Gordon.

This was because he was seldom of the same mind twice in one day, and had not the slightest idea either of sticking to his own agreements or obeying orders. Gen. Gordon was aware of this himself. In his "Journal" he once wrote that he was conscious of having been "very insubordinate," and added: "I know if *I* was chief I would never employ *myself*, for I am incorrigible." To this add intense energy, great driving impulses with a tinge of fanaticism in them, and you certainly get a man little fitted for a complicated and delicate enterprise. He might have a very noble character, as Gordon undoubtedly had, but he would not be a serviceable or coöperating man.

To do anything with him at all, Lord Cromer says that he had to "learn Gordonese." That is, he had to sit down patiently with the mass of conflicting statements by Gordon, and figure out as best he could what was the general drift and net result. Gordon would send Cromer twenty telegrams a day, each positive, sweeping, imperative, but one often contradicting another. The British agent's habit was to let them accumulate till nightfall, and then try to make out the one thread of purpose running through the maze. On top of this dynamic instability, there was the strain of mysticism in Gordon. Lord Cromer gives one crucial illustration of the embarrassment this brought to Gordon's colleagues. On his way to Cairo from England, the General telegraphed that Zobeir Pasha was certain to make trouble and should be, if possible, deported to Cyprus. Once in Cairo, Gordon had an interview with Zobeir, and instantly pitched upon him as the one man to take with him to Khartum! He said he had a "mystic feeling I could trust him." Lord Cromer's dry remark is: "I have no confidence in opinions based on mystic feelings."

It has to be admitted even by Gen. Gordon's panegyrists that he did not abide by the instructions under which he went to Khartum. Lord Cromer's statement is that "he threw them to the winds." But it has been argued that the instructions ought never to have been given; that they meant a cruel abandonment of the garrisons; and that therefore Gordon rose to the higher law of humanity and duty, when he wrote in his "Journal":

> If any emissary or letter comes up here ordering me to come down, I will not obey it, but will stay here and fall with the town and run all risks.

But the simple answer to this is that Gordon not only consented to Cromer's instructions to evacuate the Sudan, but that he *dictated them himself*. This is put by Lord Cromer beyond all doubt. Gordon was, it is true, placed under Cromer's orders; but as the latter wrote at the time to Lord Granville, "a man who habitually consults the Prophet Isaiah when he is in a difficulty is not apt to obey the orders of any one." Accordingly, the whole matter of instructions was gone over with Gordon in person. After assenting to everything—indeed, suggesting everything—he added with his own hand that the instructions were "on no account to be changed." Yet he went off and, as Lord Cromer proves, in the next thirty-nine days advocated five policies, all different from each other, and all flatly opposed to his orders. Plainly, the hero was "gey ill" to work with.

That the British government, having got Gordon into the trap at Khartum, from which he refused to extricate himself was bound to go to his relief, Lord Cromer strongly contends. And he makes out a black case of official negligence and delay in getting off the expedition too late. But the main and original culpability is placed on Gordon. Lord Cromer even challenges the reflection of Gordon, "I have tried to do my duty." In a passage where the great public servant speaks, he says:

> I am not now dealing with Gen. Gordon's character . . . but with the political conduct of his mission, and from this point of view I have no hesitation in saying that Gen. Gordon cannot be considered to have tried to do his duty, unless a very strained and mistaken view be taken of what his duty was. He appears to me to have set up for himself a certain standard of duty without any deliberate thought of the means by which his objects were to be accomplished, or of the consequences which would probably ensue. . . . As a matter of public morality, I cannot think that Gen. Gordon's process of reasoning is defensible. The duty of a public servant placed in his position was to sink his personal opinions, and to consider the wishes and true interests of the government and the nation whom he was called upon to serve.

This must come pretty near anticipating the verdict of sober history. Gordon's heroic stand at Khartum was magnificent, but it was not public service.

PEDIGREES AND PICTURES.

Not long ago in an Italian auction-room, where the contents of an historic palace were being sold, an English critic—and, incidentally, a successful dealer—was observed bidding on all the trash. Copy after copy of pictures, the originals of which hang in the great museums, passed into his possession at base prices. A friend, inquiring into the cause of this sudden aberration of a great expert, received the response: "Of course I'm not buying this stuff for myself; my clients, you see, don't buy pictures; they buy collections."

One is reminded of this incident in studying the sumptuous catalogues issued by so many of our collectors. At the beginning of each descriptive paragraph stands the pedigree of the picture, a tall column of type, which records the famous collections in which the masterpiece sojourned before it was graciously conceded, say, to Mr. Sheetiron of Pittsburgh. The great dealers will assure you that without such a documentary record no picture, however intrinsically fine, can be sold for a long price, or, indeed, sold at all to the average opulent amateur.

Now, we are far from questioning the sentimental value of such pedigrees. It is worth something in cash to feel one's self in the apostolic succession of noble and royal dilettanti, or even the legitimate heir of plebeian but potent collectors whose names shine in the biographical dictionaries. Considered merely as a means of becoming, however modestly, an heir of fame, buying pictures with pedigrees may even seem advisable, on grounds of economy. It costs less, for example, than founding universities, and it lasts longer than sailing cup defenders. But as a means of getting good pictures it has its drawbacks.

In the first place, the ideal pedigree of the dealers—a chain reaching back to the artist's studio—practically never exists. At best, most pedigrees end in the seventeenth century—that is, in a period in every way less critical in t matters than our own. Accuracy in attributions was not the forte of the seventeenth-century amateur, nor was scrupulosity in this regard more common among dealers then than now. All the present frauds, forgeries, and mystifications could be paralleled from that period. We find even Van Dyck repudiating one of his own paintings, apparently either to spite the pupil who had some part in its execution, or the agent who sold it; and we may be sure that where one picture was disowned by its maker, thousands were quietly fathered upon great artists who could no longer speak for themselves. In short, a pedigree of ten stages, covering three hundred years, too often means simply that the picture has been sold under false representations to ten generations of confiding amateurs.

But even the perfect pedigree is of rather little worth from the fact that at any point a copy may have been substituted for the original. How many times has a proud owner received from the restorer, not the shabby canvas he sent, but one in every way newer, finer, and more resplendent. Perhaps, not oftener than sap, not in the family tree, has renewed the blood of ancient lordly families. In both cases the pedigree remains as good as ever; it merely has ceased to apply accurately to the case in hand. But even when an artistic genealogy does begin at the beginning, and there has been no fraudulent substitution, are we really much better off? We can trace, for example, the version of the Madonna of the Rocks in the National Gallery, London, to the altar of the chapel for which we know, documentarily, Leonardo da Vinci painted such a composition. Yet we must regard it as a copy, executed under the master's eye, while the original, the pedigree of which is much shorter and less complete, drifted into the royal collections of France, we hardly know when, and now hangs in unchallenged loveliness and authenticity in the Louvre. In fine, the pedigree of the London picture is correct; it merely happens to have applied from the first to the wrong work of art, while the pedigree of the Paris picture might barely satisfy a fastidious dealer on Fifth Avenue.

So long as our collectors buy not pictures but names, and the glamour of famous collections, pedigrees will probably rule active in the speculative art market. But as soon as the practice of buying pictures becomes common, pedigrees will fall like other over-exploited securities. Meanwhile, those amateurs who buy on the evidence of a trained eye ignoring the dockets of the antiquaries, will not fail to reap their reward. In the possession of fine works of art they may even find compensation for the absence from their catalogues of tall columns, savoring agreeably of the Gotha.

RECENT GERMAN FICTION.

The attitude of German writers towards what was once a comedy figure in their fiction and drama, "the American," seems to be changing. The American heiress in Ludwig Fulda's comedy, "Der Dummkopf," and the prodigal son in Gabriele Reuter's novel, "Der Amerikaner," are products of the American soil and the American spirit, likely to inspire the foreigner with respect for the ideal of manhood and womanhood, which they represent. Even Georg Hirschfeld, in his story, "Der Wirt von Veladuz," though he has based the character of Mrs. Harrison upon the European conception of the American flirt, has given her modern and generally human qualities, which relieve her from the charge of being typically American. While it may interest Americans to see themselves as German writers see them, recent German fiction does not lack qualities which command the attention of the general reading public. There are authors who treat the eternal problem of the sex relations: Kurt Aram in "Der Zahnarzt," Georg Wasner in "Fatum," and Helene Mühlau in "Sie sind gewandert hin und her"; or a question of social morality as Wilhelm Hegeler in "Das Ärgerniss." There are also authors who give their stories an economic background and suggest the change in ethical standards that corresponds to a change in social conditions, as in "Der Wirt von Veladuz." Others are concerned with the individual conscience, as August Friedrich Krause in "Sonnensucher."

Wilhelm Hegeler's "Das Ärgerniss" (Berlin: S. Fischer & Co.) is one of the most remarkable works of fiction recently produced in Germany. Always concerned with matters of conscience, Hegeler is, even in his lighter moods, a writer of great ethical force. In this new book the question of the nude in art is presented in a story, provincial in setting, but of universal significance. The figures of a fountain given to a little German town by one of its most cultivated citizens, and set up in the public square, are the cause of great commotion, and of a child-tragedy of deep pathos. The crusade against the luckless piece of statuary is described with an admirable knowledge of mass-psychology and with a delightful humor. The characters are drawn with skill. The moral that prohibitory measures against a publicly exhibited and inoffensive specimen of the nude in art are likely to open secret gates to the really pernicious in art and letters, is unmistakable, but not so obvious as to offend good taste.

Kurt Aram's "Der Zahnarzt" (Berlin: Egon Fleischel & Co.) presents the vagaries of a soul endowed with the fatal gift of artistic temperament without artistic ability or moral stamina. The influence of the intellectual Bohemia of a modern metropolis upon such a character is impressively depicted. The tragic result of the conflict around which the plot is constructed comes as a surprise; but is thoroughly consistent with the pose so effectively assumed by the dentist-poet. The wife is a well-conceived character; nor does the unfortunate woman who is the cause of the husband's estrangement fail to enlist sympathy as victim of a delusion. Georg Wasner's "Fatum" (Egon Fleischel & Co.) is also concerned with the hackneyed, but ever-fruitful, theme of a third coming between husband and wife. Temperamental and perhaps racial differences distinguish the work of Wasner and Aram. Both are naturalists and moralists, but Aram is imaginative and emotional; Wasner, cool-headed and rational. Wasner has created some capital types of the German bourgeoise overstepping the limits of middle-class morality and ensnaring by her charms the guileless fool occasionally found among the pedagogues or students.

Emmy von Egidy's "Liebe die Enden konnte" (S. Fischer & Co.) and Helene von Mühlau's "Sie sind gewandert hin und her" (Egon Fleischel & Co.) might well exchange titles and yet be appropriately named, for both are stories of love's errantry; in both the heroes are men pursuing an *ignis fatuus;* in both love dies. The difference between the heroines, however, is striking. The one is a woman of yesterday, quick to obey the suggestions of the man she loves and clinging to him even after that love dies. The other is a woman of to-day, as devoted, as loving, as the other, so long as her love lasts, but withdrawing her affection as soon as the object proves no longer worthy. Emmy von Egidy is, like her father, concerned with the inward life of her lovers, rather than with the vicissitudes of their external careers. Helene von Mühlau is more emotional. She is eloquent in her defence of her heroines. As in her first book, the title of which invited comparison with Strindberg's "Confession of a Fool," she pleads for a woman whose life has been wrecked by the man she loved; but unlike the Swedish author, whose intense misogynism is almost ludicrous, knowledge of life and love has not embittered her. The book is well written, and derives additional interest from its passages descriptive of men and places in South America.

Various elements of interest enter into Hirschfeld's "Der Wirt von Veladuz" (S. Fischer & Co.). The commercialization of an isolated place in the Alps, with the resulting demoralization of the inhabitants, the conflict between the spirit of this severe mountain solitude, and the laughing, lively metropolis of the valley; the antagonism between old and new typified in the two generations Freydank and Sternwald—all this is not new, but it is powerfully presented. Nor is the hero with his obstinate opposition to all innovations an uncommon type; but he is admirably individualized. Hirschfeld has borrowed a minor motive from one of his previous works. The lame mistress of the hotel of Veladuz recalls the invalid heroine of "Das Mädchen von Lille." Each is painfully conscious of her physical infirmities and silently suffers another to engage her husband's affection. But the daughter of Jacob Freydank, the sturdy Romanic mountaineer, is a saner and more tangible creature than the neurotic offspring of the German scholar. So the story is concerned less with the delicate problems of supersensitive souls than with more primitive questions of right and wrong. There is a tragic grandeur in Freydank's abandonment of the old estate and his retirement to a hermit's hut when the financial practices of his son-in-law have led to bankruptcy, and wife and child have followed the fugitive across the ocean.

August Friedrich Krause's "Sonnensucher" (Egon Fleischel & Co.) is the story of a soul's growth from its early awakening under depressing social conditions to the painful struggles of maturity. Born into the home of Silesian peasant-weavers, the hero breaks away from the grandfather's tyranny to become a school-teacher. In his profession he meets men who are endeavoring to reconcile Christianity and Socialism and to give a higher spiritual meaning to their vocation. Thus the book reflects that movement among the educators of Germany whch has given us plays like Ernst's "Flachsmann als Erzieher" and stories like his novel "Asmus Sempers Jugend"; and has been the source of serious conflicts with school authorities, as in the case of Wilhelm Scharrelmann. It is a book of serious ethical import, and although some episodes unnecessarily lengthen the narrative, it holds the attention of the reader. The disintegration of the old system of caste traditions so powerfully depicted in Georg von Ompteda's trilogy of the German aristocracy plays an important part in many recent stories. It is interesting to note that the heroines breaking with these traditions seem to be more numerous than the heroes. Otto von Leitgeb's "Sonnensplitter" (Egon Fleischel & Co.) suggests the struggles of such a woman. His heroine is a spoilt child of fortune, waywardly bent upon following her innocent, yet in the eyes of the world unpardonable, impulses. The book presents a vivid picture of life in that society of Germany equally divided between the aristocracy of birth and that of wealth, and succeeds in conveying to the reader a clear idea of the emotional undercurrents below the placid surface. The revaluation of old social standards enters largely into Gabriele Reuter's new book, "Der Amerikaner" (S. Fischer & Co.). At the beginning of her career the author had the opportunity to study the American seeking culture abroad; and she embodied her observations in one of her earliest books, "Episode Hopkins." She has since supplemented her knowledge of things American by personal intercourse with Americans and by reading some of our authors, like Elizabeth Robins and Edith Wharton. The impressions thus gained have crystallized into a sane appreciation of what America can do for the human wreckage seeking these shores year after year. "Der Amerikaner" is one of the many regenerates that inspire foreigners with respect for the healthy spirit of American life. He rehabilitates himself by returning rich and worldly wise, saves from utter financial ruin the old home of his aristocratic parents, and goes back to America with a cousin, who has made herself impossible in the Old World. The story contains a gallery of delightful portraits, and is charmingly told. In matter and manner it is a distinct departure from the "woman novel" with which the author has been associated for the past ten years.

Helene Böhlau is a writer whose whimsical humor gives her a place by herself among the women novelists of Germany. From every page of her latest book she faces us with the gentle smile of one who has known the suffering of man and womankind and has yet been able to construe for herself a bright and hopeful reading of life. Were it not for that humor, her books might be disposed of as the bizarre imaginings of a social anarch. She is one of those who, beneath the crust of our conventions and the varnish of adventitious accomplishments, seeks for the eternally human; and in mating her men and women she absolutely ignores the spirit of caste. Even if the scene of her story is one of those little out-of-the-way corners of the Old World where present-day realities assume the remote aspect of a fairy tale, her heroine's choice of a husband is likely to give the reader a shock. But to the seeker of romance, modern in spirit and setting, this fascinating story of people working out their individual salvation in unusual ways will bring a rare pleasure; for Helene Böhlau is one of the foremost artists among German novelists.

Of short stories the volume by Raoul Auernheimer, "Die ängstliche Dodo" (Egon Fleischel & Co.) is the one most likely to be enjoyed by the average reader. The stories are clever and sprightly. Gerhard Ouckama Knoop implies more than he says in his collection, "Der Gelüste Ketten" (Egon Fleischel & Co.). Each tale is an illustration of the suggestive title. There is no flippancy in his outlook upon the world; he is at heart a moralist and at times he strikes a tragic note. Jacob Schaffner is a comparatively new name. His collection, "Die Laterne" (S. Fischer & Co.) is full of a sweet simplicity, rare in modern German fiction. There is no complexity of characters or conflicts, there are no subtleties of style, yet the book is the work of an artist. His individuality remotely suggests the influence of Gottfried Keller. The little volume is wholesome and delightful reading. Of a quite different character is Gustav Meyrink's "Wachsfigurenkabinett" (Munich: Albert Langen). A product of mordant irony and grotesque fancy, the characters figuring in the book grin at the reader like gargoyles and seem to dance a cancan in face of the world, whose submission to fictitious and antiquated authorities Meyrink lashes with merciless satire. Fiercely polemic in its attacks upon certain features of life in modern Germany, especially upon militarism, the stories cannot fail to appeal to readers with a taste for tabasco.

NEWS FOR BIBLIOPHILES.

William Carew Hazlitt has added another to the long list of his books on bibliographical subjects. This new volume, "A Roll of Honour" (London: Quaritch), is a list of more than seventeen thousand names of men and women who in the British islands, and in the American colonies, have collected books. Of some of these persons nothing more is known than that at some time they were the owners of a few books. In a number of cases Mr. Hazlitt has told us a little of the character of the libraries and what became of them, or of special books in which he found inscriptions, but for the most part the list is merely a bare list. The arrangement is alphabetical, but there are two indexes, the first by place, the second by rank or occupation. A few signatures or inscriptions, are reproduced, among them three of Shakespeare's signatures; the one in the Montaigne of 1603, in the British Museum; another, pasted in a copy of the Second Folio, now owned by Mr. Gunther of Chicago; and a third in a copy of the Aldine Ovid. So many old books are being rebound and the evidences of former ownership being removed by skilful cleaners, that such a record as this, meagre as it is, is of some importance. If all those through whose hands old books are passing could take the time to copy off inscriptions, the results when brought together would be both informing and interesting. Mr. Hazlitt describes one book from the library of Sir Philip Sidney, and reproduces the inscription. He also notes a letter from Sidney to Plantin, the Antwerp printer, ordering books. Another similar letter to Plantin, ordering a copy of the best edition of Ortelius's Atlas, was in the Rowfant collection. The name of Sidney's father, Sir Henry Sidney, does not appear in Mr. Hazlitt's list, though a copy of Halle's Chronicles, 1545, with interesting inscriptions by him, and by his wife, Mary Sidney, was sold at Anderson's in this city, December last.

The manuscript records of entries and preëmptions of land in Kentucky are included in the Anderson Auction Company's sale of March 16. The books contain the names (but, of course, not autographic) of a large number of early pioneers, among them Daniel Boone and Abram Lincoln, father of President Lincoln. In the same sale are several desirable books on Western history, books on the Revolution, Franklin imprints, a first edition of Motley's first book, "Morton's Hope," 1839; and a series of Quaker broadsides.

Some of the better books at the Pyser sale (Anderson Auction Co., March 6), brought good prices, but the majority sold low. Either the interest in first editions of American authors is falling off, or, perhaps, the country has been so thoroughly ransacked during the last eight or ten years in search of first editions, that the supply now exceeds the demand. Bryant's "White-Footed Deer," 1844, brought $216; this was the Alfred B. Street copy, which sold for $220 last season. Hawthorne's "Sister Years," 1839, brought $276. Of this rarity seven copies only are known; and this was presumably the copy which at the Stickney sale, in Boston, last November, brought only $140. The only other copy thus far offered at auction went for $290 in the French-Chubbuck sale, 1904.

Ouida is reported to have left among a confused mass of manuscripts which at her death filled eight trunks a number of interesting letters from persons high in politics and literature. These manuscripts are now in the hands of the British Vice-Consul at Leghorn. Since the British government, in the absence of kin, is the novelist's heir, these letters will probably be returned to the writers while her autographs are likely to be sold to establish a memorial fund.

Correspondence.

THE JOHNSON MEMORIAL AT LICHFIELD.

TO THE EDITOR OF THE NATION:

SIR: Last June my predecessor in office issued an appeal for funds for the reparation and restoration of the birthplace of Dr. Samuel Johnson, at Lichfield. The house is now set apart as a Johnson library and museum, and as such is to be preserved as a memorial of our greatest citizen. Many ladies and gentlemen have subscribed liberally, but I am sorry to say the response has been inadequate for the objects in view. A great deal has been done, but much more is necessary before the birthplace is restored to its original condition, and before it can be said to be permanently safe.

With the subscriptions offered we have been enabled to restore the old bookseller's shop to as nearly as possible its original state. The modern shop front has been removed, and replaced by a double window of the period of Dr. Johnson, and the steps which led to it from that side have been indicated. The ancient floor has been made secure, the old oak beams of the ceiling have been thrown open to view, and other work has been done to restore the shop to the state in which it existed in the olden days.

We are now anxious to proceed with the birth-room above the shop, to reveal the oak panelling, and to make manifest the other features of interest which prevailed when Dr. Johnson was born. Other rooms and the roof require renovation and reparation to make them damp-proof, sanitary, and safe, and we want to put them in complete order as soon as possible.

In a short time we shall be preparing to celebrate the bicentenary of Dr Johnson's birth, and we are undertaking this needful work of restoration in anticipation of that historical event. We wish to maintain the building as a memorial of the great and good man born there, and to hand it on to future generations of the English speaking race. To this end I appeal for further subscriptions, and I hope all classes will join in offering a contribution.

W. R. Coleridge-Roberts,
Mayor of Lichfield.

The Guildhall, Lichfield, Staffs., February 27.

MR. GODKIN AND THE "OWLS NEST."

To the Editor of The Nation:

Sir: I failed to see in your notice of Mrs. Cunningham's "Owls Nest," February 27, any reference to the fact that the founder of the *Nation*, Mr. E. L. Godkin, was one of the interesting personages who flitted across its entertaining pages. He was closely connected, through his marriage to Miss Foote, with the Perkins family.

James M. Hubbard.

Boston, February 28.

Notes.

Among the books announced by Thomas Whittaker, Inc., for the Lenten and Easter season, may be noted the second part of "Mission Preaching for a Year," from Lent to Whitsunday, edited by the Rev. W. H. Hunt; "The Seven Words from the Cross," by the Rev. Frederick Watson; "The Pathway of the Cross," by G. T. Shettle; and "The Christian Life Here and Hereafter," by the Rev. Frederick Watson, edited by the Rev. C. B. Drake, with a preface by the Lord Bishop of Ely.

E. P. Dutton & Co. have ready this week "The Canterbury Puzzles and Other Curious Problems," by Henry Ernest Dudeney, illustrated; and a new, cheap edition, revised, of Horace Plunkett's "Ireland in the New Century."

The most important publication of Scribners for this month will be "The Life and Letters of George Bancroft," by M. A. DeWolfe Howe.

Henry Frowde, in connection with Chapman & Hall, is publishing a new Dickens in twenty volumes, to be known as the Eighteenpenny Illustrated Edition, from the price per volume. All the copyright letterpress and reproductions of the original illustrations are included.

Bliss Perry's excellent Life of Walt Whitman is now issued by Houghton, Mifflin & Co., in a revised edition, with an appendix of new material. From the same house comes a revision of Mrs. Orr's "Life of Browning," by Dr. Frederic G. Kenyon, containing many new letters and other fresh documents.

Sir Clements Markham has made a translation of "Lazarillo de Tormes," the famous Spanish picaresque story. It will be published this spring.

In February, 1907, F. Hopkinson Smith gave, before the Harvard Union, an address that now appears as "Old-Fashioned Folk," with pleasant sketching of the simplicity of family life in the past generations. Mr. Smith pleads for courtesy and genuineness in this age of rushing commercialism. The R. E. Lee Co. of Boston brings out this book in a limited edition of 700 copies for sale, admirably printed and attractively bound.

"Adam Smith and Modern Sociology: A Study in the Methodology of the Social Sciences," by Albion W. Small (The University of Chicago Press) is designed to show that Adam Smith's economics are only a part of his wider social philosophy; that his isolated treatment of the wealth interest was only provisional; that Smith recognized its necessary subordination to the more fundamental canons of ethics; and that Smith's disciples have often misinterpreted their master by according to economic principles a degree of absoluteness which he never intended. The chief criticism to be passed on the book is that its main contention, while correct, was specifically elaborated twenty years ago, and that to revamp it does not require 238 pages. To substantiate this proposition—that the book's essential thesis was set forth explicitly long before Professor Small devoted himself to the task—we may cite, for example, an essay by Woodrow Wilson, entitled "An Old Master" (Charles Scribner's Sons, 1893). The essayist says (pp. 16, 17):

> It is interesting to note that even this vast miscellany of thought, the "Wealth of Nations," systematized though it be, was not meant to stand alone as the exposition of a complete system; it was only a supplement to the "Theory of Moral Sentiments"; and the two together constituted only chapters in that vast book of thought which their author would have written. . . . In the "Wealth of Nations" he ignores the operation of love, of benevolence, of sympathy, and of charity in filling life with kindly influences, and concentrates his attention exclusively on the operation of self-interest and expediency; because he had reckoned with the altruistic motives in the "Theory of Moral Sentiments," and he would not confuse his view of the economic life of man by again forcing these in where selfishness was unquestionably the predominant force.

Doubtless uncritical economists have often erred in their narrow exaltation of a part of Smith's philosophy into a universal system. But if, as Professor Small declares, "the extreme decline into unmorality" may most properly be instanced in the case of a single writer, the sinner worthy of "this bad eminence" might at least have his name spelled correctly. It was J. R. M'Culloch, *not* McCullock, as it is printed in the text (p. 198), and again in the index (p. 243). The proof-reading is occasionally faulty. A stray line appears at the bottom of p. 148; a decapitated sentence and paragraph on p. 149; and some contorted spelling, p. 152, line 12.

Thomas Davidson was one of those philosophers who, by their unlimited learning and their keen pursuit of one Absolute after another, arouse a feeling of reverence in some and of distrust in others. No one, at least, in the case of Davidson would fail to be impressed by the tremendous personal force of the man, of which his writings gave but an imperfect notion. In his "Memorials of Thomas Davidson" (Ginn & Co.), William Knight has undertaken to fix for a while this fleeting impression of the man himself, by writing a sketch of his life, and by adding various reminiscences of William James and others. A number of documents relating to his sociological projects in London and New York, together with letters about his philosophical studies, complete the memorial.

A volume of 415 large pages on "Ralph Waldo Emerson, sa vie et son œuvre," of which the greater part discusses his *idées générales* and their application to individual and social life, would seem to exhaust the subject, as well as the reader. M. Dugard's work is in fact too thorough in every sense of the word; it is a question whether the real spirit of Emerson is not crushed beneath so much analysis. (Paris: Armand Colin.)

It was only the other day we were bewailing the lack of a French "Who's Who," and now such a volume ("Qui êtes-vous?" imported by Lemcke & Buechner, New York) lies before us. It is designed professedly on the English original, and needs no detailed description. The comparatively small number of names (about 5,000, although the sum will no doubt be increased in future editions) permits the avoidance of abbreviations, which make "Wer Ist's" almost a torture to consult, and the arrangement of topics by paragraphs—a great convenience. Only French celebrities are included; we could wish the book were expanded to comprise all the Latin countries of Europe.

That our impressions of travel vary greatly according to the means of locomotion is Carlo Placci's apology for the pictures of travel, "In Automobile" (Milan: Treves). As we walk, ride, take the post chaise, train, or motor, he holds, our aspect of the world changes. Hence most of the older descriptions of the road must be rewritten in terms of the automobile. So evidently just seems this view that it is a disappointment to find little that is unmistakably "motoristic" in Signor Placci's fluent Italian. He is an impressionist quite as these adorers of a passive sensorium were before petrol came to their aid. He flashes a single apparition—the gaping crowds of Apulian villages, for example, and then another in the familiar kaleidoscopic way of Bourget in "Sensations d'Italie." The roads traversed with many illustrious friends, as the several dedications of the eighteen chapters show, reached from England to Algeria, but most of the routes lay in Italy. The author is perhaps at his best in disentangling mixed nationalities and civilizations, as in the charming essay on the Trentino. Maeterlinck was, we believe, the first critic of note to discuss the æsthetics of the motor car. He came to the opinion that one recalled at the end of the day nothing but the onrush itself. Signor Placci, who sees much in his flights, might well be cited to the contrary—perhaps because he regards two hundred kilometres a day as rather more than the ideal run.

Has the English schoolmaster gone to sleep in Leipzig? We have studied Carl Beck's prospectus of his projected edition of the "Speculum Humanæ Salvationis," only to find our wits dazed by the new English thereof. Exactly what is meant by "the arts performed in Alsatia during the fourteenth century" we are not sure. And certainly: "One source of the most valuable mediæval ones as for Christian iconography, superior even to the importance of Biblia pauperum existing by great many of modern editions," is more than cryptic. From the chapter contents we compile this necklace of gems: Apostatic angels, Creation of the primer life, three valiants bringing King David water from Bethlehem, Jesus' internment, the 5 sage maids and the 5 other foolish ones. All of which demonstrates that even the Middle Ages may be treated humorously.

Prof. Julius Kaftan of the theological faculty of Berlin University has just published "Drei akademische Reden" (Tübingen: J. C. B. Mohr). These addresses are on "Die Lehre Kants vom Katagorischen Imperativ"; "Der ethische Wert der Wissenschaft"; and "Die Einheit des Erkennens."

In commemoration of the one hundredth birthday of David Friedrich Strauss, a collection of the poems, letters, and other literary remains still in manuscript will be exhibited in the Schiller Museum, Marbach, from the middle of March to the close of the summer.

With the second part of the "Biblia Hebraica," the critical edition by Prof. R. Kittel of Leipzig, assisted by several other scholars (Leipzig: Hinrichs), is completed

Pastor Ludwig Schneller, who was born in Jerusalem and has lived there for over thirty years, has just added to his classical Apostelfahrten und Evangelienfahrten, a new work, entitled "Unter dem Halbmond Nordafrikas," with the sub-title "Kreuzfahrten durch das Gebiet einer untergegangenen Kirche" (Cologne-Marienburg: Palästinahaus). This story of a tour of investigation of the historic sites of the church of North Africa is semi-popular in character, yet critical. The book is richly illustrated.

Miss Valfrid Palmbrin of the Royal Library of Sweden, who was sent last year by the Swedish government to investigate conditions in this country, has published a preliminary report, in which she notes the following among other significant features: (1) the large freedom given to the public in the use of the library, exemplified strikingly in the open-shelf system, which, on the whole, she pronounces a great success; (2) the thoroughness with which the material in the library is indexed, making its entire resources immediately available to the student of any subject; (3) the liberality with which the wants of all classes are provided for in stocking libraries; (4) the rapidity with which borrowers are supplied (on this point the librarian of Columbia University is quoted as saying, that "while a man may sometimes wait two days and a half in the National Library at Paris to receive the books applied for, and two and a half hours in Berlin for the same purpose, in New York the desired book will be in the hand of the applicant in two and a half minutes"); (5) the large sums annually given by men of wealth to the building and endowment of libraries; (6) the generous provision for children and the systematic study of their particular problems; (7) the development of the travelling library; (8) the work of the library training schools.

The North Dakota Public Library Commission, the youngest of the twenty-seven State Library Commissions now in existence, announces the following programme for its first year of work: To organize an educational reference library, to be free to all residents of the State on payment of the cost of transportation of books; to start a legislative reference department; to reorganize and administer the 175 travelling libraries, formerly under the supervision of the State Superintendent of Education; to aid in the general library development of the State by giving such counsel as may be desired in regard to founding, building, and administering libraries.

In accordance with a suggestion made at the Cooperstown Centennial celebration last August, the Fenimore Cooper Statue Association has been formed. Its leading members are President Charles W. Eliot, Harvard; Prof. Thomas R. Lounsbury, Yale; Prof. Brander Matthews, Columbia; and Rudyard Kipling. The local members in Cooperstown are G. Pomeroy Keese, John Worthington, the Rev. Ralph Birdsall, and Harris L. Cooke. The object is to erect a statue of the novelist in the vicinity of his old home in Cooperstown. For this purpose, a popular appeal for funds will be made to lovers of Cooper throughout America. The project is a revival of a similar, but, as it proved, untimely plan, devised soon after Cooper's death, in 1851, by an association of which Washington Irving, William Cullen Bryant, and George Bancroft were members. Donald G. Mitchell, the only surviving member of that association, is a member of the present organization.

The New York City Association of High School Teachers of English has made the following recommendations to the Conference on Uniform College Entrance Requirements in English:

> That the Uniform Entrance Conference be asked to recommend the publication of two volumes of poetry especially adapted to pupils of high school age: viz., one volume of lyrics, and one volume of narrative and descriptive poems. (Tentative lists of poems such as the committee had in mind were submitted.)
>
> That the conference be requested to select a series of English and American short stories, and authorize the publication of the collection in a volume suitable for use in the schools.
>
> That this association suggest the arrangement of the books for reading and practice in six groups, somewhat as follows:
>
> Drama—"As You Like It," "Julius Cæsar," "Henry V.," "Merchant of Venice," "Twelfth Night."
>
> Narrative and Descriptive Poetry—Chaucer's Prologue, a complete story from Spenser's "Faerie Queene," Books iii., vi., xxii., and xxiv. of a good translation of the Iliad, the Odyssey, Goldsmith's "Deserted Village," selections from Byron's "Childe Harold," Tennyson's "Idyls of the King," Arnold's "Sohrab and Rustum," Coleridge's "Ancient Mariner," Lowell's "Vision of Sir Launfal."
>
> Lyric Poetry—The volume of lyrics suggested above.
>
> The Essay—De Coverley Papers, Lamb's "Essays of Elia," Emerson's Essays or Orations, Stevenson's Essays, a volume of short modern essays from various authors.
>
> The Novel or Romance—"Henry Esmond," "Lorna Doone," "The House of the Seven Gables," "Ivanhoe," "Tale of Two Cities," "Silas Marner," "Kidnapped."
>
> The Short Story—The volume suggested above.
>
> That the conference be requested to make the minimum requirement of books for reading and practice one from each of the six groups mentioned.

It is expected that all schools will select many more books from the groups than the six required, but it is thought desirable that the examination be limited to a number of books that it is possible to read within the year immediately preceding the preliminary examination. This plan is recommended because it seems to the association that at present there is danger of too great emphasis on special preparation on the content of books for examinations; that greater stress in examinations may wisely be laid on the pupil's power in composition, and on his ability to deal with material outside the books required for reading; that nothing is gained by examining candidates on the content of books read in the earlier years of the high school course; and that the expectation of such examination and the review for it exert a pernicious influence on the teaching of literature in the high schools.

Jacob Chamberlain, for forty-nine years a missionary of the Dutch Reformed Church of America among the Telugus of southern India, died March 2 at Madanapalle, India. He was born at Sharon, Conn., in 1835, and after graduation from the Western Reserve College of Ohio in 1856, and from the Theological Seminary of Brunswick, N. J., in 1859, he studied medicine. Then he entered the missionary field. Since 1901 he had been engaged in literary work in the Telugu and Tamil languages. He was chairman of the committee for bringing out a new version of the Bible in the Telugu tongue; and he translated the liturgy of the Reformed Church into Telugu. Among his books are "In the Tiger Jungle," "The Cobra's Den," "The Bible Tested in India," "The Religions of the Orient," and "The Opportunity of the Ages."

Ludwig von Schwabe, professor of classical philology and archæology in the University of Tübingen, has died in his seventy-third year. Besides his revision of "Teuffels Geschichte der römischen Literatur," he is particularly known for his works on Catullus.

CROMER ON EGYPT.

Modern Egypt. By the Earl of Cromer. 2 vols. New York: Macmillan Co. $6 net.

Teachers of English would do well to weigh the style of these volumes. Here is a man who has never been known as a professional writer, who has had no literary practice beyond the composition of official reports; yet who now comes forward as a master of lucid statement and apt phrase, able to convey his thought vividly and precisely in language which yet attracts no more attention to itself than the dress of a woman of perfect taste. The instance shows that the writing of good English is neither a trick nor to be acquired as such. Lord Cromer drives us back to what Sainte-Beuve said of Napoleon, or Matthew Arnold of Gen. Grant—that clear-cut thinking is indispensable to the best writing. In the present case, we have, in addition to a style notable for simplicity and point, sagacious reflections, remarks which light up whole principles of government, characterizations of individuals and of races which reveal a philosophical mind with a disciplined imagination. All these are fruits of long experience and patient study. For rich content, then, as well as pleasing form, this work of a seasoned statesman is one to be not only read but pondered.

The title of the book accurately marks its scope. It is Egypt of the Khedives, of the Dual Control, of English dominance, that Lord Cromer has taken for his ample theme. Archæology is omitted. It is history in the making, and the statecraft that makes it, which we have here put before us. The career of Ismail Pasha is dwelt upon only to the extent of showing how his reckless extravagance, heightened by corruption and oppression, plunged his country into such a tangle of inextricable finance that the European Powers had to intervene. With rapid pen is traced the course of the successive commissions, the establishment of a Ministry, the fixing of a Civil List, the laborious reform of the finances, the Aráhi rebellion, the bombardment of Alexandria and Tel-el-Kebir. Larger space is given to Gordon; those powerful chapters we have dealt with in another column. Then comes the reconquest of the Sudan, and the final settlement of the government of Egypt, so far as it can be settled by outsiders, in the Anglo-French agreement of 1904. To the series of great reforms wrought in Egypt, Lord Cromer devotes summary chapters. The whole makes up a record of practical and humane statesmanship for which it would be hard to find an exact parallel. The charm of these volumes is that the work is recounted by one who was a large part of that which he describes, and whose grasp and penetration as a writer are so evidently the product of his great qualities as an administrator.

The government of Egypt is unique among all countries of the earth:

> One alien race, the English, have had to control and guide a second alien race, the Turks, by whom they are disliked, in the government of a third race, the Egyptians.

As no counterpart for this can be found elsewhere, so no other system of government could apparently be so confused and incapable of being made to go, as the Egyptian. The intricate overlapping of jurisdictions and the conflict of authorities are enough to drive a political theorist to despair. Yet the Anglo-Saxon genius for successful though utterly illogical administration has triumphed even here. In a striking page, Lord Cromer, after describing the alternatives which hard logic seemingly forced upon the British in Egypt, says in words which have all the shrewdness and force of Bagehot or even Burke:

> Being debarred from the adoption of either extreme course, the Englishman fell back on the procedure which is endeared to him by habits of thought and national tradition. He adopted a middle course. He compromised. Far be it from his Anglo-Saxon mind to ask for that *situation nette* which is so dear to the logical Frenchman He would assert his native genius by working a system which, according to every canon of political thought was unworkable. He would not annex Egypt, but he would do as much good to the country as if he had annexed it. He would not interfere with the liberty of action of the Khedivial government, but in practice he would insist on the Khedive and the Egyptian Ministers conforming to his views. He would in theory be one of many Powers exercising equal rights, but in practice he would wield a paramount influence. He would occupy a portion of the Ottoman dominions with British troops, but at the same time he would do nothing to infringe the legitimate rights of the Sultan. He would not break his promise to the Frenchman, but he would wrap it in a napkin, to be produced on some more convenient occasion In a word, he would act with all the practical common sense, the scorn for theory and the total absence of any fixed plan based on logical reasoning, which are the distinguishing features of his race.

It is dogged as does it. That seems to have been the motto of the English in Egypt, and a good part of the explanation of their success there. They have come back to their problem day after day, until at last it has had reluctantly to yield its solution. It was the application on an immense scale of the qualities of a business man. For these, Lord Cromer has a kindling admiration. About Kitchener as a soldier he says little, but testifies warmly that "he was an excellent man of business"; he did not overrun his financial estimates of the cost of a military expedition, and he had the virtue, rare among soldiers, of not thinking that "extravagance was the necessary handmaid of efficiency." That it had been both extravagant and inefficient, was the curse of Egyptian financial administration. The spirit in which Lord Cromer set about reform is indicated in a characteristic passage:

> Finance is often considered a repellent subject, and, because it is repellent, it has gained a reputation of being more difficult to understand than is really the case. There are, indeed, some few economic and currency questions which are abstruse, but the difficulty of understanding even these has been in no small degree increased by the cloud of words with which writers on subjects of this sort often surround issues in themselves simple. One merit of the Egyptian financial situation was this, that no semi-insoluble economic problem lurked between the leaves of the Budget. The finance minister has not, as in India, to deal with a congested population, of whom a large percentage were in normal times living on the verge of starvation. He never had to refer to the pages of Malthus or Mill, of Ricardo or Bastiat. The complications arising from a bewildering political situation had done a good deal to obscure the problems which he had to solve, and to hinder their solution. But, in truth, all that was required in Egypt, in order to understand the situation, was a knowledge of arithmetic, patience to unravel the cumbersome system of accounts which was the offspring of internationalism, and a sturdy recognition of the fact that neither an individual nor a state can with impunity go on living for an indefinite period above his or its income.

We have not space to follow Lord Cromer into the detail of Egyptian reforms. How "the three C's"—the courbash, the corvée, and corruption—were attacked he narrates with full exposition of the difficulties and frank confession that the triumph has not been complete. What engineering has done for the soil, and education for the people, he lays before us. When all is said, what is his final attitude? We note at once that Lord Cromer is modest beyond the wont of our imperialist travellers. His thirty years on the spot have left him more distrustful of his own infallibility than Senator Beveridge's thirty days left him.

> I was for some while in Egypt before I fully realized how little I understood my subject; and I found, to the last day of my residence in that country, that I was constantly learning something new.

Lord Cromer is deeply impressed with the great gulf fixed between the Oriental and the Western mind. A European may fancy that he understands a child of the East perfectly, but one day he suddenly finds himself "in the presence of a mind which is as strange to him as would be the mind of an inhabitant of Saturn." With no complacency in his own judgment, therefore, Lord Cromer ventures on certain forecasts of the future. He thinks that England should not annex Egypt. The destiny of that country is to be self-governing. To that he looks forward, though not until after a long time has elapsed. It is well, he argues, not to attempt to hold Egypt too closely. The bonds which bind her to Britain are brittle; moreover, they are "not liked." To admit this is a part of Lord Cromer's clear-sightedness. In spite of all that has been done for the Egyptians, they are not grateful. They perversely want Egypt for the Egyptians, and Lord Cromer thinks that in time they should have it. He distinctly expresses his sympathy with the national movement. But this is only of a piece with the singular large-mindedness of Lord Cromer's attitude throughout these volumes. In them we get much more than historical records and political discussions; we get the overflow of a full and powerful mind. The book is so noteworthy because the intellect and the character which have gone to its making are so exceptional. Lord Cromer is not only a great administrator; he stands before us as a great thinker.

CURRENT FICTION.

On the Knees of the Gods. By Anna Bowman Dodd. New York: Dodd, Mead & Co.

The date is 415 B. C. "Clotho, that skilled spinner of men's fates, was busy with her secret, dark designs. As though in sinister sport, far and wide she cast her dread threads. For a Corinthian merchant lay dying, and Maia would soon be free." This beautiful slave girl, who had given her heart to Ion, the athletic son of an Athenian merchant prince, would now be in a position to prove the sincerity of her vows. But, greatly to her distress, she discovered that her lover had protested too much; already his betrothal to a daughter of the Athenian aristocracy had been declared. To be sure, it was only a father's ambition that had goaded him to the match. Myrto was not perfectly to his liking. Her features were those of Phidias's "famous Juno," whereas Ion would have preferred, he said, "a wife who resembled an Aphrodite—the Juno-type is not, and never was, to my liking." Nor was Myrto herself quite happy, for she had already a handsome, though unacknowledged lover of her own, Timoleon.

Clotho spins on. The reader is reminded of the mystery that enshrouds Maia's origin: a foundling, left amongst the tombs, with a locket round her infant neck. Now she resolves upon a systematic hunt for her mother, who—she seems to feel it instinctively—is still alive, longing for her lost child. Meanwhile Ion embarks on the disastrous Syracusan expedition, and is given up for lost. Timoleon wins the hand of Myrto. Maia searches for Ion in the prison quarries of Sicily, finds him, nurses him back to vigor, brings him to Athens. And now, wondrous to relate, it transpires that Maia, the ex-slave, is none other than the long lost sister of Myrto.

> Indeed—yes. I am Maia. Lost Maia! Oh Mother, take me to your heart." . . . Then [so closes the story] taking the moved face between her hands, Hermione searched it as though it was a scroll. A cry rang up that pierced the air. For Hermione knew her daughter. And the two women clung together, and wept as they clung.

It only remains to add that, in the course of the narrative, the reader is given a full account of a stirring chariot race at Olympia; and that such notable figures of the time as Socrates and Alcibiades are frequently met with. We venture the suggestion that, in another volume, the author might depict for us the grandeur that was Rome. No need to devise a brand new plot: let Clotho respin the old; the habit must be strong upon her by this; and, after all, the product could not be any more hectic, illiterate, or futile than "On the Knees of the Gods."

The Black Bag. By Louis Joseph Vance. Indianapolis: The Bobbs-Merrill Co.

The charm of true picaresque adventures never palls; it is only the feeble invention of it, the trumped up rascals and galvanized activities thereof, which are a weariness and an offence to the reader of current fiction. "The Black Bag" is probably not a masterpiece, but it has certain very pleasing qualities. These persons and their exploits are absurd enough and not too absurd. The plot is not without complications, and yet is free of the air of cold contrivance which hangs about so many of our clever novels of the hour. The most engaging thing about it is its youthfulness, its buoyancy, its joy of motion. One thinks of Louis Joseph Vance as a very young man, a cheerful undergraduate who takes everything quite light-heartedly and seriously. No doubt he admires his heroine sincerely; she is just the kind of girl one would like for a partner at a "Prom." or on Class Day. The hero is that envied person, the young alumnus abroad. There is no mistaking the gusto with which the tale is told. "Upon a certain dreary April afternoon in the year of grace, 1906," our young gentleman, described as "Artiste-peintre," finds his pleasant life suddenly concluded by the loss of all his property in the San Francisco disaster, and himself in London with just enough money to get home. He is advised not to return, as there is nothing left for him in San Francisco, but nobly determines to go back, and "fight it out shoulder to shoulder with his brethren in adversity." Unfortunately for this plan, the girl appears on the scene, and in the immediately devolving duty of rescuing her and her jewels from a trio of villains, one of whom figures as her father, our cheerful Philip promptly and permanently loses sight of his brethren in adversity. The species of pursuit which ensues, with a Gladstone bag full of jewels as prize, is sufficiently spirited and amusing.

Ten to Seventeen. By Josephine Daskam Bacon. New York: Harper & Brothers.

Since the joyous day when "The Madness of Philip" took its place among classics of infant depravity, a new book by Philip's sponsor may be counted upon as a fresh if not permanent addition to the sum of human gayety. This "Boarding School Diary" does not disappoint the adult reader at least; the contemporaries of Roberta, Connie, and Ben would probably think it both tiresome and silly, for the foibles common to imaginative girls of the designated age are certainly ridiculed to make an Olympian holiday. It is amusing reading, in spite of a certain suggestion of coarseness which makes one feel that while the Elmbank girls have apparently never undergone the snickering age, their chronicler has not yet outgrown it. The incidental poems, one "for each Event, just as in real books, at the top of chapters, and in Mr. Kipling's stories," will touch a chord of remembrance in the mind of any one who has ever edited a school paper. They are truthfully done and bad to the verge of excellence, all but "The Unseen Playmate," which is a lyric of real and haunting charm.

The Greater Mischief. By Margaret Westrup. New York: Harper & Bros.

Some years before the opening of the story, Susan Fielding lost her husband in a shipwreck off the Irish coast. The shock of the disaster brought on a dangerous illness, and when, weeks later, she was allowed to have her infant child again, she did not at once recognize it. From this basis is developed an elaborate plot, which includes a new and happily ending love affair for Susan. It cannot be said that the author has succeeded in rendering this rather factitious plot very plausible. But it is undeniable that the character of Susan Fielding, as a study of motherhood under certain highly specialized conditions, is admirably and powerfully rendered. Speaking generally, the personages of the story (including Euphemia, a truly comical dog) are realized far more vividly than in the run of contemporary novels. It is a pity that their effectiveness should be so often endangered by the coil of a futile and over-ingenious plot.

Gotty and the Guv'nor. By Arthur E. Copping; with 24 illustrations by Will Owen. New York: Mitchell Kennerley.

The text of this book is hardly worth the pictures. This is unlucky, since they are in Mr. Owens's most delightful manner. This illustrator has a habit of really illustrating, a rare thing in this day of spoiled and indifferent draughtsmen. When the author describes one of his persons as "a tall man with a square face and white trousers," it does not occur to Mr. Owen to represent him as anything else. To be sure, he cannot help representing him as something more, reinforcing the rather thin and forced humor of the text by a pictorial humor both rich and fine. The adventures of Skipper "Gotty" and his employer are of a sort amusing enough in real life but merely trifling on paper, unless a good deal embellished by the fancy of the recorder. Mr. Copping reminds us a little of the beaming gentleman who has always just seen a funny thing, funniest thing you ever saw in your life, the humor of which in his version of it seems to you much diluted.

Epistolæ Ho-elianæ: or the Familiar Letters of James Howell. With an introduction by Agnes Repplier. 2 vols. Boston: Houghton, Mifflin & Co. $5 net.

When Joseph Jacobs edited an edition of the "Familiar Letters" some fifteen years ago, he remarked that strangely enough there had not been for 130 years a reprint of this former favorite. To us, however, this neglect of Howell seems less surprising. He was one of the first in this field of literary enterprise, and for a century his Letters were popular as a sort of novelty. Then other writers came forward with letters more genuinely familiar—Swift, Lady Mary Wortley Montagu, Walpole, Cowper, and others—to overshadow Howell. Moreover, Howell's writing is filled with allusion to passing events, which, after a generation or two, were completely forgotten except by students of the period. Thus it happened that for a long time enough second-hand copies were on the market to supply the demand for "Epistolæ Ho-elianæ." But a revived interest in Howell is indicated by a pretty edition in Dent's Temple Classics and by the present beautifully printed volumes. And for the reader who is not scrupulous to run down the meaning of every casual reference, this classic offers abundant entertainment.

For Howell was eminently a man of the world. Born, probably in 1594, the son of a Welsh clergyman, he was educated at Jesus College, Oxford. He travelled much abroad, in the Low Countries, France, Spain, and Italy, on business connected with a glassware manufactory in London, and he became an accomplished linguist. In 1622 he visited Spain and went thence to Sardinia, in a vain endeavor to obtain satisfaction for the seizure by the viceroy of Sardinia of a richly laden ship belonging to the Turkey company; and he was in Madrid when Prince Charles, accompanied by Buckingham, came to woo the Spanish Infanta. He was secretary of an extraordinary embassy to Denmark; he filled various appointments in the civil service. In 1643 he was sent to Fleet prison, partly for political reasons, partly, perhaps, because of his debts; soon after the execution of Charles I. he was liberated, and at the Restoration he was appointed historiographer royal. With the chief literary men of his day, including Ben Jonson, he was on friendly footing; certainly they could not be jealous of the mediocre verse of which Howell produced a large amount. Such are the scenes, such the activities mirrored in Howell's Letters.

One obvious source of popularity is the ease of his style. When we remember that he was the contemporary of Hobbes, Walton, and Sir Thomas Browne, we are astonished at the simplicity and shortness of his sentences. He is a forerunner of Dryden in making English prose the flexible instrument it became in the eighteenth century. Nor was this characteristic of his style an accident; he deliberately adopted it. On his very first page, speaking of the difference between a letter and an oration, he says:

> The latter of the two is allowed large side robes, as long periods, parentheses, similes, examples, and other parts of rhetorical flourishes; but a letter or epistle should be short-coated, and closely couched; a hungerlin becomes a letter more handsomely than a gown. Indeed, we should write as we speak, and that's a true familiar letter which expresseth one's mind, as if he were discoursing with the party to whom he writes in succinct and short terms.

So succinct and free from involution is Howell that not a single sentence calls for a second reading.

But Howell's mastery of the technical side of his craft, indicative though it be of a clear and orderly mind, cannot make every page interesting. There is, as we have said, much space devoted to matters that are of trivial import to the modern reader, even the educated, to whom alone this book can appeal. Here one must turn the leaves quickly. A more serious defect is that too many of these letters are a pretence. They never were really written as printed. Discrepancies of all sorts prove that Howell composed some of them years after the event, to keep the printer busy. They are merely what he might have written had he thought to do so at the time, and consequently the falsetto note is common. We do not now allude to the essays of one sort and another—like those on the languages of Europe. These we accept without difficulty for what they are. But the pompous and pious commonplaces, in a forced style, become tiresome. At the beginning we are entertained, as by this sentence from his first letter to his father:

> I humbly pray your blessing may accompany me in these travels by land and sea, with a continuance of your prayers, which will be as so many good gales to blow me to safe port; for I have been taught that the parents' benedictions contribute very much, and have a kind of prophetic virtue to make the child prosperous.—(I., 8.).

But after fifty or more passages in a similar vein we reach the limit of our patience at this farewell to a friend who is mortally ill:

> God gave you a bon voyage to the haven you are bound for (which I doubt not will be heaven), and me the grace to follow, when I have passed the boisterous sea of this tumultuary life, wherein I have already shot divers dangerous gulfs, passed over some quicksands, rocks, and sundry ill-favoured reaches. While others sail in the sleeve of fortune you and I have eaten a great deal of salt together, and spent much oil in the communication of our studies by literal correspondence and otherwise, both in verse and prose. Therefore, I will take my last leave of you now in these few stanzas.—(II., 301.)

With due allowance for the change of conventions in two hundred and forty years, and with allowance also for the current taste for literary conceits, we cannot make anything of this but posturing.

Notwithstanding these deductions a heavy balance remains to the credit of Howell. A man far inferior in powers of observation and expression could, with such opportunities for travel, make an interesting book. The volumes contain much that is quotable about the people he saw and the events in which he participated. Samuel Rawson Gardiner, in the preface to "Prince Charles and the Spanish Marriage," puts Howell in "the list of writers whom it is impossible to use with confidence," but untrustworthy or not, his account of the arrival of Prince Charles in Spain, and of the subsequent doings is a lively story, livelier, perhaps, than the cold facts. It is a pretty tale—how the prince jumped the wall of the orchard in which the Infanta took her morning walk, and how "she, spying him first of all the rest, gave a shriek and ran back." "The Spaniards themselves confess there was never princess so bravely wooed," even though the match was finally broken off. Then, too, there are his circumstantial details of the assassination of Henry IV. of France and of Buckingham, and the numberless amusing anecdotes which, whatever their historical basis, are at least true to the temper of the age.

For this is something from which Howell, despite his small hypocrisies, could not escape. With his odds and ends of gossip and of comment he paints us an admirable picture of the time, with its religious zeal, its credulity, and superstition, its cruelty and disregard of human life. He tells us, for instance, of his Edinburgh landlord, who fell into a dispute with a shoemaker on the subject of bishops; and "the shoemaker grew very furious and called them the firebrands of hell, the panders of the whore of Babylon, and the instruments of the Devil." All of which reminds us of Calvin's hatred of bishops, or of Milton's dictum: "Episcopacy before all our eyes worsens and sluggs the most learned and seeming religious of our ministers." Then there are tales of curious or impossible maladies—of "the young man of twenty-one" who lived in High Holborn. "Being dissected after his death, there was a kind of serpent with divers tails found in the left ventricle of his heart." For some time this man's eye had grown "more sharp and fiery, like the eye of a cock, which is next to a serpent's eye in redness." Whence Howell concludes that "the symptoms of his inward disease might have been told by certain exterior rays and signatures." Howell is also interested in the report that on four different occasions when death occurred in the Oxenham family a "bird with a white breast was seen fluttering about the bed and so vanished." And behind all these shifting scenes which he chronicles is the sombre background of war—sieges on the Continent and civil war in England. Whatever else might happen, war was the one great fact to be reckoned with. It gave a poignancy scarcely comprehensible to-day to that prayer to be delivered from battle, murder, and sudden death.

In some aspects of his writing Howell was a forerunner of the modern journalist; and though he was but an amateur, his judgment as to the significance of events seems about as sound as that of his highly trained professional successors. He records, indeed, many trivial and inconsequent happenings; but for this no twentieth-century journalist can throw a stone at him. He seems not to have grasped the importance of Charles's ship-money tax and the full strength of the undercurrent of discontent with that luckless monarch. Under date of August 1, 1633, Howell writes rather lightly:

> There is some murmuring against the ship money, because the tax is indefinite, as also by reason that it is levied upon the country towns as well as maritime, and for that they say Noy himself cannot show any record. There are also divers patents granted, which are muttered at as being no better than monopolies.

But Howell's Letters, viewed as a contribution to journalism, drive us to the old conclusion that the enormous development of our facilities for gathering and distributing news has improved little or not at all our capacity for interpreting it. Telegraphs and telephones, typesetting machines, swift presses, and express trains leave the human mind and its powers just where they were in the seventeenth century, or the age of Plato. The daily serves us with a thousand fresh facts every morning, but as to what they all mean and whither they ultimately tend, we know no more than our grandfathers.

Miss Repplier's Introduction is in her usual manner, discriminating, appreciative, and felicitous. The book would be more interesting for an occasional footnote as to persons or events; and far more useful were there an index, or even a table of contents. We do not ask for Howell with an elaborate critical apparatus, but at least an index is indispensable.

A Princess of the Old World. By Eleanor C. Price. New York: G. Putnam's Sons. $3 net.

The Queen of Letter Writers. By Janet Aldis. New York: G. P. Putnam's Sons. $2.50 net.

The Salon. By Helen Clergue. New York: G. P. Putnam's Sons. $3 net.

Literary Rambles in France. By Miss Betham-Edwards. Chicago: A. McClurg & Co. $2.50 net.

In the first three volumes of the above list is illustrated *le triomphe des dames* (to use Gerzan's phrase) during the period which accorded the amplest recognition to their social supremacy; and from Mademoiselle de Montpensier of the blood royal to Madame Geoffrin of the bourgeoisie, we are presented with a set of portraits of successive Frenchwomen exemplifying the diplomatic adaptibility of their race under widely varying conditions. These studies, which are of unequal merit, are designed for popular reading, without any successful attempt at original interpretation of life, character, or times.

The story of *La Grande Mademoiselle* as retold by Miss Price, is, however, an exceedingly finished and accurate presentation of Louis XIV's dashing cousin, with abundant references from contemporary memoirs, and most of the later important authorities. The book thus offers a comprehensive retrospect of the epoch with the *grande dame* in the leading feminine part. It is worthy of note that the narrative of *La Fronde* is here conducted with combined equity and spirit. Exception might be taken to the stress laid on the first twenty years of the Princess's life, to which is allotted much more than one-third of the volume; the six years of *La Fronde* fill nearly as much, while the remaining forty-one are more summarily dealt with. Miss Price's view is that the entanglement with Lauzun reduces one's interest in the lady, whose influence, whether social or political, waned sensibly after that uninviting episode. How carefully the abundant material has been sifted appears from the rapid sketches of character and situation—Mazarin, Henrietta Maria, Condé, etc.—and from the aptly-quoted Mazarinades, or other squibs, serving as chapter headings. This biography glides over unsavory gossip.

Madame de Sévigné as treated by Miss Aldis fares less happily, for as was the case with the author's "Madame Geoffrin" (noticed in the *Nation* of January 18, 1906, p. 55), we find the "Queen of Letter Writers" screened and overshadowed by her retinue. This appears to be in keeping with the spirit which leads to the following expansion of an undisputed opinion:

> Is it not a truism that the elusive quality called "charm" can irradiate a plain face into something more alluring than beauty, while the lack of its leaves perfect features a mere dull mask of cold inanity? (p. 27).

Monsieur de la Palisse himself could not better this. Several chapters in this work narrate abundantly familiar but hardly essential passages in history or literature, such as the account of the Hôtel de Rambouillet (ch. iv.), and the over-elaborated tale of Fouquet's extravagance and ruin (ch. xiii., etc.). The biographical element thus outweighs literary discussion. It is difficult to understand why a book on Madame de Sévigné, though containing manifold quotation from the inimitable letters (in extremely literal translation), devotes not a single chapter of disquisition or appreciation to the one attribute singled out in the title page.

"The ethical viewpoint of the age," Miss Clergue holds, must be understood before embarking on any examination of the hostesses, who constitute the topic of her work. Her introduction seeks to describe the growth of the social institutions which rendered such lives possible, while emphasizing the point that feminine qualities and capacities were, after all, the *causa causans*. Any one so privileged as to obtain introduction to cultivated French society at the present time may see exactly the same combination of tactful leadership, suggested and never imposed, with true unselfishness and engaging simplicity—all the difference, in short, between Mademoiselle de Lespinasse and Lady Holland. The details of this development given by Miss Clergue, are accurate, but not unfamiliar. Of the following studies, five in number, dealing with famous hostesses of the eighteenth century, the same remark holds good, for in these essays are merely embodied the results of compilation from authorities in no sense difficult of access. Offhand literary declarations occasionally call for revision. Thus, although a note (p. 165) declares that Rousseau was "of purely French extraction," it needs no very shrewd discrimination to find in most of his work the ineradicable tendency to ethical didacticism which stamps the Genevese literary breed, and indeed characterizes to this day much of the writing of Protestant Switzerland. Again, Diderot's "Le Père de Famille," played in 1761, though in one sense a dramatic point of departure as a completely bourgeois play, is not an unprecedented breach with the dramatic practice of France; it combines already existing elements, rather than truly innovates (p. 182).

With Miss Betham-Edwards as a guide, any corner of contemporary France becomes interesting. She and Mme. Duclaux (A. M. F. Robinson) are among the few foreign women who write about France, after years of residence, with the finer *flair* which comes only through sympathetic attraction. The present volume is composed apparently of miscellaneous magazine articles of travel, with a casual touch of judgment or appreciation. Every sketch reveals the charms of provincial town or landscape in the country of which Shelley declared that it contained nothing to see. Limoges and Saumur thus commemorate Balzac; with Brantôme and Périgueux are associated Bourdeilles and Montaigne; to Nohant we trace "The Footsteps of George Sand"; in Brittany we find Souvestre; in Amiens, Gresset. Besides these reminders of past authors, the volume indulges freely in literary chat, local description both light and accurate in touch, and various impressions derived from special knowledge of French life. We can vouch for the truth of the pictures of Rocamadour, Périgueux, Vézelay, and Limoges. Such slips as Henrietta (for Helen) Maria Williams (p. 39) indicate over-rapid proofreading.

Napoleon: A Biographical Study. By Dr. Max Lenz; translated from the German by Frederic Whyte. New York: G. P. Putnam's Sons. $4 net.

The author is known for the best biography of Bismarck we have, but he will not add to his reputation by the present book. It is not in any sense a work of erudition, being devoid of both footnotes and preface, though the author has investigated with some care the writings and sayings of Napoleon. It is on this, on the character of the man as he reveals himself in documentary material, that Dr. Lenz insists, though even at this point his presentation is neither novel nor striking. If the note varies from that of other biographers, it is in that Napoleon is made to appear a little nebulous, a trifle inclined towards Teutonic idealism—"his soul," as Dr. Lenz puts it, "weighted with feelings of loneliness and vague melancholy." So largely is the author absorbed in this aspect of his hero, that one almost forgets Napoleon was a soldier, half a dozen perfunctory and not very convincing lines disposing of his greatest battles.

The standard of accuracy is moderate. Thus on two consecutive pages, 300, 301, the following corrections have to be made: "The English [Sir John Moore] had landed at Corunna and ventured on a sudden advance into the interior"; they did not land at Corunna, or anywhere near it, and their advance was a deeply significant movement. We are then told that the intrigue of Fouché and Talleyrand in 1808 was for the object of putting an end to Napoleon's power, whereas the real import of the intrigue was the fact that Napoleon's plunging into the Spanish war had opened the eyes of these two astute observers to the immensity of the risk he was running; their intrigue was to provide a successor to Napoleon should he come to a sudden end—a point which Dr. Lenz does not understand, as his opening paragraph on page 301 further shows. These errors, trifling though they may appear, demonstrate that Dr. Lenz is often far from catching the true significance of the events he narrates; many similar ones may be found. Even in the matter of style, in the English translation at all events, the author is not very satisfying; he is verbose and inelegant. One must on the whole conclude that, although the book is not entirely without interest on the side of the character of Napoleon the non-combatant, it was hardly worth the honor of translation.

Studies, Historical and Critical. By Pasquale Villari; translated by Linda Villari. Photogravure illustrations. Imported by Chas. Scribner's Sons, New York. $3.75 net.

Since Mommsen's death, Prof. Villari has been the dean of European historians, and, although he has recently celebrated his eightieth birthday, he is still actively teaching and writing. It is nearly fifty years since he won an international reputation by his life of Savonarola. Since then he has written on Machiavelli, on various periods of Florentine history, and on many smaller topics. He has, besides, educated a whole generation of Italian historical students, served as Minister of Education, and taken a leading part, by speeches and pamphlets, in the great social questions which have confronted Italy since her unification.

We welcome this volume of essays, because they will introduce to English readers one of the weightiest writers of his generation, and, through him, several interesting modern Italians. Prof. Villari's longest paper—"Is History a Science"—discusses on all sides a question which still perplexes a certain class of minds. He begins with Buckle, proceeds through Lorenz, Bernheim, Seeley, Freeman, and their school (who mistook, as we think, *scientific method* for *science*), and comes down to the present, with the late Henry Sidgwick's criticism of "The Historical Method," and Prof. Karl Lamprecht's dictum that history is only applied psychology. Prof. Villari concludes his review with a statement of his own position. As he is as thoroughgoing as a German pedant in his application of the scientific method to research, his opinions ought to command a hearing in quarters where the dry-as-dust theory of historical study still prevails.

Of the other essays, one summarizes the youth of Count Cavour so pithily that it offers the best twenty-page description accessible in English of the apprenticeship of that statesman. Another is devoted to Luigi Settembrini, professor, patriot, prisoner in Bomba's dungeons, and literary historian. The subject of the third biographical paper, Francesco De Sanctis, was the foremost Italian critic of his century, a philosopher and patriot, and a wonderful inspirer of youth. Villari was his pupil and friend, and in the portrait which he sketches he amply justifies his admiration for the powerful mind and lofty character of De Sanctis, whose critical work has been almost wholly neglected outside of Italy. Of another Neapolitan contemporary, his brother-in-law, Domenico Morelli, Professor Villari gives an intimate study. Morelli stands out among the Italian painters of the last half-century, and this description of him combines the man and the artist so skilfully that one explains the other. The last two essays are on Donatello and Savonarola.

This inventory can give no idea of the variety of interest in Professor Villari's papers; but it may at least suggest what a rich equipment he has for writing history. Literature, criticism, and art are for him not less important than "original sources" as means to historical study. In this respect he resembles the great British historians, who have never divorced history from the highest human concerns, and who have usually—like Gibbon, Grote, and Macaulay in the past, and John Morley and James Bryce to-day—taken part in public life. We close with a single quotation, which is a fair sample of Professor Villari's quality, and of the excellent translation which Signora Villari has made:

> So long as Homer, Virgil, and Dante are only shown to boys on the anatomical table, where we professors have already dissected them, robbed them of life, and destroyed the inner spirit that had throbbed for ages in their immortal works, we might as well teach the boys algebra or chemistry, and pretend to train their æsthetic taste by that method! We have exchanged purposes for appliances, converted method into the end of learning.

A Short History of Greek Literature. By Wilmer Cave Wright. New York: American Book Co. $1.50.

The writer of a history of Greek or Latin literature has nowadays a peculiarly complicated task. He must have learning, and a detailed acquaintance at first hand with the whole range of the authors whom he professes to summarize and to appreciate, to weigh and to trace out their relations and mutual dependence. He must also have read an immense mass of disquisitions and discussions; for he must know the main body of the opinions of other scholars up to the most recent date. He must digest all these as best he may, and then, if possible, come with a clear head and a light heart to the actual matter and manner of his authors. If they possess literary beauty, he must, first or last, taste these beauties, with a spirit free from prepossessions, unencumbered by the embarrassments of erudition. He must in short be saturated with learning, and yet forget his learning, when he uses the inward eye. Again, he must have some native æsthetic endowment, trained by the wide reading of great literatures, which alone begets the cultivated and genuine critic. He must, if possible, contribute something fresh himself, some individual point of view. He must, moreover, have a turn for expression. He must not plod along like a plough-horse when he is trying to convey an impression of the airy flights of Pegasus. Moreover, it is reasonable to require from an historian of literature some knowledge of human nature, which the linguist, or the scholar, *qua* scholar, does not necessarily possess. He should have some practical insight into the workings of the human heart, some knowledge of the history of ethical standards, and some imagination in applying them. For example, what sort of woman was Sappho? Are we to trust Welcker, or Mr. Winter's opinion? How came the author of the "Oration on the Crown" to disappoint us by taking a bribe? Was not Aristophanes rather dense in his presentation of Socrates? Or, was he merely fooling? Last of all, it is easier to compose a history of literature on the scale of the Croisets, who have ample room and verge, than to preserve proportion and perspective in a "Short History of Greek Literature" which includes ten or twelve centuries.

This, then, is the Herculean labor (shall we say Amazonian?) which Professor Wright has undertaken, and which she has completed, it is fair to say, in accordance with the exacting details specified above. The sketch of the Homeric question, notwithstanding its brevity, is one of the most readable and complete, within its limits. The wave of scepticism has receded somewhat since Wolf and Grote. We know more about ballad poetry: a critic like M. Bréal is in a position to speak of its characteristics with more authority and insight than Wolf. Schliemann and Dörpfield have discovered for us an historical background which Grote largely rejected, or hardly dreamed of. The contradictions and *cruces* in the problem are well brought out. The discrepancies which offend many German scholars exist, as Mrs. Wright shows, only in their own standards and imagination. As Professor Wright says, "the duel between Paris and Menelaus did not trouble the logical sense of a court audience listening spell-bound after a banquet"; and again:

> There is not in the whole body of Homeric epic, a single discrepancy of detail which we could not throw into the shade by parallels from Cervantes, Scott, and Thackeray, to range no further.

Nothing in this volume is more sympathetic and satisfactory than the little monograph on Theocritus. The writer permits herself the digressive remark that the genuine pastoral flourishes only under balmy semi-tropical skies. Though the Irish are poetic, "the sun of Ireland shines too cold" for the pastoral. Hence, too, the English pastoral is mostly laid in an artificial Arcadia, less plausible than Tasso's "which never was on land or sea." It is a reflection of a reflection, the echo of an echo. But the pastoral which is not an imitation, which has simply received the electric shock of contact with Theocritus, springs once more from fresh earth with native and authentic charm in such verses as Bracciolini's "Ravanello alla Nenciotta," and Nenciotta's reply. Next to the sketch of Theocritus, we may note the admirable appreciations of Herodas and of Menander.

Professor Wright's manual touches on everything down to the Sapphic ode, the Pæan of Isyllus, the nome of Timotheus, the Delphic hymns. The bibliographies do not of course aim at completeness; they might have mentioned Headlam's article on Herodas in the "Encyclopædia Britannica," and his later strictures on Nairn's edition; under Plutarch, Perrin's admirable "Themistocles and Aristides." On the whole it may be said that this little book should have a wide circle of usefulness. Adequate learning, wide reading, the critical equipment, good taste and good judgment, a pleasing and readable style, a thread of individuality shining through the mass of the material—these are the qualities which impart to this small manual genuine value beyond its modest pretensions.

Under the Syrian Sun: The Lebanon, Baalbek, Galilee, and Judæa. By A. C. Inchbold; with 40 full-page colored plates and eight black-and-white drawings by Stanley Inchbold. 2 vols. Philadelphia: J. B. Lippincott Co. $6 net.

Cairo, Jerusalem, and Damascus: Three Chief Cities of the Egyptian Sultans. By D. S. Margoliouth; with Illustrations in color by W. S. S. Tyrwhitt. New York: Dodd, Mead & Co. $3.50 net.

Mr. and Mrs. Inchbold did not travel as ordinary tourists. They spent some two years in Syria and Palestine, settling down first in one town or village and then in another, making each place the centre of excursions into the surrounding country. And first of all, Mr. Inchbold devoted some four or five months to the study of Arabic, that he might be independent of a dragoman, coming finally, so he tells us, to be counted by the natives "as *ibn-el-blad*, a son of the country." Both Mr. and Mrs. Inchbold appear to have entered into peculiarly cordial relations with the natives, receiving and accepting invitations to weddings, circumcisions, and other festivities, and becoming fairly well acquainted with the real life of the people. The travellers were also present in Baalbek on the occasion when the German engineers restored to its place the keystone of the great portal of the Temple of Jupiter; they visited Bethlehem at Christmas; saw the holy fire at Jerusalem at Easter; and at Epiphany witnessed that extraordinary scene of the immersion of the Russian pilgrims in the Jordan. They were the guests of the Druses at Daliyeh on Mt. Carmel, where Lawrence and Alice Oliphant once made their home, and they visited the picturesque Greek penal monasteries at Quarantana and in the Wady Kelt.

Mrs. Inchbold describes the country and their experiences with vivacity, and some of her accounts of the people, their sayings, and their doings, are extremely interesting. When, however, she ventures out of her proper field and undertakes to explain the religion of the Druses, or discourse on history or archæology, she cannot always be safely followed. For instance, in vol. II., p. 324, writing of Mt. Carmel on the Mediterranean, she mentions King Uzziah of Judah as having had his vineyards there; and there also she places "the man Nabal who had great possessions in Carmel," and whose wife, Abigail, David married after he had frightened Nabal to death. Evidently she is quite unaware of the fact, familiar to the ordinary Bible student, that the Carmel of these incidents lay in quite a different region, in the Judaean Mountains some distance southward of Jerusalem. Mrs. Inchbold's descriptions of the scenery, the wonderful coloring of the sunsets, nature's marvellous springtide flower festival and the like, are full of enthusiasm; but the frequent repetition of such descriptions, at considerable length, and in a rather florid style, with similar runs and thrills of ecstacy, becomes tedious. After reading thirty-five chapters full of word painting, it is a relief to come upon chapter xxxvi., the "Experiences of the Artist," in simple and direct language.

The *raison d'être* of this book, however, is not so much Mrs. Inchbold's descriptions as Mr. Inchbold's pictures. The coloring is in general very vivid, and, if you look at them consecutively, with a strong light, they produce somewhat the same impression as Mrs. Inchbold's style. But if you take them separately, and especially on an "English" day, you will appreciate their full charm. One of the peculiarities of Syrian scenery is its coloring, which no photographs can reproduce; and in reality the tints of these plates are not too intense for subjects painted under the Syrian sun.

"Cairo, Jerusalem, and Damascus" is quite frankly a picture album. The letterpress has been composed "as a relief from the labor of editing and translating Arabic texts," to accompany the illustrations. It must frankly be said that the history of Cairo here given is dreary reading. It is a succession of monotonous murders and usurpations, varied with accounts of the buildings, which are too detailed to be appreciated without plans or drawings in addition to the pictures. Of Jerusalem we have a sketch from the time of David down to the present, with special reference to the buildings, and particularly the history of those which have stood on the present Haram area. The section on Damascus differs from the other two in that there is practically nothing about the history before the Arabic conquest, and in that the author has made use of contemporary Arabic accounts of various captures of the city by Arabs, Mongols, and others, accounts which, though often rather tedious, after the manner of that kind, contain also some very interesting facts, with occasional romantic and picturesque incidents. He has added as an appendix a new report of the massacre of the Christians in 1860 and the philanthropy and heroism of the noble Algerian exile, Abd-al-Kadir, by which so many lives were saved. The publication in English of this record is a welcome contribution to the history of these massacres.

Mr. Inchbold's pictures exhibit chiefly the country and out-of-door life, native types and costumes, scenic effects of mountain, plain, and lake; some of the sketches, like the Rain Effect over the Dead Sea and Jericho (p. 476) are gems. In contrast, Mr. Tyrwhitt deals with interior effects and city scenes. In this one volume he offers fifty-eight colored plates and four line drawings. The greater part of these, depicting the streets of Cairo, are beautifully executed with carefully worked-out detail. The two pictures of the Sphinx and the neighboring desert are less satisfactory. The pictures of Jerusalem are almost exclusively confined to the Dome of the Rock and the surrounding area within the Haram enclosure; and they convey, even to one familiar with the scene, a new conception of the picturesqueness and beauty of the sacred area and its buildings. Mr. Tyrwhitt's keen appreciation of the visual charm of Oriental cities is well shown in his pictures of Damascus and also in their arrangement. We are introduced to the city first by that beautiful outlook from Salahiyeh, which must linger in the mind of every one who has seen it: in the distance, a brown and arid expanse of desert; just below, a luxuriant forest; and in the very centre of this the roofs of the city, with graceful minarets and domes. In other sketches we get fascinating glimpses of the River Baradah within and just without the walls, the strange confusion of covered bazaars, at once street, restaurant and shop, where groaning camels and their drivers wind in and out among the buyers and sellers, drinkers of coffee, and sippers of sherbet.

Both books are welcome additions to the literature of Oriental travel. They are not done with when once read, but will be taken up from time to time for renewed study, because they are in reality picture galleries.

The Formation of the New Testament. By George Hooper Ferris. Philadelphia: Griffith & Rowland Press. 90 cents net.

For a long period theological debates have arisen over the extent and method of inspiration, and the changes have been rung on "verbal inspiration," "plenary inspiration," and various other methods of divine providence in the production of literature. The conservatives have usually had the better of the argument in point of logic, but the liberals have steadily won by appeal to fact. It has seemingly occurred to few of the contestants on either side to inquire into the historical basis of the fundamental notion of an authoritative body of literature. The necessity of a fixed rule of faith, to which final appeal must be made in all matters of belief and practice, has been quietly taken for granted. The disputants have differed over what belongs in the canon, and as to how its various elements should be interpreted and related to each other, but the rightfulness of the idea of an authoritative canon of sacred writings, to be forever the norm and final law in all matters of faith, has seldom been called in question within the folds of the orthodox Protestant churches.

Mr. Ferris makes bold to criticise, from the point of view of evangelical Protestantism, the very notion of a closed scriptural canon. He declares that "a New Testament Church," which is the desire of the Protestant heart, must be a church "with no idea of a New Testament." He maintains that Protestants are inconsistent in appealing to the Apostolic age as the normative period of Christianity, and holding at the same time the tenet of a definite collection of authoritative literature, since the Church of the first century, and indeed of the greater part of the second century, possessed no such body of scripture. The individual writings existed, but the gathering of them into a canon had not yet taken place. "The period of Christianity over which hovers the greatest romance, while she was secretly building up that influence that was soon to surprise the world, was the period when her authoritative literature was without limit," or, as the author elsewhere makes clear, when there was no authoritative literature as such.

The motive for the formation of a Christian canon Mr. Ferris finds in the rise of heresy, and the need in the hierarchy of a test for orthodoxy. It cannot be said that utility in spiritual edification, or popularity in devotional use, was the principle on which certain Christian writings were gathered into a New Testament, else the Shepherd of Hermas, the Epistles of Clement and Barnabas, would certainly have been included. These books were more popular for devotional reading than some of the writings which were adopted, and on the other hand there is evidence that the letters of Paul were regarded as authoritative before they gained recognition as suitable for reading in Christian assemblies. Doctrinal motives governed the selection of canonical documents, and the closing of the canon was in the interests of the hierarchy, not of Christian life and service.

Mr. Ferris does not hesitate to maintain that the received notion of a fixed body of inspired Christian scripture is an incubus upon the churches which think themselves free. By means of it and "the baneful and pernicious notion that every doctrine and practice of the Church must somehow find Apostolic authority," the sense of perspective in the Gospels has been utterly destroyed, and Christianity has been led away "from the great spiritual and ethical message of its Master." Because of this harmful belief there is to-day "no open vision." The very notion of a closed canon must be abandoned by those who would be disciples of the Teacher who "spoke with authority, and not as the scribes."

Whether this teaching will pass for orthodoxy, or even be tolerated by orthodox churches, need not be here determined. That such a volume should issue from an evangelical clergyman and a denominational publishing house is significant of the liberal days upon which we have fallen. There can be no question, however, but that Mr. Ferris has put his finger upon the source of endless confusion of mind and barrenness of doctrine. Religious truth has grown too large for the vessels from which the many have thought to draw it, and awakening to the facts which Mr. Ferris has brought into the clear must serve as an emancipation to not a few.

Das amerikanische Volk. By Georg von Skal. New York: Imported by G. E. Stechert & Co.

This is the most thorough and satisfactory book on our social and national life that has been produced by any German in a decade or more. Thirty years ago Herr von Skal came to America penniless and unable to speak English, toiled among the lower classes for three years, travelled on business for ten years throughout the United States, and served sixteen years on the staff of the *New-Yorker Staats-Zeitung*. Then Carl Schurz and others encouraged him to publish his impressions in this well-printed volume of 348 pages, provided with a complete Index. Part i., at least, of this work merits translation into English.

Herr von Skal gives more than a glance at early conditions which did so much to form the manners and customs of the present American. The pioneer roved from place to place; and this same inclination is still so apparent in his descendants that it is the exception, rather than the rule, for American families to reside long in the same place. The selfishness resulting from the early struggle for possession has been modified by two characteristics: amiable *naïveté* and inexhaustible humor. It is not meant, of course, that every American is a *Witzbold* and knows how to make a joke; but he easily sees the humorous side of things. The pioneer took things much as he found them, complaining little and helping all he could; and the American to-day is notable for his good-naturedness and patience. He carries his sympathy for criminals too far, and too easily believes, with respect to political and social evils, that "every cloud has a silver lining," and that all will be better by and by; but no one excels him in willingness to help a fellow-being stand up when once he has fallen. Such are some of the characteristics of the American people as a whole.

There are, however, characteristics noticeable only among certain classes, and therefore the author sketches the New Englander, the Californian, and the Southerner; but while he seems at home with the latter two, his analysis of the Puritan is somewhat lacking in sympathy. The point of view of the New Englander, prone to intolerance on such questions as drink and observance of the Sabbath, is so far removed from that of a native German, that even with best of will the German is likely to see the Pharisee.

Herr von Skal thinks there is a sort of mechanical conception of life that is peculiarly American. The result of our forefathers' contest with wild nature is that, more than any one else, the American has devised mechanical contrivances. Consequently, mechanical ingenuity and that which is practical have been overvalued. The American's power of imagination is limited to mechanical things and to invention. Of course, there are many who follow idealistic ends; in particular, the teachers in colleges, many of the Protestant clergy, and officers in the army. So unfavorable is the environment here that the American artist needs to go abroad to get his enthusiasm. Americans have made their greatest progress in music; but it has been mostly through foreigners coming to America, and especially through Germans.

Two of the most interesting chapters are those devoted to the American woman and children. He finds the woman charming, not only because of her cleverness in dress, but because she is perfectly natural in all that she does. The idea that the American is the slave of his wife, the author characterizes as ridiculous. The American, to be sure, does work which the man in Europe would seldom or never do, but he does it because he is the stronger, and he wishes to do it. According to European ideas, the American wife *is* more or less spoiled, and some bring ruin to their husbands; but more help them through thick and thin. American housewives are cleanly, and know how to adorn a house with little; but in real housekeeping they are poor managers, wasting in the kitchen—so that two German families could live upon what one American family throws away—and preparing food for appearance rather than for taste. Boys are not neglected at the expense of the girls, but different aims demand a different training. What makes home-life in an American family—as the stranger seldom sees it—so attractive, is the consideration of one member for the others. The American does not believe that any one has obligations without privileges; hence even the small boy has place and freedom. He may be unmannerly and boisterous, but one thing is very characteristic of him as an American, and that is his love for truth. Too much credit cannot be given the American public schools for assimilating foreign elements and teaching patriotism; the strong feeling of self-sufficiency formed there, however, leads to underestimating the good in other nations.

Part ii. of Herr von Skal's work is devoted to politics and an explanation of our civil government, more or less familiar to Americans but likely to instruct foreigners; a study of our law system and courts, railroads, and Trusts, the American press, the race question, and the position of the German-American.

Folkways: A Study of the Sociological Importance of Usages, Manners, Customs, Mores, and Morals. By William G. Sumner. Boston: Ginn & Co. $3.

From writing his treatise on sociology, Professor Sumner has turned aside to write this substantial volume (692 pages) upon a subject which he could not treat, with satisfaction to himself, in a chapter of another book. Folkways he defines as "ways of doing things" which are gradually recognized as expedient and develop into established customs. They relate to all branches of human activity—the struggle for existence, domestic institutions, ordinary social intercourse, education, and morals. They "come down to us from the past. Each individual is born into them as he is born into the atmosphere, and he does not reflect on them or criticise them any more than a baby analyzes the atmosphere before he begins to breathe it." They "are made unconsciously"; their origins are lost in mystery; but they everywhere and always are a controlling social force, regulating in every detail the life of uncivilized races, and hardly less potent in the life of civilized peoples. Your average sociologist begins his investigation by equipping himself with formidable schemes of classification and nomenclature, to which he adjusts, as best he can, such facts as chance to come within his ken; but this is not Professor Sumner's method. With great labor he has assembled a mass of materials, gathered from almost all accessible sources; and with rare insight and due scientific caution has sought to elicit their meaning. The result is an important contribution to the scientific study of society.

The first impression which the average reader will derive from the volume is that the folkways are practically the sole regulative force in human societies, that they control our actions absolutely, determine what we shall think, and establish moral standards for us. Particularly in this true of what our author calls the "mores," by which he means such popular usages and traditions as "include a judgment that they are conducive to societal welfare," and thereby gain increased power to coerce the individual to conform to them. The life of society "consists in making folkways and applying them." Philosophy and ethics are products of the folkways, being derived from the mores:

> When the earth is underpopulated, and there is an economic demand for men, democracy is inevitable. That state of things cannot be permanent. Therefore, democracy cannot last. It contains no absolute and eternal truth. While it lasts a certain set of political notions and devices are in fashion. . . . We "believe" in democracy, as we have heen brought up in it, or we do not. If we do, we accept its mythology.

Morality is what the mores prescribe; immorality "never means anything but contrary to the mores of the time and place." The mores can make anything right, and can prevent condemnation of anything:

> In Wickliffe's time the Bishop of Winchester obtained a handsome rent from the stews of Southwark. Probably he and his contemporaries thought no harm. Never until the nineteenth century was it in the mores of any society to feel that the sacrifice of the mortal welfare of one human being to the happiness of another was a thing which civil institutions could not tolerate.

Thus it is, and thus it always will be:

> The range of societal activity may be greatly enlarged, interests may be extended and multiplied, the materials by which needs can be supplied may become far more numerous, the processes of societal coöperation may become more complicated, and contract or artifice may take the place of custom for many interests; but, if the case is one which touches the ways or interests of the masses, folkways will develop on or around it by the same process as that which has been described as taking place from the beginning of civilization.

But it must be remembered that Professor Sumner is not formulating in this volume a complete theory of social structure and action. He is dealing with the part which established usages and tradition play, and naturally states the case strongly. At various places he gives us hints that, despite the force of custom, desirable changes can be effected—at least, in the direction social movement takes. By the highest mental discipline, some men rise above the intellectual atmosphere created by the folkways, and "form rational judgments on current cases." Men of talent are of great value to society, and this would not be the case if their best efforts availed nothing in directing social movement. In one way or another, therefore, our author seems to admit the possibility of conscious regulation of social interest—at least, within certain limits. His position will be made clearer, doubtless, when he publishes his treatise upon sociology. It cannot be gainsaid, however, that the present volume gives no flattering estimate of such theories of social betterment as pass current under the name of *Socialpolitik*.

Vida y escritos del Dr. José Rizal. Por W. E. Retana. 4to, pp. xvi., 511. Madrid: Librería general de V. Suarez.

During 1905-1906 the Madrid monthly review *Nuestro Tiempo* published serially notes and documents upon the life of José Rizal, political saint of the Filipinos, by W. E. Retana, who acquired a reputation before 1898 as an industrious Philippine bibliographer and as the chief mouthpiece of the friars in opposing the Filipino reform propaganda. With the change of sovereignty over the Philippines, Retana's occupation as a champion of the friars was gone, and by 1905, he had declared himself a Liberal in politics and religion, and, making abject retractions of his former writings, appeared before the Filipinos as the eulogizer of the one Filipino whom he had most abused and ridiculed. The Filipinos apparently do not cherish resentment, for they have greeted Retana's recantation with applause; and some of Rizal's closest associates have aided his biographical work with corrections, notes, documents, and hitherto unpublished writings of Rizal. The result of their collaboration and Retana's industry is a volume, not merely of great value for hitherto unpublished data on Rizal, but indispensable for any student of the Filipino reform propaganda and the closing years of Spanish rule in the Philippines. There are some interesting halftones of Rizal, pictures of his clay-modellings; a useful, though redundant, bibliography of his writings; and an alphabetical index, though mainly of names, not topics. Miguel de Unamuno, in the "Epilogue," makes both a shrewder and juster estimate of Rizal's career and character, and with less rhetoric, than does Retana. The work is valuable not as a biography, but as a collection of the raw materials of biography—such things as Rizal's student diary, letters to his family and fellow-workers, the statutes of the Liga Filipina, incidents of his life in exile in Mindanao, and most of the documents of his trial. These last show his Spanish military prosecutors and judges to have deserved all the censure they have received even when the circumstances of the trial were only suspected, not known.

The more we know about Rizal, the higher he rises in our estimation. It is also notable that his gain in our estimation is especially in character. He undoubtedly had great ability, but his people have in general taken promise for achievement. This pure-blooded Malay showed a firmness, a devotion to his ideals, and a practical political wisdom altogether unique in the social medium in which he spent by far the greater part of his life. And yet there is not yet an adequate biography of him, even a sketch, in English, nor are his two novels, which reveal his people and their aspirations as no other writer has done, available to Americans who do not know Spanish.

Science.

Lectures on Plant Physiology. By Dr. Ludwig Jost, professor of botany in the University of Strassburg; authorized English translation by R. J. Harvey Gibson, professor of botany in the University of Liverpool. New York: Henry Frowde. $7.75.

This is not a text-book in the proper sense; it is much more. The translator has done his work conscientiously and on the whole satisfactorily. In some instances his strict rendering has given us rather awkward turns, but in no case is the meaning obscure. The translator does not at all points agree with the lecturer, but he has not attempted to contend with him or to bring in his own views. The edition on which the translation is based bears date of 1903, but sundry additions and corrections by the author bring it fairly down to 1906, that is, practically up to date. After an introduction, which states clearly the problems and methods of physiology, the author divides the field into three parts: (1) Metabolism, (2) Metamorphosis, (3) Transformation of Energy. A detailed account of the treatment of these subjects would be out of place here, but it is proper to present a few of the author's conclusions relative to the most important activities of plants.

One naturally begins with the office of the root, and its equivalent. Most roots are provided with a velvety zone of delicate hairs near the tip of their fibrils; and these hairs are in close connection with soil-particles, sharing with them the films of aqueous solutions found in all soils. In the case of roots which do not possess hairs, the thin layer of cell-wall next the soil carries on this work either directly or by an intermediary agent in the form of an enveloping net of fungal threads. Air-roots get their water in part by condensation of vapor on their surface. Formerly the absorption of solutions by root-hairs was ascribed to the power which membranes possess of facilitating the commingling of liquids on their two sides. But this process of diffusion has been shown to be vastly more complicated, since decompositions and recompositions take place at the surface, and in the substance of such membranes as the root-hairs.

The fate of the matter absorbed by the roots has now been traced fairly well in some cases; for instance, sulphur and phosphorus are needed to build up the so-called proteids, the true "flesh" of the plant; but it is not known in exactly what part of the plant the combination of these elements with carbon, hydrogen, oxygen, and nitrogen is effected. Potassium finds its way in through the root-hairs, and its office in controlling the constructive processes in young tissues, and in assisting transfers of food within the plant, is fairly well settled. Magnesium appears to be a constant constituent of the leaf-green. Formerly iron was thought to be, but that is not now quite so certain. The part which nitrogen plays is satisfactorily treated. The principal source of plant nitrogen is the soil-solution of diverse compounds of this element. But after all these compounds are studied a question remains as to the uncombined nitrogen in the air between the soil-particles. That a certain part of it can be used by the roots through the agency of low organisms associated with the roots, is one of the most interesting of recent discoveries. Plants take substantially all their water through their roots. But it is hard to explain certain phenomena of recovery from wilting without assuming that in exceptional cases plants can obtain part of their supply through other tissues—as the author shows by numerous citations. Carbon comes in through the leaves in the form of carbon-dioxide. Its appropriation by the plant is termed by the author *assimilation*, an old word, concerning the accuracy of which authorities dispute. Professor Jost continues:

> We must recognize in carbon-dioxide assimilation the source of the collective organic life of our globe, life which ultimately draws its energy from the sun.

He thinks that not quite one per cent. of the solar energy which falls on the leaf is employed in carbon-dioxide decomposition. And yet it is that one per cent. which constructs all food and treasures, directly or indirectly, all energy for all organisms on our planet. The author concludes that the leaf-green, through which this wonderful treasuring of solar energy takes place, is something more than a mere "sensitizer," although this is probably one explanation of its relations to sunlight. The first product of assimilation may be traced through many complicated processes by which organic compounds in infinite variety are formed. This is, of course, recondite chemistry. Even to enumerate a fraction of the substances which the plant produces in its laboratory would be impossible here. It is sufficient to say that with German thoroughness, the author has placed his drag-net over almost all.

Among the various products of chemical transformation are the materials out of which the plant builds new tissues, and out of which tissues frame new organs. This brings us to the second part of the volume, Metamorphosis. Some other less rigid name would perhaps have been better to connote such subjects as growth, development, and heredity. In the last few years this department has been invaded by statisticians and mathematicians, and the results of experimentation have been put on a numerical basis. As yet there is a certain amount of fog over the whole field, but Professor Jost has for the most part kept on the higher and less obscure ground. Where there is doubt, he says so. For us, it is enough to say that results in the study of heredity are coming in so fast that many of the most competent students are bewildered.

In the concluding part of the volume, Transformations of Energy, we are shown the different responses of plants to external agents. The subject is treated on the whole judicially. It is to be regretted that Professor Jost has given no space to the sensitive instruments devised by Prof. Chundar Bose, by which it is asserted that very obscure responses can be not only detected, but analyzed. This concluding part is full of interest to serious students of the activities of nature, and also to casual readers, to whom leisure for investigation of these phenomena has been denied. It would be well if all observers, amateurs, and professionals, could avail themselves of Professor Jost's suggestions as to methods. As it is, many observations now go to waste.

The index is generally good, in spite of a few curious omissions. For instance, Professor Jost takes up the matter of sap under various headings, and gives an excellent account of it, but the term "sap" does not appear in the index.

The Macmillan Co. announces a series of six Biological Studies and Addresses by H. F. Osborn. The first of them is at hand, "Evolution of Mammalian Molar Teeth," with W. K. Gregory, the assistant of Professor Osborn, as the editor. The purpose of the book is the collection of the writings of the author on this question and the extension of them by other observations and illustrations in support of the tritubercular theory. The shares of the author and the editor are not clearly indicated. In recent years this doctrine, founded by Cope some twenty-five years ago, has met with much criticism and opposition, held by Professor Osborn to be largely due to misunderstandings and removable by a fuller presentation of the evidence. The illustrations are numerous and with few exceptions very clear. Some of the other studies have titles suggestive of less specialization and more interest for the general reader.

A recent publication of the Carnegie Institution—No. 77 in the series—is by F. G. Benedict, and reports experiments on "The Influence of Inanition on Metabolism." These observations were made with the use of the complicated calorimeter at Middletown whose construction was largely due to the initiative and energy of the late Prof. W. O. Atwater, although it ought not be forgotten that others have shared in the general design and in much ingenious and clever detail to an extent that has not been quite adequately acknowledged. The book deals with fourteen fasts in which ten different persons voluntarily went without food from two to seven days, but mostly only for periods of two to four days. There are also some studies with food in connection with fasts. The observations are given in great detail and with a fulness which has never been attained in similar investigations. The literature concerning inanition in man is also very fully considered—at least so far as it can be said to have any scientific value. This is not the place for a discussion of the results, and it must suffice to say that the metabolic status of the faster turns out to be far less simple and its bearing on the bigger problems of nutrition less direct than many have expected them to be. The reader is also left with the impression that in this line of experimentation some sort of preëxperimental standard of metabolism, so to speak, ought to be adopted, so that the fasters shall enter upon the period of special study under conditions which are more strictly comparable than they usually are. A fly-leaf in this book announces that a nutrition laboratory has been erected in Boston by the Carnegie Institution, and is now in charge of Professor Benedict. No indication is given of the future of the researches at Middletown, which for several years were aided by grants from the Institution.

Arthur J. Fynn's "The American Indian as a Product of Environment" (Little, Brown & Co.) is not profound scholarship of the sometimes over-condemned armchair type, nor is it the result of any notable investigations upon the spot. It is made up in part from entirely reliable sources, all English, and in part from more or less desultory personal observations. It does not live up to its main title; as the author notes in a sort of sub-subtitle, his interest lies chiefly with the Pueblos. Nevertheless, this is, with certain reservations, a pretty good book; it takes hold of the subject in the right way, and it is clear and simple. It is time that ethnography should be written from just this point of view of adaptation to environment. Of course, the Pueblos, whose very religion would reveal the condition of nature under which they live, are an easy subject for such treatment. A little more of the comparative method would have added greatly to the value of the book. The author apparently lays no claim to a wide knowledge of ethnology; but if his little volume incites some specialists to essay the treatment of savage races upon similar lines, it will have performed a worthy service.

Jerome Dowd's "Negro Races" (The Macmillan Co.) is the first volume of an announced series covering "a sociological study of mankind from the standpoint of race." The present instalment covers the Negritos, "Negritians," and Fellatahs of Africa. It appears from the announcement that this is all there is to be upon the Negritos, and that the black races of the Far East are not to be discussed. In any case, the Oceanic Negritos, such as the Mincopis and Aëtas, are not to consort with their African congeners. This seems to us to be an error of arrangement; and we are inclined to think that there is a similar vagary in the somewhat novel classification (of the African negroes described) under different "zones" *e. g.*, the banana, millet, camel, and cattle zones. The tribes in these several belts are treated under the headings: economic, family, political, religious, and æsthetic life; and we wind up with the "psychological characteristics" of the banana and other zones. The bibliography as a key to the scholarship of the work shows some ten each of German and French titles, and a good many curious entries that suggest an inclusion of chance matter. The style is not seldom anecdotal, though the stories are often rather apt. Yet despite shortcomings, there has been an honest effort to assemble a large array of useful facts. The sections on the Pygmies and the lighter races of South Africa are satisfactory, and one imagines that the other chapters would be more effective had the arrangement been different. In fine, the author has assumed rather light-heartedly a task too difficult and encyclopædic for any save the hand of a profound and highly gifted scholar.

Prof. Svante Arrhenius, whose "Världarnas utveckling" has recently been translated into English, has again made a remarkable literary success with his new book "Människan inför världsgåtan" (Stockholm: H. Geber). In a few months it has seen five editions. After the publication of his previous work many questions were presented to him, especially respecting the history of theories as to the origin of the universe. As a kind of reply to these inquiries, Professor Arrhenius has published the present volume, in which he gives an historical account of man's ideas of the development of the world. Beginning with the legends of primitive peoples and the creation myths of the most developed ancient religions, he goes on through the cosmogonic speculations of ancient philosophers and those of the scientists of a later time to the more exact observations and experiments of modern investigators. He upholds the theory of panspermism (according to which life originates on a planet from germs driven through the universe by solar radiation) against spontaneous generation. The latter, he thinks, may one day be regarded in the same way that we now regard the theory of a *perpetuum mobile*.

At a recent meeting of the Accademia dei Lincei, Senator Augusto Righi, professor of Physics in the University of Bologna, announced the discovery of a special type of rays which accompany the discharge of electricity in rarefied gases. He suggests the name magnetic rays, since their most marked characteristic is their conduct in the presence of a magnetic field. Details of this discovery will be published in the next volume of the reports of the Accademia.

William Ashbrook Kellerman, professor of botany at Ohio State University, died in Guatemala, March 8. He was born in Ashville, O., in 1850, and after graduation from Cornell in 1874, he obtained his doctor's degree at Zurich. Before coming to the Ohio State University he taught in the Wisconsin State Normal School, was professor of botany and zoölogy in the Kansas State Agricultural College, and botanist of the Kansas Experiment Station. He was founder and editor of the *Journal of Mycology* and the *Ohio Mycological Bulletin*. Among his books are "Flora of Kansas," "Elementary Botany," "Phyto-Theca," and "Spring Flora of Ohio."

Austin Craig Apgar, vice-president of the New Jersey State Normal School, Trenton, died March 4. He was born at Peapack in 1838, was graduated from the Normal School in 1862, and had been teaching in that institution more than forty years. He had studied science under both Louis Agassiz and Alexander Agassiz. He was author of "Geographical Handbook," 1865; "Geographical Drawing Book," 1866; "Plant Analysis," 1874; "Mollusks of the Atlantic Coast," 1891; "Pocket Key of the Trees," 1891; "Trees of the Northern United States," 1892; "Pocket Key of the Birds," 1893; and "Birds of the United States," 1898.

Dr. Daniel Bennett St. John Roosa, president of the New York Post-Graduate Medical School, and professor of diseases of the eye, died in this city March 8. He was born in Bethel, N. Y., 1838, and after graduation from the University Medical College of this city in 1860, he served as a surgeon in the civil war. He filled important positions in the medical schools and hospitals of New York, he had been president of the New York State Medical Society, and he was a member of various medical and scientific societies. Among his writings are "The Old Hospital and Other Papers," 1886; "A Pocket Medical Lexicon," 1887; "Treatise on the Ear," 1891; "Treatise on the Eye," 1894; "A Doctor's Suggestions"; "On the Necessity of Wearing Glasses"; and "Defective Eyesight," 1899.

Drama.

A pamphlet, "The Typical Shakesperian Stage," just published by the Knickerbocker Press of this city, consists of the third chapter of a forthcoming volume on the Shakespearean stage by Victor E. Albright. This scholarly bit of work, which will be read with interest by persons interested in Elizabethan methods of dramatic representation, is an attempt to reconstruct a typical stage of the Elizabethan period from a careful study of the few and not always trustworthy prints of sixteenth-century theatrical interiors, and some contemporary stage directions. The interest in this subject has been quickened in recent years by the so-called Elizabethan performances organized by William Poel and the brothers Greet. It is now conceded, pretty generally, that the pre-Restoration theatre was not so destitute of the common means of illusion as was formerly supposed, but Mr. Albright argues, with much enthusiasm and some plausibility, that except in the matter of painted scenery, it had stage facilities not altogether incomparable with those of the present day. Briefly, his theory is that the stage was separated by a curtain into two divisions—front and rear—with an extra proscenium space, and that each of these had its proper side entrances and exits. With such an arrangement it is easy, of course, to see how the rapid changes of scene called for in Shakespearean and other pieces could have been marked and much possible confusion avoided. Mr. Albright argues further that Shakespeare and his fellows constructed their plots with a special view to these conditions. In support of this theory he quotes stage directions from a great number of old plays which are certainly consistent with it, although they do not absolutely prove it. But it is to be noted that in many of his citations there is no positive indication that the "curtain" alluded to is anything more than a temporary device. Nevertheless, the theory is ingenious and plausible, and offers a simple explanation of the way in which the necessary properties—thrones, tables, chairs, beds, and so forth—could be arranged in the back scene, while the street conversations, so common in the Elizabethan drama, were proceeding in front. But in considering the question it must not be forgotten that the whole undivided stage could scarcely have been more than twenty feet square. The use of the gallery and the "hut," to which Mr. Albright devotes some space, is familiar, of course, to all students of the period. It is, perhaps, worth while to remark that the interest in this topic is antiquarian rather than practical. The value of modern Elizabethan performances lies more in the treatment of the text than in the accuracy of the stage fittings.

The precise dramatic status of the latest Russian actress, Vera Komisarzhevsky—like that of Madame Nazimova—is still uncertain, neither of these performers having attempted here, as yet, any character involving the interpretation of emotions or passions of the nobler sort. But in the three plays in which Madame Komisarzhevsky has already appeared, she has demonstrated a striking versatility, insight, and consistency, fine artistic restraint, and a rare control of technical resources. In the delicacy and calculated significance of her work she is worthy of comparison with Eleanora Duse. She excels particularly in the eloquence of facial expression and in the naturalness, variety, and appropriateness of her by-play. All these qualities were exhibited with delightful effect in the different phases of Norah in "A Doll's House." As Marikke in Sudermann's "Johannesfeuer" she underwent a complete transformation, in appearance, voice, and behavior. Her subdued and distraught manner, her abrupt speech, and a certain rigidity of pose, as if she were keeping a strong hold upon herself, denoted the pressure of inward agitation as surely as did her impulsive outbreaks of affection for her unconscious rival, Trude. And when, in the third act, she gave vent to the passion that consumed her, her acting had all the abandonment of truth, without any of the extravagance of mere theatricality. In short, she is clearly an actress of the first rank, and she is supported by a company of all-round capacity and sound training. It is unfortunate that she should be giving plays, which, so far as the general public is concerned, are almost as unknown as the tongue in which they are presented, but connoisseurs in acting will find ample gratification in watching, even if they cannot understand her.

"The Fool Hath Said 'There Is no God,'" a piece constructed by Laurence Irving upon the main outlines of Dostoieffski's "Crime and Punishment," and produced by E. H. Sothern in the Lyric Theatre, on Monday evening, is a melodrama of common type, having no extraordinary features except its rather crude utterances on the beauties of anarchy in government and religion. There is in it presumably quite as much of Laurence Irving as there is of the original author. The force of the main thesis, that man is justified in ignoring human and divine laws and in committing murder (with a purely benevolent motive), is practically destroyed by the hero's final acknowledgment of his religious and political obligations in deference to the compelling faith of the heroine. Undoubtedly the play is regarded, both by Mr. Irving and Mr. Sothern, as representative of modern liberal ideas, and, being offered in good faith, is worthy of courteous recognition; but, upon the argumentative side, it is a violent, contradictory, inconclusive, and essentially juvenile affair, while as drama it is only really effective at intervals. It would be worthy of more respect if it were not plainly written to gratify all shades of opinion. It caters both to rhapsodic faith and aggressive infidelity.

Lily Hanbury, the actress, who was Mrs. Herbert Guedalla in private life, died in London March 5. She was born in London in 1874, and made her first appearance in 1888 in "Pygmalion and Galatea," at the Savoy Theatre. Recently she had appeared as leading lady in several of Beerbohm Tree's most important productions.

Music.

The True Story of My Life. By Alice M. Diehl. New York: John Lane Co. $3.50 net.

"Literature was my first love," Mrs. Diehl confesses to the readers of her autobiography; and it is through her novels—nearly half a hundred in number—that her name became best known. Yet the chief interest of her reminiscences lies in her gossip relating to the time when she was a pianist and met many men and women eminent in the musical profession. She could, at the age of four, play by ear any music she heard that she liked, but she considers this a reprehensible practice which "should be sternly discouraged"; why, she does not explain. In the summer of 1858 her mother took her to Schloss Gersdorf in Silesia, where the great Henselt resided during his furlough from royal and other engagements in St. Petersburg. When they arrived, the eminent pianist met them at the door, "dark, handsome—clad in white and wearing a red fez." She found him not only a stern, but a capricious teacher. He scoffed at all the rules laid down by Mozart, Hummel, Cramer, Czerny, and Kalkbrenner. Her first "piano lesson" was given on the organ, as a study in legato playing. She found she had to begin all over again, "in irons," literally, because he insisted on his difficult exercises being practised with weights—copper coins by preference—on the wrists. In teaching he was "a raging lion." "It was all a storm of corrections, given between his favorite pastime of fly and wasp-killing with a leathern flap at the end of a stick." The real tuition began when he took her place on the stool, and, after caricaturing her errors, showed her how to play.

When she returned to London she found that her studies with Henselt, far from proving an advantage, were a detriment. Henry Broadwood introduced her to Professor Ella, "the musical autocrat of the aristocracy of music," who sneered at Henselt as an executant. Broadwood also introduced her to the all-powerful critic, H. F. Chorley, who condemned the Henselt method "with a wholesale condemnation which was dispiriting." Ella consented to have her appear at one of his concerts, and her début was highly successful. Previous to this, no less a musician than Berlioz had spoken encouragingly of her playing.

It was through another eminent composer, Ferdinand Hiller, that the author of this volume became a writer. Having made his acquaintance, she wrote an article on him which was inserted in the place of honor in the *Musical World*, and caused its editor, Davison, to call on her and say: "Why, you girl, you, what are you thinking of, messing about all this time with music, when you were born with a pen in your hand?" She took the hint and soon found writing more profitable, if not more congenial, than playing or teaching. For sixteen years she lived among the authors and journalists close to the Regent's Park, meeting many eminent writers (among them Bret Harte), of whom she gives brief but graphic pen-and-ink sketches.

Mrs. Diehl closes her book with this confession: "The only novel I have written which I really feel to be part of myself is 'The Temptation of Anthony.'"

Two interesting revivals — Thomas's "Mignon" at the Metropolitan Opera House and "Crispino e la Comare" by the Ricci brothers at the Manhattan—call for a few lines of comment. When "Mignon" was first produced at the Opéra Comique in Paris (1866), it had 150 performances in twelve months, and it has ever since remained prominent in the repertory. In Berlin it became very popular while Geraldine Farrar was at the Royal Opera. Patrons of the Metropolitan have at last had a chance to hear her in this part, in which she displays her art of impersonation to perfection. Whether as the frightened gypsy waif, or the jealous page, or the sweet *jeune fille* in Filina's gown, or the typical beauty from the land of the citron and the orange, she is always true to life, a picture for the camera at every moment, and her singing is as good as her acting. No doubt Thomas's opera will gain a new lease of life through her art; it is a work that deserves renewed favor, being in every way far superior to most of the modern Italian products we have to put up with. Far superior, also, is it to the older Italian opera "Crispino," which owed its revival entirely to the magic of Tetrazzini's name. It takes one back to the sixties of the last century, when the two Ricci brothers were famous as collaborators. There is a certain amount of fun in their libretto, and the music has an easy melodious flow, but it is shallow throughout. The interest in hearing such a work is chiefly historic. Tetrazzini gave as an appendix Julius Benedict's variations on "The Carnival of Venice," which she sang with dazzling brilliancy. Her popularity is unabated, and so is that of Mary Garden as Louise and Mélisande.

French composers have not been idle of late. Massenet has written "Bacchus" for the Paris Grand Opéra, on a book by Catulle Mendès, the librettist of "Ariane." The composer has also found time to write a short ballet, "Espada," for the Monte Carlo opera. Gabriel Fauré, during the autumn holidays, composed an act of an opera, entitled "Penelope." Théodore Dubois, former director of the Conservatoire, has finished a suite of "Odelettes Antigones"—the words being by his son—and several pianoforte pieces. He has also begun writing a symphony. Ch. M. Widor has given the last touches to a symphony for orchestra and grand organ, which will be first heard in Berlin. Xavier Leroux has composed half the score of an opera based on a book by the prolific librettist, Catulle Mendès. Paul Vidal is nearing the end of "Ramsès," which will be brought out soon by the new directors of the Grand

Opéra. Henri Février has completed an opera on Maeterlinck's "Monna Vanna."

The mausoleum of the Emperor Augustus has been restored sufficiently to be opened to the Roman public, under the name of the Amphitheatre Corea, in which popular symphony concerts (the twentieth century substitutes for the bull fights held there not even a hundred years ago) are to be given Sunday afternoons. An admission fee of five cents for a seat in the second gallery makes it possible for the humblest to enjoy excellent music. In addition to $16,000 spent on the building, the Comunal Council of Rome has voted an annual appropriation of $10,000 to the Royal Academy of Sta. Cecilia, which has undertaken to give not less than twenty-five symphony concerts each season in addition to four of chamber music. This is the first attempt in Italy to give classical orchestral concerts at popular prices.

Art.

FAIR WOMEN.

LONDON, February 25.

The International Society of Sculptors, Painters, and Gravers has closed its usual winter show and opened an exhibition of Fair Women at the New Gallery. It is a very few years since the Grafton Gallery gave an exhibition of the same kind. That collection was retrospective; the great pictures of the eighteenth century British portrait painters were drawn upon, and those who saw it will still remember the beautiful Gainsboroughs. To avoid repetition and rivalry, nothing was left but to vary the period represented, and to insist upon the international character which Whistler gave to the society. The period chosen is, roughly speaking, from the eighteen-sixties, and much has been done in the last fifty years to justify the choice. The first shock of disappointment is to find so little work from abroad. An admirable opportunity for comparative study has been thrown away.

France fares a trifle less badly than other countries. But except for a fine little pencil drawing by Ingres, a powerful Madame Georges Duruy by Besnard, with none of the mannerisms of his later painting, a Madame Henri Fouquié by Carolus-Duran; with the distinction of his earlier portraits, the Renoits retained from the recent exhibition, and some fairly interesting examples of Ricard—with these exceptions, there is hardly anything to record the aims and tendencies of French art in the last half-century. A very inferior Lenbach, a couple of artificial Winterhalters, and three portraits by Prof. George Sauter exhaust the art, it appears, of the German schools. There is nothing from Belgium, save two beautiful examples of Alfred Stevens. One, however, The Lady in White, makes a visit to the exhibition more than worth while. There is nothing from Holland save one Matthew Maris, and it comes from England—the exquisite little Fantasy. These are pictures well known. Anglada and Zuloaga belong to the society, and yet no portraits have been discovered in Spain but one indifferent full-length by Ramon Casas. The art of portrait painting in Italy begins and ends with Mancini—to some good purpose I must admit. I have seen Mancinis of late years that, for all their brilliance and cleverness, were almost impossible in their exuberance of color and in the painter's growing mannerisms, which are against all the finest traditions of painting. But there is here a portrait of Mrs. Charles Hunter that simply dominates the wall on which it hangs. The canvas is large and the color scheme, for Mancini, austere. He has not altogether escaped from the mannerisms to which I refer; the paint rises in ridges, as if he used it as a sculptor uses his clay, and bits of metal are worked into the buckle at the waist, even into the flesh. There is absolutely no feeling for the beauty of surface. But you forgive defects and affectation in your pleasure for the fine modelling of the seated figure, the beautiful quality of the black of the gown and the deep gold of the couch, and the magnificent handling of detail. A few pictures, like the Alfred Stevens and the Matthew Maris, are more subtle, more exquisite, but not one is more vigorous, not one gives such an impression of knowledge and power.

It cannot be denied that the last half-century has produced no greater portrait painter than the American Whistler, not one who has had more influence on the younger generation, not one who has painted more beautiful portraits of beautiful women, from The Little White Girl down to Miss Kinsella, and, though Whistler virtually made the society, not one painting by him has been hung. He is not, however, entirely forgotten. A small group of prints and drawings has been arranged, though not thought of sufficient importance to fill a centre. The dry-point Miss Eleonore Leyland and the lithographs, The Little Nude Model Reading aud The Little Draped Figure Leaning, have been often seen. The studies are less well known. One is a small pen-drawing of Lady Meux in fur cloak and muff, for a portrait begun but never finished; another, evidently, was for one of the etchings of "Maud." Whistler was always making these little studies, sometimes in pen-and-ink, oftener in chalk on brown paper. They were notes of a pose, a bit of drapery, a costume; memoranda for his own use, serving him exactly as the studies of the old masters served them, and not paraded as so many finished works in the manner of the modern young genius. Whistler did exhibit his studies from time to time, but not very often, so that when many were hung at the London Memorial Exhibition of his work they were a revelation, even to his admirers. It is unfortunate that space could not have been made for a larger number now. I, for my part, would gladly have spared for them the space which is now reserved for the new vice-president, William Strang, in whose studies one is still more conscious than in his paintings of his frequent clumsiness as draughtsman. Besides Whistler, two other Americans exhibit: J. W. Alexander, whose Marjorie, a full-length of a young girl in white, is not a very characteristic example; and Timothy Cole, whose admirable wood-engravings after the French masters have been accepted, only to be stuck into a corner, where it is difficult to see them with satisfaction.

Moreover, I have not even the consolation of believing that the International Society is becoming more intolerant of art abroad because of greater catholicity of spirit at home. Despite all professions, the open-mindedness is more apparent in the catalogue than on the walls. There are interesting Rossettis—little drawings for his earliest illustrations in Allingham's "Music Master" and Moxon's "Tennyson"; one water-color, Mount Pomona, alone represents him as a painter. With Millais, also the interest is in the examples of the illustrations which made him one of the great masters of the sixties, while the few large portraits are characteristic rather of the popular moment, when, as I believe he put it himself, he was working not so much for fame as for wife and children. Leighton and Alma-Tadema share the same fate; that is, they are seen at their feeblest, not their strongest. Only two Academicians are treated with prominence and some degree of fairness. Mr. Sargent is one, but by some strange perversity he suffers rather than gains by the distinction. I have not forgotten that I wrote in praise of his colossal Lady Elcho, Lady Tennant, and Mrs. Adeane on its first appearance at the Academy in 1900. Now, I ask myself in amazement why I praised, and I feel that the picture is best described in the words of an artist who at the time insisted there was nothing to be seen except a heap of women in white being poured out of a picture. Indeed, the only good Sargents in this show are his Miss Evans and one other, here called simply Portrait, interesting as student work. Watts is the other conspicuous Academician. His Hon. Mrs. Wyndham has a centre, and it is usually ranked as his finest portrait. It is dignified and is painted with a bigness of style not common among modern Academicians. But there is no life, no flesh and blood in the figure, and the want of feeling for texture gives it an unpleasant cast-iron quality. The Besnard and Carolus-Duran put it out of countenance. His other portraits are of no particular merit, but his Clytie, sometimes declared his greatest achievement, has a place of honor in the Sculpture Hall.

I am not given to quoting the *Times* in matters of art, but I am inclined to think its critic is not without reason when he says the exhibition is chiefly for the benefit of one group of the International and their friends. They may be supremely unconscious of the fact, but their work loses nothing by the avoidance of comparison with that of men of greater learning, distinction, and charm. All critics do not agree with the *Times*, and there are others full of admiration for the Exhibition as proof of the fine and healthy condition of British art to-day, and its promise for the future. There is, indeed, no question that the collection includes much of interest, and that here and there are very fine pictures. The few masterpieces, however, cannot redeem the general commonplace.

N. N.

The Boston Society of Architects has just published "A Holiday Study of Cities and Ports," by Robert Swain Peabody. To further the work of the commission on the improvement of metropolitan Boston, of which he is a member, he has visited some of the most active cities of northern Europe, and describes here the way in which they are developing their industrial and commercial resources, and at the same time adding to their attractiveness by beautiful streets, squares, boulevards, and public buildings. While his direct aim is the awakening of similar activity in Boston, yet these results of his investigations have a bearing on the future of every American city. He closes with an attempt to answer the pertinent question, How would the German Kaiser develop Boston? The illustrations consist of 104 pictures on 35 plates, among the most suggestive of which are those showing the beautiful walk under the elevated railway at Berlin, and the artistic way in which electric light poles and trolley posts are treated in Hamburg and Amsterdam.

The heirs of the artist Adolf von Menzel will publish his correspondence. Persons who have letters or other documents of Menzel are requested to send them to Prof. Oskar Bie, Bühlowstrasse 80, Berlin.

Sixty-eight autograph letters of Michelangelo have, according to dispatches from Italy, recently been found among the family papers of Count Rasponi Spinelli at Florence. They will soon be published.

The *Rassegna d'Arte* begins its eighth year with a new cover and a heavier, coated paper, which permits a clearer printing of the cuts. One notes the improvement in the drawings reproduced from the Dubini collection, Milan, by Francesco Malaguzzi Valeri. These practically unknown drawings comprise interesting examples by Tintoretto, being sketches for such well-known pictures as the Original Sin, the Baptism of Jesus, and the Miracle of the Bread and Fishes—in the Scuola di S. Rocco; and for the Miracle of St. Mark, in the Academy, Venice.

Prof. H. Diels, at the recent meeting of the Berlin Academy, reports the finding of an antique temple key. His account, when printed in the Bericht, will be illustrated by a photograph. Up to this time nothing has been found in connection with the ruins of old shrines that could with a certainty be called a key. The present discovery was made at one of the most famous temples of Greece, the sanctuary of Artemis Hemera in Lusoi, Arcadia. That this key belongs to the temple is attested by an inscription, dating perhaps from the fifth century.

The exhibition of the Municipal Art Society of New York will be open at the National Arts Club to March 27, inclusive. Among the exhibitions at the dealers' galleries in this city are paintings by Emil Carlsen and sculpture by Clara Hill, Bauer-Folsom's, March 13; pictures by Horatio Walker, Montross's, March 14; portraits by Maurice Fomkes, M. Knoedler & Co.'s, March 14; paintings by George H. Macrum and John F. Carlson, George A. Glaenzer & Co.'s, March 21; pictures by Malcolm Fraser, Clausen's, March 28; pictures and studies in oil and water-colors by Raphael Lewisohn, Oehme's, March 29.

At an auction at Christie's, London, February 22, the following prices were paid for drawings: C. Fielding, Storm on the Coast, £262; P. de Wint, Woody Landscape, with cattle and stream in the foreground, £110; Turner, Lake of Lucerne, £420. These paintings were also sold: J. Linnell, Sen., Gathering Fuel, £210; H. Harpignies, La Nièvre à Nevers, £651.

Frederick Warren Freer, a painter and teacher at the Chicago Art Institute, died March 7. He was born in Chicago in 1849, and studied for some years in Munich and other foreign cities. He was an associate of the National Academy of Design, and a member of the American Water Color Society and the New York Etchers' Club. Among the honors which he received were a medal at the World's Columbian Exposition, 1893; a bronze medal at the Pan-American Exposition, Buffalo, 1901; a silver medal at the Charleston Exposition 1902; the Martin B. Kohn Prize, Chicago Art Institute, 1902; Artist's prize and medal, Chicago, 1903; and a bronze medal, St. Louis, 1904. His principal pictures are A Lady in Black, Consolation, The Old Letter, In Ambush, and Sympathy.

George Chickering Munzig, the portrait painter, died March 5 in this city. He was born in Boston in 1859, and studied at the Primmer School, Boston, and the Academy Julian and Lefebvre, Paris. He had painted the portraits of many prominent people.

William Callow, well-known for his work in water color, died at Great Missenden, England, February 22, in his ninety-sixth year. When only seventeen Callow went to Paris to continue his studies, and while there acted for seven years as professor of water-color painting to the family of Louis Philippe. In 1838 he was made an associate of the Royal Water-Color Society. Among his publications are "Illustrated Book of Versailles" and "Deep-Sea Fishing."

Charles Brun, the French painter, has died at the age of eighty. A student of Picot and Cabanel, he collaborated with the latter in L'Improvisateur Arabe. He was specially at home in Oriental scenes.

The death is announced, in his seventy-seventh year, of Ferdinand Callebert, the Belgian painter and director of the Academy at Rouliers. His painting was largely of religious subjects, and many specimens of his work may be seen in Belgian churches.

Paul Thumann, painter, illustrator, professor at the Berlin Academy of Arts, has died in that city in his seventy-fourth year. His work, both in historical painting and fancy portraiture, was popular in Germany, and photographs of his female heads are scattered broadcast in America.

Finance.

PANIC AND POLITICS.

The arrival of the period when political conventions in the States are expected to make their preliminary platforms for the Presidential contest, converges interest again on the part which the panic of 1907 is to play in current politics, and, conversely, on the part which politics will play in business. It is a tradition of American finance and industry that a Presidential election, even in days of unruffled markets and prosperous trade, will be a time of unsettlement. Certainly there was a halt in commercial activity, and hesitation or disturbance on the Stock Exchanges, in 1880, 1884, 1888, 1892, 1896, and 1900. At the last two dates, the fact that one party advocated currency measures which would have altered the standard of value might have been assigned as the cause of misgiving, but in the earlier contests no such factor existed. Most of the elections—notably that of 1880—were in years of genuine prosperity, when "free silver planks" cut no figure. The notable exception to the general rule of trade depression was 1904; the canvass was accompanied by steady and continuous recovery in trade, and for this the commonly accepted explanation was that Mr. Roosevelt's victory was regarded as assured in advance, and that therefore the programme of the next administration was not in doubt.

Another tradition of the markets, however, is that a campaign after a serious panic is likely to be particularly disturbing, both because unsound nostrums will be advocated in party platforms with the idea of preventing future panics, and because the people, smarting under losses, will incline to support the opposition. The opposition has certainly carried Congress in every election which immediately followed a great panic, and it has gained the Presidency in the election next following all such occasions, excepting only that of 1876, when Mr. Tilden, though he was not seated, nevertheless polled a heavy popular majority, and is still believed by a great many persons to have been lawfully elected.

All these considerations add to the interest taken by business men in the preliminary moves in selecting delegates and framing platforms for the approaching contest. The Ohio Republican convention, on Wednesday of last week, was the opening gun. The Ohio platform contained this declaration:

> We congratulate the American people that their recent safe passage through a financial disturbance indicates the sound basis upon which our commercial, industrial, and agricultural interests are founded, and the Republican party hails with confidence the signs now appearing of a complete restoration of business prosperity in all lines of trade, commerce, and manufacturing.

Of this declaration, it will doubtless be said that its political value depends on the extent to which this "complete restoration of business prosperity" shall have been achieved before November 3. The platform avoids such familiar assignments of causes as President Roosevelt's activities, or the people's excesses in the use of capital, or even the currency; the dominant party would naturally ignore these matters. There remained one popular scapegoat, and last week, Thursday, the Nebraska Democrats seized upon it:

> The injury done by issues of watered stock is more clearly seen and better understood, since the shrinkage in the market value of such stock has precipitated a widespread panic and brought enormous loss to the country.
>
> The panic has emphasized the necessity for legislation protecting the wealth producers from spoliation at the hands of the stock gamblers and the gamblers in farm products.

This is manifestly a bid for measures of the "anti-option" sort, aimed at preventing speculative operations on the Stock Exchange. Within a few days of this Nebraska declaration, a Republican Congressman, W. P. Hepburn of Iowa, supporter of the Administration and author of the Railway Rate Bill of 1906, introduced a measure imposing on sales of stocks a tax, virtually prohibitive in the case of large speculative transactions, amounting to 50 cents per $100 share. The effect on business of such proposals, if seriously pressed, is doubtful; on the stock exchanges, the bill was naturally regarded with apprehension.

The possibility of a "currency issue" in the approaching campaign, with disturbing results to industry, was indicated by the Nebraska convention's expression of belief that "in so far as the needs of commerce require an emergency currency, such currency should be issued and controlled by the Federal government, and that it should be loaned upon adequate security and at a rate of interest which will compel its retirement when the emergency is passed." The interesting part of this declaration is, that it does not assume that such currency is needed. For a State from which very radical platforms on the currency were once a matter of course, this is remarkably restrained.

In singular contrast was the declaration, on almost the same day, of a non-political gathering, the so-called Prosperity Convention of merchants, held at Baltimore. Demanding a change in the currency system, it adopted this resolution:

> The recent currency panic was wholly due to our bond-secured currency, which bears no relation to the trade and commerce of the United States.

This lodging of all responsibility for the October crash on the existing bank-note system is by no means in accord with the best economic judgment; but a "prosperity convention" might perhaps have been expected to express its feelings thus. A bond-secured currency can be abolished overnight, whereas financial exhaustion, due to the people's own extravagance and excesses during the recent "boom," would have to await the slow process of retrenchment and recuperation.

The Programme of Modernism

A Reply to the Encyclical of Pius X.

With the Text of the Encyclical in an English Version and an Introduction by A. Leslie Lilley

No. 25 in Crown Theological Library.
$1.50 net.

Though written by Roman Catholics for Roman Catholics, this book deals with problems which touch not Rome only, but almost every form of religion. The authors are excommunicated and suspended. Yet the book is, perhaps, the most masterly attempt that has so far been made to gather together in a brief space all the assured results of Biblical and historical criticism, and to reconcile them with a deeper and more spiritual faith in Catholic Christianity.

G. P. Putnam's Sons, New York and London

The Nation.

NEW YORK, THURSDAY, MARCH 19, 1908.

The Week.

Attorney-General Bonaparte now frankly admits that the government proposes to take no proceedings against labor unions for boycotting. This meth- of warfare has been held by the Supreme Court, in a unanimous decision, to be in violation of the Anti-Trust law. Application has been directly made to the Department of Justice, Mr. Bonaparte concedes, to begin an action against one powerful labor union for defiantly persisting in a boycott, but nothing is to be done. Indeed, the head of that labor union is in frequent consultation with the President, to prepare an amendment of the law so as to make labor unions immune. Moreover, certain District Attorneys who, in their innocence, supposed that all violators of Federal laws were to be prosecuted, and who went ahead and had boycotters indicted, have been rebuked by the Attorney-General for excess of zeal, and directed to discontinue all such proceedings until further orders from Washington. In the specific case of the District Attorney at New Orleans, Mr. Bonaparte admits this. He states that this Federal prosecutor was "a new appointee and somewhat zealous." The ostensible reason for thus extending immunity to a certain class of law-breakers is that the Department of Justice has "experts in such matters" and that impetuous District Attorneys ought not to proceed except by advice from Washington. Yet it takes no expert to see that this reduces the administration of justice to arbitrary whim. If the Administration desires to prosecute a certain man or corporation, prosecuted he or it is; but if for any reason it is regarded as "inconvenient" to arraign another violator of the statute, the machinery of the law is stopped. One has but to imagine the different reception which the decision of the Supreme Court would have met with from the Administration had it been against one of the President's pet malefactors. But since it was labor unions that were shown to be lawless, we have nothing but a grieved official silence, while the leader of the law-breakers is summoned to the White House in order to help draft a bill which will enable labor unions to snap their fingers at the general law. This is precisely the same as if President Roosevelt had sent for E. H. Harriman, after the Northern Securities decision, to plan with him some way of getting around it. We have heard many loud boasts that this Administration is "no respecter of persons." That may be; but its present course in the matter of organized labor defying the law, shows that it is, at any rate, a respecter of votes.

Senator Tillman has his uses, after all. A rude man, with utter scorn for the artificialities of "Senatorial courtesy," he sometimes utters the blunt and wholesome truth. In his attack upon the President on Monday he suddenly turned upon the Republican Senators with the demand why they dared not say in public what they were all saying in private. Publicly, they displayed the most cowardly servility to the President; in the cloak-rooms, as in their clubs and hotels and private houses, they spoke of him with the utmost dislike, bordering on personal hatred and fierce hostility. Where was their manliness, that they were afraid to utter a word of all this in open Senate? The challenge was met by Senator Beveridge alone. He denied that the relations of President Roosevelt to the leading men of his party in Congress were what Tillman alleged. Perfect harmony existed. The great minds at either end of Pennsylvania Avenue had reached the *idem sentire de republica*, so how could there be anything but hearty coöperation and the best of good feeling? If this was intended as a merry conceit, there is nothing to be said against it; but that, as a serious statement, it is a travesty of the actual truth, is known of all men. No one is more vividly aware of it than President Roosevelt himself. The bitterest language is used on both sides. Republican Senators speak with an indignation almost comic, so intense yet carefully confidential is it, about the course and speeches and messages of the President. He, on his part, gives them the benefit of his unbridled tongue. His epigrams about the most venerated of them, his arraignment of them by name—all this is retailed about Washington as the common gossip of the day. The amusing part of all this is the assumption of secrecy which has been kept up, in the face of the most widely-trumpeted publicity. Things are no longer done at Washington in a corner. What one Senator whispers in the ear of another, is instantly proclaimed from the housetops And the President's impulsive and picturesque *Tischreden*, busybodies and go-betweens immediately report. All that has happened is that Tillman has kicked over the screen behind which both sides make a decent pretence of hiding. There may be an apparent reconciliation between the President and the chiefs of his party in Washington, before the end of the session; but if so it will be like that famous conciliatory meeting between Lord John Russell and Palmerston, of which it was said that they embraced each other and then went away more deadly enemies than ever.

The Federal Administration, with the Civil Service Commission, is taking a highly technical and really indefensible position respecting complaints about the political activity of officeholders. The disposition is to pin the whole question down to the classified service. If the Federal employees complained of are not in that service, then, it seems to be argued, there is no ground for objecting to their attending and managing political conventions. For example, Frank Fisher, postmaster at Paducah, and Thomas L. Walker, postmaster at Lexington, are charged, the one with "spending the major part of his time organizing western Kentucky for Secretary Taft," the other with "directing the Taft fight in the eastern part of the State." Is it sufficient to reply that these men are not in the classified service? Far from it. The laws, rules, and directions governing the whole matter were epitomized in a separate publication by the Civil Service Commission in May of last year. They show clearly that the prohibition of partisan activity is by no means limited to employees in the classified service. First, we have the order of President Cleveland, dated July 14, 1886, directing Federal officeholders not to make their influence "felt in the manipulation of political primary meetings and nominating conventions." It was added that "the use by these officials of their positions to compass their selection as delegates to political conventions is indecent and unfair." Then we have the official letter of President Roosevelt, written June 13, 1902, explicitly declaring that "the Executive order of President Cleveland. of July 14, 1886, is *still in force*." There followed some general instructions, which apply to all persons holding office:

> Officeholders must not use their offices to control political movements, must not neglect their public duties, must not cause public scandal by their activity.

That is signed Theodore Roosevelt. So is a passage in the minutes of the Civil Service Commission, of August 14, 1894, which runs:

> There need not be the slightest apprehension that any officeholder will be wronged by not allowing him to take part in running the caucus or be active in a campaign. The danger does not lie that way. *The danger lies in the use of patronage to control nominating conventions and elections.*

Now, these rules would, if vigorously enforced, put an end to the meddling of officeholders in politics, of which there is evidence from one end of the country to the other. Federal employees *are* neglecting their duties; they *are* seeking to control political movements; they *are* causing public scandal. We care not in whose interest the thing is done—whether for Taft or Fairbanks or Cannon or Knox or Hughes. It is grossly improper and also illegal.

Mr. Taft's speech in Brooklyn Monday night took up the suppression of the qualified negro vote in the South. He admitted that this makes "a dead letter" of the Fifteenth Amendment. The legislative acts under which it is sought to justify discrimination against property-owning and educated colored men, he described as mere "evasions" of the Constitution. And he used plain words about the "fraud and violence" by which the negro vote has been eliminated. But when we ask what is to be done about it, his reply is, Nothing. We are to trust that "industrial progress in the South," and "the closer union between the sections," will secure, in the end, the equal political rights of the negro. This is an opinion which Mr. Taft is entitled to hold. But this careful statement of his views makes our curiosity all the greater about that plank in the Ohio platform which explicitly proposes to cut down the representation of the Southern States as the just way of meeting the disfranchisement of Southern voters. Does Secretary Taft approve of that part of the platform upon which his Presidential candidacy was proclaimed by the Ohio Convention? Is he in favor of putting such a plank in the national platform? The inference from his speech Monday night would be that he decidedly is not. But, in that case, we have the other inference forced upon us that his friends in Ohio went far beyond what he really believes and intends, and apparently did so for the sake of catching negro votes in Ohio.

What Gov. Hughes had to say about the tariff before the Brown Alumni at Boston last week may fairly be called a counsel of perfection. Beginning with the proposition that a majority of our citizens want tariff revision, he proceeded to a description of the spirit in which the revision of the Dingley schedules should be undertaken:

> It should be accomplished fairly, promptly, without log rolling, not in any sense as a matter of political manœuvring, but in the interest of the American people as a whole. We shall adhere to the policy of protecting American industry. We are not prepared to surrender our scale of wages or permit our standards of living to be reduced to those which prevail in other countries. Upon a complete and just examination of the facts any needed readjustment may be had to the end that the schedules may harmonize with the principle underlying the protective policy and the reasonable necessities of American production as compared with production abroad.

We wish most devoutly that the first part of this counsel might be followed. A "complete and just examination of the facts" would show, we believe, that the Dingley tariff serves not "the interests of the American people as a whole," but that of a small influential minority; that "our scale of wages and standards of living" are not dependent on a high tariff, but have been maintained at all stages of our varying fiscal policy; and that, finally, the "reasonable necessities of American production" do not include taxation of American consumers, since, as repeated investigations have shown, the highest wages and the lowest labor-cost are often found together in the American factories. But does the Governor really imagine that a Republican Congress in his lifetime will overhaul the tariff in the spirit which he describes with such fine idealism? If Congress had been actually animated by that spirit, certain features of the Dingley law would have gone years ago. Clear statements of fact are at times wonderfully potent in politics. No one in public life has been able to accomplish more by plain statement and lucid analysis than Gov. Hughes himself. Yet these forces need to be supplemented. If the racing bills are adopted by the New York Legislature, it will be because they are fought for, because they are presented as moral questions, and the tale of the evil they would cure is iterated and reiterated. The weakness of the Governor's tariff position, we think, is in his failure to see this, too, as a moral question, and his belief that, without powerful pressure from outside, Congress can be trusted to deal with it on grounds of abstract fairness.

The safe arrival of our battleship fleet in Magdalena Bay is legitimate cause for national gratification. It does not enter into the question that the notable cruise which has now been practically completed should have been undertaken after official denials and grave doubt as to its wisdom. Once the voyage had been decided upon, there could be no dissentients from the common hope that our ships and their men would come up to the high standard of efficiency implied in the test to which they were submitted; and it is an indubitable sign of efficiency that the fleet, without strain or mishap, should have arrived at its destination somewhat ahead even of its schedule. It is a maxim of modern naval strategy that a fleet is as fast as its slowest unit. That Admiral Evans should have brought in his command of sixteen battleships without delay or loss in stragglers is not the least notable achievement of the cruise. There is still bound to be much troubled talk about what is to come when target practice in Magdalena Bay is over. Certain prophets will continue to see visions of bloody war. But for the present it is enough that our ships, so far, have been much more active for peace than for war in leaving a trail of international good will along both coasts of Latin America.

It may be, as Representative Boutell says, that the Congressional committee investigating the submarine boat scandals was merely following precedents when it required Mr. Lilley to state his whole case before other witnesses were called, and the outside counsel retained by both parties to submit all their questions to the committee in writing. Nevertheless, on their face these decisions hardly square with common sense. Mr. Lilley's two lawyers have withdrawn from the case because, as they say, they could accomplish nothing under the restrictions imposed by the committee. Why, it is fair to ask, should counsel be allowed at all if they are to be debarred from using those methods of eliciting the truth from witnesses for which counsel chiefly exist in the courtroom? Notable Congressional inquiries, like the Smoot case, have been conducted by counsel on both sides, the committee occupying rather the position of a board of judges. The theory of our whole judicial system is that the conflict of two trained lawyers with freedom to ask questions germane to the inquiry is a better method of obtaining the truth than any other yet devised by the wit of man. No one supposes that the Congressional committee has discovered a better. The public, we may add, tolerant as it is of official laxity, has shown itself sensitive to a degree on the subject of investigations that do not investigate. It is nearly as serious a matter for a statesman to be caught with a whitewash brush in his hand as if that implement were a sectional "jimmy" to be used for breaking into the Treasury. Certainly, a committee which has the honor of the House of Representatives to uphold should be itself above suspicion.

Democratic Senators voted to sustain the President in discharging the colored soldiers, but that has not debarred them from sarcastic allusions to the way in which he is now trying to escape the consequences of his own action. He has asked the Senate for authority to reinstate "any man who, in his judgment, shall appear not to be in the class whose discharge was deemed necessary." But the President's order of November 5, 1906, declared that the discharge of "every man" in the companies at Brownsville was necessary. Moreover, they were all to be "forever debarred from reënlisting in the army or navy of the United States." But now, the President desires to give practically the whole of them an opportunity to reenlist. The Senate Committee on Military Affairs is to bring in a bill to authorize Mr. Roosevelt to reverse himself. It is not strange that the Democrats have to have their little flings at the "race" which the Republicans are now running to see who can do most to appease the dissatisfied negro voters. The net result of the inquiry is technically to uphold the President, by aid of the Democrats on the Committee, but actually to have brought out a mass of convincing evidence that Mr. Roosevelt's action was hasty, arbitrary, and unjust. That he is now conducting a thinly-disguised retreat from his first position, is the best proof that it was badly taken.

Trial by jury sometimes seems to be breaking down; but fresh illustrations of its success usually come along to vindicate it. One is the verdict against the men who cheated in the building and furnishing of the Pennsylvania Capitol. The case was intricate, and the proof of conspiracy, always difficult to establish, depended largely upon circumstantial evidence. Yet the jury saw its way clear through all the subtleties of the counsel for the defence, and found the high-placed thieves guilty. A sentence to jail now awaits them. Sentence has actually been imposed in Chicago upon John R. Walsh, for illegal use of the funds of certain banks. In this case, too, a patient jury sifted the facts and arrived at a verdict unquestionably just. Much credit, too, is due the presiding judge, and his plain-spoken address to the prisoner should carry far beyond its immediate application. Judge Anderson said that the position of a bank president is one of the highest trust, and that it is utterly inconsistent with his being a promoter. If more speculating bankers should see prison doors yawning, it would be a good thing, not only for banking, but for public morals.

The rejection of the Unemployed Workmen's bill by the British House of Commons will bring to the Liberal party mingled advantage and disadvantage. The firm stand taken by Mr. Asquith and John Burns against a measure of avowedly socialistic character is generally characterized as the first important step towards a rupture between the Liberals and the Laborites. Naturally, the defection of so large an element in the House of Commons is a disadvantage to any government that wishes to remain in power; and the Liberal government is only human. On the other hand, by coming out definitely against hot-haste progress toward Socialism, the Cabinet has succeeded in freeing itself from a good deal of the ambiguity that has surrounded its intentions ever since it came into power with a top-heavy majority that has kept the government hesitating between policy and policy. By so much as definiteness of aim is a gain, the Liberal party has gained by this vote. The majority may not be so fleshy now, but is more athletic; and a fighting government with a slim majority may, on the whole, live as long as a government blundering along under the staggering weight of its votes.

Those who maintain that English political methods are not, after all, so much purer than our own, will find comfort in the debate in the House of Commons the other day on "Secret Political Funds." That the war-chests of bot parties had been supplied by the practical sale of peerages was openly charged, and scarcely denied. The member for St. Pancras, Mr. Lea, was particularly outspoken. He affirmed that the titles and decorations in vogue in his country "are just as lacking in dignity, prestige, and moral worth as the methods by which they were obtained are corrupt and nauseous." He asserted that the tariff for these honors was well known; in one case as great a sum as $750,000 had been paid. Analyzing the creation of peers since 1903—two years under the Conservatives and two under the Liberals—he found that more than 20 per cent. were given in return for pecuniary aid to the party committees. Further than this, there has grown up a special Tariff League fund, out of which grants are made to favored candidates. The use of money from such sources comes perilously near violating the Corrupt Practices Act. All told, there was a great deal of dirty political linen aired in the debate, and incidental support given to the doctrine that political corruption is thicker than water, that bribed hands reach across the sea, etc.

While doubts may still remain as to the ultimate succcess of the reorganization of the London *Times*, just sanctioned by the courts, the radical changes that would have been involved in the transfer of the great newspaper to the control of the Pearson interests have probably been avoided. In that there is much satisfaction. It may be good that there shall be "hustling" journalism, but woe to him by whom "hustling" journalism cometh. A new paper, born screaming and yellow in the face, is endurable; but for an institution like the *Times* to take on the cap and bells of "up-to-date" newspaper methods is a tragedy. Though under the new arrangement the control of the *Times* is to remain with its present managers, we cannot but think that they will profit by their recent experience. As a matter of fact, the adoption of methods of a somewhat yellowish tinge—book enterprises and anti-publisher crusades—is one of the things that seriously damaged the *Times*. In any case, a resumption of some of the best traditions of the past may now be hoped for.

The burden of the latest news from Morocco is that things have been going well with the French. The cause of Mulai Hafid is on the decline. The other day a dispatch told of the offer made by two of his supporters to deliver his head to Abd-el-Aziz; and now Mulai Hafid is reported to be seeking peace with the French. The Shawia tribes of the region about Casablanca and Mazagan, in which Gen. d'Amade has been carrying on his campaign, have fought well. Mulai Hafid's own army seems to have done no less. But the French commander was quick to realize that he was confronted with the possibility of war on a larger scale, and adopted measures accordingly. The policy of mere resistance was abandoned for one of active aggression, by the system of flying columns which Gen. Lyautey has recently used with remarkable success on the Algerian frontier. In the course of the last two months severe engagements have been fought with invariable success for the French. Yet as late as the first week of March the government took the decisive step of dispatching a reinforcement of 4,000 men, making the French strength in western Morocco over 10,000 in all, together with the experienced Gen. Lyautey in a sort of advisory capacity. Before this method of war on a large scale Mulai Hafid's power is apparently collapsing.

Edmondo de Amicis, who died last week, was the most conspicuous representative, in modern Italian literature, of the classic traditions, whose fame has been obscured by the achievements of latter-day naturalism and mysticism of the more or less hectic type. Gabriele D'Annunzio and Matilde Serao have in all probability been read abroad much more than De Amicis, whose talent, in general, was not extraordinary. To us, as to the world at large, he is best known through a single book of child life, "Cuore," which has become one of the classics of European literature. But, without possessing the gifts of a D'Annunzio or a Carducci, the author of "Cuore" and of numerous volumes of entertaining travel had the sane and sympathetic outlook upon life, and the power of appealing to elemental sentiments regarding the value of accepted standards, without which a writer can never hope to be taken to its heart by a nation. Such a rank Carducci held, and such a rank, in spite of a rather theatric patriotism, D'Annunzio has not yet attained. In favor of the dead author were, of course, his notable share in the drama of Italian liberation, and the very fact of a long life and a fertile productivity.

TRUE AND FALSE MORAL ISSUES.

In a time of much confused thought and loose talk about moral issues in politics, the bills to extinguish gambling at race tracks, which Gov. Hughes has finally led a reluctant Legislature to accept, furnish a plain and excellent test of the genuine and the insincere in such matters. The issue which they present is moral, because it has to do with a widespread public temptation and demoralizing vice; and it is an issue which may properly be thrown into politics, because the organic law of the State enables the Legislature to act upon it by way of statute and penalty. First we have the moral agitation. It is directed to a specific evil. That evil can be delimited. Thereupon, its relation to the lawmaking power comes under discussion, and it is found that ample authority exists to deal with the immoral conditions by a law which can unquestionably be enforced. It is a typical case of a true moral issue.

These race-track bills, now happily on their way to enactment at Albany, stand in marked contrast with certain projects of legislation that are put forward as moral. We hear a great deal about the "moral awakening" that has taken place within the past few years. It is a consequence of it, we are told, that State Legislatures, and particularly Congress, are called upon to undertake all sorts of new legislation aimed at economic or social ills. But mere vague complaint, however loud, is not necessarily moral. To raise a great outcry and produce dissatisfaction and unrest by incessant clamor, without once making precise the public evil to be attacked, or explaining the weapons that are to be used against it, is often to do the commonwealth disservice. Complaints should always lead to cure. If the conscientious public man cannot isolate and define the bad condition which he wishes to remedy, and next show accurately the legal means by which it is feasible to proceed, then he should generally hold his peace. The demagogue will not, of course, because his stock in trade is to cry aloud; and the more undefined his charges and the more inarticulate his shouts, the better he gets on.

There is no occasion to condemn agitation, provided it has a specific cause and a clear purpose. Even noisy agitation has to be tolerated, in an age when some men will not believe that you are in earnest unless you scream. Burke said that we must not object to clamor when we could not deny the abuse. But when we speak, politically, of an abuse, we should always mean something which exists in political conditions, and which can be done away with by ordinary political tools. There are abuses which have their root in the weakness of human nature. They exist under any form of government, and are independent of any. Matters of personal habit and individual tendency and practice are often grossly offensive, shocking to contemplate and degrading in their effects; yet they are private, not public, abuses, because there is no way of reaching them by public law.

Any statesman who asserts that his proposals involve moral issues, exposes himself to a searching trial both of his intellectual soundness and his personal sincerity. It will not long be hidden if he is a shallow thinker; and if he shirks the logical results of his arguments, we know what to think of the genuineness of his devotion to reform. There has been, for example, much thundering in the political heavens about "swollen fortunes." They have been held up as a grievous wrong, their possessors have been described as little better than criminals, and the urgent duty of the hour has been declared to be to devise some means of mulcting them heavily. But this is a case, first of all, for clear thinking. Swollen fortunes may or may not be a bad thing, in their public effects—and it is only with their public effects that the legislator can deal. If they are the fruit of political corruption; if they are law-made; if they represent purchased privilege; if they grow out of the prostitution of governmental powers to private gain—then, indeed, we have a definite public evil. But what is the honest way to deal with it? Is it by vague denunciation and loud but empty threats? Will the statesman, as distinct from the demagogue, content himself with railing at the inequality of fortunes, stirring up every sort and degree of class hatred thereby, without once pointing out the steps that may be taken to undo the wrong? We think not. We think that any public man, with a clear head and an honest heart, who studies the problems of inordinate wealth in this country, will be driven to the conclusion that he can do only one thing to take the sting out of it. He can abolish the wealth-creating privileges conferred upon certain individuals by law. When he sees, for example, a tariff law which as good as places millions in the pockets of favored individuals, he will set his hand to the work of striking out such iniquities from the public statutes. A really sincere and firm statesman would be ashamed to prate about "swollen fortunes," yet, for party reasons, to refrain from saying one word about the protective duties that made so many of them possible.

As against such indefinite and inconclusive proceedings, under the name of a moral issue, the course of Gov. Hughes in connection with the bills to do away with public gambling, stands out instructively. He singled out his abuse. He showed that it was clearly remediable by law. Then he bent himself to such an explanation and advocacy of the reform he desired, that public sentiment was powerfully evoked. The best people of the State let it be known that they were with him. The whole was a fine example of a real moral issue at work. It should be an encouragement to political reformers everywhere, while having its plain warnings for self-seeking and trumpery politicians.

GERMANY'S LAW AGAINST SPECULATION.

The Hepburn bill to impose a prohibitive tax on "margin" transactions, taken with the President's investigation of stock-gambling, makes instructive a review of similar legislation in Germany. The results of the Bourse Law of 1896 and of subsequent legislation raising the listing tax on exchange securities and imposing a transfer tax on each sale, must be construed, however, in the light of two considerations. One is the peculiar constitution of the Berlin Bourse, where, prior to 1896, securities were commonly bought and sold "for the account," or monthly settlement. The other is the tempering effect which the easy resort to foreign exchanges was bound to have on the speculative current whose outlet was not choked up, but merely diverted into other channels.

The Bourse Law of 1896 was the outcome of flagrant dishonesty which had come to light in transactions going back to 1891. The government appointed a commission of investigation, which rendered a well-sifted report with conservative recommendations in November, 1893. The bills drafted for parliamentary approval went far beyond the projected remedies suggested by the commission, and the Agrarians loaded the measures down still further with an absolute prohibition of time dealings in grain on the produce exchanges. Similar in purpose and spirit was the provision which forbade future dealings in the securities of mining and industrial companies. The purpose which animated both the big landlords and the large industrial proprietors was to abolish the low prices in produce and in industrial shares, which they alleged resulted from short sales. Another peculiarity of the Bourse Law was the attempt to keep "lambs" out of the market by providing an official register in which speculators had to enter their names on penalty of having contracts non-enforceable at law. It was naïvely supposed that a book in which one must write himself down, not an ass—or not an ass only—but a gambler, would deter many who would not hesitate to speculate *sub rosa.* Besides these provisions, there was a cumbrous system of regulation, inspection, checks, and balances by the dozen, to make up a good dose of paternal regimentation.

The effect of the law was most quickly felt in the produce exchanges. The Berlin dealers in produce, who had previously occupied one section of the Bourse proper, proceeded to abandon their wonted place of business, and migrated to a neighboring variety theatre, appropriately called the Fairy Palace. Here, without the formal rules of exchange business, as to official fixation of prices and stipulations for contract enforcement, they proceeded to "enjoy the angry gods" both of the scandalized bureaucracy and the outraged Agrarians. The official register they let severely alone, and took their chances on their contracts for future delivery. Furious interpellations of the Ministry resulted in a tardy administrative order to the Fairy Palace to qualify as a produce exchange. This order was contemptuously neglected, with the result that the ever-faithful *Polizei* made a descent on the palace on June 11, 1897, and nailed it up. Driven from their refuge, some of the more persistent dealers ingeniously rented an abandoned hospital. Here they set up pseudo-offices in the stalls or booths which communicated with the central corridors, and contended that they were doing, not an exchange business, but exchanges in their own private counting-houses.

Soon, the grain trade of the empire had become seriously disrupted. Produce exchanges in some of the smaller cities had closed, and reliable prices for future delivery were not quotable. The only persons to benefit were local dealers, who gave the farmers less for their grain, and charged the millers more. The middleman's profit, moreover, was fairly legitimate, as he now carried the risks attendant upon holding the stocks he purchased. As if to point the revenge which the produce brokers had taken on the community, the Minister of War complained of the danger confronting the nation. He could not obtain guaranty of large deliveries, and pointed out that a war emergency would leave the army administration in a grave plight. The Minister of Commerce approached the grain dealers, and on April 2, 1900, the Berlin Produce Exchange welcomed back its long-lost sons. The government shamefacedly recognized their right to deal in futures and to publish time quotations. The only concessions made by the grain dealers was to accept representatives of the grain interest on their managing board, and to print "For actual grain" on their sales memoranda. Thus the dangers of "paper wheat" were cured by a paper-phrase.

In the security market the prohibition of time dealings in the leading industrials resulted mainly in changing the form but not the essence of speculation in these stocks. Cash transactions superseded the older dealings "for the account," and the ups and downs of prices were, if anything, intensified by the change. This change had also the effect of concentrating the business in the hands of the large Berlin banks. Unlike our banks, these institutions do a large brokerage business in stocks and in the issue of securities. They are also permitted to "match orders." If they receive buying and selling orders in the same security, they simply make the transfer, and exact commissions from both principals. Hence, the larger the bank, the larger the gain from this process; and the greater the speculation for immediate delivery, the greater the facilities the big banks can afford by reason of their large cash holdings. Between 1897 and 1900 a carnival of stock speculation prevailed in Berlin—which demonstrated the ineffectual character of the Bourse Law as a preventive of speculation.

The more recent heavy listing and transfer taxes have had the result of driving certain kinds of speculation to foreign exchanges, and of lessening in some degree residual speculation at home. But German experience seems clearly to show the general utility of grain futures, the inadequacy of law to lessen seriously a speculative mania, and the ease with which speculation migrates to foreign exchanges. Whether the incidental lessening of speculation is worth purchasing at the cost of demoralizing quotations and penalizing the legitimate investor and the legitimate business of the speculative "hedge," is more than questionable.

ENGLISH AND OTHER TEACHING.

The fact is brought out by a correspondent in another column, that teachers of English composition frequently get more hindrance than help from their colleagues in other subjects. Parents as well as professors in college wax eloquent over the lack of eloquence, and even of correct speech, in the rising generation, and declare that the whole tribe of teachers of English are too much occupied with the beauties of literature and the difference between Carlyle's and Macaulay's views of Boswell to drill their pupils in spelling, punctuation, and the rudiments of grammar. As we have recently pointed out, too many teachers think that literary criticism is a possible and fit occupation for children of tender years; but, as our correspondent shows, teachers of English are more often the sufferers than the sinners. Who can inculcate a belief that bad spelling and slovenly sentences are a sign of illiteracy when teachers of the classics, which are extolled as the very headspring of culture, and teachers of science, which is proclaimed the only begetter of modern thought, look on blunders in English as slips into which any educated man, even they themselves in moments of preoccupation, may fall? And from the other point of view, what is the pardonable confusion between *their* and *there* to a man who must impress the quantities of Latin vowels or the accents of Greek verbs on unwilling young barbarians? Or why should one whose thought is given to the eternal laws of gravitation and of the conservation of energy have to think of such ephemera as clearness and neatness of exposition? If a pupil gets an exact command of the grammar and archæology of Cæsar and Virgil, and learns to do experiments in physics and chemistry without bungling, why should he be bothered with a trifle like spelling, which business men now entrust to stenographers, or with such decorative graces as accuracy and facility of expression?

But, seriously, the fact that in many schools the ordinary decencies of written style are held to concern one teacher alone is a crying scandal. Merely from the point of view of waste of money it calls for a remedy: why pay for instruction in a subject when it is certain that the effect of that instruction will be nullified by mere inattention and carelessness on the part of other teachers? The other teachers, it may be said, have enough to do to keep their own houses swept without cleaning up after the department of English. The answer is that children are remarkably like their elders both in their inability to do things that are not required of them, and in their ability to do the same things under the spur. If a child knows that bad spelling and abortive sentences mean a failure and extra work in history, geography, or translation, he will spell and write better in all his courses. Thus the expense of training him in English will be greatly lessened.

The economy of money is the least consideration, however. The evil to be met is the squandering of time and effort in schools where there is no such coöperation. Modern teaching proceeds on the formation of habit through constant repetitions of the same acts, whether mental or bodily; and it recognizes that irregularities in the repetition indefinitely postpone the formation of the mental grooves which make for facility and accuracy of execution. Now, just in so far as a child is allowed to write carelessly in other subjects, just so far is he hindered in acquiring the habitual, unthinking command of his mother tongue. What he gains in one hour he throws out of window in the next. The truth is that formal exercises in English composition are likely to become artificial and wholly detached from the pupil's interests, either in play or study, and in so far forth almost useless. The study of ancient and modern languages, however, might incidentally be made an almost ideal drill in the choice of the exact word and in the construction of vertebrate sentences; but nine times out of ten it is not. Reports on laboratory experiments and other work in the sciences might be models of clear and orderly exposition; but they seldom are. Every teacher of English in a college is familiar with the way in which the ablative absolute clings to freshman and sophomore English; and it is obvious that a boy who in his exercises in history or physics has put every sentence into a separate paragraph will not think of paragraphs as a natural and useful tool of expression. Children who have been thus neglected, instead of growing up with the habit of easy and efficient expression, must work out what they have to say by laborious application of rules and canons which ought to have become second nature. Such a dissipation of energy would be laughable if it were not so deplorable.

Much may be done by active and intelligent principals and superintendents. Definite requirement of good English in all classes, followed up by joint meetings of departments in a school, would help to impress the minds of indifferent teachers of other subjects. And in the selection of new teachers, insistence that correctness in the use of their own language is the beginning of wisdom, without which none will be either called or chosen, would do still more. Men and women who look forward to teaching would then have to take some pains with their own style. Certainly, school committees and superintendents would be justified in placing a reasonable command of English style on an equality with a grounding in the principles of pedagogy. Eventually, both schools and colleges should aspire to putting into practice the admirable system for some years in force at the Massachusetts Institute of Technology, by which the teachers of any subject may at any time send the writer of a slovenly report or thesis back to the department of English for further instruction. This is the surest remedy; for it assumes that the one universal accomplishment of the educated man is a command of the resources of his own language. But in the meantime our schools should look to their harness, and make sure that the very process of teaching a boy Latin or physics or history does not contribute to making him illiterate in the use of his mother tongue. The truth is that if all the teachers did their duty toward English, the special teacher of English composition would be a superfluity.

AMUSEMENT AT THE ABNORMAL.

The proposed banishment of "freaks" from one of the circuses has been the occasion of much genial comment. Regret has been expressed for their departure, as if they had really been old friends. To some it may have seemed that, having no immemorial pantomime, this nation had made the circus "annex" provide a substitute, so that the human skeleton was our Pierrot, the fat lady our Columbine, and the tattooed man our Harlequin. If such were the case, then the freaks would be entitled to sympathy as victims of a prosaic and commercial age.

Yet, in fact, it is neither lack of imagination nor commercialism that is driving the freaks from their comfortable position. They were doomed from the day when the public began to realize what they really were. The passing of the freaks is not a casual incident in the history of the circus, but a striking illustration of the tendency which has been in progress for centuries toward the humanizing of our amusements. Even in the case of the freaks the change has really not been sudden. The odd and uncanny men and women who will one day be forced to depend for livelihood on the few remaining dime museums are natural prodigies. A few generations ago such human curiosities were manufactured by abominably cruel processes. In recent years, however, the armless and legless man, to obtain an engagement, must have been born that way, not maimed in infancy. Incidentally, he was all the more of a rarity, since demand was not allowed to create supply. But even a manager who had no hand in the man's mutilation would find it unprofitable to exhibit one who was simply the victim of barbarity. Managers, also, found out long ago that their attractions must be sane. An idiot might be ever so fantastically framed; it would not do to exhibit him on the platform. The freaks might be, and usually were, of a low grade of intelligence, like the giant who nearly turned a press-agent's farce into a tragedy by refusing to sign his own bail-bond when arrested, for fear that he was giving away his children, but they were not actual "defectives."

To that extent there was a reaction long ago against making public sport of what was merely pathological. The perception that, apart from mentality, freakishness itself was generally a disease, has finished the work. The giant, for example, when considered as a physical superman, or even as the villain of the nursery tales, was worth going to see. But we are taught now that he is not a superman, but the victim of a disease which in other forms kills after horrible disfigurement, that something at the base of his brain is responsible for the extraordinary and disproportionate growth, that the giant is usually sickly, dies young, and is inferior to an able-bodied man of ordinary size in any test that involves sustained effort. Just so when the patrons of the circus realize that the human pincushion, the elastic-skinned man, the blue man, the dog-faced boy, and their ilk are all victims of rare diseases with ten-syllabled names of Greek origin, and that, in all probability, other sufferers, who are unwilling to exhibit their afflictions, are under treatment by physicians, these, too, lose most of their fascination.

The most obvious parallel, of course, is the changed sentiment toward insanity. To spend a merry afternoon at the madhouse watching the antics of the maniacs in their chains seemed natural and reasonable to civilized Englishmen not so many generations ago. It has become absolutely unthinkable. In spite of certain ingenious critics, we cannot even conceive of Ophelia and Lear as comic characters. Nor do we go joyously to public executions. No town is likely again to receive such a title as "merry Carlisle" because of the exceptional activity of its gibbets. Sensation-seekers are excluded, so far as possible, from such places as morgues and prisons. So, sometimes by a gradual change of the attitude of substantially the whole public, sometimes by regulations which are supported by the sound sense of the community, though large numbers of the more or less morbidly-minded would disregard them if they could, the humane evolution goes on.

Not the least interesting phase of it is to be traced in the history of sport. The *gaudium certaminis*, perhaps, could not be eradicated from the human breast. Certainly, it has not been. Interest in contests as contests is as high as it ever was, yet many forms of competition which were once popular, from gladiatorial shows to cock-fighting, have been put under the ban of the law. Some persons, to be sure, consider such restrictions merely puritanical, and quote approvingly Macaulay's comment that the original objection to bear-baiting was that it gave pleasure to the spectators. The line, however, has consistently been drawn, not with reference to the degree, but to the kind of pleasure. The sports which have been interdicted are those in which the element of cruelty is paramount over the contest itself. As there is no intoxication more destructive than that of cruelty, other entertainments lose their zest to the spectator who has seen swordsmen carve each other to the vitals, heretics burned at the stake, or even game-cocks stab each other to death with steel gaffs. When the "punishment" arouses more interest than the rivalry of the contestants, the spectator of wholesome instincts, even though he himself be carried along in the excitement, knows that the danger line has been passed. So the more cruel sports have one after another been outlawed.

There is, in fact, sound reason behind every one of the efforts to get rid of the morbid and unwholesome in our life. That practices which once attracted no attention "get on our nerves" to-day is not a sign of weakness, but of sensibilities more intelligently directed. When there is so much, in the drama and elsewhere, to indicate a lowering of taste, there may be compensations in noting these thoroughly healthy tendencies.

PARIS BOOKNOTES—HISTORY.

PARIS, February 29.

The fullest publishing season of Paris, in quantity and in quality, is the month before Lent. The number of new books, which, if not all serious, are certainly not frivolous, is astonishing. Somewhere there must be readers numerous enough to warrant the publication of books, for example, on history, which take up the full space of the present letter. Many times as many more are omitted, because they are of local interest only. The most interesting concern France; and, not to lose ourselves in the number of them, let us take them in the order of the centuries of which they treat.

"L'Enfance de Paris" by Marcel Poëte, curator of the City of Paris Library, narrates intelligibly, with due reference to remaining antiquities, the making of Paris and its growth from prehistoric origins to the time of Philip Augustus, wall-builder of its adult age. Joseph Bédier, successor of Gaston Paris at the Collège de France, publishes the first of three volumes on "Les Légendes epiques," studies in the formation of the *chansons de geste;* the present volume deals with the Cycle of Guillaume d'Orange. The third volume of the posthumous "Mélanges linguistiques" of Gaston Paris, treats of the French language with etymological notes; it has been edited by Mario Roques. Professor Ch. V. Langlois of the Sorbonne publishes a readable, handy volume on "La Vie en France au moyen age," made up of properly chosen and ordered extracts from mediæval moralists, just as his previous book on French society of the thirteenth century was taken from ten romances of adventure. Octave Galtier, in his "Étienne Dolet," tries to give an authentic and moderate account of the life, work, character, and beliefs of that very debatable martyr of the surging Renaissance, round whose statue advanced thinkers of the Paris populace wrangle yearly.

The new volume of the Collection historique illustrée is devoted to Fouquet, finance minister of Louis XIV., with a predominating feminine interest from the Duchesse de La Vallière, Henriette of England, Marie Mancini, and others less known; A. Savine and Fr. Bournand are the competent compilers. In the series of Femmes galantes du XVIIe siècle, the new volume deals with the society of *précieuses* immortalized by Molière and their leading light, Madame de La Suze, who has a pathetic interest from her Protestantism and descent from Coligny of St. Bartholomew fame. Another Court lady of the *grand monarque*, who has a detestable reputation heightened by Frantz Funck-Brentano's book and Sardou's play of this winter, finds a defender with the courage of strong convictions in Jean Lemoine's "Madame de Montespan et la légende des poisons." He follows fiercely on the trail of Louvois, whom he accuses of having built up the whole charge of Black Masses and child sacrifices against the King's favorite. As in most French *causes célèbres*, the question must be reduced to the value of evidence, which is mainly that of confessed poisoners. Jules Lemaître, in the Conférences which are preparing his new book, takes up the supposed contamination of Racine in the same affair. To this reign also belong the "Mélanges et documents à l'occasion du 2e centenaire de Mabillon," the Benedictine founder of so much historical research. The three principal erudite bodies connected with him—the Bibliothèque du Roi (now the National Library), the Bollandists, and the Académie des Inscriptions—united last year with the Benedictine Order in doing his memory honor.

Lighter echoes of the next reign are heard in Letainturier-Fradin's "La Camargo," the life of a Belgian *danseuse* of the Paris Opera of the day (1710-1770). Her portrait was painted by Lancret and it is her imperishable glory to have been the first to do an *entrechat à quatre*, that is, strike her feet four times together during a single leap into the air; a century later her successsors pretend to an *entrechat à quatorze*, but this is mere revolutionary acrobatics and not the aristocratic ballet-dancing of the Old Régime. Richard Waddington, an historian who sits in the French Senate, devotes his fourth volume of "La Guerre de sept ans" to the diplomatic and military history of the years 1760-1761 (the battle of Torgau and the Pacte de Famille). In this struggle, the France of Louis XV., following the lead of Madame de Pompadour's vanity, joined Austria against Frederick the Great, embroiled herself with England, and lost Canada and India for ever, and formed the Trust of the Bourbons, which resulted in such far-off things as the suppression of the Jesuits, French help for American Independence, the warding off of England from Florida and Louisiana, and the saving to Spain of the Philippines—all with present-day results for the United States, not to speak of Anglo-Saxon civilization, Prussian hegemony, and Latin counter-Bourbon Revolution. M. Waddington's volumes, which have been crowned by the Institut de France, of course limit themselves to a painstaking study at first hand.

In lighter vein again, but with shadows cast before from the tragedy to which calumny led the way, we have "Les Amoureux de la Reine Marie-Antoinette," compiled by Henri d'Alméras, from the Royalist and Revolutionary pamphlets of the time, with a valuable bibliography. Victor du Bled, another industrious collector, devotes the sixth series of his anecdotes concerning French society from the sixteenth to the twentieth century to the subject of doctors before and after 1789 and to "L'Amour au 18e siècle." The endless publication of Revolutionary documents, lives, and memoirs goes on profitably. A new reproduction of contemporary books—L'Élite de la Révolution—leads off with the complete works of Saint-Just, with introduction and notes by Ch. Vellay. Henry Furgeot's "Le Marquis de Saint-Huruge (1738-1801)" gives the significant adventures of one of the men who made the Revolution triumph in Europe as Généralissime of the Saus-Culottes. The first volume of the Études sur la Contre-Révolution begins the career of one whose whole life was a long kaleidoscope of adventure—"La Vie et les conspirations de Jean, Baron de Batz (1754-1793)," written from unpublished sources by his descendant, the present Baron de Batz. Another book, which in like wise makes us understand how Alexandre Dumas's romance is truest to history as it really happened, is "La Guerre de Vendée (1793-1796)"—lively souvenirs of the Comtesse de La Bouère, published by her daughter-in-law, with a preface by Marquis Costa de Beauregard of the French Academy. The same historical Academician introduces the quite new reminiscences of a Bourbon follower, who chose for many modern years to forget nothing and to learn nothing—"Une Fidèle—La Marquise Lage de Volude (1764-1842)"—unpublished documents that see the light thanks to the Comtesse de Reinbach-Foussemagne.

The entertaining Jean de Bonnefon has turned from his No-Popery tracts to prove that "Le Baron de Richemont" was the real surviving son of Louis XVI., and that the claimant now in honor, Naundorff, appropriated the other's proofs and papers after his death. This question of the lost Dauphin has never been so discussed as now; an entire letter would not suffice to tell in order all that is published, including the special periodical review for a sort of lost-Dauphin (Naundorffian) society. Last week Ernest Daudet, the most erudite of Restoration historians, showed conclusively that Louis XVIII., when first King, must have believed in the demise. The common opinion, which is all but proved, is that the hapless child really "escaped" from the prison of the Temple, perhaps only to die before he could be of use to any one.

A book of prime importance for the understanding of Napoleon is the "Mémoires du Baron Fain," who was the Emperor's first Secrétaire du Cabinet, edited with introduction and notes by the author's grandson, an artillery officer of the Third Republic; it is the day-by-day observation of an intelligent subordinate dominated by an admired master. G. Duchêne describes for all who interest themselves in the proudest Imperial monument of Paris the history and architecture of the Arc de Triompbe, and the surrounding Place de l'Étoile, whose symmetry has of late been so sadly broken by great Americanizing hotels; the book belongs to the series Bibliothèque du vieux Paris. A piece of history, where religion gave a trend to politics, lasting until now—Liberal Catholicism from 1828 to 1834—is the subject of Abbé Charles Boutard's second volume on "Lamennais: sa vie et ses doctrines."

We come next to the Second Empire, with André Lebey's "Louis Napoléon Bonaparte et la Révolution de 1848," from unpublished sources. Adolphe Lair of the Academic family publishes, also from new documents, anecdotes and reminiscences of "L'Institut de France et le Second Empire." Two volumes of the technical military history of the War of 1870-1, in course of publication by the historic section of the French General Army Staff, deal with the besieging of Metz, the maps and original documents forming a volume separately.

The present Third Republic is represented among these historical documents by "La Séparation (1904-5)"—speeches of Aristide Briand during the discussion of the law which proposed to separate Church and State, and of which he was the Parliamentary reporter. His still more important later discourses, when he was minister, charged with executing the law, are to appear in a second volume. The publication shows all the wonderful qualities of the patient and ready debater. It seems designed to defend M. Briand in his great labors, since their constructive part has been made impracticable by Catholics giving up their church property rather than submit.

Apart from French history, there are a few books which ought particularly to interest American readers. One is the "La Question d'extrême orient," by E. Driault, a specialist; another is "Le Partage de l'océanie," by H. Russier, who has been director of public instruction in Indo-China. "Le Protestantisme au Japon," by Raoul Allier of the Paris Faculty of Protestant Theology, should appeal to an especially large public; for the first time, perhaps, it sums up the history and results of missionary enterprise, much of which has been American. S. D.

NEWS FOR BIBLIOPHILES.

In the Addenda to P. K. Foley's "American Authors," the compiler records an edition of Longfellow's "Hanging of the Crane," square 16mo, Boston, 1874, and says: "A privately printed issue, of not more than fifty copies, for presentation by the author." No copy has ever turned up in the market, nor has it, so far as we know, ever been accurately described. Longfellow's friend, Samuel Ward, had "negociated" the sale of the poem to his "trotting friend Bonner," the price paid being $3,000, besides $1,000 more for some charity in which Mr. Ward was interested. It was first published in the New York *Ledger*, March 28, 1874. This private issue had been put in type probably in January. It is a 16mo, consisting of title and pp. 3-16 of text. The title reads: "The | Hanging of the Crane. | By | Henry W. Longfellow. | Boston: | James R. Osgood and Company. | 1874." Only two copies can now be traced, and it is not probable that more than ten were printed. Although it was copyrighted, no copy is now in the Library of Congress. One was probably sent to the *Ledger*, and one, we know, to Routledge & Sons, London, for the use of their artists if they should wish to get out an illustrated edition. Instead, however, Routledge put the book in type in form similar to the author's own private issue. The copy in the British Museum was received May 6, 1874. That was actually the first published edition, as the book did not come out in this country until November, 1874, and the title is dated 1875.

Longfellow's poem "Keramos" was written in the spring and summer of 1877 and first published in *Harper's Magazine* for December of that year. That there was a privately printed issue, preceding the appearance in the magazine, seems to have been totally unknown to collectors until it was discovered by the late J. Chester Chamberlain. The private issue is an octavo pamphlet of twelve pages, without title, but with the word "Keramos" at the top of page 1. The poem was collected, with others, in a volume the next year.

After the school children of Cambridge had presented the chair made from the "spreading chestnut tree," which formerly stood before the blacksmith shop on Brattle Street, Longfellow had his poem "From My Arm-Chair" printed as a leaflet, each copy in an envelope, to be given to children who came to see him and to sit in the chair. This issue was printed before its appearance in the Cambridge newspapers, where it was first published. Of this leaflet two or three copies have come upon the market. Mr. Chamberlain secured the one given to George W. Greene, and Mr. Wakeman has the McKee copy.

Earlier in the year another leaflet poem had been privately printed, and it has heretofore remained undescribed. Bayard Taylor had died on December 19, 1878. A few days later Longfellow wrote the verses beginning

> Dead he lay among his books,

and the first week in January, 1879, a few copies were printed. Longfellow intended to read the poem at the memorial meeting to Taylor held January 10, but instead, the poem was read by Dr. Holmes. It is a little four-page leaflet (the last page blank) measuring 6¾ by 4¾ inches. Only two copies now seem traceable.

One other private leaflet deserves mention—Longfellow's poem "Noël," written in French, to send with a Christmas present of a basket of wine to Professor Agassiz in 1864. This little pamphlet, which was also noted by Mr. Foley in his Addenda, consists of title and pp. 3-8 of text. Five copies can now be traced. One appeared twice in New York auction rooms, the first time in March, 1900, with a collection of furniture, books, and curiosities of all sorts sold as the collection of Salmon P. Chase and his daughter Kate Chase Sprague. It was bound in with two other French books, and was described in the catalogue as follows: "Souvestre, Emile. Confessions d'un Ouvrier, about Le Progress, Longfellow's Noël, 1864, in 1 vol., 12mo. half calf." All but hidden in this curious entry, it was recognized by one bidder only, who bought the volume for $1.25. Then it was acquired by William Harris Arnold, who had it bound by the Club Bindery; and in his sale Mr. Chamberlain paid $55 for it. Mr. Chamberlain also acquired the copy given by Longfellow to George W. Greene.

Still another first edition of Longfellow has recently been unearthed. In the sale catalogue of Charles B. Foote's American first editions was listed a copy of Longfellow's posthumously published "Michael Angelo" with a London imprint and the date 1883, instead of 1884, that of the regular American first edition. The book was described in the Foote catalogue as "indifferently printed, . . . probably put in type for the purpose of securing copyright in England." After vain search in the British Museum and elsewhere the Foote copy was traced and examined. It proves to be an interesting and valuable piece, printed from the types of the *Atlantic Monthly*, but with altered page numbers and with other typographical changes. It brought only $1.25 in the Foote sale, but is easily worth fifty times that sum.

These notes, we may add, are from proof-sheets of the bibliography of Longfellow, which Mrs. Chamberlain is having prepared as a memorial to her husband.

In the "Varick Court of Inquiry" printed by the Bibliophile Society of Boston, Prof. Albert Bushnell Hart uses certain manuscript material obtained by a Western collector from the Varick family. It cannot be said that the papers give any additional information on the treason of Arnold, but they are interesting for the side-lights thrown upon some of the persons connected with Arnold at the time. Varick disliked Arnold's intercourse with Joshua Hett Smith and sought the aid of Mrs. Arnold to bring it to an end; he even insulted Smith when a guest at Arnold's table. Varick also believed that Arnold was disposing of the public stores for his own advantage; but no suspicion of participating in the treason ever attached to Varick. His arrest and examination were matters of form, and the manner in which Washington communicated the fact that he was under arrest showed the magnanimity of the general. Varick's picture of Mrs. Arnold's condition has dramatic touches, and awakens sympathy. For Arnold the editor has only caustic language, and attributes his falling to the pressure of money matters. He overlooks the fact that Arnold was addicted to liquor, which would account for his morbid tone and belief in his grievances. The "illegible word" in the letter of September 12, was *prepense*. The facsimile reproductions are excellent, the illustrations somewhat irrelevant, and the edition small enough to appeal to the collector.

The action of the Prussian Cultus Ministerium in having the Royal Library in Berlin, in connection with other libraries, prepare a full report on the earliest specimens of printing to be found in Germany, has already led to the discovery of a number of the earliest productions of the press of Gutenberg. Prof. Paul Schwenke, in the *Zentralblatt für Bibliothekwesen*, describes the Donatus finds, made by Prof. Ernst Voullième in the gymnasium library at Heiligenstadt, which antedate the Astronomical Calendar of 1448, and have now been deposited in the Royal Library in Berlin.

The German Gutenberg Gesellschaft which was not able to issue its annual volume in 1906 because Dr. Adolph Tronnier's exhaustive investigations of the Missalia of Peter and Johann Schöffer were not ready for the press, has now issued for 1907, a double volume of over two hundred pages, containing in addition Schroeder's study of the literary sources of the "Mainzer Fragment vom Weltgericht," Zedler's examination of the forty-two-line type in Schöffer's "Missale Maguntinum" of 1493, and a few minor articles. A large number of illustrations and reproductions make this a valuable work for the student of the art of printing.

The first number of the new magazine for collectors, the *Bibliophile*, has come from London. It is a royal octavo, on coated paper, with fifty-eight pages of text and illustrations, including four plates in colors. Heretofore, bibliographical periodicals have generally been short-lived, but this first number of the *Bibliophile* contains no less than thirty-six pages of advertising, and, if this amount can be kept up, the magazine should survive. Among the contributors are G. K. Chesterton, with a sketch of W. E. Henley; Mrs. Arthur Bell, the first of a series of articles on "Illustrated Books"; A. W. Pollard, "Early Book Advertisements," with a facsimile of the only known book advertisement printed by Caxton; and George C. Peachey, "History in Book-plates," etc. There are also book reviews, and two pages on postage stamps.

The Philadelphia book-seller, Samuel N. Rhodes, is offering his entire stock of books relating to American history at auction on March 23, 24, 25, and 26. Samuel T. Freeman & Co. are the auctioneers. They make the statement that every lot will be sold "as is," and that nothing can be returned on account of error in description. Book-auctioneers generally sell subject to collation, and the return of imperfect books not so described. The manuscript journals of Titian R. Peale during his services as naturalist with Long's first expedition, is one of the most interesting lots in Mr. Rhodes's collection. Among others are Franklin imprints, and books about Franklin and Washington, a series of Quaker broadsides, books on Pennsylvania and New Jersey, and a few Western books.

Correspondence.

THE JAPANESE POINT OF VIEW.

TO THE EDITOR OF THE NATION:

SIR: The following portion of a letter just received from a Japanese who somewhat less than twenty years ago was a student at Harvard seems to me to deserve wide circulation. The lesson which it has for our own press and the instruction it affords for public opinion do not need to be enforced by any words of mine.

CHARLES ELIOT NORTON.

Cambridge, Mass., March 10.

Japan, February 11, 1908.

We Japanese have done very well in education so far, but I cannot help having great apprehension as to the future. The students are overtaught, being obliged to attend about thirty hours of class work weekly. This is a requirement which obtains in all grades of our schools, colleges, and universities. Worse than this, the teachers are underpaid, except a few who are foreigners. In the near future I fear our best men would not take up the work of education as their life work, and the result would be that we Japanese would be left far behind among the nations of the world, and if our national spirit should lose its power over the people, we can expect nothing but spiritual dearth and national calamity.

I see almost every morning some telegraphic news of the "Japan-American question." It is almost beyond the comprehension of most of us, to see how well-informed Americans could take such a question seriously, how little we and our ways of thinking are known to your people. The question of emigration to America occupies but a very insignificant place in the mind of the Japanese, while they cannot for a moment forget how greatly Japan is indebted to America for her present progress and achievements. I do not think the Japanese can be made, in a few years to forget the last fifty years of America's good will, and unlearn the lesson she has taught them, however un-American Californians may try. Nor are the Japanese ignorant how poverty-stricken a nation Japan is. Though recently our Diet has passed the government's new bill of increased taxation, it will be many, many years before the nation can bear the burden of another war.

As to the coming of the American warships to the Eastern waters, no Japanese have any feeling of anxiety or fear. On the contrary, they will heartily welcome them, as these warships will simply serve to broaden their minds and help their trade.

We Japanese are, indeed, perfect fools to build and maintain so many powerful warships, while so many more important works of civilized life are left undone, though perhaps a great navy and army are important helps to us to get the respect of our neighboring countries in Asia. I sometimes pass hours indulging in the almost Utopian imagination as to what the result would be, if instead of having your fleet sent to the Eastern waters, a fraction of its cost should have been used to found a great American university or universities—say one at Tokio and another at some point in China—to teach Western ideals, institutions, and sciences, and investigate certain Eastern subjects which can be best studied in the East and at the present day. This is certainly an idle imagination, but such universities, with able and broad-minded presidents and mixed faculties of Americans and other nationalities, might in a few years do untold good to the world at large, to say nothing of the more immediate benefits which the Eastern people would derive from them.

POWERS OF THE EXECUTIVE.

TO THE EDITOR OF THE NATION:

SIR: Your editorial of March 5 on "A Real Governmental Change" is a marked sign of the times. In the convention of 1787 Madison said:

> The tendency in our State governments is to throw all power into the legislative vortex. The executives are little more than ciphers. The Legislatures are omnipotent. Unless some check can be devised upon the ambition of these bodies, revolution is inevitable.

About the middle of the last century, when the advent of stronger government became inevitable, the Legislatures, with their inherent jealousy of the Constitutional single-headed executive, proceeded to set up a system of government by commissions, the futility and disastrous results of which are just beginning to make themselves manifest. Meantime, the mass of the people, weary and disgusted with Legislatures, committees, and commissions, are developing a feverish thirst for that which alone, since the beginning of the world, has aroused them—and probably will to its end—to united, coherent, and permanent action, and that is individual personality. The boss-rule in cities is only a manifestation of this. The reason of its badness is that while the honest and law-abiding elements are forbidden to have any leaders and cannot find them, the rascals quickly gravitate towards the biggest of their number and form a disciplined phalanx to override the majority. Could there be a more beautiful illustration of this abiding necessity for the welding together of public opinion than the present position of our Chief Magistrate? What its significance is and its possible results are not here touched upon, but merely the fact. And this is not all the evidence. Reform candidates for Governor are springing up all over the country, and it is surprising to see how promptly the people respond to their appeals by election. But the Governors do not know what to do. As the object to be attained is not particular legislation but reform in methods and procedure, the other branch holds them at bay, they achieve little or nothing, and so pass on to oblivion.

The first requisite is that the Governor, who alone represents the whole State and the administration of its work, shall have just as good a right to be heard by all his constituents as any member of the Legislature, any chairman of committees, or the Speaker. Take a case in point: On March 4 ex-Gov. Frank S. Black of New York made a speech in opposition to Gov. Hughes's proposal to suppress race-track gambling. The weakness of Mr. Black's argument was exposed at the time by Mr. Louis Marshall. The next day Gov. Hughes made a reply, which for elevation of sentiment, force of logic and fire of language and delivery was simply magnificent. But mark the difference: Mr. Black's speech was made "at the joint hearing before the Codes Committee of both houses," the nearest approach to a legislative debate. But the opportunity of the Governor of the State was reduced to "the annual dinner of the North Side Board of Trade in Ebling's Casino." Does it not sound absurd? If that speech had been made, where it ought to have been made, in the great chamber at Albany, it would have resounded all over the United States, and gone far to secure his nomination in the national convention.

The point to be aimed at was well stated in the Massachusetts platform of 1901:

> We demand more unity and responsibility in our State government. The present system of administration is unscientific in form, unnecessarily complex, and largely irresponsible. The "supreme executive magistrate" of the commonwealth should be the controlling head, not merely the figurehead, of the State government, and should be responsible for every part. To that end, we demand that all State officials be appointed by him, and be subject to removal by him alone. We further believe that the duty of approving and recommending to the Legislature all such acts as administrative needs may require in the general interest belong to the Governor, and that all measures recommended by him should be given the right of way in the Legislature over other bills.
>
> We believe that every branch of our State government should be classed as a department, and that every head of a department should have a seat upon the floor of the Legislature, without a vote, and be subject to proper questioning as to matters under his charge.

It may be asked, why, if this is so important, no movement is made toward it. For two reasons: because the Legislatures do not want it, and the Governors are afraid. The latter do not see either the degree of necessity or the means of carrying it into effect, and so shrink from taking hold of it. But, with events drawing rapidly to a head, it seems as if before long some Governor must see it, and if, by passing over the Legislature and appealing directly to the people, he can get it into working order, and secure its adoption, not only in his own, but other States, he will find a place in our history awaiting him alongside of Washington and Lincoln.

G. BRADFORD.

Boston, March 10.

"OUR INFANT CRITICS."

TO THE EDITOR OF THE NATION:

SIR: May I add a few words of reinforcement to what you say in your issue of February 27 on the futility and waste of training the average boy or girl of high school age to write literary criticism? In a good many years' experience I have found the capacity to put on paper even an approximate idea of a student's views of books a rare accomplishment, even in college classes. As a matter of fact, few mature readers ever crystallize their impressions of what they read into coherent expression. It is obviously absurd, therefore, to ask school children to do what most of them will never be able to do when they are grown up.

The cause for this perversion of teaching is to be found, in part at any rate, in an ambiguity which has not yet been generally recognized. Schools usually provide a course and colleges an entrance examination in what is called "English," as if it were a single subject; and then demand results of two quite different kinds—ability to write, and appreciation of literature. Under this loose use of the word "English," school teachers and examiners alike have easily slurred over the fact that, though the capacity to write correctly and clearly ought to be universal, appreciation of literature is bound to be limited by considerations of temperament and occupation. Moreover, school committees and superintendents frequently expect the teacher of English in a single allotment of time, often in itself scanty, to give instruction in both literature and composition, subjects which are hardly more closely related than are history and English composition, or Latin and English composition, pairs of subjects which no one would think of compassing in a single allowance of school periods. Until it is recognized that English composition is a subject by itself, to be taught with full allowance of time, and with direct reference to the whole range of a child's practical needs, both in school and in after life, we shall find schools turning out "infant critics" as if they were cause for pride and not for pity and repentance.

On the further question, as to whether "English" should be taken to mean composition alone, and literature be either dropped or else made elective in schools and on the list of subjects for entrance to college, I can contribute a little light. The department of English at Harvard recently appointed a committee to consider the general question of entrance requirements; and, to get an idea of the views of teachers in the schools on the subject, we sent out a number of circulars, most of them to public schools. One of the questions which we asked was: "Do you think it would or would not be advisable that the examination in English should test proficiency in composition only?" Practically all the forty answers we received were in the negative. Teachers of English in the schools, therefore, we may suppose, believe almost unanimously in the value of the present requirements of some knowledge of literature.

The results of another question were interesting. In answer to the inquiry: "Is there any formal coöperation between the teachers of English in your school and the teachers of other subjects to maintain and strengthen the pupils' standards of written English?" it appeared that in a dozen schools there is formal coöperation, in fourteen informal coöperation, and in seventeen either none or very little. Though the number of answers is too small for certain generalization, yet they seem to point to the secret of much of the difficulty with the written English of the rising generation. Ideas of correctness and facility of expression which are laboriously drilled into a child by the teacher of English in one hour, are in the succeeding hour blurred and obscured by the indifference of semiliterate or careless teachers of Latin or physics or history; and the child comes to look on the desire to write well as an unreasonable hobby of the teacher whose subject has the least relation to the practical interests of life. If in such a case the teacher of English makes literary criticism the chief subject of composition, one can understand the repugnance which so many of our youth show to the idea of learning to write. But, if principals and superintendents of schools would enforce on teachers of all subjects coöperation with the teachers of English, there would be a surprising decrease in the number of young men who start in business or come to college congenitally incapable of writing a decent letter.

J. H. GARDINER.

Harvard University, March 6.

PHOTOGRAPHIC REPRODUCTIONS OF MANUSCRIPTS.

TO THE EDITOR OF THE NATION:

SIR: Prof. Raymond Weeks's welcome description of the *procédé Graffin* in your issue of March 5 may be supplemented by the statement that such positive photographs can now be procured at almost all the larger European libraries. At the Vatican, for instance, those in size 9x12 cm. can be bought at ten cents apiece. But as Father Ehrle of the Vatican, an enthusiastic promoter of the new system, admitted to me in conversation last fall, they cannot yet really replace good ordinary photographs. They are rather sketchy than accurate, and a pupil of mine now working at the Bodleian points out in a recent letter another serious drawback:

> The Clarendon Press make what they call "rotographs," black background and white letters, at eightpence each. With these I have to be content, though they are very unsatisfactory and particularly trying on the eyes.

Few realize how cheaply regular photographs may be taken. I have photographed several manuscripts entire, in the size 9x12 cm., with a camera costing about $25. Slow plates cost thirty-five or forty cents a dozen (one can of course buy American Trust-made plates, etc., at lower prices abroad than here). It is well to do one's own developing; a photographer's dark room may be hired for the purpose, for a franc an hour. Prints can be made at two and one-half or three cents apiece. It cost me two days and about $18 or $20 to make a complete photograph (including also a set of prints for the library) of the Fulda manuscript of Ammianus Marcellinus, now in the Vatican, containing 208 folios. Of course the negatives may be used indefinitely—we have made several slides from these for our palæographical collection—and I now have the satisfaction of collating each proof of my edition of Ammianus with a sharp and clear print. It is easy to learn the art of photographing manuscripts, as several of our faculty here can testify; witness the beautiful manuscript fac-similes in Tallgren's recent "Estudios sobre la Gaya," enlarged from Prof. Henry R. Lang's photographs; he made these in Madrid a couple of months after his initial attempt. If one plans to go abroad for such work, he should in any event equip himself with a camera.

Krumbacher's article, "Die Photographie im Dienste der Geisteswissenschaften," referred to by Professor Weeks, appeared in the "Neue Jahrbücher für das klassische Altertum," 17 (1906), 601-659, with 15 plates; it is also published separately by Teubner (price 3m. 60).

CHARLES UPSON CLARK.

Yale University, March 7.

THE SUPERLATIVE IN CRITICISM.

TO THE EDITOR OF THE NATION:

SIR: May I venture to suggest that the ingenious author of the letter on "Yellow Criticism," in your issue of February 6, betrays an "old-fashioned" indifference to origins in attributing the invention of the "method of superlatives" to Victor Hugo? Has he forgotten that the superlative Lamb and the intoxicated Hazlitt had the start of a quarter of a century upon the terrific Frenchman? Shakespeare himself had a certain knack at the superlative,—but let that pass. Hazlitt and Lamb had a positive genius for it; to ignore them in favor of Hugo is—the most unkindest cut of all. Recall Hazlitt on Mrs. Siddons: "It was something above nature. We can conceive of nothing grander. . . She was not less than goddess, or than a prophetess inspired by the gods." Recall Lamb on Ford's "Broken Heart": "The expression of this transcendent scene almost bears me to Calvary and the Cross." Did Hugo surpass that? We need not confine ourselves to Lamb and Hazlitt; there was, if I am not mistaken, a marked fondness for the superlative in the hard-hitting, or Satanic, school of criticism of Jeffrey and Gifford, for which your correspondent confesses an elderly taste. When his favorites were in question, Jeffrey committed himself as daringly as the next man. Turn to his utterances on Burns or Shakespeare, and you may catch him again and again at a mouth-filling "incomparably," "unequalled," or "unparalleled." Of the Elizabethan and the succeeding age, he says: "There never was anywhere anything like the sixty or seventy years that elapsed from the middle of Elizabeth's reign to the period of the Restoration." It was "by far the brightest in the history . . . of human intellect and capacity." Hear him again on Shakespeare: "More full of wisdom and ridicule and sagacity than all the moralists and satirists that ever existed—he is more wild and airy, and inventive, and more pathetic and fantastic than all the poets of all regions and ages of the world." Has Swinburne surpassed that? Has not this the very ring of the golden verbosity of Swinburne?

I have not the slightest intention of suggesting that Jeffrey, Lamb, Hazlitt, and the anonymous criticasters of your correspondent are, by virtue of the "superlative method," birds of a feather—quite the contrary. I wish only to make a distinction which your correspondent has neglected. The inventor of a literary label is liable, in the enthusiasm of the creative moment, to paste it rather indiscriminately upon everything within reach; in my opinion, he has been guilty of indiscrimination in pasting his interesting yellow label upon Swinburne. The last of the great Victorians uses the method of superlatives, to be sure,—a point which he has in common with the yellow critics and with Lamb—which should give us pause. It is true that Swinburne has discovered a humorously large number of "peerless sovereigns of the realm" of prose and poetry—I confess I envy him the experience. But a man no more thinks of swallowing Swinburne whole than of swallowing the west wind; a whiff of either is invigorating. No more should one swallow Lamb's utterance on the "Broken Heart," quoted above; it is very bad criticism. Yet it can scarcely be denied that Swinburne and Lamb and Hazlitt have done more to stimulate interest in the dramatists of the Elizabethan age and to bring about appreciation of them than all the horde of temperate critics and editors that has followed in their footsteps. For they had the first requisite of stimulating criticism, exuberant joy in excellence, a joy that makes its possessors speak like intoxicated men; such critics bring home the burden of the harvest. Jeffrey, even, praised Hazlitt for his "happy intoxication" in approaching Shakespeare. And so I wish to say a good word for the superlative. A superlative rightly used means: My life for my word. It's the proper expression of whole-hearted lovers and haters. It's the proper expression of Shakespeare, of Lamb, of Hazlitt, and—I do not hesitate to say—of Swinburne. The superlative is right when there is a man behind it.

There is no real peril in the superlatives of Swinburne; nothing is more difficult to counterfeit than enthusiasm; nothing is more inimitable than joy. Let us not affix the yellow tag to the grey-haired son of Charles Lamb. There are, in all conscience, uses enough for the label, elsewhere. The real yellow criticism is the criticism of puffery and sham. It is the criticism of the poverty-striken hack "inspired" by the frugal publisher, who presents him the book for his pains. It is the me-and-my friends, or the Christmas-present, school of criticism; Author A extols the work of Author B to the skies, expecting shortly to be stellified in turn. Swinburne surely did not expect Shakespeare to rise from the dead to praise his "Bothwell" or his "Mary Stuart!" The fundamental and controlling principle of the real yellow criticism is, that the right hand should always know what the left hand is about. The gentle reader must light a bigger lantern than that of Diogenes, when he sets out to find an honest critic. What we need in criticism is not a check on superlatives, but a check on shams: not a check on poetic prose, but a check on puffery,— critics, in short, who bring their whole characters to bear upon the work in hand.

STUART P. SHERMAN.

Urbana, Ill., March 4.

LONGFELLOW'S GERMAN STUDIES.

TO THE EDITOR OF THE NATION:

SIR: In his interesting letter published in the *Nation* of January 9, Prof. J. M. Hart of Cornell, discussing Hoffmann and Longfellow, says: "I hope that some one of our younger set may be moved to make a careful study of Longfellow's German studies." A note of mine, sent to the *Nation* some weeks ago in reply, seems to have miscarried, and I venture to write again, announcing that I hope to issue, in the near future, a volume dealing with Longfellow and his entire relation to Germany and German culture. I began the work years ago, while in Germany, but was interrupted by return to America; and repeated short visits to the Fatherland, with even substantial coöperation from scholars and authors there, have been insufficient to enable me to complete the task on the lines I originally laid down. Year by year I learned of new material, some of which was long inaccessible; and it is only recently that I have come into possession of a quantity of original manuscripts and letters from Longfellow and his friends, throwing new light on many incidents and disputed points. The late Carl Schurz and others have kindly contributed reminiscences to the volume, and I have been encouraged by one of America's most distinguished men of letters, a warm friend of Longfellow's. One more visit to Germany will be necessary to bring the book absolutely up to date—for the work could never have been prepared outside of Germany—but with the considerable amount of manuscripts and illustrations before me, I should be able at last to treat the subject comprehensively. Inasmuch as it was a labor of love from the beginning, prompting me to regard Longfellow's indebtedness to the Germans in a sympathetic spirit, I trust that the volume, when it appears, may fulfil every expectation of the poet's most ardent admirers.

J. PERRY WORDEN.

March 4.

ABOUT THE BACKS OF BOOKS.

TO THE EDITOR OF THE NATION:

SIR: I have been much annoyed by the unsatisfactory backs of many modern books. A number of publishers, both at home and abroad, omit the author's name from the back. Moreover, some publishers of annotated school and college texts put in large and conspicuous type the editor's name, to the utter exclusion of the author's. In the case of the average annotated text the author's name should surely take precedence over the editor's, and not vice-versa.

C. H. IBERSHOFF.

Ithaca, N. Y., March 7.

Notes.

The following are forthcoming from E. P. Dutton & Co.: "Reminiscences of Oxford," by the Rev. W. Tuckwell, second edition; "An Apostle of the North," the life and memoirs of William Carpenter Bompas, D.D., by H. A. Cody, with an introduction by the most Rev. S. P. Matthesen, D.D., archbishop of Rupertsland; and "English Socialism of To-day," by the Right Hon. H. O. Arnold-Forster, M.P.

The University of Chicago Press has three important works almost ready for publication: "The Witness of the Oriental Consciousness to Jesus Christ," by President Charles Cuthbert Hall; "Descriptive Geography of Palestine," by Prof. L. B. Paton; and "Stellar Evolution: A Popular Account of Modern Methods of Astro-physical Research," by George Ellery Hale.

Thomas Y. Crowell & Co. will soon have ready a study of "The Christian Faith and the Old Testament," by Dr. John M. Thomas, president of Middlebury College. It is said to be "progressive, yet conservative" in its attitude toward this question now undergoing readjustment in the minds of students and laymen.

The following religious books are in the press of the Revell Company: "The New Horoscope of Missions," by Dr. James S. Dennis; the first three volumes of G. Campbell Morgan's "Analyzed Bible"; "The Saloon Under the Searchlight," by George R. Stuart; "Missions Striking Home," by J. Ernest McAfee; "Ancient Jerusalem," by Hon. Selah Merrill; "A Life with a Purpose," memorials of John Lawrence Thurston, by Henry B. Wright; "Beyond the Natural Order," by Nolan Rice Best; and "Our Silent Partner," by Alvah Sabin Hobart.

Charles Scribner's Sons, publishers of Hastings's five-volume "Dictionary of the Bible," are now preparing a "One-Volume Dictionary of the Bible," edited by the same scholar. The articles have been specially written for this work, which is not in any way a condensation of its larger forerunner. It will be published this year and sold by subscription.

The Oxford University Press has the following works in preparation: Stowe's "Survey of London," edited by C. L. Kingsford; "The Mirrour of the Blessed Lyf of Jesu Christ," translated out of the Latin by Nicholas Love, edited by Lawrence F. Powell; "Imperial Gazetteer of India," Vol. III.; "The Greek Versions of the Testaments of the Twelve Patriarchs," edited by R. H. Charles; "Virgil," translated by J. Jackson; "The Sounds of English," by Henry Sweet; "Handbook of Flower Pollination," by Dr. Paul Knuth, translated by J. R. Ainsworth Davis; "Catalogue of Coins in the Indian Museum, Calcutta," Vol. III., by H. Nelson Wright.

The only publication of Houghton, Mifflin & Co. this spring in their special Riverside Press editions will be George Willis Cooke's "Bibliography of Ralph Waldo Emerson."

The Selden Society hopes to issue the delayed volume XXII. of its publications by April. It will be the fourth volume of the "Year Book of Edward II.," with text and translation by the late Prof. F. W. Maitland and the final revise and introduction by G. T. Turner. Volume XXIII. for 1908 will be "The Law Merchant in the Fair Courts and Other Local Courts," edited by Prof. Charles Gross of Harvard. The material upon the Law Merchant has been found to be so interesting that there will be a second volume, "The Law Merchant in the King's Courts," containing several interesting rolls and other matter.

The first number of the *Economic Bulletin*, published by the American Economic Association, will appear on or about May 1. It is to be a quarterly, containing from 80 to 100 pages, and devoted largely to book reviews in the field of economics and the allied social sciences. Each number will include a classified and annotated list of recent books, magazine articles, and book reviews. The *Bulletin*, according to the announcement of its projectors, represents the first systematic endeavor to provide a complete critical bibliography of current economic literature. The members of the board of editors are:

E. W. Kemmerer, managing editor, Cornell University; William B. Bailey, Yale; Ernest L. Bogart, Princeton; Thomas N. Carver, Harvard; Frederick A. Cleveland, New York University; John R. Commons, University of Wisconsin; Frank H. Dixon, Dartmouth; Charles A. Ellwood, University of Missouri; Frank A. Fetter, Cornell; John Henry Gray, University of Minnesota; Mathew B. Hammond, Ohio State University; Jacob H. Hollander, Johns Hopkins; Edward D. Jones, University of Michigan; Samuel M. Lindsay, Columbia; Isaac A. Loos, University of Iowa; Frank L. McVey, St. Paul, Minnesota; Carl C. Plehn, University of California; Maurice H. Robinson, University of Illinois; Henry C. Taylor, University of Wisconsin; Frank A. Vanderlip, New York city; Ulysses G. Weatherly, University of Indiana; Adna F. Weber, New York city; Henry Parker Willis, George Washington University; Clinton R. Woodruff, Philadelphia.

W. J. Rolfe's "Satchel Guide for the Vacation Tourist in Europe" comes to us from Houghton, Mifflin & Co. with revision for 1908. This year there have been added an excursion in the Dolomite region and short tours in Southern Spain.

The first value of Martha Pike Conant's "Oriental Tale in England" (Columbia University Press, the Macmillan Co., agent), as should be expected from a thesis for the doctorate, is its fulness as a record. Here in convenient form are brought together brief characterizations of the Oriental apologues, satires, and letters that run all through the eighteenth century and form an integral part of the romanticism of the nineteenth. Miss Conant makes this connection with the romantic movement the guiding thread of her book, and in her concluding chapter, "Literary Estimate," deals with this theme directly and convincingly. She admits that the Eastern tale as written in England was classic, or pseudo-classic, in form, but points to the romantic escape inherent in its subject, and shows that "every romantic revival passes through a stage of what may be called pseudo-romanticism or, more accurately, superficial romanticism." She has a word also for the influence of the Oriental tale on the development of the novel through the introduction of the element of plot. On the whole, her work is useful, though pedestrian in tone.

"A History of Milan under the Sforza," by Cecilia M. Ady (G. P. Putnam's Sons), edited by Edward Armstrong, is an interesting book. It brings over into English the results of the investigations of a generation of Italian scholars, and supplies the first consecutive account of the Sforza. With reasonable fulness, it is intended to be popular, but not shallow. The Sforza and the Medici rose and flourished side by side, the former in the north, the latter in Florence; and their families collapsed in almost the same year. The author of this book has done much towards securing from English readers an appreciation of the remarkable Lombard dukes, who seemed more than once on the point of overshadowing their Florentine rivals. She has added excellent chapters on the architecture, art, literature, and social life of their duchy, and of Milan in particular. No doubt, much of the credit for the book belongs to Mr. Armstrong, whose life of Lorenzo de'Medici and other works on Italian Renaissance subjects have long been favorably known. The illustrations consist of a score of portraits, of a view of the old Castello Sforzesco, and of some appropriate architectural subjects.

Six lectures delivered at University College, London, and now reprinted under the title "Bonapartism" (Henry Frowde), constitute H. A. L. Fisher's latest contribution to historical literature. Assuming that the reader is familiar with nineteenth century history, he ranges from the campaign of Italy to that of Sedan with a strong grasp of fact and a power of generalization that never flags. Occasionally a new thought is struck out, as when he says that the mental infirmity of Napoleon III., his apathetic tentativeness, was the chief factor that made for his political survival after his election to the Presidency of the Second Republic. On the other hand, the Roman expedition is not noticed, and there are some errors of proportion. The only bad slip observed (p. 76) is the statement that Louis Napoleon became head of the House of Bonaparte on the death of the Duke of Reichstadt. On the whole the book has the true historic ring, and should be useful for students of the period.

"Paraguay on Shannon," by F. Hugh O'Donnell (London: P. S. King), is a vigorous denunciation of the dominance of the Irish priest in politics by a Roman Catholic and Nationalist. While in matters of style and taste it is not above criticism, it throws light upon the Irish question which cannot be ignored. Among other things he calls attention to the unparalleled increase of the clerical population, and says that if Belgium was staffed in the same proportion as Ireland it would have ten archbishops instead of one and sixty bishops in place of five. The priesthood also "monopolize every post and profession in public and private life to which an emolument is attached and from which a layman can be excluded." It controls the Ribbon organization which is now exceedingly strong, a large majority of the leaders being "publicans and spirit grocers." His gravest accusation is that the priests are driving the best of Ireland's sons and daughters to seek an asylum in other lands.

The descendants of Dr. John Morgan, a graduate of the first class of the College of Philadelphia in 1757, later surgeon in Forbes's expedition for the capture of Fort Duquesne, have printed for private circulation his "Journey in Italy, Switzerland, and France in 1764." After six years of apprenticeship to Dr. Redman, the leading physician in Philadelphia in colonial days, Morgan went abroad equipped with letters from Franklin. In Edinburgh, in 1763, he received his medical degree, and then came his tour on the Continent, of which he left the "Journal" now first made public. It is interesting from his description of the places and people he saw, and it shows how young Americans were welcomed abroad. He was presented to the Pope, to the King of Sardinia, and to Voltaire at Ferney; his "Journal" devotes much space to a detailed account of the enthusiastic welcome given to him and his companion, Samuel Powel of Philadelphia. Voltaire showered blessings on their heads, introduced them to his family and guests, among them the descendant of Corneille who shared his bounty, praised Franklin, discussed Bolingbroke and Locke and Hume, and was violent in his denunciation of the church and the priesthood. It is noteworthy that this young American records in an enthusiastic way his admiration of Swiss scenery, at a time when his English elders showed no such love of nature in its grandeur. In Milan he found the Public Hospital beyond comparison the finest and largest he had ever seen, supporting a staff of fifteen surgeons and seventy assistants, with lectures given to the students—no doubt an inspiration to him in his successful foundation of a medical school in connection with the College of Philadelphia in 1765. This was the first medical school in the country, as he was the first American professor of medicine. Later he was made chief medical officer of the Continental Army; his services in reorganizing its hospitals and medical and surgical department were recognized by Washington and the generals who could best appreciate his labors. The appendix to the "Journal" is a list of articles collected by him during his travels, and is of interest as showing the culture of a colonial doctor.

The veteran Anglo-American Orientalist, Prof. Lawrence H. Mills, of Oxford, who reached his seventy-first birthday on February 11, celebrated the occasion, as it were, by adding to his long list of contributions to Avesta scholarship his "Avesta Eschatology Compared with the Books of Daniel and Revelations."

The Gyldendal Publishing Co. (Copenhagen and Chicago) has just issued a daintily printed Danish translation of selected poems by Robert Herrick. The manuscript was recently found in the attic of an old house in the Danish city of Ribe by V. J. von Holstein Rathlou; the author of the translation, which must have been made about 1670, has hidden his identity behind the initials J. L. F., which the editor supposes to mean Jörgen Lauridsen Fog, a former rector of Ribe.

Hans Ross, the Norwegian dialectologist and compiler of "Norsk Ordbog," is the author of a recent treatise on the phonology of Norwegian dialects, "Norske Bygdemaal," published by the Scientific Society of Christiania. The Scandinavian languages as a group he divides into four branches: (1) South Scandinavian, Danish principally, but also including the southern districts of Sweden; (2) Central Scandinavian, comprising the languages of central and part of southern Sweden, and also a part of the north of Sweden; (3) East Scandinavian, or Gothic, covering Gothland and the Swedish isles; and (4) North Scandinavian, or Norse, the language of all of Norway, the northern sections of Sweden, the Swedish of Finland, and, strange it may seem, also the Swedish dialects of Esthonia. This classification is interesting as serving to emphasize the close affinity of Norwegian and Swedish to-day, while a thousand years ago in the later viking age, Danish and Swedish were one as opposed to the more conservative language of Norway. The larger portion of Ross's treatise is devoted to an analysis of the characteristics of the fourth of these groups.

"The Swedish Dialect and Folklore Society" has, in its organ *Svenska Landsmal ock Svenskt Folkliv*, edited by J. A. Lundell, published a large amount of important material in recent years. Perhaps only one other of the existing dialect societies in Europe has accomplished more, namely, the English Dialect Society, whose leading spirit is Prof. Joseph Wright of Oxford. In addition to minute studies of dialect the effort of the Swedish Society has been largely directed toward collecting popular ballads (with the music), accounts of rustic dances, legends, and survivals of early beliefs and superstition. The headquarters of the society are at Stockholm, Sweden, and the publications are issued from the press of Aktiebolaget Ljus.

In the Proceedings of the Christiania Scientific Society, No. 6, Magnus Olsen has an article on the inscription of the Valby amulet (Danish), showing how study of runes may throw light on folk-lore. The particular inscription had been unsatisfactorily explained before Olsen's interpretation. This stone, which is slightly larger than a human eye, reads: "Against jealousy." It was evidently used as a charm against "the evil eye." Belief in this magical power, as is well known, was widely spread in southern Europe in the Middle Ages. A Danish author, H. F. Feilberg, has shown that the superstition is also prevalent in the folk-lore of the north of Europe. As there can be no doubt that the Valby amulet dates back to about 700 A. D., and as Mr. Olsen's interpretation is supported by very strong evidence, the inference is that belief in the evil eye, so often met with in later times, affected the life of "the folk" in the north of Europe as early as the seventh century.

"Svensk Arbetarlagstiftning" (Stockholm: H. Geber), by M. Marcus, is a survey of Swedish efforts at legislation relating to labor, with frequent side lights on conditions in foreign countries, especially in Germany, England, and, in a smaller measure, the United States. Sweden has yet much to learn in this matter, and the author hopes that the more democratic composition of the national legislature, expected as an outcome of the new suffrage law, will result in more progressive legislation. The fifth part of Prof. G. Steffen's "Sociala Studier" (Stockholm: H. Geber) deals with only one part of the labor question that of the labor contract, and is more a philosophical study than an account of present conditions, as is natural in a series which has for sub-title, "Attempts at Explanation of Modern Social Evolution." Both Marcus and Steffen emphasize the idea that the object of all labor legislation is the raising of the working classes to a higher social and cultural *niveau*, in the interest of society as a whole, and warn against tendencies to condemn modern movements on account of occasional exaggerations and abuses which are due to the fact that this is a period of transition.

Karl Brugmann and August Leskien's attack on Esperanto, "Zur Kritik der künstlichen Weltsprachen" (reviewed in the *Nation* of February 13, 1908), has provoked a warm reply under the same title, from J. Baudouin de Courtenay, professor of comparative languages in the University of St. Petersburg (imported by G. E. Stechert & Co.). De Courtenay defends himself against the charge of partisanship, saying that he is no more an Esperantist than he is an abolitionist; but he asserts that, as a student of language, he is interested in Esperanto. Taking up Leskien's declaration that Esperanto is anything but easy, De Courtenay says that he gave two weeks, twelve hours a day, to the study of Esperanto; and now, with the exception of a word here and there, he can read practically anything in Esperanto. He has not tried speaking or writing, but has little doubt that he should soon succeed equally well. In answer to Leskien's conclusion that Zamenhof's effort "to solve the problem of a world language is quite unsuccessful," De Courtenay replies that Esperanto is a real language, is not too much dependent on the Romance, is not too artificial, has advantages over all other "world tongues," and is at present the most widely used of all artificial speech. He believes it will not only serve commerce and business men in practical affairs, but it will help in promoting the peace of the world, and breaking down the selfish barriers of contending nations.

In a volume of two hundred and fifty pages, Emil Burger publishes one hundred letters from women of prominence in Germany during the past two centuries, "Deutsche Frauenbriefe aus zwei Jahrhunderten" (Berlin: Moritz Diesterweg). The collection begins with samples from one of the most original of women letter-writers, Elizabeth Charlotte von Orleans; and with selections from Queen Louise, Goethe's mother, and the wives of Lessing, Herder, Schiller, and Wilhelm von Humboldt, comes down to the present Duchess of Baden.

The first *Heft* of the new volume of the Zeitfragen des christlichen Lebens (Stuttgart: Belser) devotes forty-eight pages to "Karl Schurz, Deutschlands beste Gabe an Amerika." The article is from the pen of Pastor G. von Bosse, a Lutheran minister of Philadelphia.

In "Hauptprobleme der Religionsphilosophie der Gegenwart," a booklet of 120 pages (Berlin: Reuther & Reichhard), Prof. Rudolf Eucken of Jena gives a summary of the principles of the philosophy of religion, based on the facts of psychology. A second part of the work deals with the history of religions; and a third discusses the character of Christianity. The views are quite naturally in harmony with those developed more extensively in Eucken's larger works. A supplement to this summary is the brochure of seventy-nine pages, entitled "Die Religion." by Georg Simmel, a volume in the series known as Die Gesellschaft (Frankfurt A. M.: Rütten & Loening). Writing from the point of view of psychology, the author regards religion as a necessary factor in man's makeup.

To his two volumes on the best of the Old Testament apocryphal books, Jesus Sirach, or Ecclesiasticus, furnishing an excellent text edition and commentary on this important work, Rudolf Smend of the University of Göttingen has now added a third volume, entitled "Griechisch-syrisch-hebräischer Index zur Weisheit des Jesus Sirach" (Berlin: Georg Reimer, 251 pp.). This makes the material for the study of this *apocryphon* more complete and better than that we possess for some of the Old Testament books themselves. This trilingual concordance is valuable in that it furnishes, as far as Ecclesiasticus alone can do this, the basis for a scientific study of the genesis and development of the meaning of the New Testament technical terms. The three languages are used because these represent three different text recensions of Sirach. This work, like the two earlier volumes, is an excellent example of German research.

The Deutsche Orient-Gesellschaft has been informed by the commission it sent out some months ago to investigate the ruins of the synagogues in Galilee, that enough data have been secured to publish a new and instructive volume.

Students of modern religious thought, especially of the recent papal Syllabus and Encyclical on Modernism, will find a mass of valuable material from Catholics and Protestants, now being published in the *Internationale Wochenschrift*, of Berlin, edited by Prof. P. Hinneberg.

Persons interested in the struggle of the so-called Modernists against the Jesuit reaction in the Catholic Church will find significance in a new journal, *Nova et Vetera*, which is issued at Rome by the Società Internazionale Scientifico-Religiosa. Father Tyrrell contributes the opening article and Loisy, Fogazzaro, Murri, and many of the lesser Catholic liberals, both lay and clerical, are among its supporters. The journal is to be issued fortnightly.

The *Rassegna Contemporanea*, a new review published monthly in Rome, deserves a welcome by those interested in the intellectual and political awakening in contemporary Italy. This magazine, which began with the present year, is intended to present all sides of the more serious questions of the day. Among its more notable contributors are Giovanni Pascoli (who, since Carducci's death, is regarded as the greatest living Italian poet); Prof. Adolfo Venturi of the University of Rome, Prof. Cæsare Lombroso of Turin, Giovanni Bertacchi, Luigi Capuana, and Leonida Bissolati.

H. C. Wellman, librarian of the Springfield City Library, reports that in the last four years the use of technical books in that library has increased 145 per cent. This increase he attributes directly to the liberal outlays for such works, and, more particularly, to the efforts to bring these books to the attention of industrial workers. The methods adopted are: The regular publication in the local papers of descriptive notes on the more interesting books; lectures and exhibitions of industrial art, with special emphasis on the books dealing with these subjects; the issue of brief lists of books on technical subjects and the mailing of these lists directly to persons likely to be interested; and, in general, the cultivation on the part of the librarian and his staff of a wide acquaintance with the various industries of the city.

Problems of higher education will be discussed at the fourth biennial congress of the Akademisch gebildeter Lehrer of Germany to be held in Easter week in Brunswick.

Robert White, the English publisher and bibliophile, has just died at the age of ninety. He is known chiefly for his two antiquarian publications, "Worksop, the Dukery, and Sherwood Forest" (1875) and "Dukery Records: Notes and Memoranda Illustrative of Nottinghamshire Ancient History" (1904).

Edmondo de Amicis, one of the most brilliant and popular of contemporary Italian writers of prose, died at Bordighera, March 11. He was born in 1846, and after a military education he entered the army. While still connected with the army he gave more or less time to journalism and literature, and after 1870 he devoted his whole time to travel and authorship. A number of his works have been translated into English. Among his books are "Italia e Polonia," a volume of verse, 1866; "L'Esercito italiano durante il cholera del 1867," 1867; "Bozzetti della vita militare," a collection of tales, 1868; "Ricordi di Roma, 1870-71," consisting of recollections, 1872; "Roma Libera," 1872; "Novelle," 1872; "Spagna," 1873; "Ricordi di Londra," 1874; "Olanda," 1874; "Pagine sparse," 1875; "Marocco," 1876; "Costantinopoli," 1877; "Ricordi di Parigi," 1879; "Poesie," 1881; "Ritratti letterarii," 1881; "Gli Effetti psicologici del vino," 1881; "Gli Amici," 1882; "Alle Porte d'Italia," 1886; "Il Romanzo d'un maestro," 1890; "La Carozza di tutti," 1898; "Speranze e gloria," 1900; "Memorie," 1900; "Ricordi d'infanzia e di scuola," 1901; "Capo d'anno," 1902; "Giardino della follia," 1902. In the last fifteen years of his life he wrote many books on Socialism and social questions.

Adolph Kirchhoff, professor of Greek in the University of Berlin, has passed away in his eighty-second year. Besides his work with Aufrecht on the Umbrian dialect, which made something of a sensation in the academic world, he has to his credit a considerable number of books on the origin and composition of the Odyssey, and on Herodotus and Thucydides.

Conservative Biblical scholarship in Germany has lost one of its ablest representatives among the younger university men in the death of Prof. Justin Adolf Koeberle, who held the Old Testament chair in the University of Rostock. He was born in 1871. His most recent works were the "Kampf um das Alte Testament" and "Der Prophet Jeremias für die Gemeinde erläutert."

The death is announced, at the age of fifty-two, of Carl Ewald, the Danish writer of novels and fairy tales. "The Son of Cordt," a story of his, is now running in the *Fortnightly Review*.

THE INQUISITION OF SPAIN.

A History of the Inquisition of Spain. By Henry Charles Lea. Volume IV. Pp. xii, 619. New York: The Macmillan Co. $2.50 net.

The Inquisition in the Spanish Dependencies (Sicily, Naples, Sardinia, Milan, The Canaries, Mexico, Peru, New Granada). By Henry Charles Lea. Pp. xvi, 564. New York: The Macmillan Co. $2.50 net.

In the final volume of his elaborate study of the Spanish Inquisition Mr. Lea continues his examination of the different spheres of action of the Holy Office, and traces its decadence and final extinction in the nineteenth century. The list of matters, other than formal heresy, with which the Inquisition concerned itself, is a long one, ranging from mysticism and sorcery, where the connection with heresy is very close, to such remote subjects as freemasonry and solicitation in the confessional; and their treatment leads into curious by-paths of psychology and jurisprudence.

The history of mysticism in Spain has already been narrated by the author at greater length in a separate essay, which is here supplemented by new documents and some comparison of the Church's policy in France and Italy. The visions and ecstasies of the mystics might easily lead to heresy by producing contempt for the good works and external observances upon which the Church laid stress, and the problem was complicated by the difficulty of distinguishing the revelations vouchsafed by God from those which were the work of demons. With the line between heresy and sanctity thus uncertain, the visions which in one age were crowned with canonization might in another lead to the stake. No wonder that the Inquisition sometimes vacillated, and grew more and more rigid with the spread of illuminism in the course of the seventeenth century.

Sorcery and the occult arts the Inquisition dealt with much as it dealt with heresy, but its treatment of witchcraft stands out in striking contrast, not only with its own practice in the matter of heresy and sorcery, but with the policy pursued in other parts of Europe. The belief in witchcraft from the fifteenth to the eighteenth centuries was universal, and the epidemics of persecution tortured and slew their thousands throughout northern and western Europe. This deep-rooted belief then claimed the support of the Bible, the Pope, and the great body of learned opinion, both Protestant and Catholic; and the popular terror which demanded the execution of witches was justified by the scriptural injunction, "Thou shalt not suffer a witch to live." The Suprema did not deny the existence of witchcraft, but it seems to have acted on the theory that it was a delusion rather than a result of demoniacal possession. The Instructions in regard to it were singularly moderate and enlightened, and the practice lenient, as appears from the sparing use of torture and the opposition to persecution. And, as the witch-madness is "essentially a disease of the imagination, created and stimulated by the persecution of witchcraft," the firmness and wisdom of the Inquisition had a steadying effect on the people and kept Spain comparatively free from the mania. It is doubtless only fair, as Prof. George Lyman Kittredge has recently urged with much force, to judge the witch-hunters of New England by the standard which prevailed in England in the same period; but a large view of the matter must also bear in mind that "the two lands in Christendom in which the Inquisition was thoroughly organized escaped the worst horrors of the witch-craze."

Contrary to a commonly accepted opinion, Mr. Lea finds the political activity of the Inquisition unimportant. He has shown in his first volume how unfounded is the view, once so dear to Catholic apologists, that the Inquisition of Spain was not an ecclesiastical institution but a part of the civil government; and he here points out how the Dominican Inquisition of the Middle Ages, which these same apologists were anxious to free from any connection with the Spanish institution, allowed itself, in the cases of the Templars, Joan of Arc, and Savonarola, to be used for political ends in a way to which Spanish history presents no parallel. In the most celebrated instance of its employment for political purposes, that of Antonio Pérez, "the Holy Office was invoked only as a last resort, when all other methods had failed, and, when it was called in, so far from being the obsequious instrument of the royal will, it resolutely sought to advance its own interests with little regard for the policy of the monarch." Nowhere in the transformation of the state under Ferdinand and Isabella and the Hapsburgs does the Inquisition appear as a factor; and although it was more frequently employed under the Bourbons, cases were uncommon and of a trivial character. Moreover, the reign of the Bourbons was a period of decline for the Holy Office. Their theory of monarchy was that of Louis XIV., which had no place for such an *imperium in imperio* as the Inquisition had become under Philip IV. Like the Grand Monarque, the Bourbon kings also aspired to be patrons of learning, and the scientific and literary establishments which they encouraged prepared the way, though very slowly, for that "Europeanization" which is still the unrealized aim of the most progressive minds of the Peninsula. In such an atmosphere prosecutions for heresy grew much rarer as the eighteenth century advanced, and the energies of the Inquisition were devoted mainly to such matters as bigamy, blasphemy, solicitation, and sorcery. Still the Inquisition died hard. Though suppressed by the Cortes in 1813, it came back with the Restoration, and its final abolition dates only from 1834.

In the concluding chapter the attempt is made to estimate the share of the Inquisition in the misfortunes endured by the Spanish people since the sixteenth century. Mr. Lea is too sound a thinker to attribute the decline of Spain to the Inquisition alone, and he passes rapidly in review such other causes as absolutism and mis-government, indolence, *empleomanía* and unwise economic policies. He says:

> What may fairly be attributable to the Inquisition is its service as the official instrument of the intolerance that led to such grave results, and its influence on the Spanish character in intensifying that intolerance into a national characteristic, while benumbing the Spanish intellect until it may be said for a time to have almost ceased to think.

Religious unity was secured—if it was ever severely threatened—at the price of intellectual stagnation. Still, Spain simply did more thoroughly what was in some form or other attempted everywhere. As Mr. Lea puts it:

> The Spanish Inquisition was only a more perfect and a more lasting institution than the others were able to fashion. . . . The spirit among all was the same, and none are entitled to cast the first stone, unless we except the humble and despised Moravian Brethren and the disciples of George Fox. The faggots of Miguel Servet bear witness to the stern resolve of Calvinism. Lutheranism has its roll call of victims. Anglicanism, under Edward VI., in 1550, undertook to organize an inquisition on the Spanish pattern, which burnt Joan of Kent for Arianism, and the writ *De hæretico comburendo* was not abolished until 1676.

And the conclusion of the whole matter is to be found in these closing words:

> After all, the great lesson taught by the history of the Inquisition is that the attempt of man to control the conscience of his fellows reacts upon himself; he may inflict

> misery but, in due time, that misery recoils on him or on his descendants and the full penalty is exacted with interest. Never has the attempt been made so thoroughly, so continuously or with such means of success as in Spain, and never has the consequent retribution been so palpable and so severe. The sins of the fathers have been visited on the children, and the end is not yet. A corollary to this is that the unity of faith, which was the ideal of statesmen and churchmen alike in the sixteenth century, is fatal to the healthful spirit of competition through which progress, moral and material, is fostered. . . However deplorable were the hatred and strife developed by the rivalry which followed the Reformation, it yet was of inestimable benefit in raising the moral standards of both sides, in breaking down the stubbornness of conservatism, and in rendering development possible. Terrible as were the wars of religion which followed the Lutheran revolt, yet they were better than the stagnation preserved in Spain through the efforts of the Inquisition.

The fourth volume shows the same qualities of candor, sobriety, and solidity of judgment which characterize its predecessors, and like them it is built up from the original sources. The prime materials are naturally the unpublished records of the Holy Office itself, as preserved in great abundance in Spanish archives and libraries, but these have been supplemented by research in manuscript collections scattered all the way from Rome and Copenhagen to Lima and Philadelphia, and by wide reading in fugitive imprints and recondite theological literature. Where so much is taken from unpublished sources, it is to be regretted that Mr. Lea has not prepared, either as an introduction or as an appendix, such a survey of the materials as only he can give. The plan of the work, in seeking to combine chronological and systematic treatment, involves a certain amount of repetition; and the bulk is considerably enlarged by the amount of illustrative detail, but such illustrations are always pertinent and their concreteness is in refreshing contrast with the loose and rhetorical writing which has hitherto abounded in this field. Those who lack time or patience for the four volumes can easily select significant chapters by the aid of the elaborate table of contents. The "History of the Inquisition of Spain" is Mr. Lea's best and most mature work, and is in some ways the most notable achievement of American historical scholarship. It is idle at present to expect universal acceptance of its results, for, although the Inquisition has been extinct for two generations, its history is full of controversial matter and touches on every side questions of living moment. The apologist may find comfort here and there, as in the account of witchcraft or in the destructive criticism of the reckless estimates of the number of victims, while other chapters may perhaps suffer the fate of the author's "History of the Inquisition of the Middle Ages," the three volumes of which were translated into French at the time of the Dreyfus agitation, as a means of anti-clerical propaganda which would be all the more effective because so obviously written as a record of historical facts and not as a party pamphlet. Yet Lord Acton pronounced the main body of this work "a sound and solid structure that will survive the censure of all critics," and the Abbé Vacandard, while denying its finality, has recently accepted Reusch's characterization of it as "l'histoire de l'Inquisition la plus étendue, la plus profonde, et la plus fouillée que nous possédions." In spite of present reactionary tendencies, one may indulge the hope that this work may in its turn be accepted as a substantial addition to the body of fact, even now by no means inconsiderable, upon which both Protestant and Catholic historians are in fundamental agreement.

Although published under a title of its own, the account of the "Inquisition in the Spanish Dependencies" is really a continuation of the "History of the Inquisition of Spain," and should be read in connection with the larger work, for the light it throws on the workings of the inquisitorial system when comparatively free from central restraint. The history of the tribunals beyond the seas forms an instructive chapter of Spanish colonial policy. In many places the ground has already been tilled by local investigators. The Chilean scholar Medina has written a series of important monographs on the American tribunals; useful works exist for Naples and Sicily; and for the study of the Inquisition in the Netherlands even Mr. Lea must await the completion of the monumental "Corpus Inquisitionis Hæreticæ Pravitatis Neerlandicæ," upon which Paul Fredericq has spent so many fruitful years. Often Mr. Lea has little more to do than to summarize the labors of his predecessors, but he can generally supplement them from his acquaintance with the materials in Spain, and he has always the great advantage of looking at the subject as a whole, and viewing it against the background of the parent institution. Except during the great persecutions of Jews toward the middle of the seventeenth century, accusations for heresy were not frequent in the colonies:

> A vast proportion of the cases tried by the Inquisition were for offences comparatively trivial—blasphemy, careless or irreverent remarks, or the more or less harmful superstitions classed as sorcery—and the transmission of denunciations for such matters, over hundreds of leagues of forest and mountain, and awaiting a reply with instructions, was manifestly too cumbrous a process to be practical.

The local commissioners, like most of the officials of the Inquisition in the Indies, seem to have been for the most part men of low character, and their remoteness from superiors and complete immunity from local jurisdiction made them "intolerable pests in their districts." The tribunal itself was subject only to the Suprema in distant Spain; its privileges and exemptions and constant quarrels with rival authorities were a fruitful source of the disorder and weakness of colonial administration, and its opportunities for uncontrolled exploitation are seen in the success with which it evaded the royal demands for accounts of its enormous receipts from confiscations. The influence of all this upon the colonial system Mr. Lea sums up as follows:

> While thus in the colonial tribunals we see the Inquisition at its worst, as a portion of the governmental system, we can realize how potent was its influence in contributing to the failure of Spanish colonial policy, by preventing orderly and settled administration and by exciting disaffection which the Council of Indies more than once warned the crown would lead to the loss of its transatlantic empire. It is, perhaps, not too much to say that these revelations, moreover, go far to explain the influences which so long retarded the political and industrial development of the emancipated colonies, for it was an evil inheritance weighing heavily on successive generations.

CURRENT FICTION.

The Metropolis. By Upton Sinclair. New York: Moffat, Yard & Co.

The Iron Heel. By Jack London. New York. The Macmillan Co.

Having stirred up a nation and its Chief Executive as thoroughly as the author of "The Jungle" did the other day, few men, few wizards certainly, would be able to resist the temptation to repeat the trick. Mr. Sinclair, as previously announced by megaphone, here steps forward with his encore. It is the same pot with which he is busy, only this time he stirs it the other way. The gruel is thick and slab. New ingredients appear upon the surface in place of the eye of newt and toe of frog which held our horrified eyes but yesterday. The magical fumes which arise are less noisome than those of the former brew in so far as rank perfumes are less noisome than offal. The whole business is malodorous enough in all conscience.

"The Metropolis" is even less properly to be called a novel than "The Jungle." There are no human beings in it and there is no continuous action. It is a tract with enough of the air of fiction to draw the attention of a generally intractable public. The excerpts which have been printed in the *American Magazine* contained everything of importance in the book. The story element is delightfully ingenuous. Once upon a time there were two brothers, sons of a Southern family impoverished by the war. The younger came North early in life, and became a prosperous parasite of the very rich New York class. The elder remained a country lawyer and planter, till fire swept away the family mansion, and, now in middle life, he too turned his steps toward the metropolis. He was as ignorant as a babe of everything in New York; he had apparently never even heard of luxury or corruption anywhere. He learned in due course a good deal about such matters, and declared that for himself he would be neither luxurious nor corrupt. All millionaires were dishonest and wickedly extravagant; all Society was brutal and fast. This did not please him at all. He said some hard things about it to the sycophant brother:

> "What are you going to do?" gasped Oliver.
>
> "I'm going to give up these expensive apartments—give them up to-morrow, when our week is up. And I'm going to stop squandering money for things I don't want. I'm going to stop accepting invitations, and meeting people I don't like and don't want to know. I've tried your game—I've tried it hard, and I don't like it; and I'm going to get out before it's too late. I'm going to find some decent and simple place to live in; and I'm going downtown and find out if there isn't some way in New York for a man to earn an honest living."

All sensible enough, if a trifle obvious; conclusions of the kind have been reached ere this by persons who did not need such blows of the bludgeon as Mr. Sinclair deals our hero. He leaves very little for anybody else to say against the revoltingly rich. For that matter, Juvenal left very little for him to say:

> Nothing is left, nothing, for future times
> To add to the full catalogue of crimes;
> The baffled sons must feel the same desires,
> And act the same mad follies, as their sires.

Vice and extravagance in our age are pretty much what they have been in others, and no new penalty has been discovered for them. The gay world is wasting more money than ever because it has more money to waste, and that money as a whole has not been come by more honestly or dishonestly than heretofore. Yet, few readers, however incredulous of the fact, will feel quite like laughing at Mr. Sinclair's prediction of civil war as the outcome of the continued absorption and misuse of wealth by the few.

Of the recourse to violence Mr. London makes a much more distinct forecast. We have little more regard for him as a man of letters than for his "comrade" in Socialism, Mr. Sinclair; but his book, like the former's, is interesting as a sign of the times. In its character of tract, its force of assertion, and narrowness of generalization, it is strikingly similar. The events described are supposed to take place in the years 1912 and 1913. The narrative is written by the wife of a Socialist and leader of revolt, and the manuscript, hidden in a hollow oak, is discovered seven centuries later and edited, with introduction and notes, by one of the enlightened gentry of that day. "Too late," he comments, "did the Socialist movement of the early twentieth century divine the coming of the Oligarchy. Even as it was divined, the Oligarchy was there—a fact established in blood, a stupendous and awful reality." The "Iron Heel" is, of course, the ruthless power of capitalism, or "the Oligarchy." What Mr. London wishes to give is not so much prophecy as warning of what might happen if, contrary to the hopes of Socialists, unprincipled capitalism were to get the upper hand and do its logical worst. He sees society in the grip of an oligarchy enforcing its will by mercenaries, annihilating the power of the middle class, and making serfs of the "people of the abyss." A series of bloody revolts follow, extending over some three centuries, upon which arrives at last the beneficent triumph of Socialism. Theoretically, Mr. London's rôle as a Socialist is that of apostle of peace, but his nature—his imagination, at least—is, one recalls, a trifle bloodthirsty. A future such as Socialism hopes for, of steady progress, of peaceful conquest by propagandism and the ballot, would afford small material for his talent. The gore through which, in the course of these pages, we are invited to wallow, is far more to his taste; three hundred years of it is not a day too much for him.

Old Wives for New. By David Graham Phillips. New York: D. Appleton & Co.

A popular melodrama of the present season dropped its curtain on the melancholy speech of a noble but rejected suitor, "Nobody loves a fat man!" If Mr. Phillips's new novel has any serious purpose it is the expounding of this same thesis as applied to the opposite gender. It begins with the story of a winsome, "straight and slim" young girl, who, after marrying a youth with the money-making faculty, overeats systematically and neglects her personal appearance, thereby sacrificing a husband who really means uncommonly well by her. Up to a certain point the matter of the story—its manner needs another criticism—seems intended as a warning against overindulgence. The reader actually feels for a time that Mr. Phillips is leading him on to a reconciliation between the estranged pair, effected through the agency of diet and a regimen of daily exercise. A little later, the author introduces the *motif* of the beauty doctors, and one recalls the advertisement of that cosmetic which raised a plain young woman to such a pinnacle of beauty that when she made a great match, people said it was the maker of the facial cream who really "gave the bride away." As it turns out, however, Mr. Phillips's book is no tract, either for health food or cosmetic. Mrs. Murdock does win an admirer, but it is not her first husband. The outcome, so far as that personage is concerned, is devoid of any ethical or logical significance whatever. After being captivated by a very much worse woman, he chooses, in the end, a sort of middle course, with a third.

The fiction of Mr. Phillips never lacks certain striking qualities, a rapid flow of narrative, highly colored pictures, and an unsparing wit at the expense of his characters. The fault which offsets many of his excellences is a species of realism which leads him into absolutely needless coarseness. Setting out with a theme which is ignoble in most of its external aspects, he has not a touch to refine or even to lighten it.

The House of the Lost Court. By Dona Teresa de Savallo, Marquesa d'Alpens. New York: The McClure Co.

Small but valuable articles have always been staples of the writers of stories of mystery. Jewels and missing wills, perhaps, figure more often than any others. Here, however, we have the same sort of narrative woven about the disappearance of one of three courtyards in an old English country house. Outside of a fantastic short story, a few years ago, describing the lowering of a modern office building into a hole secretly dug in the bowels of the earth, we do not recall a parallel. Nevertheless, if this story concerned the architectural enigma alone, its weakness at many points would be apparent. In a castle built on the rambling lines of that upon the book's cover it is perhaps barely conceivable that the equivalent of a three-room New York apartment with a "new law" airshaft might be overlooked for a century or so. But in the rectangular house of the architectural diagram within —altogether unlike the cover picture—it is hard to believe that even a casual visitor who knew the legend of the lost court could have walked about long without guessing where it was.

There are, however, two complementary mysteries and the second is better sustained. It is solved by a young American girl who, on seeing the family ghost, follows him by night, explores a subterranean passage with the ghost's own lantern, and, having fathomed the deception, follows up most unconventionally the acquaintance so made—quite as remarkable as anything recounted in the book. Accepting the premises, the story is entertaining and pleasantly told.

Cities of Italy. By Arthur Symons. New York: E. P. Dutton & Co. $2 net.

Few pastimes are more entertaining than to browse among the impressions or descriptions which travellers have left of Italy. Begin with Montaigne's "Journal" and come down to Mr. Symons's studies, and you will get much more than what first meets your eye on the printed page. You will find there life itself, and many varied personalites, peeping through the lines at you; and you will see so many Italys that you may ask yourself whether there is in reality a geographical Italy, perceptible to eye and ear and touch, or an ideal, a dream which rises before men generation after generation, to which they give the name *Italia.* Assuredly, if you turn from "Zeluco" Moore's volumes, which have the commonsense charm of a Dutch painting, to Mr. Symons's essays, half impressionistic, half-symbolistic, you would scarcely imagine that both men are writing about the same country.

Mr. Symons seems to draw his inspiration from Pater, but he lacks that background of serious thinking which made Pater a genuine force in his time, and saved him from amateurishness. The amateur, or, if you will, the dilettante spirit, pervades Mr. Symons. He knows a little art, a little history, something of literature; he is sensitive to poetry, to colors, and to weather. He lives, in fact, from his sensations, and this gives to his sketches their chief merit. His impressions are his own. Sometimes he tries to analyze, and even to classify them; but more often he lets them pass before you without much manipulation. Such work baffles criticism. If the Sistine Chapel, or Venice, or Siena, has called up a certain sensation in Mr. Symons, it is idle for us to say that it is not. We can only determine whether he has described his sensations adequately, and we can honestly affirm that he has done this. He writes, like all men who feel under an obligation to have style, with a pronounced manner; but even his mannerism is not unpleasing, and many of his epithets and phrases are individual and striking. His judgments on art, too, though shot off in rather haphazard fashion, are often pregnant, as when he says, for instance:

> Raphael is the instinctively triumphant perfection of the ideal of the average man. . . . Here is the simplicity of what is called inspiration; the ease of doing, better than any one else, what the greater number would like, better than anything else, to do.

We cannot help feeling that Mr. Symons is always a stranger in Italy. Contemporary life he sees from the outside, and his impressions of the actual Italians would hardly be endorsed by any one who really knew them. The Italians themselves would not recognize themselves in his sketches of them. He is busied, indeed, with an Italy which dwells in his own imagination. We can recommend him to readers who enjoy word-pictures of delicate nuances, and sensations and fancies which pass easily from the vividness of impressionism to the vagueness of symbolism.

George Sand and Her Lovers. By Francis Gribble. New York: Charles Scribner's Sons.

The author of this beautifully bound monograph of 375 pages on George Sand's love affairs has no sympathy, so he tells us at the outset, with the conventional English attitude towards the relation of sexes. One need only glance through his book to be convinced of the fact, and nobody who has read it will accuse this Britisher of "British prudery." Indeed, his "frankness" might well put to shame some of his French predecessors in the same field, who, with true "Anglo-Saxon hypocrisy" had left us in the dark as to the exact character of George Sand's friendship for some of her most conspicuous "friends." The reproach addressed by Mr. Gribble to an English biographer applies to the French likewise; and if we were to rely on their information alone, we might still be laboring under the illusion that Jules Sandeau was only her collaborator, Dr. Pagello her medical attendant, Michel (de Bourges) her legal adviser. Doubtless, Mr. Gribble felt it his imperative duty to clear up these matters once for all and explain with minute detail and accuracy what kind of friend Mérimée had been, as opposed to Flaubert, Chopin as compared with Liszt, Pierre Leroux contrasted with Lamennais. It must, indeed, have been distressing to so conscientious an historian not to have attained the same degree of scientific certitude as to the status of some minor characters, such as, for instance, the engraver Manceau, of whom Mr. Gribble speaks several times. The birth, growth, and decline of these sentimental adventures, their vicissitudes, both tragic and comic, the laws, psychological and physiological, which seemed to determine their evolution—all this is analyzed with searching scrutiny and told with amusing candor.

In fact, this is not a literary sketch, or even an ordinary biography: it is the story of the private life, the stormy and often pathetic life of a woman, a weak and sentimental woman, who owed to an incongruous and suspicious heredity a volcanic temperament, an irrepressible imagination, a magnificent gift of expression, a warm, tender, and inflammable heart. In thirteen pages, none too enthusiastic, is dismissed a literary output which fills 107 volumes; the 362 remaining pages treat the subject at hand, neglecting what this woman of letters actually gave to the public and alone intended for it. Brushing aside these thousands of pages full of poetry, love of nature, and love of humanity that have inspired so many readers, this specialist devoted his energies to the gathering of all the threads of evidence that go to prove that, at such a time this man or that one was more than a mere acquaintance, that the intrigue began at a definite date, and the rupture normally ensued at the appointed hour, and that, of course, the woman was to blame. It seems strange that a biographer should not have fallen under the spell of George Sand's winning qualities. Mr. Gribble, in fact, resisted successfully: he presents us a somewhat flippant *chronique scandaleuse*, in which he carefully brings out all the weaknesses and emphasizes the small sides of a truly great woman. Such a book, accurate as it is in the main, gives, however, of the author of "Indiana" and "La Mare au Diable" as incomplete an idea as was often received by casual visitors at Nohant. Instead of the heroine of their dreams, they would meet a silent, frigid, sleepy, stupid-looking lady, devoid of all the pleasing graces of society, who stopped writing only to weed her garden, sew gowns, play with her grandchildren. "A fat old muse," says Matthew Arnold; "a somnambulist," writes Théophile Gautier; with a "mummified face," adds Goncourt.

To the unsympathetic portrait of the English writer the admirers of George Sand will oppose the picture of the bold novelist, who, anticipating by sixty years the popular iconoclasts of the declining century, raised her voice against social lies and iniquities; of the woman whose soul was consumed with the love of her fellows, and espoused all the great causes that kindled the hearts of men; the untiring worker who, every night, until the early hours of dawn, "made copy for Buloz," and earned a million francs that she gave away to her family, her friends, her poor, and the peasants of the neighborhood; the great artist, who was inexpressibly modest, absolutely devoid of egotism, incapable of hating anything but meanness, cruelty, and superstition. Indeed, it is quite safe to admire a writer whom Renan called "the Æolian harp of our time," and love a woman whom old Flaubert worshipped like a mother; at whose funeral Dumas fils, who was to deliver an address, broke down and sobbed like a child; and of whom M. Faguet writes that, "No woman ever displayed to such a degree the highest qualities of an honest man."

This book on George Sand's lovers will serve its purpose nevertheless. It is interesting and informing. It corrects some statements of "L'Histoire de ma vie"; it brings before the English reading public the results of S. Rocheblave's and A. Le Roy's studies; especially in regard to the relations of George Sand and Chopin it offers a more complete account than any previous work, thanks to the use made of the letters to the Chopin family that M. Karlowic published in Warsaw, under the title, "Souvenirs inédits de Chopin" (1904).

The artistic appearance of this edition, the quality of the portraits do credit to the publishers. Slips on French words or names are rarer than usual; and the author knows his subject well. *Débats*, however, takes no circumflex accent, Marmontel wrote, "Les contes moraux" (not "morales"), and Louis Ulbach, the journalist, did not have any *de* before his name.

Science.

A Mind That Found Itself: An autobiography. By Clifford Whittingham Beers. Pp. 363. New York: Longmans, Green, & Co. $1.50 net.

The purposes of Mr. Beers's book as he sets them forth are three in number: To rob insanity of its terrors; to correct existing abuses and to elevate the standard of treatment; and to induce the benevolent rich to aid State and nation in supplying funds for the erection and maintenance of model institutions for the care of the mentally diseased.

Mr. Beers is a Yale graduate who began to show signs of nervous and mental breakdown during his final year at the university. From his own analysis one would infer that his obsessions were those of a psychasthenic, coupled with a rather severe acute melancholia brought on through worry and fear. He notes carefully the various symptoms he felt while attending a brother suffering from brain tumor and attacks of epilepsy, and is inclined to date his own mental estrangement from that time. As a record of the peculiar symptom-complex of temporary insanity the book is somewhat remarkable, written as it is from within, and giving the observations of an abnormal psychologist upon his own mental processes. Such attempts have been made many times before by the unbalanced, but always with the inevitable result that one might expect—mere jargon and extravagance of words. Mr. Beers, however, has written a readable book.

If he has failed to subordinate the personal element to his "cause," he can be pardoned because of his desire to stir up proper indignation for current asylum abuses as he views them. From the evidence before us there is no question that he was a very refractory patient, and as he himself confesses, a wilful one. Therefore, it is not remarkable that he succeeded in involving himself in all sorts of difficulties with attendants and physicians. But even so, the treatment he received was unjustifiable on any score whatever, and his story should serve as a text for the proper reorganization of the "system" of management of the insane as now carried on. This remark seems to apply especially to the run-for-pay sanatoria, where conditions are curiously enough much worse than in the charitable institutions.

The remedy proposed by Mr. Beers is the formation of a "National Committee for Mental Hygiene" to coöperate with Federal, State, and local authorities so that representative men and women may spread "a common sense gospel of right thinking in order to bring about right living." In fine, he would have this society do "in its own field what the National Society for the Prevention and Cure of Tuberculosis has done, and is doing, in its sphere of activity." This strikes us as a rather vague and indefinite outline. But the need of more intelligent care of the insane is undoubted; and an organization to accomplish that purpose might conceivably devise ways and means that are now unthought of or neglected. It would do something if it only enlightened general public opinion. A system of inspection by properly qualified laymen might be found desirable, but just how such inspection can actually prevent insanity is by no means clear, if we go back a very little way into a study of its etiology. To be sure, the melancholic and allied functional states yield more readily to treatment, possibly most readily; but how can one prevent hereditary types, save by marriage restrictions, or the type due to some pre-existing disease such as that which is thought to be responsible for paretic dementia? Certainly the author has failed to take these facts sufficiently into account. However hopeless the view may seem, one is bound to face the fact that insanity is in the majority of cases an unpreventable and an incurable disease, and nothing short of Utopia itself can ever make it very much less so. In the meantime, any effort toward the amelioration of the lot of these unfortunates by decreasing their sorrows and increasing whatever joys they can still appreciate deserves hearty commendation and support.

The Italian Geographical Society has decided to send a geographical and scientific expedition to Dancalia, which is in part under Italian jurisdiction. Capt. Alfonso Mario Tancredi, who has spent many years in Erythrea and has written several important monographs on that colony, will have charge of the party, which will start at once. The undertaking has the moral support of the Colonial Department as well as a generous grant of funds, and has also received a large contribution from the Milan Society for Geographical and Commercial Exploration. One of the chief objects of the expedition will be to determine the boundaries and spheres of influences between the Italian possessions in East Africa and Ethiopia.

Drama.

THE RENASCENCE OF MENANDER.

I.

The new Menander, just published,* although containing no entire play, presents enough continuous text to enable us to reexamine the verdict inherited from antiquity. The modern world has acquiesced with docility in Menander's great fame. But the paradoxical exclamation of Aristophanes of Byzantium: "O Menander, O Life, which of you copied the other?" Dio Chrysostom's and Plutarch's extravagant rating of Menander above even Aristophanes, Cæsar's depreciation of Terence as a "halved Menander," and Quintilian's appreciation of the Greek poet as a mould and mirror of life, have ever teased us with half-knowledge. He has been the hidden side of the moon behind the genial face of his Latin representative.

Until the discoveries (1891-1903) of a series of Menander papyri, our direct knowledge of his work (except for a mosaic of 759 gnomic verses) was based upon about 1,050 fragments varying in length from a few words to nineteen consecutive lines. Though only a few of these older fragments fall into place in the newly discovered comedies, yet they are still of importance, both for the dignified beauty of certain passages and also as emphasizing the quotable character of much of his writing. His sententious observations appealed to the audience like the "quotations" in "Hamlet." Hence, in part, the preservation of so many scattered fragments.

In reading the continuous text of the new manuscript one finds, as was to be expected, that this moralizing comes in only incidentally. The Greek playwright knew his business. But the old fragments help us to remember that Menander was the pupil and friend of Theophrastus—himself the pupil and successor of Aristotle—and that he was also the friend of Epicurus. Ptolemy Soter, it is recorded, tried to induce Menander and Theophrastus together to settle in Alexandria. But Menander, who was the son of a Greek general and the nephew, on his mother's side, of the famous comic poet, Alexis, was an Athenian of the Athenians. He seems to have lived on in his native land and to have been drowned in Greek water at the Piræus. On the road up from the harbor to Athens could be seen his tomb, as Pausanias pointed out, and close by it, as was fitting, the cenotaph of Euripides, whose romanticism Menander had combined with a more genial humanism. But the work of the stay-at-home poet was to acquire a larger citizenship. His comedies, known not only through the patchwork translations of Terence, but accessible themselves for many centuries from Lyons to Alexandria and wherever Greek was read, must have transmitted into the applied philosophy of life in western Europe many an echo of the Peripatetics, of Epicurus, and of all the intellectualizing ethics of the Hellenic world. When Menander was in his thirties Zeno the Stoic was putting forth his new propaganda. Yet we may attribute rather to the general attitude, common to the various schools and not absent even from Epicurus, Menander's reflection of the philosophic impassiveness—ἀταραξία. Be that as it may, this impassiveness is occasionally tempered to a finer edge, a more militant courage, as we see from these lines ("Meineke," p. 995):

Being a man ne'er ask a life from pain set free
But of the gods ask courage that endureth long.
For if to shun all grievance to life's end thou'rt fain,
Thou must become a god, or, failing that, a ghost.
Looking on ills of others, comfort take in thine.

And the following ("Meineke," p. 958) is at least more robust than Hadrian's: *Animula, vagula, blandula.* Human life is here likened to a festival or market-fair whence one may pass content when he has seen the shows:

That man, O Parmeno, I count most fortunate
Who quickly whence he came returns, when he, unvexed,
Has looked on these majestic sights—the common sun,
Water and clouds, the stars and fire. If thou shalt live
An hundred years, or if a very few, thou'lt always see
These same sights present, grander ones thou'lt ne'er behold.
So reckon thou this time I'm speaking of as though
Some market-fair or trip to town, where one may see
The crowd, the market, dice, and loungers' haunts;
Then, if thou'rt first unto thy lodgings, with more gold
Thou'lt go upon thy travels and shalt pick no brawl;
While he that tarries longer, worn, his money gone,
Grows old and wretched and forever knows some lack,
A wandering vagrant finding enemies and plots,
And gains no death that's easy, staying out his time.

This fragment, it is worth noting, is from the "Hypobolimaios," one of the plays so highly commended by Quintilian.

II.

The finds in Egypt (1891-1903) containing 14, 51, 60, and 87 lines respectively of lost plays (*i. e.*, "The Flatterer," "The Countryman," "The Girl Who Gets Her Hair Cut Off") were welcome, but the sample was still small. The new papyrus gives us a much larger pattern. It contains parts of four comedies. Three of these I shall discuss but briefly. The first is "The Hero"(?), which, although it yields us only seventy-one lines, preserves the argument and the *dramatis personæ*. Hence it is significant. The plot is typical except that here, instead of one infant exposed or farmed out, there are twins and the girl grows up to have a like fate with her mother. There is the usual happy and inevitable solution: a "recognition" of the children and a marriage of the original couples before or after the dénouement. By reason of the double knot and the stress of twins an Euripidean *deus ex machina* must intervene, and this seems to be the rôle of the divine personage who appears without a name and whose presence suggests the identification of the title. It may be noted that all the names except that of the young man and those of the twins, reappear in the types copied by Terence, that is, assuming the slave names Daos and Sangarios as represented by the Latin slave names Davus (cf. "Andria" and "Phormio") and Sanga (cf. "Eunuchus").

Of "Perikeiromene" (The Girl Who Gets Her Hair Cut Off), we have 178 lines, fortunately supplemented by the scene of 51 lines in the Oxyrhynchus fragment (Grenfell and Hunt, London, 1899), which gives the key to the situation at the end of the play. This may serve to illustrate that in letters, as in science, the same principle holds: all knowledge, however fragmentary, bides its time to be correlated with a larger pattern. The first scene is lost. The play opened apparently *ex abrupto*, but a "machine" goddess, Agnoia, gives a post-mortem prologue in the second scene. The scene of the comedy is laid at Athens. The stage setting, as in "Epitrepontes," which is treated at length below, seems to require three houses. A brother and sister have been abandoned as infants and brought up separately, both of them ignorant of their parentage. The sister comes to know the facts, but her brother, still in ignorance, excites the jealousy of his sister's lover, who in a rage cuts off her hair. Hence the name of the play. The lover becomes duly repentant and all is explained. Glycera finds her father by means of the tokens exposed with her when a baby. She forgives her barber of a lover, and is given to him in marriage with a good dowry by her new-found father.

"The Samian Woman" contains the greatest number of lines, but is much more imperfect than "Epitrepontes." M. Lefebvre *infers* the title from a Samian woman who plays a leading rôle. The follow-

---

**Fragments d'un Manuscrit de Ménandre;* découverts et publiés par M. Gustave Lefebvre (Inspecteur en chef du Service des Antiquités de l'Égypte). This *editio princeps* is a beautiful quarto (pp. 220) published in Cairo, at the Imprimerie de l'institut français d'archéologie orientale, December, 1907. It contains an uncial (semi-) reproduction of the 1300-odd lines of text; a regularly edited Greek text, with minor lacunæ judiciously filled out; the old fragments belonging to the plays in question, even including for "Perikeiromene" the fifty-one lines of the Egyptian find of 1899; and, finally, a translation in French. Facsimile plates are to follow. In the preface Gustave Lefebvre, the editor (with whom Maurice Croiset has been in happy collaboration), gives details of the discovery of the MS. In July, 1905, information was brought in to his headquarters at Assiut of a new find of papyri at Kôm Ishkaou, the site of the ancient Greek city, Aphroditespolis, further up the Nile to the west of the river. In the foundations of a Roman house, uncovered by chance, among other papyri leaves and 150 rolls of MSS.—mostly Greek business papers, contracts, wills, letters, etc.—were found seventeen leaves of a mutilated codex of Menander. Had fortune preserved the codex intact, M. Lefebvre argues that we should have had at least seventy leaves containing five complete comedies. The editor would date the MS. as of the end of the second or the beginning of the third century of our era.

ing extract may show how "The New Comedy" fills out our knowledge of details. Demeas, at his country house, is busied with the personal oversight of the preparations for the wedding banquet of his son Moschion when he discovers by chance his relationship to an adopted baby. He describes the whole household as in a bustle:

All a shouting: "Flour! Water! Give me oil! Some coals!"
And I myself, too, taking part and giving this and that,
Into the storeroom, as it chanced, had gone, from whence
I did not come directly, busy laying out
Unusual provision and inspecting all
Within. Just then, while I was there, a woman came
Descending from the upper-story, from above,
Into the storeroom's antechamber. For, with us
There's an apartment, as it happens, for the looms,
So placed that through it is the entrance to the stairs
And to the storeroom. She was nurse to Moschion,
And well along in years, a former slave of mine,
But now set free. And of the baby catching sight,
A bawling, bawling, as it lay, left all alone,
She, knowing nothing of my being there inside,
Thinking herself in safety, falls a chattering
Such things you know that women will, like: "Darling child!"
Exclaiming, and: "O blessed treasure!" And, of course,
The mammy kissed and carried it about and, when
It stopped its crying: "Wretched woman that I am,"
Unto herself she says: "It seems but yesterday
When I was suckling, loving Moschion himself,
And here's a baby of his own!"

And so the sudden grandfather learns that his son is the child's father.

III.

The least broken play in the volume, "Epitrepontes" (Those Submitting to Arbitration), takes its name from a scene happily preserved, although this is not the main subject of the comedy. The 517 lines that remain to us not only give almost complete details of the plot, but what is far more important, they allow us to judge of Menander in consecutive scenes and that, too, of Menander at his best. For by good luck "Epitrepontes," as we know, was one of his best plays. Alciphron cites it as a *chef d'œuvre*, and Quintilian mentions it with five others when he describes Menander as a model in matter and manner for the young Roman orators. "He alone," says Quintilian, "in my judgment, if read with diligence, would suffice to secure all the qualities that we are inculcating." Undoubtedly, therefore, in the speeches of the shepherd Daos and the charcoal-burner Syriskos we have now a specific instance of what Quintilian commended in Menander, his ability to mirror human life and to fit his words to his characters ("ita vitæ imaginem expressit . . . ita est omnibus rebus, personis, affectibus accomodatus").

The relation of the "Hecyra" of Terence to this play is well discussed by the editor. If it really is based upon the dismembered "Epitrepontes" we feel more than ever ready to coincide with Julius Cæsar's protest against this process of vivisection.

The plot of "Epitrepontes," so far as is needful for an understanding of the scene quoted below, is as follows: Pamphile, daughter of Smikrines, a country gentleman of Attica, has been violated during the carnival night of the Tauropolia by Charisios, who presently marries her, although both are ignorant of their past relations. A child is born to Pamphile and is secretly exposed with certain birth-tokens, including a ring taken from Charisios at the Tauropolia. The child is found by Daos, a shepherd who, however, does not wish to bring it up and is glad to hand it over to Syriskos, a charcoal-burner, whose wife has opportunely lost her own baby. Daos holds back all mention of the trinkets exposed with the child. Later the foster parents learn of the trinkets and come to demand them of Daos. The matter is left to the arbitration of old Smikrines, who happens by, and who is, in fact, the grandfather. The scene is laid in Attica. Three houses may be assumed in the background: those of Smikrines, of Charisios, and of Chærestratus, a charcoal merchant, to whom Syriskos comes on a business errand. Syriskos seems to be a worthy representative of those very independent demesmen, the charcoal-burners, who form the energetic chorus in "The Acharnians" of Aristophanes. The extract here given is selected partly on account of the reference in Quintilian, but the subsequent scenes, for which we have not space, are more dramatic.

("Epitrepontes": Act. I. Scene 2. Enter Daos, a shepherd; Syriskos, a charcoal-burner, with his wife carrying the baby; later, Smikrines, the father of Pamphile.)

Daos. You dodge what's fair!
Syriskos. And you, unchancy, swindle me.[*]
Daos. You may not have what is not yours.
Syr. This matter, then,
Let's leave to some one.
Daos. I agree, let's arbitrate.
Syr. Who shall it be?
Daos. For my part any one will do.
[*Aside.*] It serves me right, for why did I go in with you?

Enter Smikrines.

Syr. Good sir!
Now, by the gods, could you give us a moment's time?
Smikrines. Give you? And wherefore?
Syr. We've a question in dispute.
Smi. To me what does that matter?
Syr. Some fair-minded judge,
For this we're seeking, so, if nothing hinders you,
Settle our quarrel.
Smi. You crow-bait scoundrels, you!
Dressed in your goat-skins, do you walk and talk of law?
Syr. But none the less the matter's short and easily
Decided. Grant the favor, father, by the gods,
Do not despise us, for at all times it behooves
That justice gain the upper hand, yes, everywhere,
And every one that happens by should take his part
In looking out for this. It is the common lot
We all must share.
Daos (aside). I've grappled no mean orator.
Why did I let him in?
Smi. Will you abide, now say,
By my decision?
Syr. Certain sure.
Smi. I'll hear. For what's
To hinder? (*To Daos.*) You! you close-mouthed fellow there! Speak first.
Daos. I'll start a little further back, not simply tell
His part, that I may make the matter plain to you.
Within this bushy thicket here, hard by this place
My flock I was a-herding, now, perhaps, good sir,
Some thirty days gone by, and I was all alone,
When I came on a little infant child exposed
With necklaces and some such other trumpery—
Syr. About *them* we are talking.
Daos. He won't let me speak!
Smi. (*To Syr.*) If you put in your chatter, with this stick of mine
I'll fetch you one.
Daos. And serve him right.
Smi. (*To Daos.*) Speak on.
Daos. I will.
—I took it up and with it went off to my house.
I had in mind to rear it—'twas my notion then—
But over night came counsel, as it does to all.
And with myself I reasoned: "What have I to do
With rearing children and the trouble? Where shall I
Find so much money? What anxiety for me!"
Thus minded was I. Back unto my flock again
At daybreak. Comes this fellow—he's a charcoal man—
Unto this selfsame place to cut out stumps of trees.
Now he had had acquaintance with me back of this,
And so we talked together. Noticing my gloom,
Says he, "Why, Daos, are you anxious?" "And why not?" says I,
"For I'm a meddler." And I tell him of the facts:
How I had found, how owned the child. And straightway then,
Ere I could tell him everything, he begged and begged.
"So, Daos, blessed be your lot!" at every word
Exclaiming: "Give to me the baby! *So*, good luck
Be yours! *So*, be you free. For I've a wife," says he,
"And she gave birth unto a baby and it died"—
(He meant the woman, her who rears the baby now)—
Smi. You begged him, then, Syriskos?
Syr. Yes.
Daos. The live-long day
He pestered me, and when he urged, entreated me,
I promised him; I gave the child and off he went
Calling down countless blessings; seized and covered o'er
My hand with kisses.
Smi. (*To Syr.*) You did this?
Syr. I did.
Daos. Well, he
Together with his wife departed. Of a sudden now
He meets me; claims the things then with the child exposed—
(Now these were small and worthless, merely nothing)—claims
That he should have them; says he's treated scurvily
Because I will not give them, wish them for myself.
But I declare he'd better feel some gratitude
For what he *did* get by his begging. If not all
I give him there's no need to bring me to account.
If even walking with me he had found these things
It were a mutual god-send; he had taken *this*,
I *that*; but when I made the find alone, do you (*To Syriskos*)
Expect to have it all and not one thing for me?
In fine, I gave you of my own, with free-will gave:
If this still pleases you, why keep it even now,
But if it doesn't suit and if you've changed your mind
Why then return it. Don't commit nor suffer wrong.
But, partly from me willing, partly forcing me,
That you get all—that were not fair. I've said my say.
Smi. (*To Syr.*) He's finished. Don't you hear? He's finished.
Syr. Yes, all right!
Then I come after. All alone this fellow here
The baby found and all these facts he's telling now
He tells correctly, father, and it happened so.
I do not contradict him. I entreated, begged,
And I received it from him. Yes, he tells the truth.
A certain shepherd, fellow laborer of his
With whom he had been talking, now brings word to me
That with the baby he had found some ornaments.
For this, my father, he[*] is present here himself
And now demandeth of you, Daos, an account

---

[*] We should like to interchange the characters here and trans.: συκοφαντεῖς "you blackmail me," instead of "swindle," but the context and the MS. seem to indicate the present arrangement.

[*] The baby.

(Now give me, wife,* the necklaces and tokens here)
For he† declares that these were placed upon himself
As his adorning, not for piecing out your keep!
I, too, join in demanding as his guardian—
You made me that by giving him—And now, good sir, (*To Smi.*)
Methinks 'tis yours to settle whether it be right
This jewelry and whatsoever else there is,
As given by his mother, whosoe'er she was,
Be put by for the baby till he come of age
Or this clothes-stealing cut-purse is to have these things
Belonging unto others if he found them first.
"Why didn't I," you're saying, "when I took the child,
Demand them then of you?" Not yet then had there come
To me a person speaking in the child's behalf.
And even now I'm here demanding no one thing
That's mine, mine only. "Mutual god-send!" None of that!
No findings! when 'tis question of a person wronged:
That is not finding, 'tis a filching from the weak.
And look at this, too, father, may be this one† here
Was born unto our betters. Reared 'mongst working-folk
He will despise our doings. Following his own bent
Perhaps some high-born action he will venture on
And go a lion-hunting; carry arms; or run
A race; at public contests see tragedians.
I know you understand all this. Those heroes once,
Pelias, Neleus, by an aged man were found,
A goat-herd in his goat-skin dressed as I am now,
And when he noticed they were better born than he
He tells the matter, how he found, how took them up.
He gave them back their wallet, with birth-tokens filled,
From which they found out clearly all their history,
And they, who then were goat-herds, afterwards were kings.
But had a Daos found those things and sold them off,
That he might profit by twelve drachmas for himself,
Through all the coming ages they had been unknown
Who were such great ones and of such a pedigree.
And so it is not fitting, father, that I here
Should rear his body while that Daos seizes on
His life's hope for the future, makes it disappear.
A youth about to wed his sister once was stopped
By just such tokens. One a mother found and saved.
This one a brother. Since, O father, all men's lives
Are liable to dangers, we must watch, look out,
By long ahead providing what is possible.
"Well, if you are not suited, give him back," says he.
This is his stronghold in the matter as he thinks.
But that's no justice. Must you give up what is his,
Then in addition you would claim to have the child
That more securely you may play the rogue again
If some of his belongings Good-luck has preserved.
I've said my say. (*To Smi.*) Give verdict as you hold is just.
Smi. Well, this decision's easy: "All that was exposed
Together with the child goes with him," I decide.
Daos. All right. But now, the baby?
Smi. Zeus! I won't decide
He's yours who'd wrong him, but he's his who came to aid,
This man's who stood against you, you who'd injure him.
Syr. Now yours be many blessings!
Daos. Nay, a verdict rank!
By Zeus, the saviour! I, the sole discoverer,
Am stripped of all and he who did not find shall have!
Am I to hand this over?
Smi. Yes.
Daos. A verdict rank.—
Else may no blessing ever light on me!
Smi. Come, give.
Daos. Good Heracles, how I am treated!

IV.

It would be useless to assert that even this great addition to the fragments of Menander will entitle us to a judgment wholly independent of our inferred knowledge. But, added to Plautus and Terence, and even the character types that have filtered down to Molière, it helps us to picture more vividly Greek life in the days of Alexander the Great. And when allowance is made for a non-Christian, though not wholly pre-Christian, toleration of loose sexual relations, we seem to find in Menander an otherwise high-minded poet accustomed to recognize in human life the nobler impulses and motives. Tradition speaks of him, it is true, as a perfumed fop and a lover of pleasure, but we may perhaps remind ourselves that the term Epicurean, as vulgarly employed, does not fairly describe the content of his writings any more than it does the best ideals of Epicurus himself. Our present text, indeed, bears out the approval of Plutarch (Quæst. Conv. vii. 3), who expressly comments on the absence from his numerous comedies of allusions to the worst blot upon Greek morals, and notes the fact that lawful marriage is the regular outcome of the irregular intrigues of the various lovers.

Menander stands forth as the protagonist of the "New" Comedy, which no longer offers the lyric beauty, the sparkling wit, the naked license, the daring satire of Aristophanes. It does not, indeed, primarily seek to provoke laughter, but is the scenic representation of human life, the pathetic, the amusing, and the commonplace. If the types presented—inflammable lovers and courtesans; slaves and their mistresses; cooks and parasites; braggart soldiers and surly old men—ever seem mean or monotonous, this is largely due to a political and social atmosphere no longer vibrant either with victory or with struggle.

As to the Greek itself of the new text, it is straightforward and lucid. Only rarely does it offer difficulty to the average reader of Attic prose. Some betterments in filling out the lacunæ, and changes in pointing or readings have already been made and others will be suggested, but the editors are to be congratulated upon giving out so soon such a satisfactory edition.

FRANCIS G. ALLINSON.

Brown University.

The trustees of Shakespeare's Birthplace have published, for the use of visitors to the birthplace and Shakespearean students generally, a small volume dealing with some recent acquisitions. It is called "Four Quarto Editions of Plays by Shakespeare, Described by Sidney Lee, with five illustrations in facsimile."

"Ibsen als Norweger und Europäer" is the title of a small collection of essays on the characters in Ibsen's works, illustrative of his national and cosmopolitan traits, recently published by the German critic, Albert Dresdner. The author makes much of the *Kritizismus* and the *Moralismus* of the dramatist.

Henry Miller's new company will make its first appearance in this city March 23 at the Savoy Theatre, in Charles Rann Kennedy's new drama, "The Servant of the House." This piece met with warm critical appreciation in London. The heroine will be played by that admirable actress, Edith Wynne Matthison, who will be associated with Walter Hampden, Tyrone Power, Charles Dalton, and others.

F. R. Benson has completed his arrangements for the next Stratford-on-Avon festival, which will begin on April 20, and last for three weeks. He has secured the coöperation of many well-known actors and actresses. For instance, in the performance of "Measure for Measure" during the first week, W. Poel and the Elizabethan Stage Society will assist; and Miss Genevieve Ward will be the Queen Margaret of "Richard III." In the second week for "Henry V." Lewis Waller and Miss Evelyn Millard are engaged; and for "Romeo and Juliet" Henry Ainley and Miss Constance Collier. The third week will bring Forbes Robertson and Miss Gertrude Elliott in "Hamlet"; and "Dr. Johnson," with Arthur Bourchier in the title rôle, to be followed by "Monsieur de Paris" and Miss Violet Vanbrugh. The connection between this and Shakespeare is not explained. There will be a Shakespearean costume ball in the town hall at Stratford on April 30.

An Irish stage society has just been organized in London, in affiliation with the Irish Literary Society. It has for its object the production of plays dealing with Irish life, past and present, and it is proposed to have four or more performances annually, one of them to be given in the open air. Arrangements are already being made for the production of a peasant play, "The Land," by Patrick Colum. Among the promoters of the society are Dr. John Todhunter, Alfred Perceval Graves, P. J. Kirwin, Francis H. Skrine, and J. P. Boland, M.P.

Ada Dyas, a well-known actress, died in England March 12. Her first appearance in London was in 1861, when she played the part of Prince John of Lancaster, in the second part of "King Henry IV.," at Sadlers Wells, in the closing months of the famous directorship of Samuel Phelps. Perhaps she owed her clear cut style and excellent diction—which excited the admiration of Richard Grant White—to her brief experience with that notable organization. Her advance was rapid, for in 1866 she was leading lady in the London production of "Hunted Down," which had, for those days, a phenomenal run. She came to America in 1872 where she was engaged by Augustin Daly to play the part of Anne Sylvester in "Man and Wife" at his Fifth Avenue Theatre. She did not remain there long, for Lester Wallack offered her the position of leading lady in his company, then the best comedy organization in this country. In 1892 she was engaged by Henry Irving for the part of Goneril in his revival of "King Lear" at the London Lyceum, and her performance was the object of special praise. Miss Dyas was never a great actress. She had no special power of emotional utterance or the mood of tragic exaltation. Nevertheless, she could exhibit both choler and pathos, and had all the resources of feminine charm, intrigue, or guile in her artistic equipment. Her easy, authoritative, brilliant manner, her complete comprehension, and her executive neatness constituted her chief claims to artistic distinction.

---

*Daos apparently has allowed her to inspect them. †The baby.

Music.

Studies in Musical Education, History, and Æsthetics. Second Series. Published by the Music Teachers' National Association: President: Waldo S. Pratt, Hartford, Conn. $1.60.

Twenty-nine years ago the Music Teachers' National Association was founded, and many papers read at the annual gatherings have been worth preserving. A year ago the Association printed the Proceedings of its 1906 meeting, and we now have a Second Series, for the meeting of 1907, which was held on the last five days of that year. The volume covers a variety of topics, yet considerably more than half its pages are devoted to the problems of music in schools and universities.

Some months ago Prof. Leonard McWhood of Columbia University sent out circulars to which he received answers from 123 colleges. From these he infers that approximately one-half the colleges in the country recognize the value of instruction in music sufficiently to grant credit in this subject. What is more remarkable still is that one-half the colleges that now grant credit in music toward the degree have adopted this policy within six years, while the majority of colleges that now grant entrance credit in music have taken this step within three years. In the common schools, too, the demand for music and its recognition as a valuable educational factor are growing rapidly.

This movement will be further accelerated if the admirable paper on "The Function of Music" by President G. Stanley Hall of Clark University included in this volume receives the attention it deserves. He insists that "there is no subject, not one, in the high school and college curriculum that should be taken by so large a proportion of students." And he gives his reasons for this large claim. Music, he maintains, is the language of the feelings. Speech is the language of the intellect, but "the feelings are older and vaster. . . . We Americans are more prone than any other race to be defective in *gemüt*. more liable to have our emotional life grow sterile and desiccated. This it is the function of music to restore, deepen, enlarge, intensify, and express." President Hall once visited in Germany a school where a fifth grade class could sing for him any one of fifty chorals or folksongs by heart, but could not yet read notes. He advises American educators to relegate to the second or third place the technique that all teachers tend to push to the foreground. On this point the doctors disagree. George W. Wilmot, while agreeing that pupils should be given good, wholesome, and beautiful songs, thinks that in some grammar schools there is not enough technical drill. This might be true were it the object of school music to give a training for a musical career, but in truth what music teaching in shools should accomplish is, as Prof. Charles H. Farnsworth points out, "to develop the capacity for the more intense enjoyment of music." In other words, school music should not make musicians, of whom we have too many, but good listeners, of whom there are too few.

Among the other papers that will repay reading are Arthur Farwell's on "The Relation of Folksong to American Musical Development," and Hermann Klein's on the National Association of Teachers of Singing. Mr. Klein would have teachers of singing furnish, like the doctors, a certificate of proficiency. Mention must also be made of Arthur Foot's valuable lists of piano pieces and studies important for use in teaching.

Singers and students of vocal art will be glad to know that Sir Charles Santley is about to bring out a new book, to be entitled, "The Art of Singing."

Some years ago, E. Humperdinck, author of "Hänsel und Gretel," wrote some delightful incidental music to the play called "Die Königskinder," another version of the story of the babes in the woods. He has now set this story to music throughout, thus making a new opera. The score is said to be nearly completed.

The young French composer, Raoul Laparra, seems to have been successful with his opera, "La Habanera." Four years ago this composer won the Grand Prix de Rome, but his opera is his first work that has attracted general attention. The story is one of jealousy and murder, but in the background there is always the music of the habanera dance. As a composer, Laparra does not follow the example of Debussy, who taboos melodies and coherent harmonies. He belongs rather to the school of Charpentier.

Particular interest attaches to the last concerts to be given at Carnegie Hall this evening and Saturday afternoon by the Boston Symphony Orchestra. They will mark the last appearances of Dr. Karl Muck, who has won many admirers here, but who is obliged to resume his duties as principal conductor of the Berlin Royal Opera.

The committee in charge of the Edward MacDowell Fund announces that it has completed its work. Total contributions to date, with interest, amount to $39,712.18. The expense of administration, together with the money paid on behalf of Mr. MacDowell, amounts to $10,780, leaving a balance of $28,932.18. This money, less some minor expenditures which have yet to be made, will be turned over to the Edward MacDowell Memorial Association, which has been formed to administer it in connection with the MacDowell property in Peterboro, N. H.

Clara Anastasia Novello, Countess Gigliucci, famous up to 1860 as a concert, opera, and oratorio singer, died in Rome March 16. She was the daughter of the English composer and organist, Vincent Novello, and was born in 1818. In 1829 she became a pupil in the Paris Conservatoire, and in 1833, at her first public appearance as a singer, she won immediate success. Her operatic début was made at Padua in 1841, in "Semiramide." Thenceforth, for nearly two decades, she was one of the most popular artists on the stage, in England as well as in Italy. She excelled in oratorio.

Walter Slaughter, the English musician, died March 2, at the age of forty-eight. He had been conductor of the orchestra at various London theatres, and had written a number of popular songs and eight operas. Among his songs were "The Dear Homeland," "Fair Madolin," and "My Welcome"; among his operas "Alice in Wonderland," "Rose and Ring," and "Lady Tatters."

Art.

THE SPRING ACADEMY.

Surely no carping critic, self appointed to safeguard oppressed and undiscovered genius, nor those chosen young vessels themselves—they are always young—can complain that the artist with a "tendency" has not been offered a fair chance at the exhibition of the National Academy of Design, open in this city from March 14 to April 18. In groups and singly, on every hand, are examples of all the latest "movements" in art (and these are almost as changeable as the styles in bonnets). And after a tour of the galleries one comes away with the memory of things one does not care for—perhaps to the exclusion of pictures which make a quieter appeal. Here are bold, bare transcripts, large and small, of nature in unæsthetic moods, clamoring for attention; here is humanity in unlovely realism; "waves of ugliness," impressionism so called, or whatever is the latest cry—all are here. Here, too, fortunately, are many loving and intimate interpretations of land and sea, the sky above them, and of men and women who live and have their being about us, painted by artists who do not insist on telling in strident voices in this casual company all they know the first time you meet them, but hold many a choice secret in reserve for the sympathetic listener. It is to these strongly individualistic painters and not to those who with perennial zeal pursue each fleeting whim and caprice that American art owes its increasing prestige at home and abroad.

The Academy hitherto has usually, if not always, excluded works which have been seen before on its walls or in other public exhibitions in the city. This year, however, with a liberality greater than the Academy has been credited with possessing, invitations were extended to many who have not of late, for one reason or another, been contributing. This has tended to elevate the standard of the present exhibition. Not in years, if ever, has the average been so high. Doubtless, there are plenty of pictures that will concern but few observers, and there are not wanting also pictures that are entirely uninteresting—that is the fault partly of the system; but why dwell upon these when there is so much that is good to choose from?

An unusual number of snow scenes impart an air of lightness to the galleries, and incidentally provoke wonder whether the landscapists are staying more in the country or whether the taste for snow is merely a "tendency." Among these snow pictures none is more vigorous than Jonas Lie's Heart of the Woods, in which there is no sign of last year's life or next year's rejuvenescence; all vitality seems drowned in the inky black pool in the foreground. Quite the opposite is the animated glimpse of North River by George

Bellows, in which the water seems actually to dance and the busy tugs to emit real steam—in a word, the canvas is an astonishing piece of realism. Ernest Lawson also has a realistic glimpse of the Hudson, full of floating ice; and E. W. Redfield shows two ably painted canvases of mingled snow and tawny earth. But for the more poetic side of winter one turns to Walter Nettleton's Winter in the Woods, so delightful in color and so searching in character. One almost hears the soughing of the wind in those pines, so strongly do they convey the spirit of the snowy forest.

Henry Rankin Poore, Charles Warren Eaton, and Leonard Ochtman, in their respective ways, impart a similar sense of relationship and intimacy with the scene. Equally, and sometimes even more successfully, D. W. Tryon, Elliott Daingerfield, Charles M. Dewey, Arthur Parton, Bruce Crane, Henry B. Snell, Henry W. Ranger, and Frederick B. Williams imbue their canvases with the spirit of the scene —together with the personal note—invaluable in pictures as in human beings. Similarly W. E. Schofield achieves his results with a couple of architectural scenes through which bits of sky and landscape are visible.

Something like the mysterious spirit of the night rushes past our ears, and the salt sea air gets into our nostrils as we watch the dancing waves and wonder at the wake of the invisible moon in Frank Benson's Moonlight by the Sea, while Charles Woodbury, in his Blue Wave, takes one far out to sea and leaves one there in solitude amid high running waves. In the presence of this canvas one has a singular sense of being adrift in an open boat, without much concern as to how one will get ashore. From William Gedney Bunce comes a Venetian moonlight that appeals to the eye fond of color, and there is a familiar but not remarkable sea piece by Winslow Homer. Other sea painters well represented are Gifford Beal, Howard R. Butler, and Childe Hassam.

Portraits abound. John Sargent, for example, is four times represented, and there are two portraits by J. J. Shannon, all adequate, if familiar, but from these notable artists nothing particularly brilliant. Edmund C. Tarbell's spacious canvas, in which is portrayed President Seelye of Smith College (recently shown at the Pennsylvania Academy), is likewise here, suffering somewhat in color by the transition to a franker light. Besides these there are an almost too vividly colored but vital portrait by Cecilia Beaux, an appreciatively done full-length figure of a woman by Lydia F. Emmet, another by the late John Lambert, and a spirited, almost full-length woman's figure signed by De Witt Lockman. These portraits do not, however, exhaust the resources of the show, but serve as mere hints.

Verging more on the ideal than the foregoing are figures and heads of interest and individuality by Sargent Kendall, Miss Genth, Charles W. Hawthorne, Alden Weir, H. Siddons Mowbray, George Barse, W. E. Smedley, Irving Wiles, and Abbott Thayer The Girl's Head, by the last named artist, though not one of his best representations of this oft-painted subject, is endowed with a nobility that bespeaks a soul looking out from behind those eyes. Moreover, every square inch of the canvas is instinct with an elusive charm. Of figure compositions one recalls especially those by William M. Chase, John La Farge, Hugo Ballin, Will H. Low, August Koopman, Jerome Meyers, H. W. Watrous, and Charles Curran.

In sculpture, a group of bas-reliefs by Augustus Saint-Gaudens makes strongly for sentiment and artistic quality, as does also the medallion portrait of Edward MacDowell by Helen Farnsworth Mears. There are, besides, various pieces in bronze, clay, plaster, and marble, mostly small, disposed here and there about the galleries, in no very impressive way, and thereby calling attention to the crying need of more adequate galleries.

BEN FOSTER.

It was a good idea to publish, as "Vasari on Technique" (E. P. Dutton & Co.), those prefatory chapters to the Lives, which have never heretofore been translated. The translation is now competently made by Louisa S. Maclehose and edited with introduction and notes by G. Baldwin Brown and accompanied with intelligently chosen illustrations. Vasari's notes on technical matters are often incomplete and disappointing, but it is well to have them, and one wonders why all translators of the Lives have omitted them.

A publication that should be of great value is that of "A Catalogue Raisonné of the Most Eminent Dutch Painters of the Seventeenth Century," based on the work of John Smith, by C. Hofstede de Groot, with the assistance of Dr. W. R. Valentiner, translated and edited by Edward G. Hawke. The first volume, including the works of Jan. Steen, Gabriel Metsu, Garard Dou, Pieter de Hooch, Carel Fabritius, and Johannes Vermeer, is now brought out by the Macmillan Co. The labor represented in its preparation is evidently enormous, and to test the accuracy of its execution would entail a labor nearly as great. One can only say that it is a useful undertaking, and seems to have been conscientiously and thoroughly carried out.

The Pennsylvania Academy of the Fine Arts has bestowed upon Edmund C. Tarbell the Academy gold medal of honor which is awarded "in recognition of high achievement in their profession, to American painters and sculptors who may be exhibitors at the Academy or represented in the permanent collection, or who, for eminent services in the cause of art or to the Academy, have merited the distinction." Previous winners of this medal have been: Alexander Harrison, William M. Chase, Winslow Homer, D. Ridgway Knight, Edwin A. Abbey, Cecilia Beaux, Charles Grafly, Henry J. Thouron, James A. McNeill Whistler, John S. Sargent, John W. Alexander, William T. Richards, Violet Oakley, Horatio Walker, and Edward W. Redfield. Mr. Tarbell, who is represented in the Academy's permanent collection by The Golden Screen, showed in the Academy's 103d annual exhibition, which has just closed, three canvases; a woman's portrait (Mrs. A.), a little interior, and a large portrait of President Seelye of Smith College. A still more important group of his pictures is to be shown in the exhibition of works by "Ten American Painters" which will open at the Pennsylvania Academy April 11.

A scholarship competition open to all art students in the United States, with the exception of those in New York city, will be held at the Art Students' League of New York on April 27. Ten scholarships will be awarded for the best work shown, whether from life, antique, portrait, illustration, or composition. The jury will consist of the following instructors of the league: Kenyon Cox, F. Luis Mora, Edwin C. Taylor, Augustus Vincent Tack, Thomas Fogarty, William M. Chase, George B. Bridgman, Charles Henry White, James Earle Fraser, Wallace Morgan, Frank Vincent Dumond. These scholarships will entitle the holder to free tuition in any one class of the league during the winter term of 1908-1909. Work should be forwarded so as to reach the league not later than Monday, April 20.

An important building operation is to be undertaken in Rome. The Palazzetto di Venezia, that is the old Viridarium of Paul II., is to be removed from its present location and reërected between the Piazza S. Marco and the Via degli Astalli. The little street of Madama Lucrezia will thereby disappear, but the famous colossal bust of Lucrezia will be placed in the corner between the palazetto and the façade of the Palazzo di Venezia. The picturesque little square in front of the church of S. Marco will remain undisturbed.

A committee of well-known art-patrons in Vienna have contributed funds for the publication of a scientific work on the Palazzo di Venezia. The volume, which is to appear in May, will contain thirty-seven plates and seventy-five illustrations in the text. The authors are Dr. J. P. Dengel of Innsbruck, Professor Dvorak, and Dr. H. Egger of Vienna.

As a direct outcome of the lectures recently given in Rome and Florence by the English Egyptologist, Prof. B. P. Grenfell of the British Museum, an Italian Society for Archæological Exploration in Egypt is being formed, with the support of Prof. Pasquale Villari, Senator Domenico Comparetti, and Prof. G. Vitelli of Florence.

Among the exhibitions at dealers' galleries in this city are paintings by deceased American artists, from Copley to Whistler, at Macbeth's, till March 24; sculpture by Richard E. Brooks, Edward W. Deming, R. Evans, John Flanagan, and James E. Fraser, Bauer-Folsom's, March 28; landscapes by Arthur T. Hill, Powell's, March 28.

Last Thursday J. P. Silo held an auction of pictures collected by two New York dealers, Oehme and Ehrich. The following were among the more important sales; Constant Troyon, Return of the Flock, Evening, $7,000; Roybet, Cavalier, $1,350; Ziem, Grand Canal, Venice, $5,500; Jongkind, Evening Calm, $1,750; Rigaud, Portrait of Van Loo, $1,100; J. S. H. Kever. Home Life in Holland, $1,300; G. Pieters, Our Daily Bread, $1,000; Anton Mauve, Wood Cart, $1,300; Josef Israels, Reading the Talmud, $1,000; Largillière, Portrait of Vicomtesse d'Emonville, $1,100.

At an auction at Christie's, London, February 29, the following pictures were sold: Lawrence, Portrait of Richard Brinsley

Sheridan, £546; Early British School, Portrait of Miss Mary Ann Ayott and her brother, Henry Ayott, £535; Rembrandt, Titus, the artist's son, £215.

Finance.

THE COMPLEX FOWLER BILL.

Representative Fowler's currency bill has been endorsed by ex-Secretary Gage and Horace White. Both men urge that its purpose is to extinguish the present United States notes, and to base the currency as a whole on gold, not in any part on government securities. These are consummations devoutly to be wished; a measure whose primary aim is to achieve them is inso far at least commendable. The provision for twenty separate redemption agencies, whereby banknotes may be promptly redeemed without the delay and impediments imposed by the present law regarding the single redemption office at Washington, is also commended by experience.

The Fowler bill, however, goes far beyond these fundamental considerations, and undertakes a radical revision of the present banking system. It provides that the banks deposit in gold with the Treasury 5 per cent. of their outstanding notes and deposits, for a guarantee fund against failure to pay either notes or deposits on demand. But this guarantee fund is to be invested in purchase of the government bonds now held as collateral for bank circulation; and, to that extent, the government would not hold a cash guarantee, and the bill does not state how these bonds shall be employed for meeting losses. National banks are to be permitted to engage in trust company business, but under limitations in the main dependent on the varying State laws. The highly objectionable proviso of the present law, that three-fifths of the 15 per cent. cash reserve held by "country banks" against deposits may be redeposited in banks of remote cities—the evil effects of which were seen in the recent panic—is not only retained, but is made applicable to the similar reserve against the circulating credit notes. The bill is based on the assumption that these notes will not remain indefinitely outstanding, or be unduly inflated. These considerations illustrate the complexity of the bill, and show why Congress and the people are weighing it rather deliberately. The advocates of the bill say that their first opposition was removed by a more thorough study; but, as a result of such study, other persons have been filled with doubt as to the operation of certain clauses of this ambitious measure.

The two provisos on which discussion will converge, are those which arrange for a guarantee of bank deposits and for the admission of national banks into the field of the trust companies. The two features are more or less connected, because the guarantee fund, which is based, as to amount, on experience with national bank failures in the past, will necessarily cover deposits held under the trustee powers conferred upon banks. The need for this extension of the powers of national banks is not evident, and there is no reason to suppose that the banks themselves have solicited it. The section of the bill conferring these powers stipulates, as was inevitable, that they shall be exercised "in accordance with the laws of the State or Territory where situated or located." In view of the broad interpretation which has been placed on the State laws for trust company accounts, in New York and elsewhere, the effect of this authorization is perplexing. Here in New York, the recent practice has been to assume that any deposit with a trust company is a "trustee account" under the terms of the law, to be administered and invested without the restraints surrounding an ordinary bank deposit. That trust companies have been used as engines of promotion and speculation, and have been thus employed by institutions prohibited by their own charters from engaging in such enterprises, was proved by the life insurance investigation. Mr. Fowler's proposal would not necessarily lead national banks to embark their own funds in such undertakings; but the possibility is present, and it is far from reassuring. It has been intimated that the purpose of this section is to force the trust companies, through the guarantee of deposits in the national system, to take out charters as national banks. Granted this result, the national banks would become trust companies and the trust companies national banks, each intruding farther into the other's field. Such an outcome can hardly be called salutary.

Compulsory guarantee of bank deposits ought to be considered with great caution. Mr. Bryan has assumed that opposition to such a law arises from dislike on the part of strong banks to seeing weaker institutions placed on a par with them in the eyes of the average depositor. Objection on this ground is, of course, not valid. But the argument that such guarantee would go a long way towards putting incompetently or dishonestly managed banks on a par with the sound and honest, is more serious. The Fowler bill attempts to obviate this difficulty by providing that the several banknote redemption agencies, through boards selected by the banks of the district, shall have general power of supervision through their own bank examiners. Yet the New York Clearing House Committee possessed this very power in the case of the so-called "Morse banks," and it was of very little use. It requires no great imagination to picture what advantages the promoters in the "chain bank" system would have enjoyed, with the public's doubts or suspicions allayed by a guarantee of depositors.

A THIRD REVISED EDITION OF

Pancoast's Introduction to English Literature

By HENRY S. PANCOAST. ix+656 pp. 12mo. $1.35

This new and enlarged edition of a standard text-book and hand-book for general reading has been highly praised by those who were familiar with the book in its earlier form.

Professor C. G. Child, University of Pennsylvania: It is far and away the best elementary text-book of English literature in existence.

Professor William Lyon Phelps, Yale University: An exceedingly valuable book, in fact one of the best summaries of English literature that has ever been written.

James Hugh Moffatt, Central High School, Philadelphia: I have always liked this book because it shows so clearly that English literature is an expression of national life, and because it is not only about literature but is literature itself.

TAUCHNITZ BRITISH AUTHORS

The Sphere of Religion

A Consideration of Its Nature and of Its Influence upon the Progress of Civilization

By FRANK SARGENT HOFFMAN, Ph.D.
Professor in Union College, author of "The Sphere of State," "The Sphere of Science," etc.

8vo, $1.75 net

This work opens with a definition of the author's conception of religion, and proceeds to sketch the development of religion from the rudest savage forms to the more exalted conceptions of today. Following this there is an account of the various sacred books that have had a place in history. Perhaps the most illuminating chapter in this suggestive book is the last in which is discussed the present day conception of God.

The Nation.

NEW YORK, THURSDAY, MARCH 26, 1908.

The Week.

The decision of the Supreme Court, in the railway cases coming up from Minnesota and North Carolina, merely reaffirmed and applied two well-settled principles of American Constitutional law. They are, first, that no man's property can be taken from him without due process of law, which means that no Legislature can enact a statute that will be in effect confiscatory; and, second, that no man can be deprived of the equal protection of the laws. It was in the application of the latter principle to the railway laws of Minnesota and North Carolina (and the Alabama law stands on all fours with them), that the Supreme Court made its most important deliverance. These State laws were of the kind which, it was boasted, had been made "injunction proof." By this was meant that it had been made enormously difficult and dangerous for any of the parties affected to challenge the constitutionality of the measures. There was to be, so politicians in Minnesota and Alabama said gleefully, no more interference of the Federal courts in behalf of railway officials. If any of them ventured to violate any provision of the State law, in order to make a case and bring it within the cognizance of the court, imprisonment at hard labor with heavy fines would be at once visited upon him. The assertion was made that these particular statutes had been so thoroughly "fixed" that no attempt could be made by those whose property was put in jeopardy even to go into the Federal courts and ascertain whether the laws were confiscatory and hence unconstitutional. But this very effort to prevent a constitutional determination is itself unconstitutional. That is the essence of the court's decision:

> By reason of the enormous penalties provided in the rate laws, by way of fines against the companies and imprisonment of their agents and employees, the companies were in effect prevented from ever questioning the validity of those laws, as the risk of confiscation of property and imprisonment of agents in case the companies failed in their defence was too much to undertake in order to obtain a judicial decision of the question of such validity. Such laws are therefore held unconstitutional, as they prevented the companies from resorting to the courts, and therefore deprived them of the equal protection of the laws.

The net result is to prove that there is no constitutional way of "getting round" the Constitution. This is no denial of the legitimate powers of the States. It is only a fresh reason why they should be exercised deliberately and lawfully. These two-cent-fare and other railroad laws were passed by the States in a kind of infectious mania. From one commonwealth to another the passion spread. Seldom was there any pretence of preliminary investigation. The prevailing spirit was exemplified in North Carolina, where the bill was passed on the distinct promise by the Governor that, if it did not work well, the Legislature would be summoned in extra session to amend or repeal it. Lord Rosebery was only the other day speaking enviously of the position of the United States in regard to fundamental guarantees for the citizen. He said that though ours was "the most democratic community in the world," we had the great advantage of a written Constitution. England, on the other hand, was "the country in which all the barriers to popular caprice, popular impulse, popular whim, are weakest." Parliament was all powerful; there was no executive veto; no court to disallow oppressive or confiscatory legislation. If Lord Rosebery studies the decision of the Supreme Court, he will not be disposed to withdraw or qualify his praise; for it stands as a bulwark against injustice.

We welcome "Labor's Protest to Congress," as presented by Mr. Gompers and his fellow-delegates. When they come out from under cover and state exactly what they want, the abhorrent nature of their demands is plain. They desire to erect themselves into a privileged class. They are asking the right to do what they fiercely denounce in others. What they have charged, and what the law declares, to be a crime in others, they would have Congress enact that it shall be a virtue for themselves to practise. In his effort to secure the legalizing of the boycott, Mr. Gompers would have the Anti-Trust act so amended as to make organizations of laboring men immune. But what is the Sherman Anti-Trust Act? It is, in substance, simply a statutory reaffirmation of a great common law principle. This is, as laid down by Chief Justice Earle:

> Every person has individually, and the public also has collectively, a right to require that the course of trade should be kept free from unreasonable obstruction.

If two men combine to injure the business of a third, the third has his legal redress. This was the idea underlying the Anti-Trust Act. To be written into law, it had necessarily to be made broad in its terms. No class could be excepted, no especial form of combination exempted. This is innocently admitted by Mr. Gompers himself, when he says that Congress would originally have excluded labor unions from the Anti-Trust Act, but for the fear that by so doing it would lead the Supreme Court to declare the whole law unconstitutional. Naturally; for the Supreme Court sits to see that no law shall discriminate between man and man. And when it said, in the decision in the Northern Securities case, that the Anti-Trust Act "declares to be illegal *every* contract, combination, or conspiracy in *whatever* form, of *whatever* nature, and *whoever* may be the parties to it, which directly or necessarily operates in restraint of trade or commerce among the several States," it absolutely determined the principle by which trade-union boycott would be held illegal so soon as a case was brought to court. It is this even-handed justice against which Mr. Gompers cries out. In clear equity, of course, it would be just as reasonable for E. H. Harriman or J. J. Hill, J. Pierpont Morgan or J. D. Rockefeller, to go to Congress and demand that their capitalistic combinations be expressly removed from the purview of the Anti-Trust Act. But we may take comfort in the thought that Speaker Cannon has declared that he would be driven from public life before he would "vote for any law which will make fair for one and foul for another."

We have been averse to noticing the attempt to frighten people into accepting Taft by threatening them with another term of Roosevelt. It implies such an initial and essential dishonor, that it is unpleasant even to think of it. But we cannot shut our eyes to the fact that the threat is widely made that, if the Republican Convention won't take Taft, it will be compelled to take Roosevelt. In Massachusetts, for example, we have it from both wings of the Republican party. The former Attorney-General of that State, Mr. Pillsbury, has issued a statement in which he speaks plainly of those who are "conspiring to force the nomination of Secretary Taft by holding over the heads of the voters a threat of President Roosevelt taking the nomination himself rather than let it go to any other." This is promptly confirmed by ex-Congressman Powers, who is managing the Taft movement in Massachusetts. He speaks of "the growing belief that if Taft should be defeated the Convention will insist upon nominating President Roosevelt." Even more explicit is a Washington dispatch to the New York *Globe*, giving an "authoritative statement" in behalf both of the President and Secretary Taft's friends:

> He [the President] bound himself at the outset of his present term not to accept another nomination. He meant that then, and he means it now. He believes the nomination of Mr. Taft would be an endorse-

ment of his policies, and therefore a compliment equal in effect to his own renomination. But he does not propose to see what he has done overturned by the nomination of a reactionary. If it develops at the Chicago convention that Taft cannot be nominated, then he will take that nomination himself. He feels certain that Taft will be nominated. But if that should fail, he is sure that he can *force through* his own nomination.

But fundamental moral considerations would seem to make another nomination utterly beyond President Roosevelt's wildest thoughts. It is, after all, only a political trick; and not a trick that raises our opinion of the men who are responsible for it. The President cannot mean it seriously; and the fright of those who are now so much affected by it will probably wear off. At least, we can scarcely imagine that the sober leaders in the Republican Convention will be so terrified that they cannot look about them and do their best to make their party successful in a critical election. Their plain task is to put away both present fears and horrible imaginings, and to select that candidate for the Presidency who is at once fit and capable of being elected.

About this time in a Presidential campaign, expect an announcement that all is over, and that every waverer had better climb at once aboard the band-wagon. We get it now in the assurance by Mr. Taft's manager, Frank H. Hitchcock, that the Secretary is certain of 552 delegates in the Chicago Convention, with only 491 necessary to nominate. Some of the detailed claims will scarcely bear analysis. To affirm positively at this time that Mr. Taft is sure of 52 out of the 82 delegates from New England does not err on the side of under-statement. Mr. Hitchcock coolly annexes the entire delegations of Iowa, Missouri, Nebraska, Kansas, and Oklahoma, though it is known that several Congressional districts in two of those States have elected uninstructed or anti-Taft delegates. The contest is by no means closed, though it is plain that the Taft candidacy has made great headway. The Secretary's strength west of the Mississippi appears to be as great as was asserted for him, and if the Federal machine succeeds in holding the Southern postmasters and marshals and collectors in line, he will evidently be far in the lead on the first ballot. But many things may happen between now and June 16.

The resolution of the New York Democratic State Committee in favor of sending an uninstructed delegation to Denver was to be expected. It is in line with the proposal to send uninstructed delegations from Pennsylvania and other States where the Democrats are not dominated completely by Bryan and at least make the attempt to give the National Convention the character of a deliberative body. New York's delegation, in particular, cannot be ignored entirely. Controlled though it is, in the minds of the Bryanites, by sinister "financial interests," it nevertheless represents a State which the Democrats, in the light of fifty-two years' experience, must carry in order to win. New York did supply the last Democratic candidate, and that candidate went down in overwhelming defeat. But it must not be forgotten that New York also supplied the only Democratic President since the Civil War, as well as the candidate who in 1876, as many good Democrats still believe, was rightfully elected. There are many reasons for high Democratic hopes this year. But none of them can blink the fact that the East must, as in the old days, be the chief fighting ground. Here the discontent with the Administration is wide and outspoken. For the Democratic Convention to override New York would not be an entirely auspicious beginning.

When asked the other day what would become of the amended Aldrich bill when it reached the House, Representative Hill of Connecticut said: "We'll strike out most of the other provisions, too, and then pass it." This was, we suppose, playful, but it appears to have been near the truth. The Aldrich bill had few friends in the House from the start, and the abandonment of its main proposals has simply made it look still more negligible. There seems to be a prospect, however, that the House may put it to a good use, after all. It is reported in the Washington dispatches that a plan is on foot to take the mutilated Aldrich bill and amend it so as to provide for a currency commission. From it, at leisure, a comprehensive bill might be expected, which Congress could debate and enact at leisure—not, as now, in the hurry and passion of a crowded session just before a Presidential election. Such a course, it has been stated, will soon be recommended by the New York Chamber of Commerce. If the Aldrich bill is made the means of such a result, it will not have died in vain.

There is in Senator La Follette a strongly academic trait. It showed itself last week in his speech pillorying our leaders of industry and finance. Scholars have always been fond of drawing up lists: of the best one hundred books; of the ten greatest soldiers in history; of the five men who have done most for humanity; of the twelve most celebrated women; of the fifty wisest sayings; and so on. The list which Senator La Follette read might be characterized as a list of the hundred worst Americans. They were the one hundred men or thereabouts "who control the industrial, financial, and commercial life of the American people," and who, to serve their own purposes, plotted to bring about the recent panic. We doubt whether the men who make up the list will object strongly to being raised even to so bad an eminence. Probably their families are more than pleased with this first authoritative social register covering the nation. There will be, of course, much heart burning in high financial circles. Like the author who could have entered the French Academy if the number of members had been forty-one instead of forty, like the literary masterpiece which would have been included in the world's greatest books if the list had been 101 instead of 100, the wife of many a financier whom just one more directorate would have landed on Senator La Follette's index will mourn the sad decree of fate.

A new Congressman, J. F. Laning of Ohio, with the new Congressman's propensity to rush in where even Payne or Dalzell fears to tread, makes an interesting charge against the pension system. It is, in effect, that the House Committee on Invalid Pensions, which exists supposedly for the sake of mitigating the rigors of the regular pension laws, applying by means of special bills a relief for those rare cases for which no general statute can provide, never even considers the private bills offered except the four or five which each member is allowed to select for passage. If this be true (and the *Congressional Record* does not indicate that any one denied it), then the persons in charge of this part of our pension machinery no longer even go through the motions of deciding cases judicially. Out of about 25,000 special pensions asked for, the Fifty-ninth Congress granted 2,523. But no one went over the 25,000 to pick out the most deserving tenth. If, in a single district, the most worthy claims did have precedence, it was because the local Congressman sifted them, or had them sifted. Moreover, these hundreds of bills continue to be passed after the enactment of a general law taking care of one of the chief classes of decrepit soldiers for whom the system of special pension legislation used to be justified. Just what the largesses distributed by quota involve, nobody knows. Congress has discontinued the practice of printing a brief statement of the malady of each particular pensioner. Nor is any one at the White House willing, like Cleveland, to sit up nights and analyze private pension bills on their merits.

Representative Littlefield's resignation means another retirement which, like Senator Spooner's, involves a loss to Congress. For sheer debating power, no man in the House is better equipped than Mr. Littlefield. To a logical mind and full resources upon which he can readily draw, he adds the advantage of a powerful voice. Without this, no one can hope to engage successfully in a rough-and-tumble discussion on the floor of a vast and noisy chamber. Mr. Littlefield has not been always fortunate in being on the winning or popular side, but has invariably commanded respect for his intellectual ability and his reasoned convictions. At the time of the impeachment of Judge Swayne, he opposed the majority of the House in a masterly manner; and though he lost there, had the satisfaction of seeing the Senate adopt his point of view. Perhaps his greatest public service, however, has been in his consistent and fearless withstanding of the arrogant demands of labor leaders. He has fought them in the House, as in his Maine district, with eminent courage and success. If he now withdraws for private reasons, it is at least some satisfaction to know that he will serve through this session, to speak the truth, both in the Judiciary Committee and on the floor of the House, about the un-American pretensions of Gompers and his kind.

China's invitation to the Pacific fleet, following closely on that of Japan, may be taken as influenced, to some extent, by the bitterness of feeling aroused over the recent dispute about the seizure of the vessel Tatsu. Reports from Peking during the last half-year have spoken of China's militant attitude toward Japan as determined, in part, by hope of American support. The supposed crisis in the relations between this country and Japan which followed on the decision to send the battleship fleet to the Pacific Coast, was welcomed in China, where, in spite of the boycott of three years ago, we have become once more the most disinterested of friends, especially after our handsome behavior in remitting a good part of the Boxer indemnity. The rabid anti-Japanese element in China was sure that the United States would attack and humble presumptuous Japan. The more moderate politicians were sufficiently impressed to come out strongly against supposed Japanese aggression in Manchuria. For the American fleet to visit Japan, and completely to dissipate all rumors of hostility between the two nations, would be something of a blow to hopes of Chinese radicals—hopes which a visit of our battleships to Shanghai might do something to restore.

According to present indications, the number of intercollegiate contests in which Harvard athletic teams may participate will be reduced, beginning with next autumn; and a number of colleges, East and West, will follow this example. The Harvard baseball team, however, will continue in the old way this spring and play twenty-seven games—far too many for young gentlemen who are expected to attend to such secondary duties as study. Yale, of course, will not reduce its athletic activity. President Hadley is quoted by the New York *Tribune* as saying:

> The question is a difficult one. As matters stand to-day the students in our large colleges have the greater part of Saturday at their own disposal. Some of them wish to go home for Saturday and Sunday; others go to the nearest city to amuse themselves. Each of these things, particularly the latter, is a more serious cause of interruption to college work than are most of the intercollegiate sports. If sports keep the students together, I am afraid we shall do more harm than good by discouraging them.

How the colleges ever managed to maintain intellectual and moral discipline before intercollegiate athletics came to save them is a mystery to all men of middle age.

A great figure in English politics is removed by the death of the Duke of Devonshire. If his career had fallen in the United States, he would, we suppose, have been called a Mugwump. At any rate, his strong personality and massive good sense he always threw against what he thought the extremes of either party with which he happened to be acting. Long one of Gladstone's ablest lieutenants, he was, as the Marquis of Hartington, leader of the Liberals during Mr. Gladstone's temporary retirement after 1874, and was thought to be entitled to the Premiership when the party won its sweeping victory in 1880. His break with Gladstone on the issue of Home Rule for Ireland was a defection which counted more at the time than either John Bright's or Mr. Chamberlain's. As a Liberal Unionist, however, he preserved his independence, and his refusal to go with Balfour and Chamberlain after the false gods of protection was a powerful influence in holding England true to free trade. That "the Duke" opposed the new fiscal plan was argument enough for thousands of Englishmen, who had come to look upon him as the embodiment of the hard-headed and steady national virtues. His death will not have the political importance which would have attached to it had he died four years ago; yet it must be long before another statesman will fill the peculiar place of respect and trust which he occupied in the eyes of his countrymen.

Street conflicts in Berlin have become a regular feature of the day's news. The commemoration by the Prussian Socialists of the March revolution of 1848 did not pass off without the now familiar flashing of bare sabres and cavalry charges on the crowd. German opinion is extremely sensitive to what it regards as foreign misinterpretation of domestic conditions. Germany, in general, is prone to think itself ill-treated by the press abroad; yet it is difficult to see what defence can be adduced for the policy of almost seeking a quarrel with the Prussian masses which Prince von Bülow has adopted. The Socialists have, from the point of view of the government, always been a menace. Presumably, the government has always followed precautionary methods with regard to popular agitation. But, somehow, the authorities were able to keep affairs in hand without recourse to such frequent brandishing of the naked sword as in the Prussian capital the last few months. British authorities manage to cope with street demonstrations peacefully. Even emotional Paris, during threatening May-day demonstrations, has seen troops and police kept well under control, and sharper crises than those that confront the Berlin authorities surmounted without bloodshed. What reason, therefore, have the Germans for complaint if outsiders fail to appreciate Von Bülow's seeming attempt to develop a miniature blood and iron policy of his own? The need for violent repression is always a reflection on constituted authority; it is especially the case now in Prussia, where repression is called forth by the legitimate efforts of the masses to protest against a ridiculously antiquated system of parliamentary representation.

Army experts are less addicted than their naval brethren to the football specialist's method of judging the comparative strength of two teams on the basis of their record against a common adversary. Otherwise it would be easy to prove that the French army is far superior in actual fighting efficiency to the German army. In Morocco, the expeditionary force of some 10,000 French troops is fully maintaining the ratio in casualties that usually obtains for Europeans and natives. This ratio is generally about one European to anywhere from ten to one hundred Zulus, negroes, or Moors. In the heaviest battles fought by Gen. d'Amade the French loss was reported at a dozen dead and twice as many wounded, whereas the Moorish loss was estimated as close to one thousand. German troops, on the other hand, in a fight with a Hottentot band in the Kalihari desert—one of the last echoes, presumably, of the great uprising of three years ago—succeeded in killing only fifty-eight of the natives and capturing seven, with a loss to themselves of thirteen killed and seventeen wounded. In fact, all through the German Southwest African campaign against the Hereros and Hottentots, the European losses were extraordinarily heavy. The war, in all, is estimated to have cost 2,000 German lives. This fact offers some support for the contention that the rigidity of the German military machine unfits the common soldier for the individual fighting necessary in colonial campaigning.

INTERNATIONAL HATRED AND THE PRESS.

The true moral of the fury over the Kaiser's letter to Lord Tweedmouth was drawn by Lord Rosebery in his short but pungent speech in the House of Lords. He said with much force that the country was getting into a supremely ridiculous position when it could fall into such excitement over a private letter. Seemingly, Lord Rosebery had himself seen the letter of the German Emperor, for he said that it was "partly of banter," and he presumed the First Lord of the Admiralty had replied in "as much a tone of banter as one in his situation can employ towards such a potentate." But passing over all such details of the "slight incident," what, asked Lord Rosebery, was the lesson to be drawn from the vast amount of passion and bad feeling that had burst forth?

> It is this—that the responsibility of the press both in England and Germany should be realized by that press, and that they should not lash both nations into a state of soreness which some day may produce the gravest dangers to European peace.

So far as this bore severely upon the course of the London *Times*, we must say that the rebuke was deserved. That newspaper has, for reasons of its own, maintained for some years an attitude of suspicion and hostility towards Germany. But it quite outdid its former worst, in its treatment of Kaiser William's letter. First, it printed the announcement that such a letter had been written. It did so in a way which, for the *Times*, was sensational; though we admit that it would appear tameness and stupidity to a really flaming yellow journal. Not a picture of William in his war helmet, nor one cut of the ship with which he was going to sink the English fleet! Still, the work of insinuation was thoroughly done. It would be "a shock of painful surprise and just indignation to the people of this country" to learn that the Emperor of Germany had attempted to "influence, in German interests, the Minister responsible for our naval estimates." "If there was any doubt before about the meaning of German naval expansion, none can remain after an attempt of this kind." It was clear that the Kaiser was designing to lull England to sleep, until he should have got his own powerful ships "within striking distance." In the successive editorial utterances there was much more to the same effect.

All this inflated mass of conjecture and ill-will was, it is needless to say, punctured by the plain tale of Mr. Asquith in the Commons and Lord Tweedmouth in the Lords. The Kaiser's letter was not received at all until after the naval estimates had been determined upon. It had no effect upon them one way or the other. The writing of it was a purely personal affair. Out of abundant precaution, Lord Tweedmouth had shown it to the Foreign Secretary, Sir Edward Grey, and he at once decided that it was nothing of which official cognizance should be taken. And when the Chancellor of the Exchequer stated in the House that the publication of private communications could not be thought of by the government, no one in the Opposition had a word to say, and the whole case of the *Times* fell to the ground.

But the matter did not and should not end there. Lord Rosebery spoke of the responsibility of a newspaper that would recklessly endanger good relations with a friendly country. This was brought home to the *Times* in a way which it could not but have felt acutely. There was not merely the fact that the support of its own party immediately failed it; that not a Conservative rose in Parliament to say a word in its behalf. Public opinion turned against it in surprising strength. Its course was denounced in the plainest language by the leading English newspapers. The Manchester *Guardian*, for example, declared that its spirit and methods in all this business had been worthy of "the gutter press." By every expression and every token possible, this once powerful journal was given to understand that it had been a disgrace to the profession of which it professed to be the leader.

The incident shows, what we have many times had occasion to point out, that the public has, after all, an effective means of control over newspapers. The yellowest and wickedest of them live only by sufferance. They may not be restrained by anything in the conscience of their proprietors, but the outside public, without whose tolerance or patronage they could not survive, can bring them up with a round turn whenever it really desires to do so. Of this fact we had illustrations during the early days of the October panic. Certain newspapers of the baser sort began, after their kind, by treating the financial news in a sensational and exaggerated way. But it was promptly beaten in upon their intellects—that is to say, their pockets—that such a course would not be endured; and they incontinently abandoned it. There is really no other way, in a democracy, of exalting and enforcing the responsibility of the press. The lapse of the London *Times*, with its consequences, has furnished a shining example of the way in which even a great newspaper may be made to suffer for fomenting international hatred.

WOLFE, MONTCALM, AND THE ENTENTE CORDIALE.

This year is the tercentenary of the foundation of Quebec. Among the commemorative ceremonies, the most notable will be the dedication of the battlefield of the Plains of Abraham as a national park in which is to be erected a joint monument to the two leaders who fought out the issue between Great Britain and France in the new world, one hundred and fifty years ago. Of course, no more appropriate memorial to the Canada of yesterday and to-day could be found. During the three hundred years of her history, Canada has been under French and under English rule for almost exactly the same length of time. The Canada of the present is largely what the pacific union of the races has tended to make it, and that union must control the Dominion's destinies for years to come. The newer and greater Canada of the Northwest is being populated with an English-speaking stock, but under the guidance of a French-Canadian who has now for twelve years been at the head of the federal government.

Quebec and Canada have good reason to celebrate; but the nationalization of the battlefields which is to take place in the week of July 22-29, during the visit of the Prince of Wales, is intended to be more than a Quebec, or even a Canadian, event. The Imperial aspect is prominent. Of the two million dollars which Sir Wilfrid Laurier thinks necessary for the acquisition of the battlefield sites, the Dominion government contributes three hundred thousand dollars, and the city of Quebec one hundred thousand. Private munificence is probably expected to bear the bulk of the remaining cost; but also, "it is believed that the British government will contribute"; and perhaps South Africa. The Ottawa correspondent of the London *Times*, from whose dispatch we have quoted, does not say whether gifts from outside the Empire are expected; but a French squadron is to participate in the celebration, and the French people, with their traditional tact, may proffer their significant mite towards a cause that so intimately concerns their own history. Already a movement has been started for the erection of a monument to Montcalm near the place of his birth in the château of Condiac, near Nîmes, to be unveiled simultaneously with the Wolfe-Montcalm monument at Quebec. Concomitantly, a wave of Montcalm-worship is sweeping over France.

An appreciable share of the interest displayed by the British government in the Quebec anniversary is due to consideration of the effect on the present cordial understanding with France. The famous *entente* concluded less than four years ago has had remarkable results. It began with, and consisted of, a series of political adjustments in Africa, Asia, and America which, like all important political acts, were received in both countries with warm commendation and with wide censure. Great Britain and France both gained immensely, or were both betrayed. But the weight of opinion on both sides of the Channel has been in favor of the agreement. Its strength was tested within less than two years by the tension between France and Germany over Morocco; and both in itself and because of the other international rapprochements to which it has contributed, the *entente cordiale* has come to be recognized as an important factor for European peace.

Indeed, those who have worked for the *entente* in Great Britain and in France have not confined themselves to the heavy masonry of territorial and commercial adjustment between the two Powers. Sentiment, too, has been invoked. French parliamentarians have visited England, and been visited in return. French and British journalists have communed on each other's shores. Deputations of French mayors and municipal councillors have been entertained at the London Guildhall, and have entertained their English compeers at Paris. In other minor ways, down to the proposal that English and French school children should be taught to write letters to each other in each other's tongue, busy hands have been cementing the structure. And not the least curious feature of this ardent wooing is that the traditionally phlegmatic Briton should have gone into it with an abandon, an *élan*, that sometimes amazes his emotional Gallic ally. In any case, both nations have gone far. "Perfidious Albion" is now at worst the "magnanimous neighbor and rival"; and France's attempts at European domination in the Napoleonic era, are graciously described as but so many efforts towards spreading the light of civilization over Europe.

We cast no aspersions on the sincerity of the feelings that underlie the Anglo-French understanding, but take the erection of a joint memorial to Wolfe and Montcalm as a typical instance of *entente*-building. In all this sinking of misunderstanding, a cynic, preferably a German cynic, might point out that most of the time it is France that has acquired the glory, while Great Britain has secured the solid results. Montcalm and Wolfe vie in the world's admiration, but Canada is British. Dupleix and Lally-Tollendal were fully as heroic as Clive, yet India is also British. Napoleon's soldiers opened Egypt to modern Europe, but Lord Cromer and his successor are both Englishmen. The Anglo-French *entente* is quite sincere, but based on an inequality of giving and taking, which some philosophers assert is characteristic of love in general.

ZOLA IN THE PANTHEON.

It was the fate of Émile Zola, after repeated failure to secure recognition of his work in literature at the hands of the Academy, to receive the higher honor of interment in the French Westminster in recognition of his political services in a great crisis. The novelist's burial in the Pantheon was decreed by the French Parliament not long after his death, but the subject came up again a few days ago in connection with the voting of a credit to defray the cost of the ceremony. The debate was made an occasion for raking over supposedly dead ashes. Maurice Barrès, one of the most conspicuous among the remnant of the Nationalists, delivered the attack on the memory of the writer of "J'accuse." M. Jaurès defended Zola. The Chamber voted the credit by a large majority, but Paris may witness a prolonged clash between triumphant Radicalism and defeated Conservatism, fought ostensibly over the body—and writings—of Émile Zola, but involving really a trial of strength between the France of the days before Dreyfus and the France after Dreyfus. Apparently, such a contest would be one-sided. The Radical majority in Parliament and in the country is so large and so well intrenched as to make political reaction an impossibility for years to come. On the other hand, the old conservative forces have reasserted themselves in the field of literature and art; and because of the intimate connection between literature and art and politics in France, a campaign waged by the Academy would be something more than academic.

Émile Zola's fame as the champion of Alfred Dreyfus, with the consequent prominence of Zola's name in political controversy, is likely to detract from the attention the future will bestow on his services in literature. Were Zola's reputation to rest entirely on his theory of "naturalistic" fiction in its extreme, and the thorough application he gave it, the author of the history of the Rougon-Macquarts would be compelled to face a constantly receding tide of appreciation. Naturalism in literature has failed to maintain itself. Zola's attempt to apply the dispassionate and presumably infallible methods of science to the study of life in its every-day manifestations has not withstood the vast volume of refutation that has been hurled against it. It required only time and perspective to show that Zola was, in his own way, as much the creator of his characters and their fortunes as the most arrant of romanticists in the most ideal of worlds. Brutality, raw strength raw morals, raw manners, we now see, are no more really inherent in human nature than the imaginings and affectations of the most lyric of Euphuists. Gustave Flaubert, in a letter of 187 which the *Figaro* has just published for the first time, says, concerning Zola:

> I have just read a few pages of "L'Assommoir." I didn't like them. Zola is turning into a *précieuse*, but backwards. He evidently believes that there are energetic words, just as Cathos and Madelon thought that there are noble words. His System is leading him astray. His Principles are cramping his intellect. Read his feuilletons, and you will see that he actually believes that he has discovered Naturalism. As for poetry and style, the two eternal elements, he does not seem to know them.

Add to the essential weakness of the naturalistic theory the unmitigated severity with which it was applied, and the reasons for a sharp reaction are apparent. But the form in which the reaction against the unrelieved grossness of naturalism manifested itself was, on the whole, not a pleasing one. To pass from naturalism to decadence was not a gain. The new men retained from Zola only his microscopic vulgarity. For the serious spirit in which Zola approached what he regarded as a scientific problem, based on a wide collation of facts, they substituted the go-as-you-please æsthetics of a rank individualism. If Zola too often went down into the mire, to that extent, at least, he put his feet on the ground. But symbolism quickly ran down into neurasthenia and opium dreams. By contrast, therefore, with the excesses of the reaction to which his own works largely gave the stimulus, Zola regains much of that authority which he claimed for his doctrine of naturalism. However faulty the method, it *was* a method; it was not madness. At least, it took itself seriously, and took life seriously. This growing seriousness united with a chastened naturalism to make his latest works, the cycle of the three Cities, the "Fécondité," the "Travail," of especial importance in shaping the fortunes of French fiction during the last decade.

The Dreyfus affair was more than a political crisis. It actually shaped and determined the views and efforts of a large part of the French literary world. Men like Anatole France did not escape its effects. And even the younger men grew sober and reflective. Maurice Barrès, though anti-Dreyfusard and anti-Zolaist, embodies in himself the change from an epicurean æstheticism towards grown-up seriousness of purpose. The novels of "national energy" which Barrès writes, and so many others with him—purposeful, almost practical—stand much nearer to Zola than to their own youthful theories. It is not by his political activity alone, therefore, that Émile Zola has contributed toward the creation of present-day conditions in France.

THE SPECIALIZED COLLEGE FACULTY.

In the preface to a standard work on classical antiquities, revised a few years ago, it was stated with absolute truth that the modern ideas of pedagogic theory had forever broken down the intellectual sympathy which once existed as a powerful bond between all university men. To graduates out in the world, and occupied with the current affairs of a busy age, the severing of this bond may not be felt as a matter of serious importance. Athletic or fraternity memories may still furnish a common ground of pleasant reminiscence when a half-dozen former college mates happen to meet, even if one of them should bring a blank stare upon the faces of the other five by a chance reference to Antigone, Horace, or Hegel. The real loss, however, comes to the college community itself, and especially to the faculty.

It is not putting it too strongly to say that in no American college to-day, with equipment sufficient to entitle it to the name, can a faculty be found in which all the members are bound together by any single important connecting link of past scholarly acquirement or current intellectual interest. It is the merest chance if a professor of biology in the younger ranks can meet the professor of Greek understandingly even within the narrow limits of the root-meanings of the Greek terms in his technical vocabulary. The professor of mathematics must steer clear of any formula or theorem beyond the freshman year to avoid the chance of flooring half the young professors and instructors in any single scientific department, except that of physics; and the fact that the professor of intellectual and moral philosophy does not hopelessly expose the ignorance of the whole faculty at every social gathering is due in no small part to the other fact that, except in the larger institutions, he is also president, and therefore absent in quest of funds for the equipment of some new scientific laboratory. It is never certain that the professor of French can address a sentence of three words in that language to the professor of German without causing embarrassment; and we have recently known even a professor of Latin to be driven to outside help by a Greek quotation in a paper which it became his duty to put through the press. The professor of history has long ceased to hope for intelligent conversation with the rest of the faculty on any historical topic before the Civil War; and the professor of English solaces himself for the lack of sympathetic discussion of any particular author by the freedom with which he may now quote from the entire field, Beowulf to Bangs, with no danger whatever of being called to account for his general inaccuracies, growing out of his special devotion to Whitman and G. Bernard Shaw. Even when Greek meets Greek it may be no otherwise, for one of the two has possibly won his doctorate by a thesis on the use of the genitive absolute in Herodotus and is now devoting his whole attention to the syntax of the cases in the later historians; while the other ground his degree out of the recently discovered fragments of Herondas, and is at present confining his researches to the representation of women in the Greek lyric poets prior to Callimachus.

But the contrast between the new and the old lies not merely in the fact that no two members of the faculty may have traversed a single semester of their college journey along the same path. The former day saw a unity in the current reading of college teachers which no longer exists. It would take a long and weary search at present to find a case in which a single volume in any branch of literature had become personally known to a majority of the members of any American college faculty within a year of its appearance, though a generation ago it was no uncommon thing for a new volume by some one of the more important writers to create an immediate and general stir in college circles. It is true that certain monthly and weekly periodicals of the better class are found to-day on the files of practically every college reading room, but it is not true that any single one of them is habitually read by any large proportion of any college faculty.

The result of all this is that the members of college faculties, in their intercourse with one another, are deprived of one of the most valuable sources of mental stimulation, the mutual exchange of ideas on matters of common knowledge and serious intellectual bearing. That the resultant intellectual disintegration has a similar effect upon the students, is unquestionable. That the increased steadiness and concentration with which the mental energy of the really earnest student may be held down to one narrow line of investigation is a sufficient recompense for this loss, is yet to be demonstrated. It must not be forgotten that we cannot expect more than one or two successful and useful specialists, in the scientific sense of the term, from any hundred average college freshmen. As for the young man who expects to go into business, he is unfortunately not yet convinced, as a rule, that really vigorous and scholarly work in any line of study beyond commercial arithmetic is an absolute necessity. For the remnant, however, who still desire a broad and deep culture for its own sake, we are not sure that there is not room for a college or two bearing some general resemblance to the Harvard, let us say, of an older day, when every member of the teaching staff had a rich intellectual equipment in common with all the rest; and when none of them was uninformed or uninterested with reference to any great social, literary, religious, or political movement of the day. The influence of this unified mental and moral power made it only natural, for instance, that the first act of a new secret society should be to equip a reading room with the periodicals which reflected the most serious thought of the time; or that a genuine sensation should be caused among the undergraduates by the appearance of a single copy of a new volume from a young British poet whose real greatness had as yet been but dimly recognized by the learned critics of his own land.

SIR HENRY WOTTON.

I.

Few men have been happier in their fortune with posterity than Sir Henry Wotton. Not only was he included by Izaak Walton in that band of five whose precious lives may be called the hagiology of English literature, but he figures also in "The Complete Angler" as a fisherman whose "learning, wit, and cheerfulness made his company to be esteemed one of the delights of mankind." And now, in these latest days, his life has been again written and his letters edited with rare erudition and still rarer taste.[*] Here is the Wotton we have always known, with some change of emphasis from the peaceful consummation to the busy diversity of his life, but still the same stately gentleman, walking with sweet composure through the spacious world of Elizabeth and James. And to his slender poetical reputation as the author of two or three treasured lyrics must now be added the honor of standing first, and not least, in the long line of great English letter-writers. Something of his epistolary grace was already guessed from Walton's "Reliquiæ Wottonianæ" and from other scattered sources, but it is not too much to say that the five hundred letters brought together by Mr. Smith from his enormous correspondence, many of them here printed for the first time, stir us with the delightful shock of discovery.

Too much, of course, must not be expected from a letter-writer of that day. He affords little of the nimble, light-heeled entertainment of James Howell, who, as a young traveller, was received by "my Lord Ambassador Wotton" at Venice. He is often exasperatingly blind, moreover, to the interests of the future. Thus on July 2, 1613, Wotton wrote to Sir Edmund Bacon (nephew of Lord Verulam and husband of Wotton's niece), telling of the fire which three days before had consumed the Globe Theatre while "Henry VIII.," or an adaptation of it, was acting. It is a hasty brief note, to be sure, yet the writer has time to crack his jokes on the "only one man" who "had his breeches set on fire, that would perhaps have broiled him, if he had not by the benefit of a provident wit put it out with bottle ale," yet he has no time to name the writer of that play. How much we would spare in these letters for a glimpse of Shakespeare playing his part in the Globe Theatre or making court to his supercilious patrons! It may be unfair to ask of Wotton what no one else of his age condescended to give us, but it is just the prerogative of genius to forestall the concern of future times. However, if Wotton thus missed the prophetic instinct of genius and the spontaneous dexterity of wit, he had brave qualities to compensate. His language may occasionally move a little slowly for our taste, but it is always courtly and refined, while now and then there breaks through his reserve that note of piercing beauty which only the Elizabethans could utter at random.

---

[*] *The Life and Letters of Sir Henry Wotton.* By Logan Pearsall Smith. 2 vols. New York: Henry Frowde. $7.75.

His education, which may be called the business of his whole life, began with the happy influences attending his birth, in 1568, at the retired home in Kent, and with the traditions of a family who accepted or refused the baits of the great world with a proud independence. From such a home and family the boy Henry went to the school at Winchester, and at the age of sixteen (1584), proceeded to Oxford, where he stayed four years, adding to his circle of acquaintance the poet John Donne, and the Italian professor of civil law, Alberico Gentili.

After the university came the grand tour. Here his letters begin with his going abroad, in 1589, and, until his return in 1594, are filled with flitting glimpses of student life at Heidelberg, Vienna, Geneva, and other cities of the North, and with the adventures of a Protestant Englishman travelling disguised as a German through the states of Italy—"a paradise inhabited with devils," he calls the land. Now it is the difficulty of getting copies of forbidden books he relates, again he describes some famous library; but always he is in search of friends among the notable scholars where he visits. The best-known of his scholastic friendships was with Casaubon, with whom he lodged for fourteen months at Geneva. "Ah, what days those were," exclaimed the older man years afterwards, "when heedless of the lateness of the hour we passed whole nights in lettered talk! I hanging on your stories of all you had seen of many men and many lands [this was at the end of Wotton's wanderings]; you pleased to hear somewhat of my desultory readings. Oh! that was life worth living! pure happiness! I cannot recall those times without groaning in spirit." Coryat and Fines Moryson reported the meeting of famous scholars in their Continental tours, but their acquaintance was not of this stamp. Nor, at a later date, have the memoranda of John Evelyn's inveterate curiosity for celebrities the grace of these familiar letters.

II.

For friendship or love of the other sex there is, with a single exception, no concern in these letters. To the women of his own family, his mother and sisters and nieces, he showed indeed a noble affection, and in his later years found unfailing comfort in the society of those of them that remained. But for women as possible disturbers of his heart he had in general, I fear, a low conceit. Only once, apparently, does he hint at marriage for himself, and that is when, after complaining of his incompetent fortune, he adds coolly: "Peradventure I may light upon a widow that will take pity of me." His observations on woman in the Table Talk, now first printed by Mr. Smith, are even less romantic, where they are not too plain-spoken to be repeated. They correspond well enough with the poem written "in his youth":

> O faithless world, and thy most faithless part
> A woman's heart! . . .

This is not the cynicism of the voluptuary for, despite the scandalous anecdote told by Ben Jonson to Drummond—with what hearty glee one can imagine—it should appear that Wotton, like another Milton, and with less necessity of protesting his innocence than the prying Coryat, carried with him on his travels the Puritanic notion of chastity. Nor does his distrust ring like a mere echo of the age's affectation, caught up from the classical *mutabile semper* and a long succession of mediæval writers. It is, I think, the cynicism born of mingled ignorance and idealism—if these two words, in such human relations, do not connote the same thing. That Wotton remained all his life at bottom ignorant of the individual woman's character may be inferred from his blundering attempt to frighten Lady Arundel from Venice by reporting rumors of her intended arrest. Wofully he misread that imperious lady's temper, and of all his diplomatic mishaps none proved more humiliating than this. And with this ignorance went a distrust of any passions that might break down the philosophic independence which he sought as the ideal of life, and might subject him *to serve another's will*. Only remoteness of position can bring liberty from this uneasiness, by raising the woman herself into an image of detachment from the earth. And one such vision passed through the life of our philosophic diplomat.

In 1613, Elizabeth, the daughter of James I., had been married at London to the Elector Palatine, and had gone to reside at Heidelberg. Her secretary and English agent was Albertus Morton, one of Sir Henry's nephews. Wotton may well have met the princess at her father's court, and felt the charm of her winsome beauty. At any rate, when travelling to Venice on his second embassy, he stopped at Heidelberg long enough to become the trusted friend of the Electress, and to hear the difficulties of her life. And again, on his way thither for his third embassy he was commissioned to stop at Vienna and take a hand in straightening out the Bohemian tangle. Before setting forth on his vain errand, "being in Greenwitch Parke," as a letter of the day explicitly notes, he composed the lovely "sonnet" to the Queen, which has made his fame as a poet, if not as a man of business:

> You meaner beauties of the Night,
> That poorly satisfy our eyes,
> More by your numbers than your light,
> You common people of the skies;
> What are you when the Moon shall rise? . . .
>
> So when my Mistress shall be seen
> In form and beauty of her mind,
> By Virtue first, then choice a Queen,
> Tell me if she were not design'd
> Th' eclipse and glory of her kind?

Queen and not Queen she was, chosen and rejected. Of her subsequent adventures and of her mock court at The Hague, where she drew about her such friends as Descartes, there is much to read in the annals of the day. Wotton was not the only gentleman who worshipped loyally this unfortunate lady called, as Howell notes, "the Queen of Bohemia, and for her winning, princely comportment the Queen of Hearts"; but he alone was able to express the poetry of devotion in his letters. In 1628, on the death of one who had served faithfully both the Queen and himself, he directed to that "most resplendent Queen, even in the darkness of fortune" a letter which, as it is preserved to us, begins abruptly:

> Yet my mind and my spirits give me, against all the combustions of the world, that before I die I shall kiss again your royal hand, in as merry an hour as when I last had the honor to wait upon your gracious eyes at Heidelberg.

Wotton did not die for eleven years after that, while Elizabeth lived on through all the combustions of the civil war, but he never again saw those gracious eyes or kissed that "most sweet and gracious hand."

III.

I have dwelt at length on this episode in his life because in some respects it shows more of the real man than the diplomatic events which occupy the larger part of his correspondence. Besides his lesser missions, he was three times resident ambassador to the republic of Venice (1604-1610, 1616-1619, 1621-1623), and there is really more of Italian than of English history in his life. Other English travellers of the time have described "that most glorious, renowned, and virgin city of Venice"; but none knew the inmost wheels of her machinery as Wotton knew them, and none wrote so fully of her splendors and her embarrassments. With the help of Mr. Smith's notes one may almost feel one's self present at those audiences of the *Collegio*, where the perplexed and scolding politics of Europe were reduced to the stately harangue and reply of Venetian eloquence. And in this city Wotton found opportunity for the single international question that engaged his whole heart. Political differences had brought Venice into open conflict with the Pope; for a while she defied the Roman excommunication and was on the verge of throwing herself into the arms of the Reformation. Sarpi, the greatest Italian of the age, indefatigable scholar and inflexible moralist, governed from his cell the religious policy of the city, and Wotton, the only living person to whom it is known that he confided his authorship of "The Council of Trent," lived in daily hope of his complete conversion to Protestantism. Here was room for all the ardor and diligence of Wotton's religious nature. Shiploads of King James's controversial books, in whose efficacy Wotton avowed a naïve or courtly trust, were imported for distribution in Venice; plans were laid and measures, futile in the end, were actually taken to establish a Protestant college on the borders of Italy; while various other movements were set afoot, all of which are narrated—and their importance in some cases scarcely exaggerated—in the ambassador's bulletins to the King and to the secretaries of state.

But withal Wotton cannot be reckoned among the successful diplomats. It is perfectly clear that the *menudencias* of his business were continually irksome to him, and that he felt, and at times even expressed, something of impatient contempt for the political contest in which these trivialities were the approved weapons. Like Chesterfield in the next century his heart was not in the game. Not modesty alone but some touch of the gentleman's vanity led him to say that all he had observed in his employments was a few maxims of state too high for his capacity and too subtle for his nature, which was cast in a plainer mould. One gets the impression that, except where questions of religion entered, he moved through the scenes of diplomacy and politics more as an amused spectator than as a participant. He was for a while a member of the House of Commons, and this is the report of that office he sends to his nephew:

> It is both morally and naturally true, that I have never been in perfect health and cheerfulness since we parted; but I have entertained my mind, when my body would give me leave, with the contemplation of the strangest thing that ever I beheld, commonly called in our language (as I take it) a Parliament.

That was the so-called "addled Parliament," in which the growing distraction of the age vented itself in sound and fury, prophetic of furious deeds to come. Thomas Wentworth, afterwards the great Strafford, and John Eliot took part in that brief, stormy session of 1614; can one imagine either of these men entertaining his mind with the mere contemplation of this strangest thing?

Most significant of all for understanding his temperament is that famous *mot* by which he is still popularly remembered. On his way to Venice in 1604, to take charge of his first embassy, he passed through Augsburg, where in the album of a friend he inscribed his full name and office, with this extraordinary motto: "Legatus est Vir bonus, peregrè missus ad mentiendum Reipub. causa." As Mr. Smith observes, the Latin, missing the pun of the English: "An ambassador is an honest man sent to *lie* abroad for the good of his country," suggests that Wotton merely translated the witticism for the occasion; it may well have been an old joke with him. Nothing, however, came of the indiscretion until 1611, when Scioppius, ribald and scurrilous beyond the license of the times, raked it up for his "Ecclesiasticus," an attack on the religion and morals of James I. Who could trust a King, he exclaimed indignantly, that sent his ministers abroad to disseminate lies? Wotton defended himself in a public letter by showing that the words were manifestly a mere idle jest among friends, but his royal master was incensed, and for a year the jester was out of favor with King and court. As a matter of fact he was probably, for his trade and his generation, too little skilled in lying. It was he who in his old age, to one about to commence as ambassador, as Walton relates and as Bismarck was in our day to recall, "smilingly gave this for an infallible aphorism, that, to be in safety himself, and serviceable to his country, he should always and upon all occasions speak the truth (it seems a state paradox), for . . . you shall never be believed." But if no one now would think seriously of impeaching his morality, we may observe a ticklish note of irony in both his witticisms more becoming the disinterested gentleman than one walking on the slippery stones of statecraft.

IV.

But there was something more in Wotton than this *felix curiositas* which kept him rather wise than fortunate. Within his breast were wells of unruffled contemplation, the inheritance we may suppose of his Kentish ancestors, and along with that restless interest in the spectacle of life, so common in Elizabethan and Jacobean days, there went the no less characteristic dallying with the seductions of repose. It was probably in 1612, his year of disgrace after the exposure of Scioppius, that he wrote the bravest of his protests against the world, that immortal "Character of a Happy Life":

How happy is he born and taught,
That serveth not another's will;
Whose armour is his honest thought,
And simple truth his utmost skill;

Whose passions not his masters are;
Whose soul is still prepared for death,
Untied unto the world by care
Of public fame or private breath. . . .

This man is freed from servile bands
Of hope to rise or fear to fall:
Lord of himself, though not of lands,
And, having nothing, yet hath all.

It is a note struck many times before Sir Henry Wotton's day and caught up from him by innumerable poets since them. While reading that poem one thinks of what is perhaps the latest echo of it in our own age, the defiant lines of W. E. Henley:

Beyond this place of wrath and tears
  Looms but the Horror of the shade,
And yet the menace of the years
  Finds, and shall find, me unafraid.

It matters not how strait the gate,
  How charged with punishments the scroll,
I am the master of my fate:
  I am the captain of my soul.

Whose passions not his masters are! By the side of that calm strength and that clear-eyed submission to providence is it too much to say that this tortured challenge is but a poor bit of fanfaronade after all? Defiance is a passion like another, even a tawdry and insubstantial thing for the most part, and in this rebellion against fate a man may forget that he is still a slave to his own insurgent heart. It was not in such a spirit that the Elizabethan prayed to be *Lord of himself*, but in the large humility of self-knowledge, wherewith by comparison the romantic revolt of modern song is but a feverish tossing within the bondage of egotism. For it must not be supposed that the true source of Wotton's poem was any pique at his temporary disgrace with fortune and men's eyes; rather it came from that self-recollection which he carried with him through all the contrarieties of life's game.

In 1624 the full opportunity of calm came to him, when he was appointed Provost of Eton. There was, of course, the business of the college to occupy him, not always a light matter, when men of influence importunately demanded scholarships for their sons; and the traditional discipline must be maintained. But still more to the master's mind than sheer discipline was, we suspect, the opportunity of working by hidden means upon the boys of finer nature. "For in this Royal Seminary," he writes, "we are in one thing, and only in one, like the Jesuits, that we all joy when we get a spirit upon whom much may be built." And not the least noble of his pupils, Sir Robert Boyle, described him as "a person that was not only a fine gentleman himself, but very well skilled in the art of making others so." Formal religion, too, had its claims upon his time. Soon after accepting the office of Provost, he entered into holy orders, though modesty and some reticence of spirit kept him from proceeding further than the degree of deacon.

For himself he had every year more need of the secret consolations of faith. One by one the friends with whom he had shared his life dropped away, yielding, as he wrote plaintively a little before his own death, "to the seigniory and sovereignty of time," while into the growing loneliness of his study there entered the rumors, rather the first dismal blasts, of the gathering political storm. "Never," he writes in April of 1639, "was there such a stamping and blending of rebellion and religion together." Happily for him he was himself within a few months beyond the noise of these drums and tramplings, out of reach of any conquest of men. How grievously he felt the contentions of the age may be known from the epitaph by order of his will engraved on his tomb:

Hic iacet huius Sententiæ primus Author.
DISPUTANDI PRURITUS FIT ECCLESIARUM SCABIES.
Nomen alias quære.

Which Walton translates: "Here lies the first author of this sentence: The itch of disputation will prove the scab of the church. Inquire his name elsewhere."

But these losses and forebodings came to him when he had himself "arrived near those years which lie in the suburbs of oblivion." For the most part his days at Eton, as we see them depicted in his letters, slipped by in the enjoyment of that sheltered quiet for which he had always yearned—*animas fieri sapientiores quiescendo*.

V.

Several meetings out of these latter days have been recorded and are among the memorable scenes of our literary history. Most celebrated of all is that day when John Milton came from Horton to pay his respects to the famous Provost of Eton and to inquire about travelling in Italy, whither the young poet was turning his thoughts. Then came a gift of "Comus" to Wotton and in reply a letter of thanks and advice. How the tried connoisseur praised in that letter the ravishing Doric delicacy of Milton's songs, every lover of Milton knows; it is not surprising that the recipient of such praise kept the document and printed it in the first volume of his collected poems. There is for us an interest of another sort in finding Wotton impart to the intending traveller the "Delphian oracle" which he had made the rule of his own life and which in another age Chesterfield was to reiterate so often to his son: *I pensieri stretti e il viso sciolto*. That day when Wotton and Milton came together is marked with white in our annals, but many readers, if such choice were granted to fancy, would almost choose rather to have been present that time that Izaak Walton sat by his courtly friend on the river's bank, as it is celebrated in "The Complete Angler":

> And I do easily believe that peace and patience and a calm content did cohabit in the cheerful heart of Sir Henry Wotton; because I know that when he was beyond seventy years of age he made this description of a part of the present pleasure that possessed him, as he sat quietly in a summer's evening, on a bank a-fishing. It is a description of the spring, which, because it glided as soft and sweetly from his pen as that river does at this time, by which it was then made, I shall repeat it unto you:

This day dame Nature seem'd in love:
The lusty sap began to move;
Fresh juice did stir the embracing vines;

And birds had drawn their valentines.
The jealous trout, that low did lie,
Rose at a well-dissembled fly;
There stood my friend, with patient skill,
Attending of his trembling quill. . . .

It is pleasant to leave him thus, with his song unfinished and his creel unfilled, and to reflect on the full orbit of his life from the Kentish birthplace at Bocton Malherbe, through the crowded courts of many lands, to the peaceful riverbank with a friend.

P. E. M.

NEWS FOR BIBLIOPHILES.

An American collector has recently secured one of the rarest bits of Americana, a black-letter book, filled with curious wood-cuts, and the title beginning, "Of the newe landes and of ye people founde by the messengers of the kynge of Portyngale, named Emanuel." This volume, printed at Antwerp by Jan van Doesborgh, about 1520, is the earliest book in the English language containing any account of American discoveries. News seems to have travelled slowly, for it was thirty-three years more before there was a second English book on America. This, "A treatyse of the newe India," was printed at London by Edward Sutton, in 1553, and was a translation by Richard Eden of a portion of Sebastian Munster's Universal Cosmography. "Of the newe landes" has, perhaps, been as much sought for as any book. The only copy hitherto known (now in the British Museum) turned up first, so far as the records show, in the sale catalogue of the library of James West, in 1773. It was bound with ten other pamphlets, and the volume brought £2 7s. 6d. Ratcliffe, the purchaser, seems to have broken the volume up, for though several of the other pieces appeared in his sale in 1776, "Of the newe landes" was not among them. It seems to have been sold privately by him to Thomas Caldecott, and in his sale, in 1833, it was bought by Thorpe for Thomas Grenville for £25 10s.—an immense price for such a book in those days. Two additional leaves were found by Proctor among the Douce fragments in the Bodleian library, but no other copy is recorded. The copy now just discovered is imperfect, but the title, the next leaf (which contains the account of America), and the last leaf with the colophon are genuine. The recto of the second leaf (abbreviations expanded) begins:

> Hereafore tymes in the yere of our Lorde god MCCCCXCVI and so be we with shyppes of Lusseboene sayled oute of Portyngale through the commaundement of the Kynge Emanuel.

The unknown writer tells of some of the wonders of America:

> This people goeth all naked but the men and women have on their heed necke Armes Knees and fete all with feders bounden for their bewtynes and fayrnes. . . . And they ete also on another. The man eteth his wyfe his chylderne as we also have seen and they hang also bodycs or persons fleshe in the smoke as men do with us swynes flesche.

These peculiarities of the natives are illustrated in a wood-cut on the title-page (repeated also on the next leaf) showing a man and woman decked out with feathers, while to the left, hanging from the branch of a tree, is a human head and leg being cured by smoke from a fire on the ground. Only folio 2 of the book relates to American discoveries. Folios 2-8 are translated from the Dutch "Reyse van Lissebone," printed by Van Doesborgh in 1508; the second part tells of the ten Christian nations, and a third part of "Pope John and his landes." The pamphlet consists in all, of 24 leaves.

Robert Hoe has just printed the catalogue of a third part of his library; this time it is his books in foreign languages, printed before 1600, which are described. In collecting early-printed books it has been Mr. Hoe's aim to secure the best specimens, typographically, of the first printers and at the same time to secure books which are of value in themselves, as literature; and this catalogue shows the success of his efforts. Mr. Hoe owns two copies of the Gutenberg Bible, the first book printed with movable types. These are the two Ashburnham copies, one on paper, the other on vellum. The paper copy is notable as containing the name of the illuminator, Heinrich Cremer, and the date, St. Bartholemew's Day (August 24, 1456), when he finished his work. From such a wealth of books it is next to impossible to make a selection of titles. Many volumes are printed on vellum; some are in the contemporary bindings, others in modern covers by recent French binders or by Bedford or the Club Bindery. Printed Books of Hours have long been favorites of Mr. Hoe's and no less than seventy-four specimens are described. Mr. Hoe has only incidentally collected Americana but the catalogue shows two of the 1493 Latin editions of Columbus's Letter (Planck's 34-line edition and the rarer dated edition printed by Silber); six editions of Vespuccius's Letter to Francesco de' Medici, giving an account of his third voyage; and the priceless "Lettera di Amerigo Vespucci delle isole nuovemente trovate in quatro suoi Viaggi," printed about 1506, of which no other copy is known in America. The copy once owned by Varnhagen in Brazil is not now traceable. One hundred copies of the catalogue, which is in two volumes, have been printed, all on Japan paper.

A copy of the "Decretales" of Pope Gregory IX., Venice, 1491, with the autograph signature of Georgio Antonio Vespuccius, uncle of the navigator, is included in the Anderson Auction Company's sale in this city, March 30 and 31. This is the largest collection of early-printed books which has been offered here for some time. There are forty-six incunabula, or books printed before 1500, including specimens from early presses of Strassburg, Nuremburg, Augsburg, Cologne, Ulm, and other German cities; twenty-three volumes by printers of Venice, among them Jenson, Ratdolt, Wendelin of Speier, and the Aldines; and the "Sermones" of St. Bernard from the first press at Brussels, 1481. Among later books are the famous polyglot Psalter of 1516, containing in a long marginal note to the fourth verse of Psalm xix. the first printed biography of Columbus; among several Elzevirs, a very tall copy of the first edition of Horace; Galileo's "Dialogo soprai due Massimi Sistemi del Mondo," first edition, 1632, for which the author suffered imprisonment; several books from the library of Melanchthon, with his marginal annotations; bindings by Samuel Mearne; several manuscripts, including Theramo's "Belial," and a Persian manuscript of Sadi's "Gulistan," etc.

The indefatigable indexer, Konrad Burger, librarian of the Börseverein der Deutschen Buchhändler in Leipzig, has put the republic of bibliographers under great indebtedness through his index, "Beiträge zur Inkunabelnbibliographie" (Leipzig: K. W. Hiersemann). It covers Hain's "Repertorium Bibliographicum," Panzer's "Annales Typographici," and the fifteenth century titles in the latter's "Annalen der älteren deutschen Litteratur." The index also contains references to a number of other bibliographies of incunabula, such as Mlle. Pellechet's catalogue of incunabula in French libraries, and Proctor's "Index to Early Printed Books in the British Museum." Thus the volume is really an index to practically all the important bibliographies of fifteenth-century books, and an indispensable tool for all who work in this field.

Correspondence.

MUZZLED TEACHERS.

TO THE EDITOR OF THE NATION:

SIR: Since the terrible fire in Cleveland, which cost the lives of nearly two hundred school children, the representatives of several newspapers in different parts of the State have endeavored to ascertain from the teachers whether conditions exist elsewhere that would make a similar disaster possible. In most cases the inquiry has failed. The reporters were unable to learn whether fire drills were practised or whether appliances for safety were within reach. It is asserted that in most instances teachers refused to tell for fear of being called to account by those in authority. In order to ascertain the simple facts, it was necessary to interrogate the children or their parents.

It is hard to conceive a more lamentable condition than that under which teachers in public schools, in colleges, or universities hesitate to report plain facts of vital interest for fear of jeopardizing their positions. There is no excuse for fault-finding or for carping criticism; but these are something quite different from telling the plain truth. All progress is due to honest and just criticism. Where it does not exist or is suppressed, stagnation is inevitable. Teachers are often accused of being, on the whole, the most conservative class in the country. Is it any wonder when there is a premium on conservatism? The schools of Germany are admitted to be the best in the world, and everybody knows that it is an almost unheard-of thing for a teacher or professor to lose his position except for immorality. German teachers are the most unsparing critics of education in all its phases. In this matter public opinion is almost wholly untrammelled. Hugo Münsterberg recently delivered a lecture in Chicago in which he is reported to have declared that American college professors are a lot of mollycoddles, and that if two-thirds of them were killed it would be better for the cause of education. While it is probable that he did not express himself with so much ferocity, his criticism, in so far as it is warranted, is due to the depressing restrictions under which too many of them labor. As long as they make no comments, utter no complaints, suggest no innovations that might be construed as reflecting on president or superintendent or board of trustees, all is well. In several cases known to the writer boards of trustees and boards of education have peremptorily refused to listen to information that did not come through the president or the superintendent. If such a position is held by an unscrupulous man and matters are reported which he does not wish to be known, the victim is pretty sure to be dismissed. That he has spoken the truth will not save him.

It is high time that there should be a change. The cause of education is far more important than the interests of any class or individual. Let us have the truth, no matter from whom it comes, for the whole of truth will never be detrimental to the whole of virtue. It is above all things mischievous if an educational system is so closely articulated that a progressive and energetic subordinate finds it useless to propose changes because he knows in advance that they will not be adopted. We occasionally come across a protest against educating children by the lock-step method. It is ten times more important that teachers shall not be bound into a lock-step.

CHAS. W. SUPER.

Athens, O., March 12.

INFANT CRITICS NOTHING NEW.

TO THE EDITOR OF THE NATION:

SIR: The passage which I transcribe below from the *Spectator*, No. 337 (written by Budgell), should be of interest as anticipating the educational methods discussed in your recent editorial, "Our Infant Critics":

> To carry this Thought yet further, I shall submit it to your Consideration, whether instead of a Theme or Copy of Verses, which are the usual Exercises, as they are called in the School-phrase, it would not be more proper that a Boy should be tasked once or twice a week to write down his Opinion of such Persons and Things as occur to him in his Reading; that he should descant upon the Actions of *Turnus* or *Æneas*, shew wherein they excelled or were defective, censure or approve any particular Action, ohserve how it might have been carried to a greater Degree of Perfection, and how it exceeded or fell short of another. He might at the same Time mark what was moral in any Speech, and how far it agreed with the character of the Person speaking. This exercise would soon Strengthen his Judgment in what is blameable or praiseworthy, and give him an early seasoning of Morality.

For "Turnus or Æneas," read "Macbeth or Ivanhoe"; for "Morality," read "English" S.

Ithaca, N. Y., March 19.

"IN GOD WE TRUST."

TO THE EDITOR OF THE NATION:

SIR: The following judicial process reported in Lea's "History of the Inquisition of Spain" (Vol. II., p. 397) indicates how the heretical proposal to remove a time-honored motto from our coins would have been regarded by the Holy Office. Upon the occasion of an official visitation of inquisitors at Corona in 1564 one Damian Cortes was penanced in 160 ducats, because thirty years before when told to trust in God, he had exclaimed, "Trust in God! By trusting in God last year I lost 50 ducats." And when later Jean Barbero had the temerity to comment on this sentence, he was fined 20 ducats and costs for this flagrant offence. It should be added, in testimony to the leniency not unfrequently exercised by this benign tribunal, that when the matter was referred to the Supreme Council it ordered both fines to be remitted.

A. H. NICHOLS.

Boston, March 18.

Notes.

We are to have from Houghton, Mifflin & Co. a notable large-paper edition of the Complete Writings of George Eliot in twenty-five volumes. One volume will be given up to material hitherto uncollected. Introductions have been prepared to the various novels explaining the circumstances under which they were composed and, so far as this can be known, the purpose of the author in writing them. Perhaps the most striking feature of the edition will be the illustrations. In her earlier works George Eliot drew largely on actual experience and observation of persons and places; an effort has been made to get photographs to bring before the reader's eye all these sources. Where no such sources are known, illustrations have been furnished by such artists as Charles E. Brock, Fred Pogram, H. H. Paget, A. S. Hartrick, and Ambrose Dudley. The author herself will be shown in a number of portraits, including two which have never before been published.

A welcome announcement is that the "Yearbook," published by Dodd, Mead & Co. from 1898 to 1902, and then allowed to lapse, has been resumed. The volume for 1907 will be ready by the middle of next month. It will include also brief summaries of the events of the four preceding years.

Funk & Wagnalls Company will have several books ready in April, including "Long Life and How to Attain It," by Dr. Pearce Kintzing; "How to Invest Money," by George Carr Henry; and "The New Encyclopædia of Social Reform," edited by William D. P. Bliss.

An unusual number of library helps are announced for early publication by the publishing board of the American Library Association. Among the more important are the following: "Handbook of Library Plans," a collection of views and plans of library buildings, selected and approved by the League of Library Commissions, and edited with text by Miss Cornelia Marvin, secretary of the Oregon Library Commission; "Book Tests," by Mrs. S. C. Fairchild, formerly vice-director of the New York State Library School, prepared in connection with her courses in book selection; "Handbook of Library Economy," the different subjects to be treated by different persons, and the individual chapters to be issued first as separates, and later published in a single work; "A. L. A. Guide to Reference Books," by Miss A. B. Kroeger, director of the Drexel Institute Library School, a revised edition of the work issued by Miss Kroeger in 1902; "A. L. A. Cataloguing Rules," edited by J. C. M. Hanson of the Library of Congress; "Cards for Photographic Reprints," to serve as a catalogue of the photographic fac-similes of rare books and manuscripts in the Bodleian Library at Oxford, which from time to time are made for various American libraries; "Bibliography of Music," by L. M. Hooper, of the Brookline Public Library, to include both musical compositions and books on music; "List of French Books," compiled by Prof. J. C. Bracq of Vassar; "Index to Fairy Tales," compiled by Mrs. H. L. Elmendorf of the Buffalo Public Library.

The Grafton Press has in hand two genealogical works: "The Cantrill Family in America," compiled by Mrs. Susan Cantrill Christie, and "The Ancestry of Leander Howard Crall of New York." This second book includes chapters on the families of Haff, Beatty, Asfordby, Billesby, Heneage, Langton, Quadring, Sandon, Fulnetby, Newcomen, Wolley, Cracroft, Gascoigne, Skipwith, Plantagent, Meet, Van Ysselsteyn, Middagh, Bergen, and De Rapalje.

We are to have a new book from J. M. Barrie, called "When Wendy Grew Up."

There is soon to be published in London a promising volume of literary and biographical studies by James Baker, including papers on "Tom Macaulay," "R. D. Blackmore," "Friedrich von Bodenstedt," "Heine's Memoirs," "Shakespeare's Mind Scenes," and "A Chat with Verestchagin."

"Who's Who in America" for 1908-9 (Chicago: A. N. Marquis & Co.) has just come out, although the English and German volumes for this year have already been in use for some time. The present issue contains 16,395 sketches of persons living, whose lives and works for one reason or another may need to be consulted; of these, 2,057 have not appeared in any previous issue. A new feature, which may on occasion prove very useful, is an appendix giving all the names, grouped under localities. The great value of this book of reference, and its careful editing, make us regret that it is not printed in a little better form. The paper and typography are distinctly inferior, for instance, to the English "Who's Who," although the number of pages taken up by biographies is almost the same in both books.

Dodd, Mead & Co. issue "A Guide to the West Indies and Bermudas," by Frederick A. Ober. As an old traveller in the West Indies, Mr. Ober is competent to direct the tourist to all points of interest; and in 500 pages he has given a comprehensive picture of that wonderful region. Starting with the Bermudas, which, by the way, are not a part of the West Indian group, the author deals with the Bahamas and each island of the Greater and Lesser Antilles, and gives, also, a glimpse of South America. The healthy and unhealthy spots are indicated, and the traveller is told what to wear and eat and drink, how to reach his destination, and how much his sight-seeing and hotel charges should cost. The physical features of the islands, their industries, products, inhabitants, and modes of travel are described, and considerable attention has been paid to their history. The book is generously illustrated, and there are five maps.

"The Tourist's India," by Eustace Reynolds-Ball (Brentano's), is a sort of etherialized guide-book. It runs rapidly and lightly from one place of interest to another—towns, caves, and waterfalls—and all the time keeps up a delightful chatter, in which anecdote and jest sugar-coat the pill of dry information. It is just the thing needed, to inform the traveller about hotels, snake-bites, Babu English, history, and the amount of alcohol he may imbibe without danger. Not even Murray gives so much out-of-the-way wisdom; and Murray is far from being so amusing.

The State of New Jersey has published, in the last fifty years, interesting and valuable documents, relating to the State itself, its geography, geology, mineral resources, climate, lakes, rivers, birds, animals, its early history, its newspapers, its problems of sanitation, sewerage, housing of the poor, care of the blind, the feeble minded, the insane, and the criminals, etc. A list of the more important of these publications has been compiled by Miss Mary E. Fannan and issued by the Free Public Library of Newark.

The second volume of the new Eversley edition of Tennyson comes out on better paper than the first, owing to the smaller number of pages, and takes its place more suitably in that pleasantest of libraries. Only four poems are included: "The Princess," "Maud," "Enoch Arden," and "In Memoriam." The notes of the poet and of Hallam Lord Tennyson, the editor, are, as in the first volume, partly explanatory in character and partly biographical. Here and there the personal and the exegetical come together, as in the brief note to "Tears, idle tears":

> This song came to me on the yellowing autumn-tide at Tintern Abbey, full for me of its bygone memories. It is the sense of the abiding in the transient.

Again the son reports words of his father about the handling of the text and other minute points of editing. Tennyson did not like—as who does?—editions of the poets printed with every various reading along with the text. And he shows the difficulty of reconstructing a theoretical text:

> Very often what is published in my poems as the latest edition has been the original version in the first manuscript, so that there is no possibility of really tracing the history of what may seem to be a new word or passage. For instance, in the first edition of "Maud," I wrote, "I will bury myself in *my books* and the Devil may pipe to his own," which was afterwards altered to "I will bury myself in *myself*," etc. This was highly commended by the critics as an improvement on the original reading, whereas it was actually in the first MS. draft of the poem.

Naturally the annotations on "In Memoriam" are the most important of the volume. Various touches of realism here add life to the "dull mechanic exercize." Thus to the stanza of section vi.:

> O father, wheresoe'er thou be,
> Who pledgest now thy gallant son;
> A shot, ere half thy draught be done,
> Hath still'd the life that beat from thee——

a new pathos is added by the editor's comment: "My father was writing to Arthur Hallam in the hour that he died." Three discarded fragments are now printed for the first time, but none of them is of special beauty or value.

With the sixth volume F. W. Raffety brings to a completion his edition of Burke's Works in the World's Classics of the Oxford University Press. Mr. Raffety speaks of these volumes with pride as "the fullest selection of the writings and speeches of Burke ever published in an easily accessible form." The Warren Hastings proceedings are not included. Among the other late issues of this library there is a volume of "William Cowper's Letters," selected and edited by E. V. Lucas, whose name guarantees a good piece of work in this kind. In his Introduction Mr. Lucas tells briefly the events of Cowper's life and gives some account of the friends to whom the letters were addressed. In discussing the comparative merit of various English letter-writers he has this bit of discerning criticism:

> One thing is certain, that no one else possessed an epistolary manner of greater distinction and fluidity, or, with the possible exception of FitzGerald, a mode of life better calculated to lead to good correspondence. For it is a mistake when a letter-writer is a man of action with too much to tell. He is then in danger of becoming exciting. The best letter-writers never excite: they entertain, amuse, interest; excite never.

H. Fielding Hall returns to his old theme in "The Inward Light" (The Macmillan Co.). A European riding at hot noon through one of the lanes of Burmah is thrown by his pony and breaks his leg. He is carried to a Buddhist monastery and there, under the tender care of the monks, is restored to physical health and cured of our Occidental fever of acting for the sole sake of action, without perception of the end. In a word, he is converted to Buddhism; the present book is his confession. The story, we suppose, is fictitious; the religious views are substantially the same as those in his first books, "The Soul of a People" and "The Hearts of Men"—but with a difference. As commonly happens with writers of a dreamy, romantic vein, his exquisiteness has gradually sunk into something not far removed from a sickly sweetness. And, correspondingly, he has progressed away from the true Buddhism, rather than toward it as he thinks is the case. His present work has created some talk—and writing—among a certain class of sentimentalists. Now of Buddhism, as practised and believed in Burmah to-day, we claim no special knowledge; but we do know that of Buddhism as preserved in the ancient records Mr. Hall's work would give a fundamentally false impression; yet he himself says that "although the Burmese were not Hindus before they became Buddhists, they had in their beliefs and traditions all the essentials of early Hinduism, and these survive to-day." Either Mr. Hall misrepresents the religion of the Burmese, or the Burmese have drifted far from the ancient faith. It is true that in the discussion of various details, such as transmigration, the law of recompense, etc., Mr. Hall is a safe enough guide; but in his tone, in his interpretation of the spirit, he is at the antipodes of the truth. Buddhism was essentially logical; it appealed to the reason and the will. Mr. Hall is sentimental, and derives in reality from the nature cult of Rousseau and the pantheistic revery of German romanticism. For example:

> It will be surely true because it comes to them from nature. . . . All peoples emerging from their childhood bring with them, in their superstitions, expressions of primeval truths. These are the bases on which all other truths are formed. . . . I know that the secret beginnings of all truth lie not in the heaven above, not in men's hearts or souls, but in the world about us. All Nature has a message to us if we would but listen to her voice.

This may be good doctrine, but it should be understood as made in the shop of Rousseau, Herder, and Novalis and not in Buddha's. And from the same source is the romantic softness of Mr. Hall's now fully developed style.

It is bare justice to speak of Benjamin Rand's "Modern Classical Philosophers" (Houghton, Mifflin & Co.) as one of the most useful books in its subject published in recent years. The scheme of the work is simple. In a volume of 700 pages Dr. Rand has brought together considerable extracts from philosophical writers from Bruno to Spencer, including, besides the two named, Bacon, Hobbes, Descartes, Spinoza, Leibnitz, Locke, Berkeley, Hume, Condillac, Kant, Fichte, Schelling, Hegel, Schopenhauer, Comte, and Mill. Any book of this kind is, of course, open to criticism of detail. It would certainly add to the value of the work if a brief introduction in each case showed the place of the extract given in the whole treatise and in the philosopher's system. The notes, too, might be offered a little less at haphazard. But for Dr. Rand's scheme, as a whole, we have hearty praise. With the possible exception of Mill, for whose admission the editor, indeed, offers apology, the selection of names seems to us good, however much some readers may carp at the omission of certain of the later German metaphysicians. And in the difficult matter of selecting from the works of each writer, Dr. Rand has succeeded admirably. Here again there is room for divergence of opinion. Thus, one might complain that in the aphorisms chosen from Bacon, somewhat too much emphasis is laid on the negative side of Bacon's philosophy and not enough on his prophetic spirit, which has been one of the main sources of scientific optimism. But in general Dr. Rand has certainly succeeded in selecting chapters, or whole books, which sum up admirably the gist of each man's thought. The translations used are, for the most, those which may be called classical. In the case of Bruno, however, a new version from the Italian has been supplied by Josiah and Katharine Royce; Frederick C. de Sumichrast translates Condillac, and Dr. Rand has himself made the versions of Fichte (in part) and of Schelling.

An exceptionally interesting addition to previous studies of family expenditure is presented in "Wage-Earners' Budgets," by Mrs. Louise Bolard More (Henry Holt & Co.). Some two hundred typical working class families residing in the lower West Side of New York city, within what was once Greenwich Village, form the subject of scrutiny. The investigator induced many of these people to keep accounts for periods varying from one week to one year; and what play was allowed to the personal equation of the investigator must be judged from her frank admission that the "families were carefully selected for their ability to give the desired information and for their willingness to coöperate." Mrs. More brought to bear upon her work an intelligent knowledge of similar social censuses by Engel, Booth, Rowntree, the Massachusetts Bureau of Statistics, and the Federal Department of Labor. The district contains a more heterogeneous racial population and affords a wider variety of occupations than the lower East Side. The heads of families were almost evenly divided between foreign-born and native-born. The tabulated results cover the budgets of two hundred households, where the average size of the family, including boarders, was 5.6, and where the average annual expenditure was $851.38. An exposed cross-section of industrial society, such as this, affords a useful glimpse into the lives, hardships, diversions, and surprising social habits—*e. g.*, insurance—of what we commonly term "the masses." One can only wish that we had something analogous to a reliable study of family budgets, to lighten our ignorance of actual social conditions in many a vanished civilization. But besides giving such an insight into the social and economic life of the urban wage-earner, this study of Mrs. More's is notable because of the light it throws upon the much-mooted question as to what now constitutes a "fair living wage" for an average family. If railways are likely to undergo a physical valuation to determine what dividends they may "fairly" pay, the wage-earner may perhaps expect a social census to determine what he may in "fairness" demand. The author's "conservative conclusion" is that $728 a year, or $14 a week, is requisite for a workingman's family of average size in New York city.

"Positive Preaching and the Modern Mind," by P. T. Forsyth (A. C. Armstrong & Son), is a book which asserts on the one hand the vicarious atonement of Christ as the central and essential doctrine of the Christian religion, and, on the other, declares that the theory of the verbal inspiration of the Bible is "hopelessly gone," along with the evidential value of miracles. Such a work is sufficiently paradoxical to pique one's interest. It is difficult to classify Principal Forsyth, or to assign him a place in any of the theological camps, whether ancient or modern. He is no mere reactionary, since he has learned much of criticism and freely admits its full rights in its proper field. Neither is he a modern of any recognized type, for he quarrels violently with religion as humanitarianism and as the "enthusiasm of humanity," and reverts every few pages to his favorite dogma of the propitiatory sacrifice of Christ. He endeavors to deepen and clear the old faith, or, as he expresses it, to "think modern and end positive." It is not clear that he has succeeded on either count, but he has at least put his finger on some of the most glaring weaknesses of prevailing religious doctrine, and indicated the spirit in which a more virile and adequate faith may be attained. It is a long time since the subject of Christian preaching has been approached with such thoroughness and such deeply religious earnestness as in these Yale lectures of Principal Forsyth. Homiletics proverbially are prone to littleness, but in these discourses there is no consideration of clerical and ecclesiastical trifles. The besetting triviality and complacency of the Church, and its uncertainty as to its message, are scathed without mercy, and inquiry is made for the deep-seated needs of human nature, which have yielded religion its opportunity, and for the large and serious assertions of classic Christianity, which have made it a power over earnest men. The current preachment of an easy-going God, with its kindred doctrine that human nature knows no radical stain and is good without much effort, finds here stern rebuke. "We can never heartily say 'My God!' till we have humbly said 'My Guilt'" may be strange doctrine for these times, but Principal Forsyth has the heroes of faith on his side. It is certainly true that Christianity has won its victories as a religion of redemption, and not as a mere summons to social betterment, or as a gentle assurance to men that they are good enough as they are. These lectures abound in passages of real eloquence, but as a whole they are not smooth reading. One tires of the short, ejaculatory sentences, effective doubtless in delivery, but not pleasant on the printed page. It is strange that addresses delivered in America should contain a reference to "Lowell's one-hoss shay."

J. C. B. Mohr, Tübingen, announces as forthcoming a work by Prof. Paul Wernle of the University of Basel, entitled "Einführung in das theologische Studium." His purpose is to show that advanced theological thought shall be rather an encouragement than a discouragement to young men to take up the study of theology. The same house will issue a book on Amos and Hosea by Prof. W. Nowack of Strassburg, in the series known as Religionsgeschichtliche Volksbücher; and "Die Frage nach dem Sinn des Lebens," by Prof. Eberhard Vischer of Basel.

The recent Syllabus of the Pope has received from two sides what are practically official interpretations. The one is a volume of three hundred pages by Prof. Frantz X. Heiner of the theological faculty in Freiburg-im-B, entitled "Der neue Syllabus Pius X., oder Dekret des heiligen Offiziums Lamentabile vom 3 Juli 1908" (Mainz: Kirchheim). The other, from Prof. Anton Michelitsch, of the University of Graz, is entitled "Der biblisch-dogmatische Syllabus Pius X. sammt der Encyklika gegen den Modernismus" (Graz: Styria, 367 pp.); Heiner declares that his work was written "with the special encouragement of the Holy Father," and "at the request of those in authority." His tone is distinctly dogmatic. In regard to the sources of the Syllabus he is disappointing, saying merely in general that the propositions condemned are taken from Loisy, Harnack, and others. In this respect Michelitsch's book is more exact and complete; for he traces these propositions to their sources. A full survey of the literature of the subject, exceptionally complete, is furnished by Prof. Martin Köhler, in a bibliographical supplement to the German translation of both the Syllabus and the Encyclical which he has published in Nos. 7 and 8 of the *Christliche Welt* of Marburg. The list includes all the leading articles by Modernists, and by Protestant and Catholic scholars in the chief languages of Europe.

Prof. Henrik Schück's new volume, "Hufvuddragen af den Medeltida Kulturens Historia," is a popular account of the essentials of mediæval civilization. The style is so easy that the casual reader might forget that the volume gives the result of much solid research, though the chapters on the literature of the Middle Ages and on the universities disclose to the careful observer the fact that this work is by no means a mere compilation. (Stockholm: Aktiebolaget Ljus.)

Prof. Michel Revon of the University of Paris, former legislative counsellor of the government of Japan, has completed his notable study of Shinto ("Le Shinntoisme," pp. 473. Paris: Ernest Leroux). If he has not added greatly to our knowledge of sources, he offers to student and reader a well-digested presentation of the whole subject and its literature. One may fairly find fault with his continuance in the title of the superfluous syllable of older days. To write *Shintoism*, when the *to* is the *ism*, is hardly justifiable in a scholar, despite the mass of matter still clogging unrevised cyclopædias. Professor Revon gives, besides a good index, with the Chinese characters, the Kojiki text in both *kana* and Chinese (part phonetic and part ideographic) of three of the most striking myths—the Birth of the World, the Descent of Izanagi into Hades, and the Eclipse, or Invention of Human Arts and Sciences. His text, with an astonishing wealth of commentary and bibliography, treats of the gods, their origin, their world, their nature, sojourn on earth, history, life, and end—that is, when Buddhism came in and banished them. Revon's particular addition to the subject is in showing many indisputable points of contact with the mind of the Malay world. With a true scholar's modesty, he acknowledges (p. 346) that Shinto does not furnish the key to the problem of Japanese origins, but at most expresses the answers which the myth-makers of the dominant house, or clan, who alone possessed writing, gave to inquirers in the sixth and seventh centuries of our era. Agreeing with other scholars and investigators, Revon shows the form utterly dead, though the spirit surviving has helped to consolidate the nation for its new tasks.

Celtic scholars will hear with pleasure of the publication of Y. Vendryes's "Grammaire du Vieil-Irlandais." Since the appearance of the monumental "Grammatica Celtica" (Zeuss-Ebel) no complete description of Old Irish has been written; for Windisch's work, though valued in its day, does not afford a separate treatment of the language of the primitive period. The early texts, on the other hand, have been edited more than once, and their interpretation settled to all intents and purposes by Ascoli, Whitley, Stokes, Zimmer, Thurneysen, Strachan, and others, who have elucidated the chief problems of Irish phonetics and morphology. The new volume is based on the results of their investigations and a fresh revision of the manuscripts by the author himself. He has spared no pains to make his work as complete as possible, and mentions most, if not all, of the distinguishing features of the accidence and syntax, the morphology and pronunciation of Old Irish. The work, only two hundred copies of which have been issued, may be had for 25 francs of E. Guilmoto, Rue de Mézières 6, Paris (VI^{e}).

An Institute of Comparative Jurisprudence has been organized in Brussels with Émile Stocquarts as chairman. The new association will publish a journal.

Admirers of Prof. G. Garollo's "Dizionario Geografico" will accord a hearty welcome to his "Dizionario Biografico Universale," which appears in two stout little volumes of more than 1,000 pages each (Milan: Ulrico Hoepli). We know of no work of similar scope in either German, English, or French that can be seriously compared with this biographical dictionary on the score of comprehensiveness and general accuracy. It contains 50,000 different titles, the repetition of names—there are 93 Orsinis, 67 Smiths, 81 Meyers and Mayers, etc.—swelling the actual entries to 80,000. Perhaps the most characteristic feature of the work is its observance of encyclopædic proportion and international perspective. Thus the limit of a column is reached only by a Dante, Goethe, or Shakespeare, while in numerous instances two lines tell the story of the lesser luminaries, impartially selected from all nationalities. An interesting exception is the half column devoted to Scheurer-Kestner, which sums up the Dreyfus case. Americans, who have long since learned, in works of this case, to be grateful for what they receive, fare far better than usual. Henry Clay is the only serious omission among statesmen of the past. Our military men and scientists are perhaps best represented; among artists we miss Inness and Saint-Gaudens, and among literary men Aldrich (though Stedman is given). Less impeccable, as was to be expected, than the flawless "Dizionario Geografico," the Biographical Dictionary betrays, through extreme condensation, occasional slight inaccuracies, as where Henry Cabot Lodge appears only as historiographer, without a mention of his Senatorship, and James McCosh only as British philosopher, without any allusion to his connection with the United States. On the other hand, Garollo is often full and exact where even Meyer is slipshod. Thus, in the six lines given to Aaron Burr the story of his duel with Hamilton is told, while the latest Meyer, within five times the space, is silent concerning it. We notice only one rather unusual departure from encyclopædic custom; all entries are rigidly under the actual name given at birth and not under the one which has acquired celebrity. This results in our being referred under "Anatole France" to "Jacques Anatole Thibault"; stranger still, under the Hungarian poets Petöfi and Vörösmarty to "Petrovics" and "Puszta-Nyek," respectively; and strangest of all, under Cavour to "Benso." On the score of up-to-dateness the Dictionary is irreproachable. Thus, for instance, all the principal actors in the Russo-Japanese war are credited with their full share of distinction. In spite of the condensation of the notices, telling literary touches are by no means wholly wanting. Thus Heine is characterized as "dopo Goethe, il più grande poeta lirico della Germania"; and Renan is spoken of as "grande erudito (semitista) e scrittore di stile eccellente." A word remains to be said of the bibliography, which is reasonably full, fresh, and cosmopolitan. Thus, under Richard Wagner, both Finck and Henderson are mentioned, and the appendix brings the bibliography of Charles Dickens down to Chesterton's book. The typography is as attractive as the contents are intrinsically valuable.

A new edition of Petrarch's Canzoniere, edited after the manuscript originals by Michele Scherillo of the Accademia Scientifico-letteraria of Milan, has been issued by Hoepli of Milan as a volume of the Biblioteca Classica. Although the book is based on that issued by this house in 1896, with notes by Giuseppe Rigutini, the task of adapting it to present standards has left little that was characteristic of the earlier edition.

The prize of $2,000 offered in honor of Prof. Pasquale Villari's eightieth birthday will be awarded to the author of the best work on southern Italy, starting with the causes and consequences of emigration in these provinces and including all phases of their social condition. One-half the amount offered will be paid when the judges announce their decision, and the other half on the publication of the work. The judges will be chosen, one each by four or five of the learned societies of Italy. Manuscripts must be in Italian, and submitted before January 1, 1911, to the Accademia del Georgofili, Piazzetta delle Belle Arti, Florence.

The Italian government announces the recent purchase of three important private collections of papers for the new musem of the Risorgimento in the Biblioteca Vittorio Emanuele at Rome. The first consists of a long series of interesting letters, written by Mazzini to an intimate friend (whose name is withheld) during the height of his activity and published only in part; and of a quantity of other valuable documents which throw light on his career. The second includes the letters, documents, autographs, addresses, and journals left by the late Jessie White Mario, long a valued contributor to the *Nation*, and the biographer of Garibaldi and Mazzini. There are 270 letters from Mazzini to the Marios, and more than sixty from Garibaldi. Other documents refer to the life of Goffredo Mameli. The third collection, of exceptional historical and bibliographical value, is that made by Francesco Crispi. The contents of this collection have been described in the *Nation* of November 21, 1907, p. 466, and February 6, 1908, p. 122.

The University of Wisconsin has just received a valuable addition to its already large library for the study of the labor movement by the gift of the collection of German socialistic literature made during a lifetime by Hermann Schlüter, editor of the New York *Volkszeitung*. The collection is given to the University by William English Walling of New York city and other men who are interested in the subject. The Schlüter collection is said to be the most complete library of German socialistic writings in existence. It contains many of the leaflets and pamphlets which were secretly circulated after the law of 1878 made socialist literature illegal.

The *Revue Scientifique* has compiled complete university statistics of Europe. Germany heads the list with 21 universities and 49,079 students; France has 16 universities, 31,494 students; and the corresponding figures for the other countries are: Austro-Hungary, 11 and 29,509; Great Britain, 15, 24,716; Italy, 21, 24,281; Russia, 9, 23,257; Spain, 9, 12,301 in six—the others not reporting; Switzerland, 7, 6,485; Belgium, 4, 6,079; Sweden, 3, 5,262; Rumania, 2, 4,949; Holland, 5, 4,020. The other countries have less than 3,000 students each. The total enrolment in 125 universities is 228,721 students. This number does not include students in the technological institutes; of such students there are 15,720 in Germany alone.

Delegations of editors, scholars, and business men have in recent years exchanged visits between Germany and England. An innovation is an excursion of German clergymen and theologians to England, May 26 to June 3. The special purpose is to hold conferences with representatives of the English churches in the interests of international peace.

Picture post-cards may become a part of the educational system in Germany. The suggestion was made at a recent meeting of the German Geographical Society, and cards to illustrate natural history, political history, and to use in instruction in the German language have received the hearty approval of prominent educators. A collection of these cards is being formed at the school museum at Breslau.

The death is announced from London of Francis Reginald Statham, in his sixty-fifth year. Mr. Statham was a musician and composed the inaugural music for the Kimberley Exhibition in 1892. But his principal work was in journalism and poetry; his four books of verse are "Alice Rushton and Other Poems" (1868), "Glaphyra and Other Poems" (1870), "Eucharis" (1871), and "Poems and Sonnets" (1895).

STUDIES IN HISTORY.

America as a World Power. By John H. Latané. *National Ideals Historically Traced.* By Albert Bushnell Hart. *Analytic Index.* By David M. Matteson. [The American Nation, vols. XXV., XXVI., XXVII.] Harper & Bros. $2 net each.

Professor Latané has performed with more than ordinary success the difficult task of writing contemporary history. As a student of international law, he has had a congenial field in such topics as American intervention in Cuba, the Spanish war, the incorporation of the Philippines, the adjustment of relations with Cuba and Porto Rico, American diplomacy in the Orient, the Panama Canal, the Alaskan boundary, international arbitration, and the forcible collection of public debts—subjects which naturally fill the larger part of the volume. His point of view is that of a moderate and rather critical imperialist: the events which he reviews seem to him natural, inevitable, and on the whole beneficent; "world power" has been far more thrust upon us than deliberately sought; and we have done better than there was reason to fear. On the other hand, there have been some serious shortcomings and positive mistakes, and dangerous tendencies are discernible.

In dealing with controverted questions, all of them so recent that everybody still has an opinion about them, Professor Latané skilfully combines impartiality with the right of private judgment. Thus, as regards the merits of the Sampson-Schley controversy, he states the facts briefly and draws no conclusion; while for the demoralization of the army under Alger's administration he has proper condemnation, as also for the general conduct of active military operations in Cuba. On the subject of atrocities in the Philippines he says:

> Murder, rape, torture, and other crimes were too frequently commited by American soldiers and by the native scouts commanded by American officers. The reports of these atrocities which were published in the United States were in many cases exaggerated, but the truth was bad enough. . . . The disparity in the numbers killed [about ten Filipinos for one American, between May 5, 1900, and June 30, 1901] cannot be attributed to the superior marksmanship of the American soldiers; it was due rather to the fact that the Filipinos were in many cases not armed with rifles, and in some cases, perhaps, to the ruthless slaughter of the wounded (pp. 96, 97).

No wonder that the Senate Committee on the Philippines did its utmost, in 1902, to make its investigation of these shameful proceedings a farce.

Professor Hart, the general editor of the series, undertakes the large task of surveying comprehensively the development of American ideals. The scope and character of the treatment are best shown by enumerating some of the chapter topics: Territorial Concepts, Dependent Races, Theories of Government, Unofficial Government, the Art of Living, the American Church, the Business Man and the Government, Transit, War and Order, the Assurance of American Democracy. Under each of these heads Professor Hart gives a rapid historical sketch, folowed by a statement of present problems and, on occasion, a glance at the future. If the observations have not the profundity and soberness of Mr. Bryce's monumental work, they are certainly acute and show wide and discriminating observation. One cannot but admire the skill with which the thing is done; the lively style, albeit too popular by half; the wealth of novel and well-chosen illustration; the profusion of catchy, quotable expressions; the avoidance of repetition of what previous writers in the series have said; the unfailing sense of what is important, as well as of what is effective; the pervading conviction that most things have worked together for our good; and the mingled optimism and soberness with which the future is faced. We wish that Professor Hart did not write of serious matters quite so entertainingly, that he did not make us travel with such breathless rapidity, and that some of his flings at critics might have been suppressed; but the volume as a whole is in a high degree wholesome, informing, and stimulating.

With these two volumes and Mr. Matteson's admirable index, the American Nation series is brought to a close. The several volumes have been somewhat fully noticed in these columns as they appeared and there only remains now to speak briefly of the series as a whole. Two of the most serious defects of coöperative writing—overlapping, and opposing judgments of the same episode or event—have been almost entirely avoided; the writers have kept, or been kept, to their several fields, and their points of view show remarkable unanimity of thought. Careful reading has failed to detect any erroneous statement of importance, and slips of any kind are rare. The bibliographical chapters are models of comprehensiveness so far as the better known and more available literature is concerned, while the maps, many of them the work of Mr. Matteson, are so far superior to anything of the kind yet published as to make us wish earnestly for a collection of them in a separate volume. Mechanically, the execution of the work is thoroughly creditable.

The editor has been fortunate in his collaborators. Of the twenty-four writers, all but three are members of university or college faculties. The general level of the volumes is high: none is a failure, only one or two are mediocre, while more than half are important contributions to the subject. The literary quality, considering the strict and often narrow space limitations which the plan of the series imposed, is both dignified and commendable, with not a few examples of unusually good writing. While few of the writers appear to have used manuscript material, there is abundant evidence that the printed sources have been attentively scanned, and the results of multitudinous investigations attentively weighed.

The editor of a series of this sort must perforce make choice of the point from which he will survey the field, as well as the class of facts which he will most fully present. He cannot hope, if the series is to be kept within reasonable compass, to include in it more than a small proportion of the important data available, or to treat with definitive fulness any of the large aspects of the subject. All that can be done is to summarize, with due regard to proportion, the mass of existing knowledge, and present a condensed narrative which is orderly and consistent as well as true. Judged by this standard, the American Nation finds its field in political and diplomatic history. The volumes pay comparatively little attention to economic history. no piecing together of chapters or passages would afford either an adequate or a connected view of the industrial or commercial development of the United States. Constitutional and legal questions, too, though peculiarly significant in a country of written constitutions, are, with some exceptions, little expanded. To State history, also, little space is given. These are doubtless limitations of a substantial sort. As a register of progress, however, as well as an orderly, balanced, intelligently conceived, well written story of American history. Professor Hart's great undertaking must be accorded a distinguished place in the achievements of American scholarship. If, in the course of the next generation, any need of doing such a work over again shall appear, the study of American history must make giant strides.

The Reformation: Being an Outline of the History of the Church from A. D. 1503 to 1648. By James Pounder Whitney. New York: The Macmillan Co. $1.50 net.

A History of the Reformation. By Thomas M. Lindsay, Vol. II. New York: Charles Scribner's Sons.

John Morley has said that men are likely to be most effective when they learn how to put their brains into joint stock with those of other people. This statement should console many a modern historian, for the time has come when it seems impossible to write history at all in the character of a freelance. Dr. Whitney contributes to The Church Universal Series. Dr. Lindsay contributes to The International Theological Library. One may still venture to write a separate biography, but if one treats of a period or a movement, one can hardly hope to keep clear of some publisher, who, with marvellous strategic gift, has planned a series. Even the biographer does well if he escapes the meshes of the coöperative net.

Dr. Whitney, however, has acted with much more independence than is shown by the average contributor to an historical series. In nine cases out of ten the writer of a short book on the Reformation, from Luther to the Peace of Westphalia, would refrain from giving any one subject more than a snippet of space. But Dr. Whitney, with a spirit of daring which is rarely shown, singles out one topic without visible fear of slighting others. We might almost say that this volume centres in the Council of Trent. For example, comparison at once shows how every other episode is overshadowed by the acts of the Tridentine Fathers. Stated under statistical form, one must point out that Dr. Whitney allows more space to the Council of Trent than to the whole of the Protestant Revolution in Germany, between the Wittenberg Theses and the close of the Thirty Years' War. Dr. Lindsay, whose work is on a much larger scale, gives the Council of Trent thirty pages. Dr. Whitney gives it one hundred and forty. We are by no means sorry that this should be so. Most Protestants have a quite inadequate knowledge of what the Decreta Tridentina mean in the history of the sixteenth century. For many the Middle Ages simply mean popes and Hohenstaufen. Likewise for a host of Protestants the Reformation means little more than Luther at Worms and Coligny at St. Bartholomew. The careful, systematic study which Dr. Whitney devotes to the Council of Trent should go far toward redressing the balance. As an Anglican of High Church leanings, he can appreciate what the best element strove for at Trent. As an historian he can estimate properly the part which the Curia Romana had in directing the course of this momentous gathering. Stated in other words, he knows how to use both Sarpi and Pallavicini, besides having the further advantage of being imbued with the spirit of Bishop Stubbs.

Dr. Whitney is strong on all subjects connected with dogma, and his book will be more valuable to those who are somewhat familiar with theological literature than to those who never have actually had in their hand the "Summa Theologica" or Calvin's "Institutio." Character sketches are few, and where they occur present few novelties of outlook. In point of scholarship the book will bear close examination. Dr. Whitney's contributions to the *English Historical Review* and the Cambridge Modern History have long since disclosed to students the quality of his attainments, and there is no falling off here. We think, however, he has accepted somewhat hastily the view which makes Geneva in Calvin's time a beacon of austere piety and practical righteousness. Before penning the passage on page 99 he might with advantage have turned to Galiffe's "Notices généalogiques sur les familles genevoises."

Dr. Lindsay's volume is longer than Dr. Whitney's, though not nearly so extensive in scope. To say that his main subject is Calvin does not mean that he has upset the balance in favor of a theological movement which produced Scottish Presbyterianism. But having in the first instalment of his excellent work (reviewed in the *Nation* of October 25, 1906, p. 351) kept close to Lutheranism, he now comes to an era when the religious life of Europe was most deeply affected by the strife of Jesuit and Calvinist. If the Reformed Church bulks large here, full justice is done to the force of the Catholic Revolution as well as to Anabaptist and Socinian. In our former article we discussed Dr. Lindsay's method of approaching the Reformation and the fairmindedness which marks his outlook. One reads with almost equal pleasure his footnotes and his text. In no book on the Reformation are narrative and discussion better blended for the benefit of thoughtful readers, who at the same time are neither experienced historians nor expert theologians. Like Creighton wrestling with a subject of like difficulty, Dr. Lindsay has striven to write true history. From first to last he is just without being sugary. Differing fundamentally from the leaders of the Catholic Revival, he can appreciate their best purposes and deeds for the very reason that his grounds of opposition are neither petty nor partial. What we mean can best be illustrated by a contrast of two passages. Of the Jesuits as they were at their best, Dr. Lindsay says:

> What the depressed Romanists of the sixteenth century saw was a body of men whom no difficulties daunted, who spent themselves in training boys and girls and in animating them with religious principles; who persuaded boys and youths to attend daily mass, to resort to monthly confession, to study the articles of their faith; who elevated that obedience, which for generations they had been taught was the earthly head of the Church, into a sublime religious principle.

For all these things the disciples of Loyola are given full credit. But there soon comes a passage in which Dr. Lindsay indicates why he thought they were following the wrong path.

> It is true that men can never get rid of their personal responsibility in spiritual things, but multitudes will always attempt to cast their burden upon others. In all such souls the spirit of the Counter-Reformation lives and moves and has its being, and they are sustained, consciously or unconsciously, by that principle of blind obedience which its preachers taught. It is enough for us to remember that no weakened sense of personal responsibility and no amount of superstitious practice can utterly quench the conscience that seeks its God, or can hinder that upward glance to the Father in heaven which carries with it a living faith.

The six hundred pages before us afford many suggestive and alluring subjects, but we must be contented with expressing our recognition of the sound materials which enter into the volume and of the real talent which Dr. Lindsay has shown in compounding them.

CURRENT FICTION.

A Walking Gentleman. By James Prior. New York: E. P. Dutton & Co.

The first and strongest impression produced by this book is a memory of "The Beloved Vagabond"; and as one reads on, the impression deepens in spite of the difference of treatment and temperament between the two stories. Beyond a doubt, Lord Beilcy and Paragot are spiritually akin, however dissimilar in personal habits. If the Walking Gentleman lacks the genial vein that has made the other the beloved of the vagabond-hearted—and of some of the conventional—he has the excuse of youth for his vagaries, being still in his twenties when he walks away from his bride on the eve of their wedding. Young readers can take with the most sympathetic seriousness the complexities of motive that make his action possible—"a self-indulgence that was too vapid a thing to be called amusement, a languor that was too wearisome to be called ease, a doubt that was too futile to be called skepticism, a dissatisfaction that was too inert to be called revolt." Their elders may smile and wonder whether the author is quite correct in asserting that "his liver was all right." It is certain that the burden of mankind—Self—weighed heavily upon him; and the profit of his six months Odyssey is the knowledge that this burden only weighs the heavier for one's efforts to escape it, and is to be lost only by losing the sense of it in a larger consciousness. Amid weariness and pain he realizes his love for his betrothed, from whom he feels that he is forever estranged by his humiliation of her; he has yet to learn that there is a love that feels itself too royal to be touched by shame. His final comprehension of this fact brings the story to an end.

The characters that pass Beiley in his wanderings, with all the inconsequence of real life, are drawn with an assured if somewhat exaggerated touch. With the exception of Bertha, who is that rare creature, a precocious but lovable child, it is in these minor characters that Mr. Prior shows his finest art. The seaside preacher "with glowing eyes cloistered under a high white forehead," on his knees, "in the midst of a puddle as it befell"; the unknown man, walking shadowy through the night, cherishing his happiness like a coal from the altar; the old stone breaker with his pathetic yearning to be saluted as a gentleman; 'Arry and his Bina, who seems "to make the house shoine loike"; poor little Vitie, a bit of very real girlhood—these stay in the memory like faces seen from a car-window. The story in itself is not strikingly original; its value lies in its flashes of human insight.

The History of Aythan Waring. By Violet Jacob. New York: E. P. Dutton & Co.

What havoc can be wrought in the life of an innocent, noble-spirited man by the vindictive hatred of a designing woman is abundantly set forth in this story. Hester loves Eustace and loathes Aythan. Eustace and Aythan both love Barbara—but with a difference. Aythan and Barbara happen to be sweethearting one night in the church porch; they know it is imprudent, but the result shows it to have been even more than that; for close to that very spot on that same night a foul murder is committed. Suspicion is directed to Aythan; and it is not due to any softening of Hester's heart that he is saved from the gallows. Yet even Aythan can feel an impulse of divine pity when, shortly after his marriage to Barbara, he perceives, from the window of the inn, a lowly country churchyard, where "the idle, jesting Eustace," Hester, and poor "Mad Moll," all lie together under the sod, awaiting the day of judgment. The scene of all this is rural England, close to the Welsh border. The characters are vaguely drawn; the dialogue is perfunctory and bookish; the melodramatic plot is dawdling, lifeless, and absurd.

Tangled Wedlock. By Edgar Jepson. New York: The McClure Co.

Iseult Brent, the heroine, is, somewhat unaccountably, in great demand. She did her best by marrying two of her suitors, one secretly and actually, the other openly and nominally; but the result even of this generosity was unsatisfactory, and nobody was thoroughly pleased until the nominal husband and the inconvenient but previous wife of the actual spouse cut the Gordian knot by dying with a timeliness rarely encountered save in fiction. The pages are enriched with some fine touches of involuntary humor; but on the whole, recalling the dictum that easy writing makes hard reading, one is led to the conclusion that "Tangled Wedlock" must have flowed lightly from a facile pen..

Folks Back Home. By Eugene Wood. New York: The McClure Co.

Mr. Wood is an example of a writer who has overworked a vein from which he once extracted good ore. The quaintly tender dedication of this volume of short stories arouses hopes that do not survive perusal of the first tale. The book is a pleasant, inoffensive example of the apple-pie school; chiefly remarkable for the absence from its pages of the time-honored "b' gosh" and the substitution of a new expletive, "I jox." One story stands out from the general mediocrity by virtue of a certain sharpness of homely pathos. "The Elopement" is not a comfortable cross-section of life, for its principal characters are real; we waste no sighs on the sorrows of paper dolls.

Furze The Cruel. By John Trevena. New York: Moffat, Yard & Co.

> Almost everywhere on Dartmoor are Furze, Heather and Granite. The Furze seems to suggest Cruelty, the Heather Endurance, and the Granite Strength. The Furze is destroyed by fire, but grows again; Heather is torn by winds, but blossoms again; the Granite is worn away imperceptibly by the rain. This work is the first of a proposed trilogy, which the author hopes to continue and complete with Heather and Granite.

Nobody can complain that Mr. Trevena lacks serious purpose. He strips bare the ugliness of Dartmoor life with a merciless candor that shows too much schooling from Zola, Ibsen, and Tolstoy. He calls a spade by name, with gratuitous unpleasantness. Heather and Granite, it is to be hoped, will not require so heavy a touch or so morbid an insistence upon repulsive details. The most readable passages are those wherein Peter and Mary figure—for the idyl of Boodles and Aubrey, though innocent and sweet, is but trivial. The savage brother and sister, however, develop a refreshing vein of comedy; and Gran'vaither, the old pixy-haunted clock, and the railway journey to Goose Fair go far toward making us tolerate Mr. Trevena's too strenuous upheaval of the mire of the moors.

In Mary's Reign. By Baroness Orczy. New York: The Cupples & Leon Co.

Here is melodrama at its height. Lady Ursula Glynde has been betrothed in the cradle to the Earl of Wessex, and unknown to her destined husband, who has been unfortunate enough to engage the affections of Mary Tudor, she has ripened to the recognized standard of book-world beauty. At the critical moment, when Wessex is about to sacrifice himself to avert the proposed alliance with Philip of Spain, he meets Lady Ursula, and is hers. The course of true love is grievously interrupted by the machinations of the villain, Don Miguel, who employs the startingly novel expedient of a double—a witch whom he induces to impersonate Ursula under compromising circumstances. Wessex, even in this trying moment, does not forget the traditions to which he owes his being:

> "By our Lady," he said at last, with that same bitter heart-rending laugh. "What?!!! you and I, my lord, crossing swords for that!! A farce, my lord, a farce!! Not a tragedy!!!"

Of course the tangled skein is unravelled at last, and Ursula is left "in the arms of her future lord." The story was evidently written for serial production, as is evident from such slips as the "dark tresses" of the witch appearing on another page as "an abundance of golden hair." To notice such flaws, however, is like breaking a butterfly.

Race Life of the Aryan Peoples. By Joseph P. Widney. 2 vols. New York: Funk & Wagnalls Co.

To write an "epic" of the Aryan peoples is an undertaking no less difficult than attractive, requiring, as it does, the imaginative reconstruction of a prehistoric period and an investigation of the conditions under which each people reached its final home and developed its character. Dr. Widney brings to this task wide reading, intelligence, sympathy, and the adventurous spirit of the frontiersman. After deciding that the primitive Aryan home was on the plains stretching between the Thian Shan Mountains and the shores of the Caspian Sea, he follows the various migrations along the lines of least resistance, southward into India and Persia, and westward into Europe, giving in detail the climatic changes that gradually moulded the character of each group. It is the climatic belt, he says, that settles race destiny. He goes on to describe the geographical conditions under which the Græco-Latin communities, the Celts, the Slavs, and the Teutons found themselves, pointing out the debt that the world owes to each. The culmination of the race history he sees in the Teutons, and among the Teutons in the Germans, and among the Germans in the English, and finally in the North Americans. America, he thinks, offers the normal climate of the Aryan—it is the land in which he develops his real characteristics; and in America he discovers in the Southern mountaineers the nearest approach to the primitive Aryans. To this general sketch he adds a number of special discussions, particularly dealing with certain races, black, red, yellow, and white, which he regards as in process of passing away, and he ends with an optimistic outlook into the future.

Dr. Widney's volumes make pleasant reading and contain a good deal that is suggestive. His observations on modern peoples are often worth considering, as, for example, when he remarks that Germany must have room for expansion, and that its expansion can be only toward the Adriatic. Large historical reviews, such as he here offers, though they must be defective, are useful in the way of bringing together great historical movements and judging national fortunes in the light of long developments in which passing accidents may be neglected. On the other hand, wide generalizations are seductive and dangerous. To be highly useful they must be controlled by a judicial habit of thought as well as by broad knowledge. Much of the material of these volumes is of the nature of hypothesis, and the characterizations of peoples are in some cases onesided and therefore misleading. We may share to some extent the author's admiration of the English-speaking peoples while we hesitate to recognize the preëminent position he assigns them. We may think it well not to attempt at the present moment to decide what the future of the Chinese and Russians is to be. As to climatic conditions, on which Dr. Widney lays so great stress, they are doubtless important, but it cannot be said that they are the only factors in the creation of national character; it would be difficult, for example, from such considerations alone, to account for the differences between Greeks and Romans and between Chinese and Japanese. On the question of American cultural independence the author has a quite definite opinion—our college professors, he says, have run too much to Europe, seeing that we have the material of literary and scientific production at home. Here he touches a large problem, the ultimate solution of which must be found in the attainment of cultural unity in the world. In general it must be said that Dr. Widney, with much that is valuable, is inclined to express himself too positively on matters that in the nature of things must remain doubtful for the present.

Babylonian Expedition of the University of Pennsylvania: Excavations at Nippur. With Descriptive Text. By Clarence S. Fisher.

The excavations of the Babylonian Expedition of the University of Pennsylvania at Nippur began in 1889 and were continued intermittently for eleven years: 1889-90, 1893-'96; 1898-1900. Since the spring of 1900, a period of over seven years, no work has been conducted there. This does not mean that the site is exhausted; in fact, an immense amount remains to be done, and with the exception of one interesting palace of about the twelfth century B. C., no one building or group of buildings has ever been completely unearthed. The excavations were peculiarly successful in the discovery of inscribed material, the clay tablets and fragments numbering, as asserted by the scientific director of the last expedition, about 60,000. It is to be hoped that the University of Pennsylvania may find means to resume this undertaking and complete at least those excavations which are necessary to determine the history of the Temple of Bel En-lil, the oldest centre of Babylonian religion of which we have any knowledge. In the meantime, publication of the results progresses but slowly. These publications consist, first of popular accounts: two larger general works, "Nippur," 1897, by the first director, Dr. J. P. Peters, and "The Excavations in Assyria and Babylonia," 1904, by the last director, Dr. H. V. Hilprecht, besides chapters and articles in various books and journals; secondly, of the texts of the cuneiform inscriptions discovered, of which eight volumes or parts of volumes, have appeared. No translations have as yet been undertaken. These texts, with critical introductions, have all been issued under the general direction of Professor Hilprecht and published either by the American Philosophical Society, or the Department of Archæology of the University of Pennsylvania. For a long time no steps were taken to publish the architectural and topographical material. At length, however, after the close of the last expedition, Mr. Fisher, who, with Valentine Geere, had been attached to the expedition as architect, was appointed a curator of the Archæological Museum of the university and detailed to work up the architectural results. Thus we have now, thirdly, the beginning of a publication of plans and details of the excavations, with the numerous objects found in them.

The first half of Part I., dealing with topography, was published in 1905. In the text, which possesses considerable general interest, Mr. Fisher has traced the growth of Nippur from the period when it was a little village of reeds among the swamps. By comparison with existing conditions in similar modern villages, it has been possible to restore the original prehistoric, precivilized Nippur, inhabited by savages, subject to inundations, frequently destroyed by fire. Wave after wave of population swept over the region, leaving traces at Nippur of the occupancy of various races in different stages of culture. At last we come to the civilization commonly called Sumerian and the period of written documents. The temple had now become a mighty institution, possessing great properties, with a highly organized priesthood and a well-developed system of bookkeeping, covering all the details of its extensive industries. But of the exact form of the temple we have no satisfactory information until the period of the Semitic occupation and the reconstruction of the edifice by Naram Sin, early in the third millennium B. C. From this time, or a little later, we possess a contemporary map of the temple area, inscribed with descriptive text on a fragment of a clay tablet. This fragment was published by Hilprecht in his "Excavations in Assyria and Babylonia" (p. 518), with a most picturesque account of its discovery by himself; but the value of the map was not fully comprehended. Mr. Fisher, who gives quite a different account of the discovery, absolutely contradicting Hilprecht's story, has made most effective use of this curious ancient plan of the temple, the oldest known topographical plan of any place, basing on it his discussion of the topography of the temple.

The second half of Part I., dealing with the city walls, is now published. It contains some forty pages of text, with twenty-seven inset drawings and about a dozen plates, chiefly photographic reproductions. This section is highly technical. The plates in both sections are beautifully executed, but since they are scattered without regard to the text, the study of the parts before the whole is completed is difficult. What has already appeared forms, however, an important contribution, not only to our knowledge of Nippur, but also of Babylonian history and religion. We have, for the first time, an accurate and scientific statement in contrast with the more popular and general accounts referred to above, and, as was to be expected, this work corrects in many particulars the former publications. For example, from a foot-note on page 49, it appears that within the space of three years Dr. Hilprecht published three wholly inconsistent explanations of the "long wall south of X." On March 16, 1900, it was the basis of a fortification of the city by one of the Assyrian kings, probably Sargon, about 710 B. C. On May 26, 1900, it was dated at or before 4000 B. C., and described as "the southern façade of a large pre-Sargonic palace, two stories in height, with small windows near the ceilings of its rooms." Three years later it had become "a regular facing or boundary wall," supporting "the light masses of ashes and dust of the fire necropolis of Nippur." According to the present volume, with its careful comparative study of bricks, methods of construction, and the like, it is "the facing or retaining wall of a great platform, such as the temple enclosure was before the erection of the Naram Sin wall." From this, as from the Nippur "library" matter discussed in the *Nation* of November 21, 1907, p. 465, it is evident that certain of these previous publications are untrustworthy.

The remaining parts of this work, one of which is expected within the present year, cover (2) the fortress; (3) the temple; (4) the tablet hill, where the alleged library was discovered, and miscellaneous constructions; (5) the palace, referred to above; and (6) pottery and burial customs. No publisher's name appears, but merely the announcement that requests for copies may be sent to lock box 165, Rutledge, Delaware Co., Pa.

Across Widest Africa: An account of the country and people of Eastern, Central, and Western Africa as seen during a twelve months' journey from Djibuti to Cape Verde. By A. Henry Savage Landor; illustrated by 160 half-tone reproductions of photographs and a map. 2 vols. New York: Charles Scribner's Sons.

The most noteworthy thing in the journey of which Mr. Landor gives an account in these sumptuous volumes is its demonstration of the freedom and rapidity with which one can travel to-day in the Dark Continent. In just a year from the time he left the east coast, January 6, 1906, he passed through Abyssinia, the Anglo-Egyptian Sudan, skirted the French and Belgian Congo regions to Lake Tchad, and went thence by Timbuctu to the Atlantic, a distance of 8,500 miles. At no time did he have more than thirty pack animals or forty men, and once he was left with a single companion. He started and finished on a railway, his other modes of conveyance being steamers, boats, canoes, mules, horses, and camels. Apart from the fact that the journey was the first crossing of Africa from ocean to ocean in its widest part, it has no special interest or importance. His route took him through no new country, he had no striking adventures, while he went too rapidly to gather valuable information about the natives. He gives many ethnological details of some of the interior tribes, but they must have been derived mainly from other sources than his own observations. The larger part of his narrative consists of a record of each day's experiences, however trivial, and a brief description of the surface features of the country traversed. An exception should be made, however, of his account of Abyssinia, and especially of the Emperor Menelik, the foremost African of the day. The interviews with him are most entertainingly described. One was at a lunch given to 7,980 guests, at which a mountain of bread "eight feet high, fourteen feet long, and four feet wide," was served.

The next point of interest is the Congo Free State, of which he visited several frontier posts in the Ubangi district. His impressions were much more favorable to the Belgians than those of travellers in other parts of the State. He says:

> Speaking generally from my own observation, all I can say of the Congo Free State is that the country was kept in excellent order; that the natives were happy and well cared for; and the land, far from being damaged, was greatly improved by the construction of splendid roads, by enormous plantations of rubber, rice, millet maize, cotton; by the establishment of beautiful cattle farms, by up-to-date schools, and excellent hospital arrangements for the natives.

It should be added that there is nothing in the narrative which would lead one to suppose that he actually saw these roads, schools, and hospitals. He is even more enthusiastic in his encomiums of the way in which the French are ruling the natives and developing the natural wealth of their African possessions. This testimony which he bears to their simple and practical methods is much more trustworthy, as he visited many French posts.

Considerable space is devoted to an account of his experiences on Lake Tchad, interesting now as the meeting point of the three great Powers, France, Germany, and Great Britain.

Mr. Landor's personality is much in evidence, and his style is more conversational than literary. He expresses decided and unscientific opinions as to the best way to live and travel in the tropics and the cause and treatment of tropical diseases. Occasionally a curious statement is made without any substantiating facts. The Tuaregs, he asserts, for instance, "possess a method of thought transference, perhaps because they have learned the power of intense concentration. Many of these people were unconsciously adepts at telepathy." Though much of the book is tedious there is also much that is entertaining, and enables one to realize vividly how life in the heart of Africa appears to the traveller. The excellent illustrations reproductions of his photographs, are almost exclusively of the natives, and add much to the value of the work. There is also a map showing his route, and a chart of Lake Tchad from the latest French surveys.

Tasso and His Times. By **William Boulting**. Pp. xv., 314; 24 illustrations. New York: G. P. Putnam's Sons. $2.75 net.

We have delayed too long in speaking our word of praise for this excellent volume. Tasso is one of those creatures whom you will judge fortunate or unfortunate, according to your ideal of fame. His personal tragedy has kept interest alive in him for the more than three centuries since he died. This tragedy has enough of mystery about it, or at least, enough of uncertainty, to place him among those men of genius upon whom posterity cannot pass a final verdict. The reason in his case is obvious.

Mr. Boulting has approached his subject along the high-road of common-sense. This sounds easy, but it is not; because, in order to reach Tasso's individual case, his biographer must traverse the Italian Renaissance in the last half-century of its decay. The earlier interpreters of Tasso used to treat him as an exception; and when he was so studied, it seemed as if not merely fate warred against him in giving him a neurotic organism, but that men, too, and especially women, were leagued together to harass, torment, thwart, and undo him. Now Mr. Boulting, thanks to a knowledge of the late Renaissance environment, is able to show us just how much happened to Tasso because he belonged to that time and country, and how much he suffered because he was that particular, unstrung, and occasionally mad, man of genius. A single point will illustrate what we mean. If you visit Tasso's "prison cell" at Ferrara with an unhistoric mind, you will probably agree with thousands of earlier travellers that the duke must have been cruel to pen a sick poet in such a place. But if you know that these quarters were far better than the average in the sixteenth century, if you know also that the barbarous treatment which the insane received was a matter of course, you will be forced in fairness to inquire whether the duke did, indeed, intend to persecute his laureate by assigning to him this retreat. And so throughout the book, Mr. Boulting sets forth the most recent knowledge about the events in Tasso's life, and the contemporary criteria by which we can judge them. He brings in enough of the political and court affairs to serve as a frame for the portrait of his hero. He shows skill in arranging his material, and he writes agreeably. Occasionally, we note typographical slips, but the fundamental accuracy cannot be impugned. It will take long, of course, for sober history to dispel the fiction which Goethe dramatized so vividly, and Byron immortalized in such poignant verse, that it has been accepted as true for a hundred years; but Mr. Boulting can at least be congratulated on having given the history in an attractive form. The "real" Tasso, to whom he introduces his readers, is in our opinion not less but more tragic and interesting than Goethe's creation. Possibly there is room for both.

Mr. Boulting bases his study on the most recent investigations of Solerti and others, together with the original sources. More than a score of illustrations, chiefly portraits, add to the attractiveness of his volume.

The Raid on Prosperity. By James Roscoe Day. New York: D. Appleton & Co. $1.50 net.

Those who have heard or read the public utterances of Chancellor Day during the past year, and who may have assumed that their reproduction in book form by a reputable publishing house would have a restraining influence upon their author, are doomed to disappointment. The pages read like political harangues or after-dinner speeches. The state of righteous indignation which has given birth to this book is the result apparently of the acts and utterances of our chief executive, which have been "so opposed to all our dignified traditions and such a menace to our boasted freedom as to justify an examination of some first principles." The feelings of the author have been further harrowed by "emotional and sensational fiction writers of socialistic vagaries," and by "small men whose official relations to such mighty questions is the accident of political preferment, men usually without previous training or practical knowledge." Anticipating the gibes of the "small men" he asserts at the outset that his convictions have not come to him out of the exigencies of a college presidency, or by the contaminating influence of millionaires, and announces: "I speak by no man's favor, nor am I restrained by any man's frown. My credentials are sufficient. I am an American citizen."

It would be pure waste of time to attempt to meet the assertions of this book with specific replies. In fact, it is difficult to take the book seriously, notwithstanding the extreme seriousness with which the author takes himself; for it is not argument at all. It is extreme glorification on the one hand, and bitter denunciation on the other. The glorious mission of the American people is depicted with a facile hand, and with it the "new proportions" of our age, to which the "small man" is unable to adjust himself. Typical of this age is the corporation, the benefits of which are so great that it should not be destroyed or even regulated. The corporation's acceptance of certain obligations to the public in return for its right to be is entirely overlooked by this ardent advocate. He seems to be not only blind to the common every-day laws of ethics, but ignorant of the fundamental principles of English common law in its bearing upon corporations. His mistake is that of accepting the expression of the violent agitator as the voice of the people. He is possessed with the idea that the country is falling into the hands of the socialistic element, and that his is the voice crying in the wilderness.

It is not surprising, therefore, to find two chapters devoted to a defence of the Standard Oil Company, one of which is nothing but a reproduction of the statement given out by that corporation after the decision of the court in the Alton rebate case. The other contains this remarkable sentence: "The steady growth of the Standard Oil business is the best answer to all who calumniate it." A chapter entitled "Standard Oil Defended by Economic Writers," turns out to be two editorials, one from *Leslie's Weekly*, the other from the *Financial Chronicle*. Tainted money—"a new pharisaism"—is the theme of one chapter, and in another the author pays his respects to the labor unions. But the same tone runs through it all, and any chapter selected at random contains the substance of the entire book.

Science.

Fishes. By David Starr Jordan. Pp. 789; 18 colored plates, and 673 illustrations. New York: Henry Holt & Co. $6 net.

The preface of this volume (in the American Nature Series) tells us:

> This work contains virtually all the non-technical material in the author's "Guide to the Study of Fishes" (2 vols., over 1,200 pages, 900 figures, and 32 portraits; 1905); . . . substantially all which the author would have written had his original purpose been to cover the subject of fishes in a general natural history of animals. The fishes used as food and those sought by anglers in America are treated fully, and proportionate attention is paid to all the existing as well as all extinct families. . . . The writer hopes that it may still be valuable to students of ichthyology.

The volume certainly appeals to all who are interested in fishes from any point of view. Useful are the pictures and descriptions of food-fish from all parts of the world; dramatic the account of the capture (p. 359) of the only known example of sudis ringens, which "had been devoured by a hake, the hake by an albacore, and the albacore hooked before the sudis had been digested"; surprising, the vitality of the Alaska black-fish (p. 423), one of which, "while frozen, was swallowed by a dog, but escaped in safety after being thawed out by the heat of the dog's stomach"; startling, Buckland's computation (p. 698) of the turbot's eggs as more than fourteen millions; and really staggering, Baird's estimate (p. 495) of the food of the bluefish for one season on the New England coast at three hundred thousand million pounds.

Nevertheless, the book presents contradictory and disappointing features. Handsome, printed on superior paper from large, clear type, it is inconveniently bulky. It is profusely illustrated, but many figures are duplicated, some (21, 28, 77, 78, and 161) are superfluous, and at least one (268) is quite out of place. We look in vain, however, for, *e. g.*, the transformations of the ray and the gar as portrayed, respectively, by Wyman and the younger Agassiz; the eggs carried in the mouth of some species; the cocoon of the lung-fish; and the nest of the stickleback. A writer of many books, the author seems not to appreciate the importance of a complete index, for his lacks more than thirty entries. Of typographical and verbal errors there are at least twenty-five, all reproduced in this volume from its larger predecessor. Misstatements occur on pp. 77, 163, 168, 182, 264, and 454, and misrepresentations in Figs. 16, 123, 146, and 151. Widely and favorably known as naturalist, editor, administrator of a great university, and writer upon many topics of both general and special interest, and doubtless able to select his publishers, fix his terms, and take his time, the author has disregarded the just claims of his readers, of his scientific colleagues, and of his own reputation in reducing a comparatively technical larger work to a comparatively popular smaller one, not by rewriting or even by careful revision, but by simply omitting longer or shorter blocks of text and cuts, and patching the fragments together, not always even artistically, as on p. 436. This rough-and-ready scissors and paste method is as little suited to the present work as it is to the conversion of an advanced text-book to an elementary one.

Notwithstanding its imperfections, it is to be hoped that the demand for this volume may be such as to encourage the author and his publishers to issue a successor with which no fault can be found.

Two new books on gardening are about to be issued by Frederick A. Stokes Company: "The Garden Diary and Country Home Guide," a practically arranged record book by Loring Underwood, and "The Garden Book for Young People," by Alice Lounsberry.

The centenary of the birth of Charles Darwin will probably be commemorated by the foundation in the University of Cambridge of a new professorship of biology, whose holder is to make a special study of the problems of heredity and variation.

Dr. Henry Clifton Sorby died at Sheffield, England, March 9, at the age of eighty-one. His book "On the Microscopical Structure of Crystals," published fifty years ago, introduced a new method into the study of rocks, and has had wide influence in mineralogy. In the same way his work "On the Microscopical Structure of Iron and Steel" opened up the study of micro-metallography.

Drama.

"THE SERVANT IN THE HOUSE."

The surprise, delight, and encouragement afforded by such a play as "The Servant in the House," by Charles Rann Kennedy, which was presented in the Savoy Theatre, on Monday afternoon by Henry Miller's new stock company, make it difficult to write of it in the cool, precise terms of critical appreciation. It puts the author in the front rank of living playwrights. No drama so high in purpose, so stern and true in its satire, more thoroughly human in its motives, or more vital in its illustrations has been produced in many years. It might have been modelled upon one of the ancient moralities, but it is essentially, even aggressively, modern in form and spirit. In psychologic insight and constructive skill it is worthy of comparison with Ibsen's later work, and in these respects clearly shows the influence of the Norwegian's example, but substitutes a noble altruism and exhilarating hopefulness for his dreary and cynical pessimism. That it will be a cause of offence to more than one class of professed religionists, on the one hand, and to extreme rationalists on the other, is very likely. The one party will discern gross irreverence in its profound contempt for dogma and ritual, and its unsparing castigation of clerical hypocrisy, while the other will ridicule the suggestion of divine intervention in the affairs of mankind. But the transcendent merit of the play is that while it makes visible use of a divine agent and bases its action upon Biblical precepts, the main argument is entirely independent of any creed whatever except that of faith in the Golden Rule, or, in other words, the universal brotherhood of mankind. And the application of the rule is made with decorum and occasionally with solemnity, but without preachment, or hysterical extravagance, and in thoroughly dramatic fashion.

It might be urged that the play is Utopian in its ideals, too full of calculated coincidence in its action, and overcharged with proverbial truths, that long ago became platitudes, but it is difficult to avoid repetition in dealing with fundamental principles. The fact remains that it treats old topics with freshness, conviction, and boldness. There are only six characters of importance in the cast, and each is differentiated with notable vigor and skill. The scene is the breakfast-room of an English vicarage. The vicar is depressed because his church is constantly empty—his parishioners say that it stinks—and because he is expecting a visit from an outcast brother whose child he has adopted. His wife, whose sole ambition is for his preferment, has summoned her brother, a rich old bishop, to help her build a new church. It is at this juncture that a new butler, highly recommended from India, arrives, and instantly begins to exercise a strange influence in the house. He seems to be the embodied conscience of the family. The rector begins to realize that his professional life has been largely a sham, and to feel remorse for the selfishness which had been the chief cause of his brother's ruin. The greed and worldliness of the bishop are exposed, and he is driven from the house with contumely. The outcast brother is softened, in an accidental meeting with his child—one of the most affecting and truthful scenes witnessed on the stage for many a day; the ambitious wife learns the virtue of charity; and the vicar, newly awakened to the value of labor, takes off his coat to join his reconciled brother in the task of removing the foul mass of putrefaction beneath the chancel, which has made the church the abode of desolation.

The bare outline of the story gives no hint of its dramatic interest or its realism, which is not affected by the underlying vein of allegory. Space, however, will not permit indulgence in detail. The effect of the representation is due in part, of course, to the acting, which is admirable. Miss Edith Wynne Matthison, as the vicar's wife; Arthur Lewis, as the bishop, and Miss Mabel Moore as the vicar's niece, are all excellent. Tyrone Power also acts well, especially in the closing act; but Charles Dalton is scarcely equal to the part of the vicar. Walter Hampden plays the part of the butler—evidently intended as a reincarnation of Christ—with remarkable dignity, tact, and feeling. Altogether, the representation was worthy of the play—which is saying a good deal—and rivetted the attention of a crowded house. Of course, some persons laughed in the wrong places, but that was inevitable.

"The Scarecrow" is the name of a new play which Percy Mackaye has written around the legend of "Feathertop," in Hawthorne's "Mosses from an Old Manse." In his own words he has sought "to elaborate it to a different and more inclusive issue," but in this attempt he has committed a literary and dramatic mistake. "Feathertop" is a humorous satire upon fashionable fools and coxcombs and the witch-created puppet is an appropriate device for the enforcement of the desired moral. But Mr. Mackaye, while adopting the main outlines of the old tale, presents his scarecrow as a type of mankind in general, makes him the exponent of a dreary materialism, and, in the end converts grotesque comedy into veritable tragedy. His puppet acquires true manhood, or the essence of it, through the influence of love, defies the power of his creator, and, realizing (by what process of enlightenment it is hard to guess) the bitterness of his lot, heroically declines to prolong his contemptible existence. Hawthorne was too wise to introduce a supernatural imp as an auxiliary promulgation of an intellectual agnosticism, not to speak of a blank rationalism, and it is strange that the incongruity of such a proceeding did not strike Mr. Mackaye. But the radical artistic and dramatic fault in his design is the sudden attribution of human reason, passion, and religious instincts to his man of straw the moment he is deprived of the diabolical intelligence which heretofore had been his sole prompter. The scene in which he becomes a living entity is imaginative, eloquent, and dramatic—it is, indeed, the one passage which is worthy of Mr. Mackaye's ability—but it is hopelessly inconsistent with all that has gone before—which is a grave dramatic offence—and is too vague in its utterances to warrant conjecture as to its intended purport. It is not likely that the piece will ever have success upon the stage, or add anything to Mr. Mackaye's reputation. It is too incoherent to be taken seriously. Perhaps his own definition of it, "a tragedy of the ludicrous," is apt, though not quite in the sense intended.

"The Merchant of Venice" will furnish the next grand spectacular Shakespearean revival by Beerbohm Tree, at His Majesty's Theatre in London. Miss Alexandra Carlisle, who has never before essayed a Shakespearean part of any kind, will be Portia. Alfred Brydone will be Prince of Morocco; Auriol Lee, Jessica; Basil Gill, Bassanio, and Dorothy Minto, Nerissa.

Miss Ellen Terry has produced her new romantic drama, written by Miss Gladys Unger, called "Henry of Lancaster," at Nottingham, England, with marked success. She hopes to bring it out in London in September. The story deals with the love of Harry of Richmond for the Princess Elizabeth and the checkmating of Richard III. Miss Terry plays the Princess Elizabeth, while Frank Fenton is Richard III.

The next Shakespeare Day, as arranged by the Deutsche Shakespeare Gesellschaft, will be held April 23 in Weimar. The leading address will be delivered by Prof. Lorenz Morsbach, and a play by Shakespeare will be given in the Neues Weimarer Theater.

Music.

Stories of Wagner's Operas Told for Children. By Elizabeth M. Wheelock. Indianapolis: The Bobbs-Merrill Co.

Brahms. By H. C. Colles. New York: Brentano's.

Grieg. By E. Markham Lee. London: George Bell & Sons.

There was a time when plot counted for no more in grand opera than it does today in the variety shows known as musical comedies; in fact, it was held of less account, for in our shows the audience at any rate attends to whatever occurs on the stage, whereas the Italian-opera audiences of the eighteenth century listened only to the principal arias, devoting the rest of the time to talking, playing cards, or eating ices in their boxes, paying no attention whatever to the action; and as late as the fourth decade of the nineteenth century Liszt made himself unpopular in Italy by commenting sarcastically on such "manners at the opera" in Milan—manners which were more or less copied in other countries. To-day it is difficult for an opera singer to please an audience unless he is also a good actor, and most of the modern operas (for example, "Tosca," "Madama Butterfly," "Louise," "Pelléas et Mélisande") owe their success hardly as much to the music as to the play, which is closely followed. The difference between the olden times and the present is vividly illustrated also by the amazing amount of attention given to Wagner's operatic poems. Every season brings three or four attempts to tell the Wagner stories anew in prose, as a preparation for the full enjoyment of the operas. The latest of these attempts is Mrs. Wheelock's volume. She thinks it "quite unnecessary to urge that an acquaintance with these stories before children come to be 'grown ups' is almost indispensable." She has put them down exactly as she has many times told them to children of all ages, in school and elsewhere, and she aptly characterizes her accounts as "mere conversations put upon paper." She has been remarkably successful in infusing the real narrative spirit into these tales, and her book may be placed by the side of the Grimm and the Andersen fairy tales. Seven of the best Wagner operas are included, three of them—"Tannhäuser," "Tristan" and "Parsifal"—being left out, for obvious reasons.

Like Wagner, Brahms seems to be holding his own, notwithstanding the ravings and ravages of the Richard Strauss and Debussy factions, who would sponge out as antiquated everything written before these two men. One of the German biographies of Brahms, by Dr. Reimann, has reached its eleventh edition in a few years; nor is there a lack of books on Brahms in English, among them original works by J. L. Erb, W. H. Hadow, G. Henschel, F. May, and translations of several German monographs. The latest addition to the list is of modest proportions (168 pages); it does not attempt to present any new material, or to tell the uneventful life of this composer, but contents itself with giving a concise and lucid description of his works, which must be commended also for its sanity and its freedom from "gush." The least satisfactory chapter is the last, "The Position of Brahms"; it does not sufficiently summarize his achievements and his failures. The most instructive pages are those on which the author contrasts the first edition of the B major trio with the later version as an example of the development of Brahms's style.

Grieg had only two books printed about him while he was living, one in Norwegian, the other in English, but before the end of the year Germany will contribute three biographies, and Mr. Lee's book makes the second in English. It is a tiny volume of only eighty pages, yet the author succeeded in finding some interesting material that had escaped the eyes of his predecessor. He calls attention to the fact that Grieg was one of the great harmonic innovators long before Strauss, Debussy, and Puccini accustomed our ears to almost any possible tone-combinations. He declaims against the foolish persons who sneer at Grieg's early piano pieces because they are in the hands of every school girl: "seeing how beautiful and poetical these pieces are, this is a matter rather for felicitation than for contempt." And then he places himself in a line with those same foolish persons by doubting Grieg's place among the immortals because "his genius is too readily perceived," and there is "none of that patient study requisite that rewards the persistence of the follower of Bach or of Brahms."

The last artistic achievement of Heinrich Conried as manager of the Metropolitan Opera House was the production of Beethoven's "Fidelio" in the Mahler version. This version, when first given in Vienna, four years ago, was highly praised by some because of its greater scenic variety and musical coherency, while censured by others because of its disregard, in many places, of the traditions. But, inasmuch as Beethoven himself, stubborn though he was, worked over the whole opera repeatedly in conformity with the advice of experts, Mr. Mahler may well believe that Beethoven would have approved these emendations, which undoubtedly improve the opera's chance of success. While retaining the division into two acts, Mahler makes two distinct scenes in each act; he connects those in the first by playing the march that heralds the approach of Pizarro and his bodyguard as an intermezzo; and in the second act the third "Leonore" overture is played with the curtain down and the house darkened while the scene is changed from the dungeon to the bastion at the end of the fortress. The "Leonore" overture, thus played, aroused such enthusiasm as it has not provoked since Seidl conducted it in the same house, with Lilli Lehmann and Albert Niemann as Fidelio and Florestan. The Conried cast included in these parts Berta Morena and Carl Burrian, besides Bella Alten and Messrs. Goritz, Blass, Reiss; and Van Rooy. The opera had been carefully rehearsed—almost too carefully, for in the effort to follow Mr. Mahler's minutest directions the singers lost some of their spontaneity. But on the whole it was the best of Mr. Mahler's achievements here, and one of the best of the season at the Metropolitan, which closes next week, except that Wagner's Nibelung dramas will be sung during the week beginning April 13 by the German wing of the company, while the Italian wing will be busy in Baltimore.

Max Fiedler, who has been chosen to succeed Dr. Muck as conductor of the Boston Symphony Orchestra, is known to concert-goers in this city, as one of the "guest conductors" of the Philharmonic Society in 1905. He was born at Zittau, Saxony, in 1859, and he is at present conductor of the Hamburg Philharmonic. He has composed a symphony, some chamber music, songs, and pianoforte pieces.

Art.

Les Clouet: Biographie critique, illustrée de vingt-quatre reproductions hors texte. Par Alphonse Germain. Paris: Henri Laurens. 2 fr.

Among the best of the French portrait painters of the sixteenth century were the Clouets, father and son. The former was probably a native of Flanders or Brabant; the latter was born at Tours, and was a Frenchman in all the main characteristics of his art, although in it traces of the Flemish realistic manner are clearly discernible. Despite the fact that they are represented in the Louvre and at the museum of Chantilly, they are as yet imperfectly known in France, while in this country they are scarcely more than a name. Yet they stand out so conspicuously in the sixteenth century barrenness that they fully deserve the special study which M. Germain has devoted to them. With commendable patience and critical acumen he has sifted from among the mass of works commonly attributed to the two artists, those that alone bear the stamp of authenticity. Among these the following are undoubtedly by Jean Clouet: the large Francis the First in the Louvre, the Montmorency of the Louvre, and the one now in the Lyons gallery, the miniatures representing the Marignan knights illustrating a manuscript—la Guerre Gallique—in the possession of the National Library of Paris. To François, Jean's son, and by far the more important of the two, M. Germain attributes the portraits of Francis I. on horseback, owned by the Uffizi in Florence, François de Guise, Charles the Ninth, and Elizabeth of Austria in the Louvre, the large Charles the Ninth in Vienna, a miniature of Henry II., in the Cabinet des Estampes, one of Mary Stuart at Windsor castle, a Marguerite de Valois at Chantilly, and, by no means the least important, a series of colored crayon portraits preserved in the Cabinet des Estampes. These are only sketches, but they are executed with unusual care and show, as it were, the artist at work, better than either the oils or miniatures could do; for they are made from life, and, judging from the pains with which every line of the face, every color and shade of the flesh, and, in some, every detail of the costume is worked out, were evidently intended to guide the artist in the final execution of the intended portrait on panel or parchment. M. Germain ranks François Clouet among the greatest portraitists of his time. Like his father, he was a lover of sincerity, a loyal interpreter, a vivifier; and better than his father, with a more masterly and more searching brush, he revealed the secrets of the soul by fixing the most fugitive facial expressions.

M. Germain's latest work is a solid contribution to the literature of painting in the sixteenth century. Like his previous writings, it is thoroughly painstaking. Thanks to scrupulous documentation and judiciously chosen specimens of the Clouets' works illustrating the text, the reader can get a clear enough idea of the two masters. In addition to a careful biography and the more technical discussion there are some interesting pages about the society in which the artists moved, and the artistic tastes of the French under the last Valois rulers. The reader would have welcomed more historical details, but it is probable that the author was hampered in this direction by the requirements of the series to which this work belongs, Les Grands artistes: leur vie—leur œuvre. We may remark in passing that it is to be regretted that there is no English translation of this highly valuable collection of monographs. The book in question deserves a place with M. Germain's "Le Sentiment de l'art." M. Germain is not only a scholar, but an artist; and although he has of late years abandoned the brush in order to write, his technical knowledge and his artistic temperament lend his books a charm too often lacking in works of erudition or criticism.

Mitchell Kennerley publishes a tiny volume on François-Auguste Rodin, by Frederick Lawton, the author of a larger life of the sculptor published a year ago by T. Fisher Unwin. Mr. Lawton writes as a convinced, almost a thick-and-thin, Rodinite, and his sketch may be useful to those who would understand the point of view of the sculptor and of his extreme admirers. Even he, however, has his reservations to make as to the eccentricities of some of Rodin's later works—his excessive use of patches of unhewn marble and his arbitrary lopping-off of heads and limbs. To the general art lover these must ever seem either deliberate bids for attention and stimuli to jaded sensibilities, or the expression of a self-consciousness exasperated to the danger line by adulation.

The *Rassegna d'Arte* for February contains, among other interesting matter, an essay, by A. Balletti, on Sculptured Madonnas in the District of Reggio (Emilia). This article with its illustrations will be useful to collectors, for such rather hybrid sculpture as that of Emilia and Romagna is frequently offered as the product of the great schools.

Pietro d'Achiardi's "Sebastiano del Piombo" (Rome: Casa editrice de *l'Arte*) is, we believe, the first independent monograph on Michelangelo's great abettor in the rivalry with Raphael. The well-illustrated volume is the painstaking effort of a young Italian scholar to establish a canon for the Venetian eclectic and to estimate him also as an artist. Both undertakings are beset with difficulties. Sebastiano's beginnings at Venice remain dark to us, being represented by few works, and those in part doubtful; while the frescoes of the Farnesina, which exemplify his first contact with the art of Rome, have never been photographed. These serious gaps must make any investigation of the subject at best provisional. Considering these inevitable drawbacks Signor d'Achiardi comes off creditably. He has few original views to advance, but he is thorough and judicious, and his careful sifting of the drawings by or near Sebastiano supplements in a fashion the remarkable chapter on this master in Berenson's "Drawings by the Florentine Painters." We miss the genuine portrait (probably called erroneously a Columbus) in the Metropolitan Museum, and also a Madonna in the possession of the dealer, Mr. Chapman, in this city—a painting recalling our artist's latest manner and attributed to him by critics of repute.

The Archæological Society of Athens announces the discovery near the site of Pegasus in Thessaly of nearly a thousand marble stelæ, of which about four hundred bear traces of important encaustic paintings of unusual originality and workmanship. They are said to belong to the second and third centuries before Christ, and there is reason for attributing some of the work to Polignotos and Apelles. Thirty, in a state of perfect preservation, show brilliant coloring.

An investigation of the prehistoric remains in the island of Sardinia has been made recently under the direction of the British School of Archæology at Rome by Dr. Duncan Mackenzie, formerly associated with the excavations at Knossos in Crete, and Dr. T. Ashby, the head of the school. The most important results relate to the so-called "tombs of the giants," and the *nuraghe*. These *nuraghe*, as they are called by the natives, are huge prehistoric structures, probably fortifications, built of large blocks of stone similar to those used in the "tombs of the giants." They are four-sided, completely covered, and have an entrance at one rounded angle. In the middle rises a large circular tower. The tombs were found in many cases in such near neighborhood to the *nuraghe* as to suggest a close relationship between these two forms of monuments and to make it seem probable that the "tombs of the giants" were the burial places of the rulers of the inhabitants of the *nuraghe*. In some cases remains of other habitations were found near the *nuraghe*, but never more than one such tomb. This fact suggests the theory that some other form of burial was adopted by the humbler inhabitants, a problem still to be solved. A full account of Dr. Mackenzie's investigations will be given in *Ausonia*, the review published by the Italian Society of Archæology and History of Art.

Important discoveries have again been made on the Roman Forum. Commendatore Boni is trying in this season's excavations to find the remains of the primitive burial place on the Velia, of the temple of Jupiter Stator, and of the dwellings of the *rex sacrificulus* and the *flamen dialis*, which we are told were on the highest point of the Sacred Way. The excavations have already shown that the Sacred Way continued to rise in a straight line under the temple of Venus and Rome. Moreover, quite close to the Arch of Titus were found two parallel walls, consisting of great square masses of tufa, which have been identified with some probability as the remains of the temple of Jupiter Stator. This temple was, according to tradition, originally built by Romulus, but the present ruins date from a construction of Republican times. It was here that the Senate sometimes met, and that Cicero delivered his famous first oration against Catiline. The walls of the temple appear to have been cut through when the foundations for the Arch of Titus were built. A well which was found close to these walls contained various objects dating from the second and third centuries B. C.: a vase decoration consisting of a woman's head, a bronze quadrans with the figure of a wild boar, lead weights, lamps, and various pieces of pottery. A number of private, or semi-official, dwellings appear also to have stood in this part of the Forum.

The excavations of French archæologists in Tunis have recently brought to light some remarkable finds. Among the buildings the most important is a temple of Saturn, discovered at Dugga, of which a large number of columns are still in good preservation. Among the statues the figure of an Athena wearing a girdle decorated with the head of Medusa is noteworthy, as is also a colossal statue of Apollo, three metres in height, carrying a richly ornamented lyre. A large number of important inscriptions have also been found.

The Society of Scottish Antiquaries has once more asked for funds to carry on exploration of the Roman station of Newstead, near Melrose. The importance of this work both for the value and artistic interest of the objects it has served to bring to light and the evidence it has afforded as to the Roman occupation of Scotland, has been recognized by those who, like Prof. F. J. Haverfield, are most competent to judge. What remains to be done is small in comparison with what has been already accomplished. In the circular accompanying the appeal is an account of the nature and extent of the ground still to be investigated and of the operations carried out in 1907. (See the *Nation* of October 3, 1907, p. 304.) The explorers hope to find the Roman cemetery and to ascertain the position of the bridge over the Tweed. Subscribers should write to John Notman, 28 St. Andrew Square, Edinburgh (the treasurer of the society), or to Joseph Anderson, National Museum of Antiquities, Queen Street, Edinburgh.

The advisory committee of the National Gallery of Art has been selected, as follows: Frederic Crowninshield, Fine Arts Federation of New York; Herbert Adams, New York, National Sculpture Society; Edwin H. Blashfield, New York, National Academy of Design; Francis D. Millet, New York; W. H. Holmes, Washington, D. C., the Smithsonian Institution.

The jury of award for the Carnegie Institute International Art Exhibition of 1908 at Pittsburgh consists of J. W. Alexander, William M. Chase, Kenyon Cox, Robert Henri, and Irving R. Wiles, New York; G. H. Breitner and Albert Neuhuijs, Amsterdam, Holland; Charles H. Davis, Mystic, Conn.; W. L. Lathrop, New Hope, Pa.; and W. Elmer Schofield, Philadelphia.

Among the exhibitions at the dealers' galleries in this city are the eleventh annual exhibition of the "Ten American Painters," at Montross's, till April 4; and paintings by Gustave Loiseau, Durand-Ruel's, April 11.

At an auction at Christie's, London, March 7, the following drawings were sold: Turner, Constance, £2,310; Windsor Castle, £1,785; Carnavon Castle, £1.018; Zurich, £714; Sir E. Burne-Jones, Love among the Ruins, £1,653; W. Hunt, Too Hot, £767; G. J. Pinwell, The Great Lady, £472; Prout, The Entrance to Chartres Cathedral, £483; T. M. Richardson, Naples, £388; C. Robertson, The Mosque Door, £273; D. G. Rossetti, Lady Lilith, £441; Sir L. Alma Tadema, A Bacchante, £357; D. Cox, Lymne Castle, Kent, £252; Sir J. Gilbert, The Standard Bearer, £220; H. G. Hine, Folkington Hill, Sussex, £283; F. Walker, The Harbor of Refuge, £2,709; The Violet Field, £1,680; The Beehives, £577; P. de Wint, A View of Lincoln, from the River, £1,102; Paintings; W. Müller, Carrying the Hay, £357; A. Mauve, On the Scheldt, £892; Millais, Orphans, £1,617; F. Walker, The Old Gate, £1,575; G. Mason, The Gander, £1,995; J. Linnell, sen., The Timber Wagon, £525.

Paul Sain, a pupil of Gérôme and known for pictures of romantic Avignon, has died in that city at the age of fifty-four. From Berlin comes the news of the death of Capt. W. von Marées, an associate of Dörpfeld in the excavations at Leucas, and an expert in topographical work. At Dresden another artist, Prof. Ernst Hottenroth, successful in architectural sculpture and decorative work, has died in his fortieth year.

New York, 1865-1907. v. 1-85. $3.

Indexed in Poole, abridged Poole, Readers' Guide, and Library Index.

A journal of politics, literature, science, and art. In politics stands as a free lance, a position which allows of unlimited criticism, usually based on careful study of subject, and a knowledge of history and politics of the past. The book reviews are written by specialists, are scholarly, critical—sometimes hypercritical—but never too technical for comprehension of the intelligent reader. No periodical can be compared with it because none other covers just the same ground, and certainly none other is characterized with the same independence of judgment, and freedom of utterance—an independence and freedom which give it a certain authority and standing not enjoyed by any American contemporary.

Ready March 28

The Programme of Modernism

A Reply to the Encyclical of Pius X.

With the Text of the Encyclical. Translated from the Italian by Rev. Father George Tyrrell, and an Introduction by A. Leslie Lilley.

No. 25 in Crown Theological Library.
$1.50 net.

Though written by Roman Catholics for Roman Catholics, this book deals with problems which touch not Rome only, but almost every form of religion. The book is, perhaps, the most masterly attempt that has so far been made to gather together in a brief space all the assured results of Biblical and historical criticism, and to reconcile them with a deeper and more spiritual faith in Catholic Christianity.

G. P. Putnam's Sons, New York and London

WHAT WE ARE DOING FOR LIBRARIANS

We now have the most efficient department for the handling of Library orders.

1. A tremendous miscellaneous stock.
2. Greatly increased facilities for the importation of English publications.
3. Competent bookmen to price lists and collect books.

All of this means prompt and complete shipments and right prices.

33-37 East Seventeenth St., New York

NOTES ON CHAUCER. A Commentary on the Prolog and six Canterbury Tales By HENRY BARRETT HINCKLEY. 260 pages, beside Index and Bibliography. Cloth, gilt top. Now ready Price $3.00. Circular on application. Address THE NONOTUCK PRESS, Box 267, Northampton, Mass., U. S. A.

A Mind That Found Itself

By CLIFFORD W. BEERS. Crown 8vo. pp. xii-363. $1.50, *net.* By mail, $1.66.

This book is the work of a man who became mentally disordered and was confined for two years in various private and public institutions in Connecticut. His reason restored, he has written a detailed account of his experiences. Professor William James says of it: "In style, in temper, and good taste, it is irreproachable. As for contents it is fit to remain in literature as a classic account 'from within' of an insane person's psychology."

LONGMANS, GREEN, & CO., New York

Just Published

Newton & Treat's American History Outline for Review

25 cents

Presents in chronological order a brief summary of the principal events, given in a manner clear-cut and vivid, and easy of reference. The book cannot fail to prove of help to all teachers of American history.

ROBERT LEE DURHAM'S

Great American novel

THE CALL OF THE SOUTH

The Nation.

NEW YORK, THURSDAY, APRIL 2, 1908.

The Week.

In Gov. Johnson's letter announcing his willingness to be a candidate for the Presidency, the public will detect a pleasing note of dignity and strength. The Governor of Minnesota, like the Governor of New York, is not going into a scramble for the nomination. He merely states that, if his party calls upon him, he is ready to do his best to serve it and the country. In affirming that no American citizen "should be an active, open candidate for the nomination to the Presidency," Gov. Johnson takes a position with which even Mr. Bryan is forced to agree—in theory. He, too, professes to be simply asking the rank and file of the party to make their wishes known. But he certainly gives the rank and file pretty frequent nudges. He has a way of turning up at critical moments in States that are lukewarm towards him. Last Friday, for example, he began a fight in Pennsylvania against the Democratic national committeeman, Mr. Guffey, who opposes instructions for Mr. Bryan. At Pittsburgh, Mr. Bryan brought out a man whom he proposes to have chosen in Guffey's place. But this, of course, is only a patient and serene waiting on the will of the party.

"In order to pick up the Illinois delegates to the Denver convention," says the Columbus, O., *Evening Dispatch*, "Mr. Bryan has dropped his quarrel with Roger Sullivan. The delegates will better serve his purpose." But a Taft organ is hardly in position to hurl that particular stone with much effect. Secretary Taft had a famous quarrel with the Roger Sullivan of Cincinnati about the same time that Mr. Bryan was trying to down the Democratic boss of Chicago. Nothing has been heard of that quarrel since the Secretary has been before the country as a candidate for the Presidency, and the party of the second part is now one of the Taft delegation to the Chicago Convention. For the services of Boss Cox in helping to solidify that delegation, the voters of Ohio are now aware that his wishes were carefully considered in the make-up of the Republican State ticket, over and above his restoration to old-time supremacy in the government of Cincinnati. If all this is any more distasteful to Mr. Taft than the position of Roger Sullivan to Mr. Bryan, one can only say that the Secretary has not as yet made his chagrin publicly known.

In one sense little more than a case of the Dutch taking Holland, the endorsement of Cannon in the Illinois Convention is a reminder that, in the sequence of conventions, most of the ground which Taft expected to control without dispute has now been passed. The weekly summaries of delegates elected have thus far been on their face Taft documents, in so far as a full Taft column with empty spaces beneath the names of rival candidates could convey the impression that all was going Taft's way. Even if these other columns are to contain only the figures of delegates conceded to "favorite sons" from the first, it will materially change the appearance of the tabulations. The early conventions have been, in fact, largely those of picked States and Territories. They were to have given a great initial impetus to the Taft candidacy, but, in spite of his long lead as the elected delegations stand to-day, they have not altogether fulfilled expectations. There are more uninstructed delegates—Rhode Island's eight being among the latest—and far more contested than the Taft managers had expected. The South, instead of extending with true Southern hospitality the invitation to the Republicans of other sections to ride in the band-wagon, has, by wrangling and by revelations of officeholders' activity, deprived its endorsement of all moral and nearly all political effect. Taft's campaign progresses, but it must be remembered that most of the really debatable ground is still to be reached.

A parallel of the deadliest kind could be drawn between the President's letter to Mr. Foulke on officeholders in politics, and the official statement given out from the White House Monday in answer to the protests from Gloucester citizens about the attempt of Federal employees to dictate party nominations. Contrast the indignant denials made to Mr. Foulke with this:

> The mere fact that a man is an officeholder does not rob him of his political rights and privileges, and . . . he has a perfect right to attend caucuses, primaries, and conventions, and take an active part in them.

Such language not only eats up Mr. Roosevelt's previous utterances; it goes squarely against the rules which he has officially approved. If he were still a Civil Service Commissioner, and if such gross violations of decency and of Presidential orders were going on under another's Administration, we should get loud moral blasts from him of the kind which he actually emitted when serving under President Harrison and President Cleveland. But now, having set out to name his successor by hook or by crook, he has thrown all his professions about civil-service reform to the winds. Federal officeholders are everywhere engaging in political work with an effrontery not known since Grant's time.

If this were a less mad world politically, the formal offer of Democratic support for a Republican President's bills, made in the House by Representative John Sharp Williams, might be a piece of constructive statesmanship. It is as true that twenty-five Republicans, by combining with the united Democrats, can put any piece of legislation through the House, as that this is not the way in which important bills get themselves passed eight months before a Presidential election in the United States of America. The fate of the various bills referred to, providing publicity of campaign contributions, a child-labor law for the District of Columbia and the Territories, a law forbidding the issue of injunctions without notice, an employers' liability law that will pass the Supreme Court, free pulp and printing paper, and Federal liability for government employees—these bills, whether they are passed or not, will form part of the record of a Republican Congress. The attitude which the Democrats take on these measures will similarly furnish a legitimate argument why their party should or should not be entrusted with the control of the next House. Because the Republicans like to twit the Democrats with the futility of their efforts and their general lack of constructive ability, we presume that the Republicans, other things being equal, would rather have the Democrats say, "We tried but we couldn't," than "They couldn't do it till we helped."

If the Congressmen who have been muttering against Speaker Cannon wanted a fighting issue, they had it in the so-called Civic Federation bill introduced by Mr. Hepburn of Iowa. The Speaker had referred it to the Judiciary Committee, a crabbed aggregation of lawyers, as full of Constitutional scruples as the Supreme Court itself. Col. Hepburn wanted it to go to his own Committee on Interstate and Foreign Commerce, the one that reported the rate bill and much other beneficent legislation. He is not only a veteran of twenty years service, but a formidable fighter as well. He went about with a resolution to overrule the Speaker, and asked the support of all those who had felt the Speaker's chastening hand. There are many such. It stands to reason that in the five years since Mr. Cannon took up the gavel a large body of grievances has accumulated. So the issue was joined last Saturday on the question of revolt. The outcome became clear on Monday. It was that the Civic Federation bill would remain with the Judiciary Committee. And there it abides. Congress has done many queer things in its time, but when a member dares the wrath of the Speaker six months before a Presidential election, the outcome may be predicted with some certainty.

George III. was dragged from his grave again last week in the House of Representatives, to give point to the charge that President Roosevelt had attempted to browbeat a member. The alleged victim of Presidential hectoring promptly and handsomely acquitted Mr. Roosevelt of anything more heinous than using "vigorous gestures." The incident arose in connection with the prayer for the impeachment of Judge Wilfley of the United States Court in China. A severe stickler for etiquette might, we think, have objected to the public exoneration of the accused judge by the President and Secretary Root while the case was pending before the Judiciary Committee of the House. Yet the establishment of this American court in China has been a project very near the heart of the Administration, and it need not be blamed too heavily for coming to the defence of Judge Wilfley. Still, the House has its own duty to discharge in the premises; and a subcommittee has already reported that, while the proofs adduced do not warrant impeachment, they do justify censure. Doubtless we shall hear more of the matter. Meanwhile, leaving George III. to rest in peace, it might be just as well for the House to bear in mind that other English precedent, which forbade members of the Commons to go and "exasperate" the King.

If hope was entertained by any one that the investigation of the defects in our battleships could be suspended and forgotten, that hope must have vanished in the light of recent developments. Whatever be the feeling of experts, the endorsement of the so-called "Reuterdahl charges," in substance, by Admiral Evans will give the greatest possible weight to these allegations in the minds of the people generally. Criticisms that might be passed over for "reasons of state" when uttered by a meddlesome civilian, or even by some captious upstart in the service, will sound differently to many persons when voiced by "Fighting Bob." As for the attitude of the Senate committee, it has been inexplicable from the first and cannot be maintained much longer. This government cannot be conducted in secrecy, and the body which supplies the millions for our navy ought to welcome every piece of information showing faults that can be remedied in existing vessels, and avoided in those still to be built. Welcome or not, the truth must come out now; and one part of the truth must be an explanation why a letter like that of Admiral Evans, stating that our battleships, by reason of the position of their armor belts, were no better than armored cruisers, could remain apparently pigeon-holed since last summer.

The Little Peterkin who asks, "What good came of it at last?" in reference to the war for the two-cent fare, gets the answer fainter and fainter. The presidents and general counsels of Western railroads who have just conferred in Chicago, have decided to contest the passenger-fare laws of Illinois and Missouri and the freight rate law of the latter State. In the other States which passed similar statutes similar action will be taken, it is said, though most of these cases must be in the courts already. It is worth noting that, while the decision reached through the ascending series of Federal courts in the Minnesota and North Carolina cases is the basis for the Illinois and Missouri contests, these are probably to be brought before the State courts. That the long and bitter contest over the prerogatives of State tribunals has ended in a vindication of the right of the lower Federal courts to hear these Constitutional issues does not change the general feeling that the normal way to begin the fight on a State statute is in a State court. Pennsylvania's two-cent fare law was set aside without any resort to the Federal judiciary.

The citizens' health committee of San Francisco has issued a circular pointing out that if the plague should increase, the city would probably be quarantined. It therefore recommends a war of extermination upon rats, on the ground that "this plague is primarily a disease of the rat. . . . The flea living on an infected rat becomes infected. If the infected flea bites a human being that person becomes infected." This view is undoubtedly that held by the majority of experts as a result of recent observations and experiments. There are, however, dissenting voices. One San Francisco physician denounces the theory as nonsense, the measures taken for the extermination of rats as "hysterical unreason," and the whole agitation as a sort of "brain-storm." He truly says that the last word has not been spoken on the subject, yet there can hardly be a doubt that the rat is the chief disseminator of the plague, though it may not be the only one. In W. Fischer's "Geschichte des Teufels" some curious facts are given indicating that rats and mice were associated in the popular mind many centuries ago with the plague. Mediæval monks sold amulets against rats. In India the rat is the symbol of death. On Greek coins a mouse in front of Apollo makes him the bringer of pestilence, and in Christian demonology the mouse was the symbol of the plague-devil.

The Canadian tariff, enacted in the winter of 1906-7, has sometimes been described as the Tombstone Tariff. This was because of the increased duty on tombstones from Scotland, that was imposed in the interest of the quarrymen of the St. Croix River country. They protested that they could not stand up against the pauper labor of Aberdeen; and so the vaunted preference for Great Britain was thrust aside, and the duty on granite from Scotland increased by 7 1-3 per cent. Quite apart from this fact the term Tombstone Tariff is exceedingly appropriate for the Fielding Tariff of 1907; for under it were finally buried all the pledges of a tariff for revenue only, and all the vehement declarations against bounties to industries from the Dominion Treasury, that were made by Laurier and Cartwright when the Liberals were in opposition at Ottawa from 1878 to 1896. Still, the Tombstone Tariff may register the high-water mark of protection in Canada, so far as the present Liberal government is concerned. The Budget for 1908-9, now before the House of Commons, is one of the most remarkable of the eleven Budgets for which Mr. Fielding, the Minister of Finance, has been responsible. It does not contain, and does not foreshadow, a single new protectionist proposal. There is nothing for the tinplate factory at Morrisburg, Ont., whose product is now entirely outside the tariff breastworks; and, contrary to expectations at Halifax and Sydney, and also at Toronto, Collingwood, and Bridgeburg, Ont., where there are steel shipbuilding yards, there is not a solitary addition to the bounty list, which has been gradually growing since the Laurier government came into power in 1896. From 1897 to 1907 there was scarcely a session of Parliament in which some new concession was not made to the protected interests. For the present, however, there is to be a halt. In the autumn of this year a general election is due. The scandals—political, financial, and personal—that have been uncovered at Ottawa during the last two years are alarming the government; and, moreover, when the Tariff Commission was travelling from province to province in the winter of 1905-6, it was made clear to the Ministers who composed it—Fielding, Paterson, and Brodeur—that in the West, and also in the provinces east of the Great Lakes, the farmers were displeased with the adoption of the Conservative protection policy by a Liberal government. The change in attitude serves at least to indicate that the Laurier government is really apprehensive about the farmers' vote in the coming general election.

It is nearly always the weakness of political assassination that, even when it attains its immediate object, it does so at an excessive cost to the cause it would serve. The murder of Durham W. Stevens by a Korean fanatic in San Francisco was doubtless intended to call the attention of the world to what a large section of the Korean people regard as the cruel and oppressive rule of Japan in her new protectorate. Actually, the result of the assassination has been to bring odium on a people which is described as too cowardly to adopt any method of defending its liberties other than assassination. Yet that is not altogether a fair view. The Korean temperament may not be militant; centuries of misrule and oppression may have destroyed the capacity for organized resistance to foreign aggression; yet repeated uprisings in the provinces and unrest at Seul have shown that even the Korean will turn if sufficiently trodden upon. The very fact that a people so averse to fighting should have been driven to armed resistance against hopeless odds, is good testimony to the wrong they have had to bear. That Japanese rule in Korea during the first two years after the war was tyrannical in the extreme, has never been seriously denied. The defence that such a state of affairs was unavoidable immediately after the relaxed strain of a great conflict may be a good one. Probably, the old Korean Emperor did stand in the way of a better understanding between the conqueror and the conquered. Conceivably, too, Japanese rule may in the end bring good to Korea. Yet the existence of a strong national feeling that will maintain itself in the face of very great odds, is a factor Japan must carefully take into consideration.

Several causes no doubt contributed to the overwhelming defeat of the Liberals in the bye-election in one of the London constituencies. The overturn is startling. Two years ago, the Liberals won the seat for Peckham by a majority of 2,339; last week they lost it to the Conservatives by a majority of 2,494. Such a reversal cannot be due merely to the ordinary "swing of the pendulum" against a party in power. Nor can the slackening of trade, which England has felt in some degree, with the new occasion it has given for pressing Chamberlain's ideas of fiscal reform so as to "make work," alone account for the loss of Liberal votes. More effective must have been the dread of socialistic measures. London's dislike of radical Socialism was clearly shown last year in the elections for the County Council; and since then the cry that the country must make common cause against Socialism has been raised still more loudly. But the chief reason for the Liberal rout in Peckham, it seems to be agreed, was the government's licensing bill, which proposed to close thousands of saloons. The publicans and their dependents have shown their political power before, and they undoubtedly used it to the full last week in behalf of the Conservatives. The general election of 1900 was said at the time to have been really gained for the Conservatives by "Beer and the Bible"—that is, by concessions to the liquor interests and to the church schools. Peckham certainly seems to have taken kindly to that holy alliance.

The Macedonian problem has been brought a step nearer solution—however far off the end may yet be—by Sir Edward Grey's proposals as embodied in his recent note to the Powers. The "Lebanonization" of Macedonia is already being discussed with warmth by the European press. The British Foreign Secretary's scheme of reform calls for the appointment of a Turkish governor of Macedonia, "whose character and capacity shall commend themselves to the Powers." He is not to be necessarily a Christian, but is to have a free hand in the performance of his duties, to hold office for a stated term, and not to be removed without the consent of the Powers. It is also suggested that the number of Turkish troops in Macedonia be decreased so as to lighten the financial burden imposed on the natives. In return the Porte shall receive from the Powers a guarantee of territorial integrity. So far, the British note has been received with hostile or non-committal skepticism by the Continental press. This, of course, was to be expected. When it has been found impossible to maintain the European Concert for the enforcement of such police regulations as should put an end to the chronic state of massacre in Macedonia, it is still less likely that the establishment of Macedonian autonomy will commend itself to the united judgment of the Powers in the absence of the very extremest pressure. Yet such pressure is almost to be found in present conditions in Macedonia. At least, a great step has been made when a leading Power like Great Britain definitely abandons the present ludicrous game of international hide-and-seek reform for a policy of drastic innovation which from now on must be taken seriously into account by European diplomacy.

That matters in Finland are approaching a crisis, appears from dispatches reporting an open break between the majority in the Diet and the Senate, which has been charged with lending itself to Russia's renewed machinations for the suppression of Finnish autonomy. The first campaign against Finland began under the Bobrikoff régime, and ended with the surrender of the autocracy as a result of the general upheaval in Russia. The second campaign began late last year when the election of the present pacific Duma showed that the government had the revolutionary movement well in hand. Last February, Governor-General Gerard, who was notoriously acceptable to the Finnish people, was replaced by Gen. Beckmann, who came from the Baltic provinces with a record for sanguinary repression. But M. Stolypin's policy is not the old one of unmixed brutality; it shows an admixture of humor, unconscious, perhaps, but unmistakably present. Last summer, when a bill defining the conditions of naturalization for Russian subjects in Finland was submitted for the Czar's approval, M. Stolypin took his stand, "on the extraordinary principle that, since this bill concerned Russia as well as Finland, it must be dealt with in the manner prescribed for legislative proposals in Russia; that is, it must pass through the Duma and the Council of Empire." Against a Finnish press bill which the government thought too liberal, Premier Stolypin employed the same argument, thus showing himself a far more ardent champion of the rights of the Duma than even M. Milyukoff.

The French press speaks with exultation of recent progress in Algeria and Tunis, as attested by the latest figures on the commercial expansion of the two North African colonies. To a certain extent, enthusiasm may have been stimulated by the desire to keep up the nation's hopes with regard to Morocco; but undoubtedly there is sufficient ground for legitimate pride. The commerce of Algeria, which in 1905 amounted, exports and imports, to 613,000,000 francs, grew to 668,000,000 in the following year and to 774,000,000 in 1907. In Tunis the growth has been from 149,000,000 francs in 1905 to 206,000,000 in 1907. The total for both colonies is thus almost a thousand million francs. In French North Africa, as the *Temps* points out, there are 800,000 Europeans in residence. The anti-colonials are fond of pointing out that the greater part of these are Italians and Spaniards, but French, nevertheless, is the common language. Moreover, economic progress in Algeria has not been fostered at the expense of friendly relations between the natives and the government. The fact that at the present moment the French Parliament has under consideration a project for raising two or three army corps within Algeria for possible service in Europe, shows how confident the government is of the loyalty of the native population.

THE AMBASSADORSHIP MUDDLE.

From every angle of observation, the mishandling of the case of Dr. Hill, who was to have been appointed Ambassador to Germany, appears most unhappy. The vacillations of the Emperor, and the backing and filling of the German Foreign Office, will not help the reputation of German diplomacy for exquisite tact. First, there came the news of Imperial objection to Dr. Hill, notwithstanding the fact of a previous formal assurance that he would be welcomed in Berlin. And exactly what the difficulty was, has not been stated. It was a fault merely hinted and dislike just hesitated. Then, after all the flurry, comes the announcement that whatever opposition had existed has now been withdrawn, and that Berlin will be particularly effusive over Dr. Hill, when he comes as Ambassador.

Yet it is evident that his personal comfort, if not his diplomatic usefulness, as Ambassador to Germany, has been largely destroyed. The relations of an Ambassador to the government to which he is accredited are of such an intimate nature that the mere suspicion of incompatibility is a grave drawback. The President concluded to send Dr. Hill to Berlin, apparently in order to prove that he still thinks him eminently fit for the post, but it is not to be imagined that Dr. Hill could long stay there at ease or with good prospects of success. Despite Bismarck's aversion to Gontaut de Biron, that French Ambassador was kept on at Berlin for a time, but the French government soon found it wise to replace him. So it would almost certainly be with Dr. Hill.

The whole incident speaks of more than diplomatic blundering. What led up to the muddle is even more unpleasant than the misunderstanding itself. Amidst all the motives which are vaguely said to have actuated the German Emperor, one thing is reasonably clear: his desire was to have an American Ambassador who would be able to entertain on a magnificent scale. Ambassador Tower has done this in Berlin. In addition to being a highly cultivated man, he is the possessor of large wealth; and he and his wife have won a great social success. Apparently, the Emperor has thought regretfully of dropping down to an American Ambassador who was merely a scholar, practised in statecraft, whose wife the Kaiser would not be able to refer to as "the Moltke of the German social season." In addition to this local eclipse of fashionable gayety, a certain rivalry between Berlin and London has obviously figured in the case. The American Ambassador to England has lived on a scale which would be called princely, if any princes nowadays had as much money to spend. Mr. Reid's lavish hospitality at Dorchester House, and at the large country place which he has taken the better to figure in the great world, has given him fame, and has doubtless aided him in his real work, but has set a pace which is the envy or despair of other embassies. And, seemingly, the German Emperor has felt that invidious comparisons would be made if, across the North Sea, an American Ambassador should decline the competition in social grandeur. Hence his desire, which, in its expression, has had such unlucky results, that a man of large fortune should be sent to represent the United States in Berlin.

These international jealousies and demands of a social kind are all at the expense of the American diplomatic service. We hear of no such questions of ability to entertain gorgeously raised in connection with the envoys from any other nation. Must we change the old definition, and make it read that an American Ambassador is a man sent abroad to spend $100,000 a year for his country? The contrast with an earlier day seems painful. When George Bancroft was Minister to Germany, no one asked what was his yearly outlay on cut flowers and champagne. No American diplomatist ever stood higher than George P. Marsh, for so many years our representative in Italy; but he was merely a scholar of international reputation, and a delightful gentleman, who lived on his salary. Lowell's great success in England was won on the contents rather of his head than his pocket. Mr. Bayard was held in high esteem in London, though he was compelled to live modestly. Are such examples no longer possible?

We must, in fairness, admit that the scale of things has inevitably changed during the past twenty years. All must see that social intercourse counts more in diplomacy than it used to; and the standards of hospitality have become more expensive. It is hard to think ill of an ambassador's talk if his wines and his *entremets* are always good. This aside, it is clear that a diplomat can pick up more valuable information, and arrive at a better knowledge of public opinion, in clubs and social gatherings than when shut up in an office. But all these considerations only show how inept our Congress has been in raising so many legations to the rank of embassies, without appropriating money enough to enable our ambassadors to live as they should. We have tried to run our diplomacy on the cheap. The result has been to shut up the choice of ambassadors almost exclusively to rich men. But this is unhappily to narrow the range of selection, and to appear to put up the ambassadorships as prizes for large campaign contributions. The whole system is bad. In a way, Dr. Hill is a victim of it. The shortest and most businesslike way out would be for Congress to pass one of the pending bills to purchase embassy buildings in the leading capitals, as other nations do, and then to give our ambassadors a salary adequate to their official needs. If we are going into the game, we must play it according to the rules.

A MESSAGE FOR THE CAMPAIGN.

There will doubtless be flippant remarks on the contrast between the gentle roaring of the President's message last week and the cataclysmic violence of the one he sent to Congress on January 31. If this is the right tone for a state paper, that was distinctly the wrong one; and tone, as Lord Palmerston observed, is what makes the song in public utterances. Mr. Roosevelt's quiet communication to Congress inevitably recalls that servant of Sheridan's who dropped a plate-warmer with a crash, but who hastened to assure his master that nothing was broken. "Do you mean to tell me," demanded Sheridan, "that you made all that noise for nothing?"

Some people are already saying that this mild-mannered message indicates a "surrender" on the part of President Roosevelt. Mr. Bryan described the former wrathful message as "a call to arms." The present one he may feel disposed to call the beating of a retreat. But a sounder view would be that we have before us only one proof more of Mr. Roosevelt's extraordinary suppleness as a politician. He can drop the 'Ercles vein and put on the air of sweet reasonableness quicker than any living man. This is a versatility which he has often displayed. It should be no surprise, therefore, that he appears a changed man when the occasion seems to him to demand it. For there can be no mistake in regarding this message as a deliberate effort of the President to harmonize his party, give it some planks for its platform, and prepare it for the dubious electoral struggle upon which it is entering. This is, at last, a business message. The Republican party is to show once more that the great business interests of the nation are its especial charge. Not in vain did the anxious merchants from the West descend upon the White House. They want some spring trade, and they frankly told Mr. Roosevelt so, and urged him to be calm and rational. Political leaders have been pressing upon him the same duty of moderation. A critical election is impending, and a policy of "get together" is necessary. Hence this temperate message, with not one malefactor eaten alive in it, not one purple patch of vituperation. It is so unsensational as really to be a first-class sensation.

With the President's programme of legislation, no great fault is to be found. Reduced though it is, it is yet far longer than Congress will be disposed to adopt in the time that remains. Much as we should like to see that abolition of the tariff on wood pulp and printing paper which Mr. Roosevelt says should be made "forthwith," we do not expect that this session of Congress will abolish it. The horseleeches of protection always cry, "Give"; they do not give up. Vague recommendations of tariff revision at some indefinite time in the future, they may not object to; but when it comes to surrendering their particular share of the protection plunder, they will fight from the first day to the last. Nor can any one really suppose that the complicated question of postal savings banks can be taken up and satisfactorily disposed of before Congress adjourns.

It is upon other measures that the President and the party leaders have decided to concentrate their efforts. They desire a new employers' liability law, drawn so as to conform to the recent decision of the Supreme Court declaring the old one unconstitutional. As there appears to be general agreement on the principle of such a bill, it will doubtless be passed, after the necessary hammering out has been done in committee and in debate. The proposed amendments to the Anti-Trust Act are not so simple. They are advanced in the interest of railroad and industrial corporations on the one hand, and of organizations of laborers and farmers on the other. But the President's description of the plan is very indefinite; he does "not pretend to say the exact shape the bill should take." Yet the "exact shape" is often of the very essence of the bill. Of the formidable document introduced as a bill by Representative Hepburn, we can only say that it is extremely intricate and puzzling. It appears to be an attempt to explain the obscure by the more obscure. If judges have broken their teeth upon the complex Anti-Trust Act itself, they would be in danger of losing their last remaining molar over these Hepburn amendments. These clauses attempt to set up a distinction between good and bad combinations, and between contracts in restraint of trade that are unreasonable, and those which are reasonable. But this is hard, if not impossible, to do in general terms. A better way would be simply to enact that all "unreasonble" contracts in restraint of trade should be illegal, and leave it to the courts to decide in each instance what is unreasonable.

Mr. Roosevelt's attitude towards the demands of labor leaders is a mixture of reasonable concession and firm opposition. He is willing to have abuses of the writ of injunction guarded against. He freely concedes the right of workingmen to combine and to strike. But he speaks sober words of warning against "violence, disorder, and coercion," in connection with a strike, and declares that they should be "promptly and sternly suppressed." He is also explicitly against the boycott. "Nothing," he says, "should be done to legalize either a blacklist or a boycott that would be illegal at common law." This position we admire so much that we shall not stop to point out how the President has apparently learned since 1904, when he denied it, that there *is* such a thing as the common law of the United States.

All told, the message and the political negotiations which lie behind it are to be taken as intended to set the Republican party in battle array. Democrats who had been foolishly thinking that Republican divisions and quarrels would give them an easy victory, must now see their blunder. The Republican genius for political generalship is once more in evidence. It has even been equal to inducing the Rough Rider to get off his horse, and turn his Big Stick into an olive branch.

A CURRENCY COMMISSION.

Senator Aldrich's view of his own currency bill is reported as follows in the *Congressional Record:*

> The bill before the Senate is a bill to provide an emergency currency for use whenever emergencies arise. It does not undertake to treat the general question of currency or of banking reform. I realize, and I have so stated to the Senate, the necessity of the immediate consideration and treatment of that subject, and I hope that before the present Congress adjourns legislation will be enacted which will provide for a commission, either a commission of members of the House and Senate, or a mixed commission, to consider this question, with a view of reporting at an early day in the future.

With Mr. Aldrich's ideas of a temporary expedient, considered in themselves, we have had little sympathy. His plan of including municipal and railway bonds in the collateral for an authorized banknote circulation is simply an extension of a very defective existing principle; his "emergency currency" would in all probability be issued, and conceivably to its full limit, before the true emergency had arrived; it might thereby provide machinery for aggravating rather than lessening the perils of inflated credit; and in any case the emergency ostensibly aimed at is never so remote as immediately after a panic, and in the midst of the consequent liquidation. But in the remarks just quoted, the Senator takes a broad and rational view of the general question, even if his conclusion removes the last argument for passing his own measure at once.

Representative Fowler's bill, which has encountered objections of a different nature, has been urged on grounds similar to those at first alleged in support of the Aldrich measure. First, some reform was imperatively and immediately needed, because the currency caused the panic; or, as Mr. Fowler himself put it, in his speech to the Illinois Manufacturers' Association last December, "If we had had such a system of currency as Canada or France now has, the currency panic of 1907 would never have occurred." Second, this reform must be pushed through while the panic is fresh in mind; as the New York Merchants' Association has argued:

> Unless some measure of currency reform is agreed to by the people at a time when their thoughts are centred upon this subject, . . . nothing will be done until another financial cataclysm shall overwhelm the business of the country and again compel attention to the subject.

Third, the measure of reform must not be half-way, but thoroughgoing.

The third of these arguments is so cogent that it kills the first two. On general principles, to say that an intricate problem, involving revolutionary and vital changes in our financial methods, can be enacted at no time except when people are bewildered and exasperated, by the losses of a panic, would be to discredit American common sense. As a matter of fact, our previous history gives no warrant for such an unhappy conclusion. No important currency or banking measure (except the repeal of the Silver Purchase Act in 1893) has ever been enacted directly after a panic. Currency proposals have been pressed to a vote in the excitement of such occasions, but they were measures, such as the Inflation Act of 1874 and the bill for coining the silver seigniorage in 1894, which were fortunately defeated, and in which their own authors took no pride in later years. On the other hand, the two great landmarks of reform in our currency in this generation—the Specie Resumption Act and the Gold Standard Law—passed into the statute books, the one two years and the other six years after the panic which forced the need of them upon the public attention. We are justified, therefore, in saying that, according to experience, hasty law-making after panic is not the way of safety.

The further argument that our existing system caused the collapse of 1907, is not at all convincing. Mr. Fowler has pointed out, what nobody will deny, that a system under which banknotes might have been instantly issued in large quantities, last November, would have mitigated the after-shock of panic and might possibly have prevented some of its more troublesome incidents. But this is not to say that the currency system caused the panic. A competent observer, M. Leroy-Beaulieu, has declared that no currency system in the world could have withstood such a raid on bank deposits as occurred here in October and November.

As to actual causes of the panic, economists are pretty well agreed upon the exhaustion of supplies of ready capital, extreme and precarious use of credit, extravagance in speculation and in private living, distrust excited by scandals in high finance, and inadequate maintenance of reserves, through defective trust-company laws and excessive re-deposit of national bank reserves with other banks, under the National Bank Act. This fallacy of ascribing our troubles to the currency is similar to other fallacies which have been widespread after former panics. Mr. Rhodes, for example, in describing the panic of 1857 in his "History of the United States" remarks that, while every American protectionist declared the low tariff of 1846 to be the real cause of the panic of 1857, European economists, like Max Wirth, did not so much as mention the tariff as a contributory influence. The tariff was brought forward as a cause in 1893—the only difference from 1857 being that in 1893 it was a tariff law which was going to be passed, not one which had been enacted. Nowadays we smile at these vagaries; yet the "currency argument," as applied to 1907, will probably fall into the same limbo.

But this is far from asserting that our present currency system is either adequate, or permanent in its nature, or properly adapted to the country's needs. No competent student of the question holds any such position. Most of them heartily approve Mr. Fowler's declaration that fundamental reform is necessary, and most of them will probably agree that the present Fowler Bill contains numerous valuable ideas which are likely to be of use in the final solution of the difficulty. The serious defects of that measure we have already indicated; their existence adds force to the demand for thorough consideration of the subject by a commission, which should hear evidence, sift opinions, balance theory and principles with experience, and in the light of current criticism frame a comprehensive measure.

THE BOMB-THROWER.

The bomb-throwing in this city on Saturday afternoon is so shocking an affair that emotional persons are likely to attach undue significance to it. Throughout the country, we grant, anarchists and other agitators have lately been showing unusual activity. This fact is not surprising. Every period of financial depression and consequent unemployment and suffering is inevitably marked by gatherings of men out of work, of the discontented and the hungry; and these men always throw the blame for their misfortunes on the powers that be. Such complaints and protests, sometimes running into violence, are one of the serious things which we must reckon with in hard times. But the particular deed of Saturday seems, according to the evidence thus far available, to have been done by an ill-balanced, perhaps irresponsible, man, acting on his own initiative, without coöperation or even consultation with other anarchists. He was infuriated because the police broke up a meeting which he was attending some days ago, and because they clubbed him personally. Though he may have been actuated in part by a hope of advancing "the cause," he was, nevertheless, largely moved by a desire for private revenge. In short, he was not one of a group of conspirators, and his outbreak cannot be taken as part of a determined campaign of terror.

The immediate pretext for his crime —his plan had apparently been in train since his previous encounter with the police—was the attempt of the authorities to prevent a public meeting of the unemployed in Union Square. To reply to the police by hurling a bomb is a hideous and cruel outrage, for which there is no shadow of excuse. And yet we are by no means sure that the refusal of the authorities to permit the public meeting was well-advised. Affairs of this kind are extremely difficult to handle. At such a gathering as was proposed, inflammatory speakers are likely to incite an inflammable mob; and rioting, damage to property, and even death may conceivably result. Yet it may be more dangerous not to hold the meeting than to hold it. To suppress such a gathering, to forbid men to air their grievances and bring forward their panaceas, will not in the least abate the discontent or allay the irritation. Men who are out of work, who have a grudge against the existing order, are easily provoked to violence; but there is no surer provocative than to deny them free speech. An incendiary orator may set them off; forcible repression by the clubs of the police is almost sure to do so. If you want an explosion, hang the monkey-wrench on the safety-valve and crowd on full steam; if you want to avoid an explosion, open some vent and blow off steam. A knowledge of human nature should convince the authorities, here and elsewhere in the United States, that the policy of suppression must be only a last desperate resort in an extraordinary crisis.

This advice is not doctrinaire: it is the fruit of experience. Of the great cities of the world, London is the one which suffers least from the agitation of anarchists and the raging of the mob. A the reason, we are convinced, is that the police there interfere as little as possible with public gatherings. In Trafalgar Square, Hyde Park, and other great open spaces large crowds collect to listen to agitators of all sorts. Plenty of police are on hand to exercise restraint in case of need. The law in England, as in this country, is clear and explicit with regard to incitements to disorder and to murder; and the speakers who cross the line may be arrested and brought to account. But the authorities exercise a large and indeed generous tolerance, in accordance with the maxim, *De minimis non curat lex.* They follow this plan, not from any tenderness toward Socialists, anarchists, or any other person who would overturn society, but simply in order to safeguard property and life. The potential crank and bomb-thrower are always with us—like a piece of tinder ready to burst into blaze at the contact of a chance spark. From such peril no vigilance of the police, no restriction on the manufacture of explosives, no domiciliary visits, can completely protect the community. The routine precautions are futile—or worse. The part of wisdom, then, is to offer no provocation, to let the malcontent and the possible terrorist take it out in talk.

Force is but a feeble weapon in dealing with unrest and agitation, because it cannot check the spread of ideas. The police may disperse a mass meeting; but, after all, they have done little or nothing. The abhorrent doctrine runs like a plague through the masses—passed on by word of mouth, by circulars, and by the revolutionary press. There is one way, and only one way, to combat it effectively, and that is by reason. If we cannot marshal arguments to destroy the fallacies and the half-truths upon which the structure of socialistic and anarchistic theory rests, our case is indeed hopeless. Argument with ignorant, hungry, and excited men is, obviously, a formidable undertaking; but still it is the only method in a free country like this. Certainly, the clubs of the police will never put sound ideas into people's heads; on the contrary, every blow is likely to make a convert to the "propaganda of deed." Reason, coolness, and forbearance on the part of men of intelligence are what the hour calls for. This suggestion we offer to our young university graduates who are Socialists, as well as to old and hardened conservatives. In a juncture like the present both sides should refrain from bitter words, which may make mischief. And in particular our authorities, who are so often regarded as the visible embodiment of wealth and power, should see to it that the poor and the weak are not denied a hearing.

THE BRITISH PREMIERSHIP.

Sir Henry Campbell-Bannerman's disability is clearly permanent, though it may be hoped that his life will be spared. He has, in fact, ceased to be Prime Minister. The work of that office has been practically transferred to Mr. Asquith, the Chancellor of the Exchequer, who is everywhere recognized as the new head of the Liberal government.

This great change has been quietly made. Indeed, there is no recognized official machinery for choosing a Prime Minister. He is indicated, rather than elected. The Cabinet being now, in effect, a committee of the House of Commons to carry on the government, one of its members becomes a sort of chairman of it. The very word Prime Minister is unknown to English law. Lord Beaconsfield signed the Berlin Treaty as "Prime Minister of England," but, as it has been pointed out, this was both unauthorized and inaccurate: if he was Prime Minister of anything, he was of Scotland and Wales as well. The fact that the law makes no distinction between Ministers of the Crown was the basis of the question put to one Prime Minister—Lord Palmerston, we believe —by a colleague, who querulously wanted to know what the difference was between the Premier and any other Minister. "The difference is," was the reply, "that if we disagree, it is you, and not I, whose duty it is to resign."

Mr. Asquith has been signalized for the succession by his abilities, by his position, and by the fact that no Liberal with a better title to the Premiership arose to contest it with him. The Chancellor of the Exchequer is a man of clear and powerful mind. Both as a Parliamentary debater and a public orator he has displayed fine quality. Then he is a vigorous master of public business. Practically Leader of the House for the past two months he has, as even his political opponents admit, done his work with much energy and skill. And it is a great advantage for a Prime Minister to be also Leader of the House. This brings him into that sensitive touch with the Commons without which no Premier can feel sure of himself or his policy. One of Lord Salisbury's handicaps as Prime Minister was that he could not be in the House. He had to delegate to another the duty of finding out what the Commons would "stand." Mr. Asquith will be Leader of the House as well as Prime Minister. This will put him in line with the best traditions and the highest efficiency of the British Premiership.

He will, however, succeed to the headship of his party under trying conditions. His difficulties are both personal and political. He has the repute of being a "cold" man, able but austere. This objection to a public man is often silly, but has a certain amount of force in the case of one who, like Mr. Asquith, is called to lead a heterogeneous and somewhat discordant party. For such a task. Campbell-Bannerman was most felicitously endowed. He had great good-nature, infinite tact, and a kind of easy familiarity and burly Scotch sense that made him just the man for the job. Moreover, Sir Henry had fought the battle of Liberalism through good report and ill. To his lasting honor, all through the dark days of the Boer war, when to differ with the popular frenzy of the hour was to get one's self branded a "traitor," Campbell-Bannerman held stoutly for fair play, humanity, and international justice. At that period Mr. Asquith, however, stood aloof. It is inevitable, therefore, that the Liberals of the old ideals should accept his leadership with a certain reluctance. Partly in deference to them, he will doubtless make some changes in the Cabinet. That Winston Churchill and Mr. Lloyd-George will be promoted, and Lewis Harcourt recognized, is regarded as among the certainties.

Politically, obstacles are clearly multiplying before the Liberal party, and so before its chief. Popular sentiment, fickle as ever, seems to be veering decidedly against the government. A series of bye-elections has not merely led to the loss of several seats, but revealed a marked falling off in the Liberal vote even where seats were saved. Of course, the party in power never admits the significance of bye-elections. And equally, of course, the Opposition always insists that they have a vital meaning. Mr. Balfour, after seeing bye-elections go against him for three years, and pooh-poohing them as trifles, is now eagerly dwelling upon the Liberal reverses, though compelled to add, with the memory of his own crumbling Premiership still fresh in the general mind, that he does not regard their evidence as absolutely conclusive. But there is no doubt that the tide is now running against the Liberals. Their hold on power must be secure for a couple of years yet, barring accidents, but it will take a militant leadership of political genius to prevent their going out of office at the next general election.

Much will depend upon industrial and social conditions during the coming months. For a certain kind of political crisis, Mr. Asquith's qualities admirably fit him. If there is to be an anti-Socialist reaction, no one is better suited than he to lead it. He is cautious, clear-headed, economical, legal-minded. To expose and confute and resist Socialism, he is well adapted. Such a course may prove popular for a time, and may serve to strengthen him and his party. But purely defensive tactics will not suffice, nor will even a correct and thrifty conduct of public business. In these days of fermenting ideas, a political party has to identify itself with some great forward movement. Lord Cromer has aptly described a Prime Minister as the man in a surf-boat, at the mouth of an African river, waiting for a swell to carry him over the bar. If it is a question of a great wave of public sentiment in England, we think that a cool survey of Mr. Asquith's powers would not encourage the hope that he would be a man either to arouse it or to profit by it.

SICK-MEN WRITERS.

The theory that genius is a form of disease has been terribly overworked by Lombroso and his imitators; and for some time back it has seemed to be enjoying a needed rest. But a new application of it has just seen the light in France, of a sort to make previous extravagances of the kind seem tame. For it is no less a man than Montaigne who is now affirmed to have been a neurasthenic. "Montaigne malade et médecin" is the title of an inaugural thesis lately presented at the University of Lyons by Dr. Raymond Delacroix. It seems that a course in "literary pathology" is maintained at that institution; and the bold theorist struck high at the man of whom it was affirmed by Sainte-Beuve—who was, to be sure, merely a critic and not a pathologist—"Montaigne is the wisest Frenchman that ever lived." If Montaigne, nevertheless, can be proved to be one whose wisdom was a by-product of sickness, then no one is safe. We shall next be told that Benjamin Franklin was a hypochondriac.

Dr. Delacroix goes about his task in the usual way. He collects painfully every minute scrap of evidence that Montaigne was not thoroughly sound physically. The essayist confesses that he suffered from the stone; hence, we have the formidable diagnosis: "A clear case of arthritism, manifesting itself in renal lithiasis and nephritic colic." But that is only a beginning. Montaigne was, on his mother's side, descended from Spanish Jews. It is well known that Jews are frequently neuropaths; accordingly we have our man possessed at the start of a *damnosa hereditas.* Furthermore, by a certain amount of peering and prying and inferring, it can be plausibly made out that Montaigne had other morbid symptoms. Dr. Delacroix enumerates: "a taste for solitude; a melancholy turn of spirit; love of long journeys; vanity; ambition." To a mere ignorant outsider, this does not seem necessarily fatal, but to a professor in a "laboratory of legal medicine," it is clear that Montaigne was in a very bad way. If he gave the world pearls of thought, they were merely pearls secreted by his diseased tissues.

The attempt to explain Montaigne by ill health seems so absurd that one hesitates to take it soberly. May it not be simply a clever academic play of wit, intended to throw ridicule upon the whole solemn process of proving that all great wits are near allied to madness or disease? But Henry Roujon treats the thesis with the utmost seriousness in the Paris *Figaro*, even if he does make merry at some of its contentions. One of his neatest points is his citation of Montaigne's refusal to go and be a companion of the King. This from the man of consuming ambition! But, then, was it not a proof of that love of solitude which Dr. Delacroix shows to be pathologic? The truth is, you never can catch these sick-man theorists. Your best evidence of health they pityingly take and read into it a proof of morbidity. It was bound to come, we suppose—this magisterial demonstration that Montaigne was a confirmed invalid and neurasthenic. The writer who stood for the very type of sanity and clear vision and detached judgment—the man who said of himself, "Je ne foys rien sans gayeté"—he had at last to be held up before us as a pining victim of melancholia.

We have often thought that the great trouble with these professors of literary pathology is that they are not sick themselves. They appear to reason by a process of unconscious personal contrast. "Here am I," one of them seems to say, "perfectly sound in wind and limb. Every organ functions perfectly; and I have neither an ache nor a pain. Now, it must be this robust health of mine that really differentiates me from a genius. I know well that I cannot pen a sentence which the world will read twice—lucky for me if it reads it once—and to me the inference is irresistible that the only reason why others write so much better than I is that they are in so much worse health than I. If I were a nervous dyspeptic like Carlyle, or ate pie for breakfast like Emerson, I should rival their fame."

"We cannot understand Montaigne," affirms Dr. Delacroix, "until we know that his work was that of a sick man." Then he must have been a "malade malgré lui," wittily retorts M. Roujon, who adds that the thought of Montaigne is "the plainest chapter in the history of French health." Of course, a great writer may have bodily ailments. He may exhibit melancholy now and then. What should we think of him if he did not, the world being what it is? If he had foreseen his pathologic critics and *not* been melancholy, we should be willing to surrender him to their ravages. Genius will remain inexplicable and incommunicable, do what we will. But the sick-man readers of the riddle are wofully astray. Good work is the product of vigor, not of decay; it may be vigor triumphing over poor health, but it is vigor.

NEWS FOR BIBLIOPHILES.

William Loring Andrews, veteran collector of books and prints relating to New York, has added another to his list of charmingly written and printed books about his native city. This little volume just printed by the Gillis Press, 115 copies only, is a memoir of the first poet of New Netherlands, Jacob Steendam. Appended are translations of Steendam's three publications in verse relating to the colony: "The Complaint of New Amsterdam to Her Mother," printed in Dutch as a broadside in 1659; "The Praise of New Netherland," or "t' Lof van Nuw-Nederland," printed in 1661; and the "Prickel Vaersen," printed in 1662. Murphy's copies of the first two books are in the John Carter Brown and Lenox Libraries, respectively. The "Prickel Vaersen" were incorporated in a pamphlet by Peter Cornelison Plockhoy, in which he set forth a plan for establishing a colony of Mennonites on the Delaware River. Judge Pennypacker's copy brought $420 in 1906. These are three American nuggets of the first rarity.

A number of important rarities, partly from the library of John D. Elwell, are in the Anderson Auction Company's sale, in this city, of April 6 and 7. In early English poetry are several rare volumes, some from the Lefferts collection; "Sir Philip Sydney's Ourania," by Nathaniel Baxter, 1606; Tasso's "Godfrey of Bulloigne," translated by Richard Carew, 1594; also the translation by Edward Fairfax, 1600; two books by Thomas Churchyard, "Cardenus Comforte," 1573, and the "First Parte" of his "Chippes," 1578; Samuel Daniel's "Civile Wares," 1609, and his "Whole Workes," 1623; Dekker's "Satiro-mastix," 1602; Drayton's "Poly-Olbion," 1613-22, two parts in one volume; also his "Poems," 1619, and his "Battaile of Agincourt," 1627; Fletcher's "Purple Island," 1633; Lord Brooke's "Learned and Elegant Workes," 1633; Heywood's "Troia Britanica," 1609, "Gynaikeion," 1624, and "The Hierarchie of the Blessed Angels," 1635; Lilly's "Sixe Court Comedies," 1632; Milton's "Paradise Regained," 1671, the Foote copy; and Quarles's "Emblemes," 1635. Of modern English writers there are first editions of Dickens (a long series); Shelley's "Laon and Cythna," 1818, with an interesting autograph letter written to Ollier, the publisher, and relating to the book; Thackeray's "Vanity Fair," a fine copy in the original numbers; and first editions of Swinburne, Tennyson, and Matthew Arnold. Among the illustrated books is a wonderfully fresh copy in parts of Combe's "English Dance of Death," and a set of his three "Tours," first editions, both illustrated by Rowlandson; a complete set, nineteen volumes, of Cruikshank's Comic Almanac; and Brough's "Life of Sir John Falstaff" in parts.

From another source come some attractive presentation copies of American books, first editions of Lowell, Emerson, and Bryant, given to Lydia Maria Child. The Lowell items, the most interesting, are: "A Year's Life," 1841, Lowell's first book, with inscription "For Mrs. Child, with the love of Maria White" (before her marriage to Lowell): "Poems," 1844, published late in 1843, with inscription by Lowell, dated January 1, 1844; "Conversations on Some of the Old Poets," 1844, with inscription "To Mrs. Child, with the affectionate regards of James & Maria Lowell," dated January 15, 1845; "Poems," 1848, published in the autumn of 1847, with inscription dated December 23, 1847. The Emerson items include "Essays," 1841; "Essays, Second Series," 1844; "Representative Men," 1850; and "English Traits," 1856. The first was presented to the Rev. Convers Francis, brother of Mrs. Child, and the others to Mrs. Child. To her also Bryant gave "The Fountain," 1842, and "Thirty Poems," 1864, and these two books are included in the sale. Gov. Robert Hunter's "Androboros, a Biographical Farce," was printed by William Bradford in New York in 1714, but only one copy is known. This, formerly John Philip Kemble's, is in the Duke of Devonshire's collection. A transcript made in 1880 for George H. Moore, librarian of the New York Historical Society and later of the Lenox Library, was acquired by the late Thomas J. McKee, and in his sale in 1900 brought $101. It is now offered again. Superb copies of Robert Roger's "Journals," and "Concise Account of North America," 1765, are among other Americana offered.

Manuscript verses by Whittier, T. B. Aldrich, Eugene Field, Frank Dempster Sherman, and Helen Hunt Jackson, as well as letters of Longfellow, Lowell, Dickens, Bulwer, Thomas Jefferson, Henry Clay, Daniel Webster, and others are included in the Merwin-Clayton Sales Company's auction in this city April 9.

Stan V. Henkels of Philadelphia will sell on April 8 and 9 a collection of letters and manuscripts, including a number from the collection of Bayard Taylor. Among these are letters addressed to Taylor from President Lincoln, Dickens, Poe, Hawthorne, Emerson, Irving, and Lowell; also the autograph manuscript, ten pages, of Longfellow's "Prometheus and Epimetheus"; an interesting letter of Keats, written to his sister; and a letter from Charles Lamb. Coming from other sources are letters of Washington, John Adams, Jefferson, Monroe, Lincoln, and other Presidents, generals of the Revolution and civil war, Cabinet officers, authors, and statesmen.

From a bibliographical point of view the *Antiquariat* of Ludwig Rosenthal, Munich, is famous for its catalogues. Its latest issue, No. 119, with more than 3,000 numbers, fully illustrated, treats of genealogies and heraldics in all their ramifications. The works are in Latin, German, and Spanish.

RECENT FRENCH FICTION.

PARIS, March 14.

There must be in France a relatively larger number of readers of books which are not novels, for certainly the predominance of fiction during the publishing season is not so great in Paris as in London or New York. Among the many novels which appear, some are too local in interest, others too "French" in the foreign sense, and yet others too mediocre—idle dreams of empty days—to deserve notice. A chronicle like the present can only single out the few which rise to general human interest or are signed by names already favorably known abroad.

"Les Yeux qui s'ouvrent" by Henry Bordeaux marks a great step forward in the sure progress of this sympathetic writer toward high literary fame and the Academy. His novels are at least as readable as those of Mrs. Humphry Ward; our mothers would have found them more correct. In purely literary merit, style, and language they are superior to either René Bazin or Paul Bourget, although they have neither the worldly interest nor the passion of timely social controversy of the latter. Yet this new novel reaches down to those sentiments of married life that are the basis of what we call home and the French call family. An immediate comparison is possible with "The Helpmate" of May Sinclair, in which an English woman tries to read her sex (and over their shoulders the adverse sex) the same lesson which the Frenchman expounds in his touching story. Both deal with domestic unions in the higher and intelligent middle class. The lesson of the two books is intended to be the same—but how much more amiable with the French author! With him the capable, but undeveloped, wife has indolently neglected to rise to the level of a cultivated husband with literary ambitions and worldly success. The English heroine, from her narrow, unreasoning, and utterly unlovely height of religious conscience, cannot come down to the bodily needs of a weak, easy, good-natured husband. Perhaps English novels are not read by men; but certainly every thinking man will acknowledge that his sex suffers less at the hands of the French male novelist. Tennyson's dictum—"As the husband is the wife is"—is not verified in the English book at all, but in the French novel it is reversed by the awakening of will in the heroine. Thus lifted to intellectual heights, she calls back her husband, and reconstitutes the broken family. Those who still hold to that insular depreciation of the French women which John Stuart Mill, after years of residence in French families, so deeply deplored, will find pleasant correction in the book of Henry Bordeaux. It may not be amiss to know that he is himself the son of many generations of an ideal French family, holding high position in the magistracy of Savoy.

"La Route rouge" of Georges Ohnet is sure to be readable and proper, and to deal with subjects that here and now interest proper people. This time he handles the *bourgeois*, respectable property owners of that middle class to which Mr. Gladstone said he was proud to belong—and so say all of us in our present democracies. But there is a new Demos coming and the Socialist year of jubilee. All readers of Georges Ohnet will delight in the romance which leads his Socialist millionaire to deposit money, stocks, and bonds safely in British and Belgian banks —"in countries more sage than France"—before he "throws himself into Socialism without one afterthought!" His daughter naturally is in love with a lieutenant of dragoons.

"Le Port d'attache," by Léon de Tinseau, begins the twenty-fifth year of his successful publications for readers who do not care to hide their books when the young person is around. He has been once crowned by the French Academy; his books are among the good sellers. It is worth remarking, if only because of the elusive charm of polite society in his writings, that this writer is an authentic count, with connections among the old families of Franche-Comté and Burgundy; it was his ancestor who bore the keys of the good city of Besançon to Louis the Fourteenth. He is sixty-five years old; was a lawyer, and then held office under Conservative rule—all which, perhaps, explains why he never shoots the modern cascades in literature and life.

With Maurice Montégut's "Le Roi sans trône," we come on more recent modes of writing, corresponding to a state of nerves which has lost the old traditional horror of making scenes. His hero is the hapless lost Dauphin—Louis the Seventeenth—whom numberless historians are still proving to have died, or not to have died, in his prison of the Temple. In the novel, of course, he escapes, to make love and fight under Napoleon. "La Figurante," by Léon Frapié, continues behind the scenes the "naturalist" stories of this writer, who became famous by carrying off the prize of the Goncourt Academy. In private life he is a typical French functionary at the Prefecture of the Seine. Civil service has left him leisure for kindly and minute observation of Parisians struggling for life. "Le Temps d'aimer," by Gérard d'Houville, is in the usual line of this author, the wife of the poet Henri de Regnier (who one year gave the Harvard Conférences), and a daughter of the poet Hérédia, through whom she has certain American affinities. Apart from the almost exaggeratedly edulcorated thought and style, the title shows the constancy of her devotion to Amour.

It is sufficient to note, by the way, "Mademoiselle Arguillis," by Madame André Corthis, whose volume of poems—"Gemmes et moires"—was rewarded by the Vie Heureuse prize. "Armelle et son mari," by Renée Fauer, is a highly honest story of a young fellow who is not content with the silver spoon born in his mouth, but tries for ready money in marriage. He is properly wiped out in consequence by his own father at the Stock Exchange, and then does what he ought to have done at the beginning—falls in love with his wife, who saves him. This is the second book of a promising writer, whose stories are devoid of metaphysics, but full of wit and graceful surprises.

Those who think Frenchmen destitute of humor should try at Max Maurey's "Les Aventures de M. Haps." The hero has already appeared in one of the great successes of the Théâtre Antoine—"L'Asile de nuit." The novel takes him up where the play left him, and shows how he continued to thrive without work—"the least remunerative of all occupations." Journalism, theatre, politics; in everything fortune comes to him, eating, drinking, and sleeping—until we perceive that all these puppets make up a searching satire of Parisian life. In fact, Max Maurey is founder and director of that extraordinary Paris theatre of the Grand Guignol. The respectable *Monde illustré* first published this book.

Correspondence.

COÖPERATION IN ENGLISH TEACHING.

TO THE EDITOR OF THE NATION:

SIR: Permit me to add a few words to the discussion of the teaching of English in schools and colleges, especially in regard to coöperation with the professor of English.

It will not be possible to carry out the views set forth by Prof. J. H. Gardiner of Harvard, in your issue of March 19, until the majority of teachers recognize the truth that practical mastery of the elements of composition in the student's vernacular is of greater importance than anything else taught in the schools. In the present day of specialties the tendency is for each teacher to concentrate his attention on his own subject, and to regard it as unfair to depress the standing of a student of mathematics or chemistry on account of blunders in English. At least a few of us, however, are willing to insist that the teaching of English is inextricably bound up with the teaching of most other subjects. Clearness of thought may possibly exist without the power of clear expression, but clearness of expression requires clearness of thought. The present writer has for many years been a professor in one branch of physical science. In the annual catalogue he finds it best to specify the prerequisites for admission to his first-year class, which include elementary mathematics "and, especially, English composition." This, of course, does not mean that the applicant would be excluded on account of previous deficiency in English, but it merely serves to prepare him for the application of tests that may be inconvenient if he is thus deficient. For the conduct of written recitation, which is required of every student one or more times each week, a series of printed instructions is given. One of these is as follows:

> You will be marked down for such bad handwriting, and such gross violation of the rules of English composition as may interfere with clearness and definiteness of expression.

The number of students "plucked" is necessarily increased to some extent, but the student's respect for the course English I. grows accordingly. It is scarcely necessary to add that the plan is heartily approved by the professor of English.

W. LE CONTE STEVENS.

Washington and Lee University, Lexington, Va., March 20.

A PLEA FOR THE INFANT CRITICS.

TO THE EDITOR OF THE NATION:

SIR: May I be allowed a few words in reply to Prof. J. H. Gardiner's interesting letter on "Our Infant Critics," in your issue of March 19? I am ready to admit that practically all boys and most men, are incapable of "crystallizing their impressions of what they read into coherent expression." It is undoubtedly true that more attention should be given, in our schools, to practical needs—letter-writing, explanation of matters connected with daily, immediate life—to things which most boys can learn to do and which all men must do. I nevertheless still find room for the "infant critic."

In the first place, whatever the inability of grown persons to talk coherently about books, the fact remains that nearly all do discuss books. Often their reading is limited to deplorable stuff, but they, notwithstanding, attempt to express their ideas about that stuff. Frequently, moreover, one feels, when one hears a book discussed, how well, after all, that fellow has understood what he has read, and how "cleanly" he might have "got off the stage" if he had but had a little practice. There is, perhaps, not so pressing a need for this sort of practice as for drill of other kinds, but there is nevertheless great need for it. It is hardly likely, furthermore, that men will learn how to discuss books if they do not begin the practice before they are men. Much that boys write or say about literature must, of course, be absurd; it is discomfiting enough to be told that "Shakespeare didn't do things that way"—though the idea possesses great possibilities of truth could one but come at the antecedent of "way." The significant thing really is, not whether a boy can write adequate criticism, not even whether he ever shall do so, but whether he is growing. Shall we give up Greek because a boy spoils Homer in the translation, because, relatively speaking, "few mature readers" of Homer can do much better? Of course, there is no justification, except humorous or diabolic, of a teacher's assigning as a topic for composition "The Madness of Hamlet" rather than some simple subject from Scott or Stevenson. But some small literary discussion the boy must have, or he will enter college critically toothless.

In support, moreover, of beginning literary criticism before college, it may be added that the majority of men who are not in close touch with boys underrate the intelligence and maturity of boys in their last years at school. Nothing is more amusingly corroborative of this statement than the attempt of preachers and lecturers, who, in visiting a school for the first time, strive not to talk "over the heads" of their hearers, and who, in consequence, usually talk under the feet of the whole school. Boys may be absurd in their judgments, may flounder pitifully if the waters are quite too deep; but among their absurdities they often strike, in the untrammelled ingenuousness and enthusiasm of youth, on expressions almost Elizabethan in insight and picturesqueness. No boy, of course, should be given a task which his obvious youth resents, any more than a child should have meat forced into its toothless mouth. But suppose the teeth begin to grow?

The great trouble, it seems to me, is not with the subjects, but with the methods. If a boy is expected to return second-hand what the teacher himself got second-hand and delivered imperfect to the boy, the article when it reaches its last resting place, the desk of the long-suffering examiner, will perforce be "damaged" and should rightly be "marked down." Little is more pathetic than a boy striving faithfully to say what he thinks the teacher thinks he ought to think. When a boy, on the other hand, is given a book and told to say fearlessly exactly what *he* thinks about some feature of it, he frequently comes, in his crude way, surprisingly near the mark. Once, for instance, a boy, writing on "The Vicar of Wakefield," said, in conclusion: "It is a dull book, though it may have been interesting a hundred years ago, when they [?] did not have many very exciting things to read." This, instead of showing the boy's inability to criticise, reveals that he was able, in fairly "coherent expression," to set down what the majority of modern grown-up readers would themselves have written.

The inability of boys to write at least elementary criticism of literature can be largely laid, indeed, at the teacher's door. There is a superstition that the mature scholar is the only person of whom first-hand work should be expected; yet the beginner, the impressionable boy, is really the person who must be made, so far as he is able, to look things up for himself, to form his own opinions. Not until he has done this is he ready for instruction in literature. When, however, he is fortified with one or two opinions of his own making, he can safely be corrected; he can still be led. but no longer led far astray.

WALTER S. HINCHMAN.

Groton School, March 24.

THE ANGLO-SAXON CLASSICS.

TO THE EDITOR OF THE NATION:

SIR: A letter in your issue of February 20, by William C. Lane, entitled "A Warning to Book Buyers," calls for a sequel with reference to the Anglo-Saxon Classics, published by the so-called Norroena Society. The series of fifteen volumes consists in the main of reprints of standard translations of English, Norse, and German sagas, got up in the true subscription style, with gorgeous bindings, cheap illustrations, etc. The matter is, of course, irreproachable. Malory's "Morte d'Arthur," under the title of "The Arthurian Tales," is doubtless just as good reading as any one-dollar edition with the usual title. Dasent's superb translation of the Burnt Njal Saga appears with a greatly abridged introduction such as Putnam uses in his $1.25 reprint. One finds here Elton's translation of Saxo Grammaticus made for the English Folk-Lore Society, and published in 1893. Dasent's translation of popular Norse tales comprises another volume. Laing's translation of the Heimskringla fills two or three more—a translation, by the way, much inferior to that of Morris and Magnusson. And so on through most of the list.

There is nothing wrong in collecting a series of translations by reputable scholars, nearly all readily accessible in inexpensive editions, binding them pretentiously and selling them at a good round sum; but the buyer should know what he is getting, and here is where the circular describing the issue and the inspired harangue of the agent are misleading. The impression is created, that the series has been compiled with great difficulty, that the translations are either made expressly for the Norroena Society, or are so difficult of access that the ordinary reader would never be likely to find them. The list of translators, nearly all eminent men, is given without comment, leaving the unwary to infer that they are part of the Norroena staff. As seven of them are already dead, the effect is all the more ridiculous. Some of the statements are even more than merely misleading. According to the circular, the Flatey Book "is now for the first time printed," when in reality an edition was printed in Copenhagen in 1868 by Vigfusson and Unger. Of Saxo Grammaticus we are told that "this most extraordinary work is printed for the first time in English by the Norroena Society," in spite of the Elton translation, already mentioned. This translation comprises only nine of the sixteen books, but the agent informed me that the translation was absolutely complete; and the prospectus leaves the same to be inferred, without actually saying so. The whole prospectus is filled with exaggerations, of which the following are samples: Of the Njal Saga it is stated that it is invaluable to those who would thoroughly know the source and earliest application of our common law code:

> To this work may be traced the origin of trial by jury, representative legislation, the influence of public opinion on the conduct of affairs, the Magna Charta, the Declaration of Independence.

The Edda (which one is not definitely stated) is described as "the greatest of all epic poems, greater than the Iliad, Odyssey, Kalevala," etc.

As in the case of the "International Congress," the price asked is much greater than that which the agent will accept if he can effect a sale "to introduce the book."

HENRY A. PERKINS.

Trinity College, Hartford, Conn., March 24.

A CALENDAR OF THE CORRESPONDANCE GÉNÉRALE, LOUISIANE.

TO THE EDITOR OF THE NATION:

SIR: Some of the officials in the archives of the Ministry of the Colonies in Paris propose, if they can get a sufficient number of subscriptions, to print a detailed calendar of the documents in the series called Correspondance Générale, Louisiane, together with the letters sent and such other material relating to Louisiana as may be found in the Colonial Archives. It will be a useful guide to a large number of volumes of manuscripts in the archives which are of high importance to the history of our Southwest. The work would be published in one or two volumes, at a price of between ten and twenty francs. All who take an interest in its promotion, and who could insure subscriptions to the volume, should write to M. Wirth at the archives of the Ministry of the Colonies, expressing such encouragement.

J. F. JAMESON.

Carnegie Institution of Washington, March 26.

PHOTOGRAPHIC REPRODUCTIONS OF MANUSCRIPTS.

TO THE EDITOR OF THE NATION:

SIR: I have read with much interest the two letters in the *Nation* of March 5 and 19, referring to the "Méthode Graffin," for copying valuable manuscripts, etc. A great objection to this process is the fact that you have to handle the manuscripts every time you need a fresh copy, whereas, if a negative be made in the first case, any number of copies can be taken from it, by very cheap processes, without damage to the manuscript. A negative on the sensitive gelatine films, with or without the celluloid or glass supports, is now very cheap, and will produce far more satisfactory results than the white upon black process by reversal with a mirror or prism.

As I am travelling, I have not access to the copies which I have made in this way both in American and European libraries; accordingly I have tried with the insufficient apparatus at my disposal in a hotel bedchamber, using no other mirror for reversal than the common toilet-glass. Of the samples which I enclose, two are on bromide paper by the "Méthode Graffin," which I have used more or less for twenty years, while the blue prints are from celluloid films, taken in the same way, by reversal with a toilet mirror; only, being reversed, they were printed from the back instead of the front of the negative. The result is much better than in the case of white upon gray prints, for good black I could not produce by this "Méthode Graffin."

A SEPTUAGENARIAN AMATEUR.

Providence, R. I., March 23.

SHAKESPEARE ON VIVISECTION.

TO THE EDITOR OF THE NATION:

SIR: I am surprised that anti-vivisectionists have not quoted Shakespeare on their side, who has thus put himself on record ("Cymbeline," Act I., Scene 5):

Queen: . . . I will try the forces
Of these thy compounds on such creatures as
We count not worth the hanging—but none human—
To try the vigor of them, and apply
Allayments to their act; and by them gather
Their several virtues and effects.
Cornelius: Your highness
Shall from this practice but make hard your heart;
Besides, the seeing these effects will be
Both noisome and infectious.

G. P.

New York, March 28.

Notes.

A new "Turk's Head" edition of Goldsmith's works, edited by Peter Cunningham, is announced by G. P. Putnam's Sons for this spring. It is to be in ten octavo volumes, with eighty full-page illustrations in photogravure, and promises to be one of the notable publications of the season.

The Oxford University Press is about to bring out "Critical Essays of the Seventeenth Century," in three volumes, edited by Prof. J. E. Spingarn. This work begins where Professor Smith's "Elizabethan Critical Essays" left off, and omits Dryden's essays which have already been so well edited by Professor Ker.

E. P. Dutton & Co. are publishing an important work on "English Socialism of To-day, Its Teachings and its Aims Examined," by the Rt. Hon. H. O. Arnold-Forster. The author is the adopted son of the Rt. Hon. W. E. Forster, and was Minister of War in Balfour's late Government.

The Princeton University Library announces a study of "The Continental Congress at Princeton," by Varnum Lansing Collins. The description of Congressional life on its informal side is said to have been drawn largely from new sources.

The fourth publication of the Club for Colonial Reprints (Box 1275, Providence, R. I.) will be issued in April, with the title: "Invitation Sérieuse aux Habitants des Illinois by Un Habitant des Kaskaskias," reprinted in facsimile from the original edition published at Philadelphia in 1772. The only copy of this account of the pre-Revolutionary settlements in the upper Mississippi valley which is now known to be in existence is preserved in the collection of the Library Company of Philadelphia. The tract was brought to light through the researches of Clarence W. Alvord, the vice-president of the recently organized Mississippi Valley Historical Association, and of Clarence E. Carter of the University of Illinois. They have coöperated in writing the Introduction and in preparing the brief bibliographical notes which are appended. The original tract was issued without any statement of the place or date of printing. Dr. Victor H. Paltsits, the State Historian of New York, who contributed a bibliographical section to the third publication of the club, has again aided by solving this difficulty. One hundred copies of this volume have been printed, and such copies as are not taken by members of the club are offered for sale.

With a view to the completion of the Memoirs of the late Carl Schurz all persons having unpublished letters written by him are respectfully requested to send them to his daughter, Miss Agathe Schurz, No. 24 East Ninety-first Street, New York city. Copies will be made, and the originals will be returned to the owners.

One might suppose that the Rev. S. Baring-Gould had exhausted the antiquities of the West Country. Far from it. Here is a volume of "Devonshire Characters and Strange Events" (John Lane Co.) of some eight hundred pages, scrappily put together, to be sure, but containing a good store of entertainment. The greater names of Devon—Raleigh, Drake, Reynolds, Coleridge, etc.—have already been dealt with by the author; there remain for him some sixty or seventy minor characters, quaint or famous, which he takes up in successive chapters. In treating so well-known a person as John Gay, he does not attempt to give the full life of the poet, but tells the story of "The Beggar's Opera" and gives an account of the extraordinary chair of Gay's that turned up at a sale in 1818, with its complicated mechanism for ease and work and its secret drawer for MSS. Perhaps the most entertaining pages are those which relate the startling methods of Dr. John W. Budd in curing hysterical patients. His common method with such cases was outrageous bullying, in which he seems to have been remarkably successful. Nor were hysterical women the only deceivers to feel his anger and wit; thus:

> A miserly old fellow who was well off in worldly goods visited Dr. Budd at his "cottage" in Westwell Street, and, thinking to save the guinea fee, dressed himself in rags. The Doctor recognized him, but listened patiently to the old man's tale, and then asked him where he lived, to which he replied by naming a very poor part of the village near his own residence and using a feigned name.
>
> The Doctor said: "Do you know who lives in that big house in the place with the door that has a pediment over it?" To which the old man replied, "Yes," and mentioned his own name.
>
> "Then," said Dr. Budd, "call on that gentleman on your way home and tell him that the devil will have him in a fortnight."
>
> A few days beyond the fortnight the old gentleman actually died.

"He was God-like in his great fatherhood; he was Christ-like in his gentleness." With these words Frederick V. Holman caps the climax as he depicts the virtues of his hero: "Dr. John McLoughlin, the Father of Oregon" (Cleveland: Arthur H. Clark & Co.). Though Mr. Holman is of Presbyterian antecedents and himself strictly Protestant, he beseeches the powers at Rome to canonize McLoughlin, who was a good Catholic, at the earliest possible opportunity, that Oregon may have a proper patron saint. Tenderfeet from the effete East, picking their way through Oregon's historic path, can hardly be expected to adopt so enthusiastic an appreciation as this of the pioneer who laid the foundations; but McLoughlin was a fine type of manhood, and his personality has exercised throughout the entire course of that commonwealth a salutary influence. Low cunning, rapacity, indifference to humanity, have too often marked her politics. It is a great thing for the State that there has always been for her the fine tradition of this character, thoroughly brave, human, and honest, to touch the consciences of her people when they have come short. This book is authoritative, based upon abundant documents, many printed in a full appendix; and although sometimes a bit too effusive, it is, on the whole, a fit presentment of a figure which should not be forgotten. McLoughlin, a Canadian, became, in 1824, chief agent of the Hudson's Bay Company in the region west of the Rocky Mountains. He established himself at Fort Vancouver, on the Columbia, in territory which Great Britain and the United States had agreed to hold in "joint occupancy," a *modus vivendi* until a fixed boundary could be determined. Though a subject of Great Britain, and strictly loyal to the great trading corporation he represented, he yet treated with marked kindness the immigrants coming overland from the United States. His fate was the usual fate of those who try in a dispute to please both sides. Though always well-meaning, he incurred the displeasure of his company on the one hand, and was looked upon askance by those whom he had befriended on the other. Cast out by his employers, stripped of his means by Americans who owed their lives to him, he died, in 1857, of a broken heart. Such reparation as can be made to a man after death has been made by Oregon to this early benefactor. His portrait (he was of towering stature and superb physique) hangs in the place of honor in her capitol. To what lengths the community he founded is disposed to go in paying tribute to his worth and services Mr. Holman's book makes plain.

A remarkable career is described by Henry Johnson in the "Life and Voyages of Joseph Wiggins, F.R.G.S." (E. P. Dutton & Co.). The son of a coachman and an apprenticed sailor boy at fourteen, he became one of the foremost mariners of his day and "worthy to be placed beside Hawkins and Frobisher." His one great aim in life was the opening of a commercial highway through the Arctic Seas to Siberia, and to attain this he devoted all his means and thirty strenuous years of peril and hardship. In the summer of 1874 he took a vessel from Scotland to the mouth of the Yenesei, the first explorer in modern times to demonstrate the navigability of the Kara Sea. Between this time and his death in 1905 he made nine more voyages to the river, besides crossing Siberia six times by sledge and tarantass. The story is largely told by extracts from his journals and letters, which impress one with the disinterestedness of the gallant sailor as well as with his indomitable pluck and amazing energy. Many interesting glimpses into the life of the men who are building up Siberia and developing its natural riches are given in the narrative. Their industry, wealth, and especially their interest in education is surprising. At Tomsk, for instance, Capt. Wiggins writes in January, 1888:

> Yesterday we inspected the university—now nearly ready for students—given to the town by a wealthy merchant whose father was a nomad Samoyede. It is a vast building, standing in extensive grounds, and has botanical gardens, conservatories, lecture halls, and a library of 60,000 volumes.

It is a noteworthy fact that the efforts of the captain to strengthen the commercial ties between Russia and Great Britain were better appreciated by the Russians than by his own countrymen. They conferred many honors on him, and the Czar, Alexander III., presented him with a silver service, but there was practically no official recognition by the English government of what he had accomplished. The volume contains an excellent index, a map, portraits, and pictures of scenes in Siberia, many of which, however, have no relation to the text.

The principal object of Sir Hubert Jerningham, in his tour around the world, described in "From West to East" (E. P. Dutton & Co.), was to see Japan "before it is wholly spoilt by success," and to stimulate the interest of the public "in the sons and daughters of the land of the Rising Sun." The greater part of the volume, therefore, is devoted to an account of his Japanese experiences. These included interviews with several noted men, among others Admiral Togo and Marquis Ito. The government gave him permission to go to Mukden and Port Arthur, the battles and siege of which places are described with much detail. A specimen of the humor of the people is given in this statement:

> Kanaoka, the painter of animals, drew horses that were so life-like that a rope had to be attached to the picture at night to prevent the horses from rushing out into the gardens and damaging the shrubs; and rats that left their canvas on the appearance of a cat.

The remainder of the author's "fugitive notes," to use his own expression, concerning other countries and places, is not of much value. On the whole it is difficult to see the *raison d'être* of the book, except the pleasure which the author evidently had in writing it. It is attractive in appearance with some twenty-five illustrations and two maps of Port Arthur, showing its defences and the advance of the Japanese.

A volume recently issued by the Historical Manuscripts Commission of Great Britain, the third of the calendar of the manuscripts of the Marquis of Bath, preserved at Longleat, throws light on the diplomatic career of the poet Matthew Prior. Prior was secretary to the embassy and minister *ad interim* at The Hague, 1693-97; secretary to the embassy at the Congress of Ryswick, 1697; secretary to the embassy and minister *ad interim* at Paris, 1698-9; and during this period of political activity he carried on a wide correspondence with men in public affairs. Historically, the papers are not especially important, although they elucidate to a certain extent the inner history of the treaty of Ryswick and furnish material for a consecutive narrative of the negotiations from the first overtures of the French to the ratification of the treaty. They give, also, an insight into the life of James II. and the Jacobite exiles in Paris, and a few particulars regarding financial conditions in 1696 and the Partition treaties. Inasmuch as Prior was a commissioner of trade and plantations after 1700, it is somewhat to be wondered at that his letters contain nothing relating to America and the plantations. A report of the Board of Trade relative to trade with Russia, dated August, 1697, and not before printed, is the only important paper of its kind in the volume, and the editors have acted wisely in calendaring it very fully. Prior, like many another Englishman of letters, found the secret of joining two things generally thought incompatible: poetry and business. The literary aspects of his correspondence stand out conspicuously; and his letters from Paris, which are the cream of the collection, abound in humor, caustic criticism and comment, persiflage, and vivid description. Prior loved to elaborate his views of Parisian society, and to retail the gossip and scandal of the hour. After 1700 the correspondence becomes more commonplace, as disappointment and need, impeachment and imprisonment clouded his career. The volume closes with the year 1721.

Commerce in war is subjected to greater ill-usage than one might be prepared to expect from the protection mutually afforded by combatants to private property on land. A vivid realization of the extent to which belligerents may still hinder the freedom of commerce will be gained by reading "Commerce in War," by L. A. Atherley-Jones, assisted by Hugh H. L. Bellot (pp. xxii., 654. D. Appleton & Co.). The author's purpose is "to provide a full exposition of the rules of International Law which govern the commercial relations of neutral and belligerent States." By thus limiting his scope, the author is able to fulfil his purpose in a most satisfactory manner, and without attempting to determine what the law should be, he sets forth in detail what the law is and how it has become such. The development is illustrated by citations of opinions of the text-writers, the provisions of treaties, and the decisions of courts. Contraband, blockade, continuous voyage, carriage of property at sea, visit, search, capture, condemnation, recapture, and rescue are the subjects which are traced from their origin to the most recent practice. Such an exposition cannot fail to prove useful—as the author hopes—to the lawyer, the shipowner and shipper, to diplomatists and consuls; but it will also contribute to the advancement of the freedom of commerce in war.

A second volume completes the "Dictionary of Christ and the Gospels," edited by the Rev. James Hastings, with the assistance of the Rev. John A. Selbie and the Rev. John C. Lambert, and published in the same form as the well-known "Dictionary of the Bible," which also bears the name of Dr. Hastings (Charles Scribner's Sons). The plan of the work is good; articles are provided on all subjects connected with the criticism, history, and doctrine of the Gospel narratives. The contributors are exclusively British and American scholars; and a generous number of important titles have been assigned to students on this side of the water. The work is designed especially for preachers, for whom it unquestionably makes accessible many facts suitable for homiletic use. The extreme conservative point of view, however, noted in the first volume is maintained in the second. Scant space is accorded to the questions raised by the most recent criticism, and many of the articles indicate a manner of thought which the present age has outgrown. This dictionary is therefore likely to become more speedily out of date than its editor's earlier effort. Occasionally an article by the Rev. Ernest F. Scott or Prof. Benjamin W. Bacon sheds modern light on an important topic, and serves to show what this work might have been in the hands of less fearful spirits.

Prof. Kirsopp Lake, the successor of Van Manen in the University of Leiden, is the author of a careful examination of "The Historical Evidence for the Resurrection of Jesus Christ" (G. P. Putnam's Sons). The accounts in the four Gospels, the references in the Acts, and in the writings of Paul, are submitted to patient inquiry, and the endeavor is made to explain the origin of the divergent narratives, and arrive at the earliest tradition. Substantially, Professor Lake holds that the Marcan account represents the earliest belief of the church, and that the additions of the other Gospels are embellishments of the story, rather than independent traditions of value. He holds, however, that the lost conclusion of Mark recited at least an appearance to Peter in Galilee. The work as a whole is an able piece of historical criticism, conducted in a reverential spirit, and recognizing to the full the limits of historical investigation and the privileges of religious faith. The suggestion is made that the women who returned to the sepulchre in the early morning found the wrong grave, and that the speech of the young man to them was the prosaic statement, "He is not here: lo! there they have laid Him," pointing to a tomb still closed. The conjecture is ingenious, but is lacking in proof, and against it are the words, "He is risen," which are found in the earliest tradition as part of the young man's address to the women.

Modelled after the Protestant Religionsgeschichtliche Volksbücher, edited by Prof. M. Schiele, the Catholics of Germany have now decided to issue a set of popular yet scientific discussions of religious, Biblical, and philosophical problems in booklet form, to be called Biblische Zeitfragen. Prof. J. Rikel, who holds the chair of Old Testament exegesis in Strassburg, is the general editor, and the Aschendorff Verlag, Munich, will print the series.

A new series bearing the general title Die Verbrechensbewegung im Östlichen Europa, just begun in Munich, is a timely undertaking. So far only one volume has appeared, "Die Kriminalität der Balkanländer," by Dr. Arnold Wadler. This is a study based on statistical data.

An interesting collection of poetic appreciations of Jesus as the greatest and purest of men, irrespective of theology and dogma, forms "Die moderne Jesusdichtung: eine Anthologie," by Karl Röttger, who also adds an introduction. The book is published in Munich and Leipzig, by R. Piper & Co., as the sixteenth volume of the series known as Die Fruchtschale.

In the Report of the philosophico-historical Section of the Vienna Academy of Sciences, Prof. C. Wessely describes a number of recently found papyri of importance in throwing light on earlier church history. In the persecution of the Christians under Decius, circa 250 A. D. those who denied the faith were compelled not only to sacrifice to idols and eat sacrificial meat, but also in a formal document to denounce their faith. Hitherto only four formulas of this kind were known to exist; two in Vienna, one in Berlin, and one in Oxford. Now the director of the Museum of Alexandria, Dr. F. Breccia, has discovered in the recent papyrus additions to that collection a new and more complete formula.

Tacitus states in his Germania (xii.) that according to old German law and usage certain crimes were punished by burying the perpetrators alive in a swamp or marshy moor, and cases of this kind are mentioned in ancient German and Scandinavian poems. In the Gudrunlay of the older Edda of Sämund Sigfusson, for example, Gudrun is falsely accused of infidelity to her husband King Atli (Attila), and her maid Herkia, who originated and circulated this charge, is condemned to be thrown into a foul morass. The recently published twenty-fourth Report of the Museum Vaterländischer Altertumer connected with the University of Kiel contains a valuable paper on "Germanische Moorleichenfunde" by Fräulein Johanna Mestorf, professor in the university, and since 1873 director of the Museum. She describes fifty-two bodies found in German moors, some of them entirely naked, with their clothes lying near them in a bundle, and others fully dressed and often richly attired and adorned with valuable jewels. On the body of one woman were bracelets, a necklace of amber pearls, and elegant shoes adorned with fine leather work. These articles of clothing and ornaments show that the severe penalty was inflicted on wealthy persons at a comparatively late period, since such costumes were unknown to the primitive Germans. From the position of the bodies it is evident that they were thrown headforemost into the swamp. Occasionally the executioner of the sentence seems to have mercifully fractured the skull or thrust a pointed weapon into the heart before consigning the body to its foul doom.

The Verein der Buchhändler of Leipzig has started a movement against the sensationalism that is threatening modern German literature. A document has been issued urging united action against the *Zehnpfennighefte* which in editions of tens of thousands, dealing with crime and sexual matters, are corrupting the public taste.

Major Paul Balagny of the French army gives us the fifth volume of his elaborate work "Campagne de l'Empereur Napoléon en Espagne" (Paris: Berger-Levrault). In this, as in the preceding volumes, the author's purpose is to let the French official documents speak for themselves. Whereas Napier's classic is a continuous work, of no apparent documentation, M. Balagny's is really a classification of reports, of the correspondence of Napoleon, his marshals, and his generals, with just so much letterpress, so to say, by the author, as to keep the reader from losing his way. Adequate maps and sketches are furnished; for the author has personally followed the various routes of the French troops and visited the main battlefields. This work constitutes a serious contribution to military and even to general history.

René Wallier, continuing the annual series of many years signed A. Daniel, expounds from the moderate Radical point of view the year 1907 in French politics, in "Le 20ème siècle politique."

E. Amélineau begins the publication of his "Prolégomènes de la religion égyptienne," by a volume on the mythology of Egypt; the author is lecturer on the subject at the École des Hautes Études, and will be remembered for his excavations at Abydos.

That vast international symposium of authors and authorities, known and unknown, carried out by the *Mercure de France* on "La Question religieuse," now appears in a volume edited by Frédéric Charpin. It is many men of many minds asking whether God, if there be a God, will save our soul, if we have a soul.

J. Izart has compiled a compact and most useful "Dictionnaire et vocabulaire de l'automobile" (Paris: H. Dunod et E. Pinat), in four languages, French, German, English, and Italian. Of the 335 pages, 193 are devoted to the vocabulary proper, the remainder being a practical manual of international touring. The entries are French, with equivalents in the other languages; and each entry is accompanied by a brief but sufficient description of the part, etc., with clear diagrams where complexity makes it necessary. A continuous alphabetical index in English, German, and Italian completes the work. To Americans contemplating a motor trip abroad the work should prove indispensable.

Statistics of gifts to libraries in the United States during the year 1907, as compiled by the secretary of the American Library Association, show an aggregate of $4,584,859. of which $1,459,350 was contributed by Mr. Carnegie, and $3,125,509 by other persons. For buildings $3,386,600 was given, for endowments $1,098,000, and for undesignated purposes $99,759. New York State heads the list in the number of gifts reported.

In the eighth annual report of the New Jersey Library Commission special attention is called to the rapid growth, both in the supply and in the use of travelling libraries, during the three years that the Commission has had charge of them. In 1904 there were but twelve such libraries in the State system; the number now in use is 153.

The eleventh Conference for Education in the South will be held at Memphis, April 22 to 24. The programme will include addresses by representative speakers on "The Progress of Arkansas," "The Training of the Southern Teacher," "The Methods of an Educational Campaign," "Industrial Education," "The Schools and the Forests," "The Christian South and Negro Education," "More Efficient School Supervision," and "Business Leadership in Educational Progress." There will be an "open forum" on the subject of "Compulsory Attendance," at which Dr. B. J. Baldwin, president of the Board of Education of Montgomery, Ala., will preside. The discussion will be opened by Prof. W. H. Heck of the University of Virginia. There will also be addresses by Southern women on the service which is being rendered to the cause of popular education by the school improvement organizations of the several States of the South. The subject of the "Higher Education of Women" will also receive attention.

The International Congress for philosophy, which was organized in Paris in 1900, and which held its second meeting in Geneva in 1904, will meet in Heidelberg beginning August 31.

Charles Cuthbert Hall, president of the Union Theological Seminary since 1897, died in this city March 25. Born here in 1852, he was graduated from Williams, studied at the Union Seminary, and also in London and Edinburgh, and held pastorates in Newburgh, N. Y., and Brooklyn. Among his books are "Christian Belief Interpreted by Christian Experience" (1905), "Redeemed Life after Death" (1905), "Universal Elements of the Christian Religion" (1905), "Christ and the Human Race" (1906), and "The Witness of the Oriental Consciousness to Jesus Christ" (1907).

Truman Jay Backus, president of Packer Collegiate Institute, Brooklyn, since 1883, died March 24. He was born in Milan, N. Y., in 1842 was graduated from the University of Rochester, and was for some years professor of rhetoric and English literature at Vassar. Among his books are "Great English Writers," "Outlines of English Literature," and a revision of Shaw's "History of English Literature."

On the 15th of last month Walter Scott's "Kitty" of the "Journal" died at Ealing. She was born in 1815, the fifth child of James Skene of Rubislaw, the poet's lifelong friend. In 1841 she married John Foster Grierson, Queen's printer for Ireland, at Athens, whither her father had gone for his health. She saw much of Scott when she was a girl, and in her old age was fond of recalling those days, but she was averse to publishing her reminiscences.

The death of Eduard Zeller, at the great age of ninety-four, removes one of the patriarchs of German scholarship. Professor Zeller was educated at Tübingen and Berlin ,and in 1840 became *Privatdozent* at the former university. Seven years later he was appointed professor of theology at Berne; from here he was transferred to Marburg in 1849, Heidelberg in 1862, and Berlin in 1872. He continued his active teaching until 1895. As a student at Berlin he had come under the influence of Hegel, and in his first teaching years he was one of the founders of the *Theologische Jahrbücher*, which, along with the writings of Christian Baur and David Strauss, introduced into religious study the Hegelian conception of development. From his work in the origins of Christianity he was led to Greek philosophy, and his great work, mainly composed between the years 1844 and 1852, was "Die Philosophie der Griechen in ihrer geschichtlichen Entwicklung." This was afterwards much revised end enlarged, the latest edition bearing the date 1902. It has been translated into English and other languages,and is universally acknowledged as the leading book on the subject. Among his other works are "The History of the Christian Church" (1847), "The Theological System of Zwingli" (1853), "The Acts of the Apostles: Their Contents and Origin" (1854), "State and Church" (1873), "Platonic Studies" (1839), "Plato's Symposium," translation and a commentary (1857), "Outline of the History of Greek Philosophy," first published in 1883, and "History of German Philosophy since Leibnitz" (1873). He received abundant honors in Germany, and was a member of many learned societies. He belonged to a race of scholars who have pretty well passed away, their place being taken by syndicated writers, so to speak.

Dr. Richard Kaufmann, for many years professor of political economy at the Technical Academy at Charlottenburg, has died at the age of fifty-eight. He wrote a number of books, including: "Finanzen Frankreichs," "Verteilung der Steuerlasten in Preussen," "Die Eisenbahnpolitik Frankreichs," "Die Kommunalfinanz."

STUDIES IN BIBLICAL LITERATURE.

The Canon and Text of the New Testament. By Caspar René Gregory. New York: Charles Scribner's Sons. $2.50 net.

The Leipzig professor's "Prolegomena" and his (as yet unfinished) "Text Kritik des Neuen Testamentes" are intended mainly for scholars, while the present volume, covering both Canon and Text, has in mind chiefly the lay reader. The book is popular in the best sense of the term, being at once readable and accurate. There are no footnotes to distract attention, no bibliographical references. The reader, unless a specialist, would never know from this volume that Harnack, Zahn, and Westcott had written on the Canon, and Kenyon, Nestle, and Lake on the Text. Gregory is content to give his own opinion; and in this method there are obvious advantages. The style is fascinating, in spite of occasional infelicities. The author's irrelevant parentheses while bordering at times on the smart, are never offensive: "The textual critic must know all about book-making, not for races but for literature" (p. 318). We are requested to "quit the pernicious habit of calling the Lord's Day by the Jewish name for Saturday" (p. 50)

Gregory's theory as to the rise of the New Testament is based upon the habit of public worship among the early Christians. Two parts of the service are significant: one in which God speaks to men, the Old Testament lessons; the other, in which man speaks to men, the sermon, address, the recounting of what Jesus said and did, and, later on, the reading of the letters of Paul and of the Gospels. Before the time of Irenæus, it turns out that the four Gospels and the letters of Paul had passed over from the second to the first class, were put, that is, on a par with the Old Testament, while other books still remained in the second class. Though Marcion gives the first indication of a "clear-cut, definitely rounded off New Testament," nevertheless his "books were a selection from the books of the church" in accordance with his own theological interest. But, up to the time of Irenæus, there is no sign "of anything like an official declaration as to the canonicity of any one book or of a number of the books of the New Testament" (p. 217). From Irenæus on, the problem is mainly that of the classification of the Catholic Epistles in part, Hebrews, Revelation, Hermas, etc., whether they are to be assigned to the first or second class. Athanasius indicates the Alexandrian view in putting into the normative class what we know in the King James version as the New Testament, and in leaving Hermas and others in the second place. Jerome and Augustine fix a similar list for Western orthodoxy. But "Augustine could not point to an authoritative deliverance of the whole church touching the books of Scripture" (p. 287). In spite of Trent and Westminster, "there was never an authoritative, generally declared and generally received canon" (p. 290). Professor Gregory adds:

> The British and Foreign Bible Society and the Roman College for Propagating the Faith are gradually spreading abroad our New Testament. But neither the one nor the other is a General Council authorized to settle the canon (p. 292).

The point at which the reader prays for more light is the point at which Paul and the Gospels slip from the second to the first class, from "man to men" to "God to men." The reader wonders if Marcion did not have more to do with this significant transition than Gregory (pp. 81, 82) admits.

Turning to the Text, we find ourselves in the company of an expert who writes both with knowledge and with love of his subject. He passes in review papyrus, parchment, Greek manuscripts, both large and small letter, lesson books, translations, church writers, printed editions, externals of the Text, and, finally, the most difficult and the most important section, "Early History of the Text." Here Gregory stands in close and admitted agreement with Westcott and Hort. His view, stated briefly, is this: In the first century, Gregory assumes, the Christian writings were, with the exception of Revelation, carefully copied. Traces of this type of text, boldly called the Original Text, are to be discovered where intentional changes were not wont to be made, that is to say, in more prosaic and ignorant circles. A second type of text, commonly known as Western, may also have originated in the first century, and was certainly widespread almost everywhere in the second century. This text, named Re-Wrought by Gregory, is "not a clear-cut revision or correction of the former text, but a series of varying experiences of the earlier text in various places" (p. 488). Its value lies not in itself, but in its witness to the original text. A third type of text has its origin with scholars at Antioch, who "filed the text off to give it as nearly as possible the smooth surface of polite diction" (p. 493). This type of text Gregory aptly calls Polished. On the basis of these three types of text, each of which is simple, that is, not conflate ("single-eyed" is Gregory's word), a revision was made at Antioch which aimed at producing a full, untroubled, and polished text. In this revision Lucian may have had a hand. Then finally, when Christianity had become authoritative under Constantine, a second Syrian revision emerged, the official and the worst possible text, a text which remained essentially unchanged until modern scholarship started on its hunt after the original text.

Before closing his discussion, Gregory, as Hort had done before him, points out the fact that modern textual criticism has given the world a text of the New Testament which is secure. Important variations might fill "a half a page or fifteen or sixteen small lines." Definitely spurious passages are John vii, 53—viii, 11, Mark xvi, 9-20, and First John v, 7-8. Probably spurious are Matthew xvi, 2-3, Luke xxii, 43-44, and John v, 3-4. It is curious, as Gregory notes, that the passage in First John, commonly used as a proof text for the doctrine of the Trinity, has been shown by a Roman Catholic scholar to have originated with Priscillian, a heretic who did not hold the doctrine of the Trinity.

In the treatment of the text, the reader would have been obliged to Dr. Gregory, had he said more in detail in regard to a growing tendency to estimate the Western text as valuable in itself. What is said (pp. 490, 505 ff.) is scarcely adequate even in a book of this character. Furthermore, even if Von Soden has not read, or at least appreciated, Tischendorf and Westcott and Hort, even if he is all wrong in his method, still as a matter of record, something should have been said about Von Soden's new nomenclature. In a second edition, which surely will be demanded shortly, the spelling of Irenäus (p. 350) should be conformed to the prevailing usage in the book; a decision should be made between St. Catharine (p. 329) and St. Catherine (p. 298); and the dittography (p. 488, l. 27) should be remedied. Finally, let us thank the editor, Dr. Charles A. Briggs, for putting such an eminently readable and trustworthy volume into his International Theological Library.

Old Testament and Semitic Studies in Memory of William Rainey Harper. Edited by Robert Francis Harper, Francis Brown, and George F. Moore. University of Chicago Press. 2 vols. $10.

This handsomely printed and worthy memorial contains twenty-six articles by the leading Old Testament and Oriental scholars of America. The names of the contributors, connected with fifteen of the leading institutions of learning in this country, are in themselves an indication not only of the high grade of scholarly attainment, but of the recognition now given to Semitic studies—a recognition largely due to the activity of the late President Harper. His position as president of the University of Chicago during the last years of his life made him so prominent as an administrator and educator as to overshadow in the public mind his earlier work as an inspiring teacher of Hebrew, first in the Baptist Union Theological Seminary, Chicago, and then at Yale. Through summer schools, at first independently conducted and afterwards connected with the Chautauqua movement, many persons were attracted to the study of Hebrew and of the Old and New Testaments who would not have been reached in any other way. As the editor of three periodicals devoted to Semitic philology, to Bible studies, and to theology in general, he printed a large number of important contributions. His own original investigations, though restricted by his later duties, were considerable; and shortly before his death he published what is regarded as the standard modern commentary on the books of Amos and Hosea.

As an introduction, Professor Brown of the Union Theological Seminary furnishes a sketch of the life of President Harper, which is, at the same time, a contribution to the history of Semitic studies in the United States. Of the various papers, it is possible to refer to only a few, which illustrate the scope of these volumes. Thirteen of the papers deal with Old Testament themes; and those of Profs. C. H.

Toy and Moore of Harvard, Prof. Paul Haupt of Johns Hopkins, and Prof. C. C. Torrey of Yale deserve special mention. Professor Toy discusses "Some Conceptions of the Old Testament Psalter." The subjects specifically treated are the attitude towards sacrifices, the conception of law and of the government of the world, and the view taken of the ancient myths and legends, and of foreign deities. In regard to sacrifice, Professor Toy calls attention to the varying attitude in the Psalter: some psalms view sacrifices with favor, while others manifest more or less opposition. Professor Toy's footnotes are full of interesting suggestions, and contain many novel views which it is to be hoped he will develop in greater detail. Professor Moore, in his "Notes on the Name Jahweh," fairly disposes of the current belief that the false pronunciation "Jehovah" does not date farther back than the year 1520. The article, which is a model of scientific accuracy and learning, traces the use of "Jehovah" to the year 1278. Equally important is the proof that the pronunciation "Jahweh," now commonly accepted by scholars (though there is now a tendency to prefer "Jahwah") was propounded as early as the sixteenth century. The most elaborate contribution is by Professor Haupt, who furnishes a revised Hebrew text of Esther. The number of actual textual changes is not large, but there are many glosses and scribal expansions which Professor Haupt excludes from the text proper, and places at the bottom of the page. Most of these will probably be accepted by critics, but in regard to some of them opinions will differ. Professor Haupt is particularly happy in his new interpretations. A second paper on Esther is contributed by Professor Lewis B. Paton of Hartford Theological Seminary, who has put together the complete critical apparatus for the study of the text derived from the various ancient versions, Greek, Latin, Aramaic, and Syriac. Of a similar highly technical character is Prof. C. C. Torrey's study of the text of Chronicles, Ezra, and Nehemiah. These two articles reach the high-water mark of exacting scholarship.

Of the Assyriological articles, that of Prof. George A. Barton of Bryn Mawr on "The Origin of Some Cuneiform Signs" calls for a word of comment because of the important suggestion that what have hitherto been taken as methods adopted by Babylonian scribes for giving a "heightened" or "potentialized" meaning to a certain sign are merely variant forms of one and the same sign. Professor Barton's method also marks an improvement over previous attempts to classify the cuneiform syllabary into certain groups. His twelve classes, covering human and animal forms, parts of the human body, and of animals, birds, fishes, trees, plants, water, canals, houses and parts of houses, implements and vessels, articles of apparel, and fire, are valuable indications of the cultural stage and sociological status of the inventors of this old Babylonian form of writing. The article embodies some of the more general results of an investigation of the theme which will be fully set forth in a larger work on which Prof. Barton is now engaged. Prof. Morris Jastrow, jr., of the University of Pennsylvania furnishes a new interpretation of an omen text, which he shows was prepared for the temple schools, in order to illustrate the method followed in the interpretation of signs derived from the inspection of the livers of sheep as a means of divining the future. Attached to the article is a chart giving the Babylonian terms for the various parts of the liver and of phenomena observed on the liver. Two articles on Babylonian seal cylinders, by Dr. William H. Ward of New York and Prof. I. M. Price of the University of Chicago, illustrate the value of these objects for the history and religion of Babylonia and Assyria; Prof. J. D. Prince of Columbia gives a first translation of a most difficult Sumerian text. The general sense of the text has been determined by him, but many of the details must still be regarded as doubtful. An exceedingly valuable article by Prof. A. T. Clay of the University of Pennsylvania, in his study of fifty Aramaic endorsements on cuneiform tablets of the Persian period. Professor Clay has succeeded in satisfactorily deciphering the most of those badly preserved endorsements. The philological and epigraphical results are important.

Prof. R. J. H. Gottheil of Columbia contributes an elaborate study of the relationship of Jews and Christians to Moslems in Egypt, utilizing as a new source an important document which he found in Cairo and which illustrates the position occupied by the Jewish sect of the Karaites in Egypt in the middle of the ninth century. The text and translation of the document are added to the article.

CURRENT FICTION.

Fennel and Rue. By W. D. Howells. New York: Harper & Bros.

Mr. Howells's new story has at least two refreshing elements—it presents a novel situation, and instead of dealing with unpleasant immoralities, it concerns itself with excessive morality. It is, in short, the history of a virulent case of "New England conscience" seated in a Southern breast. Verrian is the young author of a popular serial story running in a New York periodical. Two young women in a country town for a joke write him a letter purporting to come from a girl who is a victim of a rapid and fatal disease, and who begs Verrian to tell her the conclusion in advance of its publication. Verrian takes the matter, as he does himself, seriously; the editor of the periodical asks the writer of the letter for her credentials, the girls are frightened and confess their guilt by letter; Verrian is furious, and writes so severe a reply that Miss Shirley, a Southern girl, the real writer of the first letter, which was signed by her companion's name, longs for death and has brain fever. Somewhat later Verrian goes to a house-party, at which he proceeds to fall in love with Miss Shirley, who is acting as hired entertainer. An incident which reminds her of the irreparable evil of an untruth, causes her to faint, and eventually leads her to confess to Verrian that she was the perpetrator of the practical joke. Verrian is ready to forgive her, they separate, and do not meet again until Miss Shirley has become engaged to another man, to whom she has not dared confide the frightful secret of the letter. In Verrian's presence she finally confesses her guilt. Her fiancé thereupon refuses to recognize Verrian, and strides away with Miss Shirley. Verrian is left in anguish; while the reader feels perilously near to the mock-heroic, and to a caricature of the remorseful Virgil in Purgatory:

> O noble conscience and without a stain
> How sharp a sting is trivial fault to thee!

Mr. Howells has succeeded admirably in depicting the excesses to which continual brooding over a trifle may lead those who have no sense of humor. The slender plot is well developed, though it is embedded in a good many pages of banal, but exceedingly life-like conversation, uttered by desperately uninteresting and real people.

The Soul of a Priest. By the Duke Litta. New York: Doubleday, Page & Co.

Fogazzaro has spoiled us for this too avowedly psychological novel, which deals with the ever-interesting subject of anti-clericalism in Italy. The hero, Renato Rinaldi, a young Milanese nobleman, after an education received in a monastery school, shrinking from the corruptions of the world, enters the Church. He finds the Roman Catholic priesthood no less corrupt than society, experiences painful disillusion, and, after stormy struggles, leaves the church in order to devote his life to "the advancement of Truth." The bitter and even petulant spirit in which the book is written detracts from its value as a contribution to anti-clerical literature. It almost laughably recalls "From St. Francis to Dante," in which Mr. Coulton "exposes" the Middle Ages by collecting from Fra Salimbene the scandalous passages which he gloats over as characteristic of the age. The Duke Litta scathes the evils of the Church one after another, not forgetting to attack Our Lady of Lourdes, and to give a covert dig at St. Catherine. Renato is the only pure-minded character within the pale of the Church, and even his early devotion to the ecclesiastical life is attributed to his love of ritual, due in some mysterious way to an element of sensuality inherited from his immoral parents; on the other hand, the intellectual problems that force themselves upon the true Modernist receive scant notice. The author further weakens his case by painting the world in as black colors as the Church; both are equally "clotted by contagion," and the picture of neither gains force by contrast. The indignation of the author against Church and society has prevented him from producing an artistic psychological study, and in the development of Renato's character there is an entire lack of those delicate touches that make such work convincing.

The narrative, however, in spite of some inconsistencies and its lack of incident, has a certain unity of effect and holds the attention throughout. This is the first novel that the Duke has written in English, of which he has an excellent command, although he occasionally betrays his foreign origin, as for instance, when he speaks of "a tepid October day," and of "serving Mass."

Seraphica. By Justin Huntly McCarthy. New York: Harper & Bros.

The manifest destiny of this story is to be put upon the stage, for which it has a thousand qualifications. To begin with, the period is nothing if not stageable, being the days of the Regency of Philip of Orleans, when the reaction from Madame de

Maintenon's régime was changing the French Court to a mere house of mirth. For figures, besides the Regent, the King, the painter Watteau, and Madame de Phalaris, there is a high-born pair who are both fleeing from the betrothal their elders desire; a princeling he, a duchess she, who rides away in cavalier's guise. And being all the daughters of her father's house and all the brothers, too, she has had a boy's upbringing and can ride, shoot, and fence with the best. "A merry devil in petticoats" was the name she earned at home. Abroad, in man's attire, or acting Columbine at Versailles in Watteau's Comedy of Masks, she becomes the heroine of a "memorable prank," part of "a few pages plucked from the golden book of the Regency," a figure in a demi-semi-historic group of that strange court "with its florid Regent, its little King, its possession of shameless favorites, and graceless gentlemen."

Mr. McCarthy has made an animated and effectively costumed story, ripe for a fall from the bookshelf to the footlights. Some of the eighteenth century history, atmosphere, and words (such as "cautelous" and "mirific") will no doubt remain behind upon that shelf, but there is plenty of scenic effect to survive the fall.

Mothers in Israel. By J. S. Fletcher. New York: Moffat, Yard & Co.

The sub-title of this book is "A Study in Rustic Amenities," viz.: lying, slander, evil-speaking, and malice. "It is not too much to say that they form an Atmosphere. Nor can one truthfully say less than that Atmosphere is chiefly created by Woman." The scene of this particular exposition is a Yorkshire village, where the dislike and suspicion of a newcomer are rooted, according to our author, in a survival of the old tribal feeling. The study is made with the utmost seriousness of intention, and the utmost solemnity of belief. The preface in particular holds shuddering presage of calamity to come. One recalls Edna Lyall's "Autobiography of a Slander," which should be in every village and other library, and wonders if this is to be a companion volume. But here the story in its naïve crudity is an anti-climax to the formidable preface. There are not, however, wanting graphic touches of village landscape and figures, and if some readers feel cheated out of tragedy, others will take comfort in comedy, for the curtain falls on backbiters thoroughly frustrated, if not in the least reformed.

The Lost Goddess. By Edward Barron. New York: Henry Holt & Co.

This is the story of a party of gay and idle New Yorkers, who sail on an expedition to the Upper Amazon to rescue a stolen American maiden from the hands of the savage Tigrane, who worship her as the goddess of their tribe. Granted this *donnée*, and the fact that the heroine, one of the rescue party, is a Maya princess, adopted in early childhood by a New Yorker, the sequence of events is not too fantastic. Intrigue, revenge, bloodshed, murder, and abduction follow one another in rapid succession, and so far as movement and action are concerned, the story satisfies the requirements of a tale of adventure. But it calls forth a sigh for "the chronicle of wasted time," for the glamour of Celtic romance, where the preposterous never fails to charm, the impossible is natural, and mystery is the world in which the reader moves without a question. The true spirit of romance, rare at best in the fiction of to-day, is sadly lacking in Mr. Barron's book, which in its execution is not without merit.

Love's Logic and Other Stories. By Anthony Hope. New York: The McClure Co.

No one who has read "The Prisoner of Zenda" and "The Dolly Dialogues" can resist the temptation to take up a book by Mr. Hawkins, in the hope that he may have matched or surpassed those earlier successes. Too often the result has been disappointment—as it is in this case. The volume is made up of short stories, good enough for magazines, but distinctly not worth publication in permanent form. "Love's Logic" is a scrap of very thin dialogue, wisely buried in the middle of the book. The four best tales are "Mrs. Thistleton's Princess," "The Necessary Resources," "Miss Gladwin's Chance," and "The Prince Consort"; the other eleven are easy to read, because they are short; and easier to forget, because they are without distinction. The book is carelessly proof-read and printed.

Letters of Dr. John Brown, with Letters from Ruskin, Thackeray, and Others. Edited by His Son and D. W. Forrest, with biographical introductions by Elizabeth T. M'Laren. New York: The Macmillan Co.

> Almost every collection of Letters . . . should be weeded. A real service would be done to literature by any judicious man who would undertake the task of reconstructing the "Life and Correspondence" of some half-dozen of our eminent men and omitting what is redundant.

These words, from a letter from Sir Henry Taylor to Dr. Brown, were not, we regret to say, always present in the minds of the editors of this volume. The seventy-five pages of letters addressed to Dr. Brown are, on the whole, more interesting than his own output, because they have been more carefully selected. Many of Dr. Brown's letters are filled with detail that is of significance chiefly to the Edinburgh circle in which he moved; and the inclusion of this matter is entirely proper, for the book is primarily intended for the hundreds who knew him and loved him in his own home. But there is a good deal—brief and commonplace descriptions of travel and other odds and ends of routine—which can hardly appeal to any one outside the family. The American reader will lose interest unless he skips freely.

Of the letters from Dr. Brown's correspondents, those of Thackeray and Ruskin are the most entertaining. Our own Dr. Holmes and Mark Twain appear briefly but creditably, and Lady Trevelyan gives a memorable description of Turner in his "wonderful old house":

> On faded walls, hardly weather-tight, and among bits of old furniture thick with dust like a place that had been forsaken for years, were those brilliant pictures all glowing with sunshine and color—glittering lagunes of Venice, foaming English seas, and fairy sunsets—all shining out of the dirt and neglect, and standing in rows one behind another, as if they were endless, the great Carthage at one end of the room and the glorious old Téméraire lighting up another corner, and Turner himself careless and kind and queer to look upon, with a certain pathos under his humor, that we could hardly miss.

Thackeray is, as in his letters printed elsewhere, intimate and delightful, with many touches, however, of weariness and regret. He tells us that the "bore and humiliation of delivering these stale old lectures is growing intolerable." And again, of the vanishing pleasures of youth: "At 47 Venus may rise from the sea, and I for one should hardly put on my spectacles to have a look." Ruskin, on the other hand, shows his eager, reforming bent, and rails at the stupidity of a world which is indifferent to his proclamation of eternal truth: "The undintable caoutchouc of which most people's heads are made is too much for me." To Ruskin the political economists are the lowest of God's creatures. The tone of mind which produced "Ricardo's chapter on Rent and Adam Smith's eighth chapter on the wages of labor" Ruskin classes with "Cretinism, Cholera, and other inexplicabilities of human disease." In another letter this "so-called science" is the "most cretinous, speechless, paralysing plague that has yet touched the brains of mankind." This denunciation, Ruskin assures Dr. Brown, "is the cool, resolute result of ten years' thought and sight. I write it as coolly as I should a statement respecting the square of the hypotenuse."

In Dr. Brown's own letters some of the best, and at times most astonishing, passages contain his literary judgments. He read omnivorously. Among the poets he seems to have reckoned Wordsworth as his favorite, despite Wordsworth's lack of humor. Browning, too, was "a true and great poet, more of both than Tennyson is, by a great way." Of the novelists he liked Thackeray and Scott the most; and to the very end he seems always to have found in their books fresh pleasure. To Stevenson's first ventures in literature he extended a warm welcome, describing "Travels with a Donkey" as "true genius, a new liquor, fresh and aromatic." Of Dickens the novelist, also "a genius in the true sense," he was tolerant; but Dickens the man, with his "intense, adamantine egotism," repelled even Dr. Brown's charitable nature. Fielding he could enjoy, though he found "Tom Jones" "coarse and rough," but for George Eliot he had no sympathy. Half a dozen times he breaks out against "the somewhat disgusting praise of the naughty, strong-headed Mrs. George," "that taint of sensuality, or rather of sexuality, which was so offensive in 'The Mill on the Floss,'" and "that unexpected, gratuitous nastiness which makes you uncomfortable." In spite of Dr. Brown's affection for Ruskin, he admits that "his arrogance is more offensive than ever"; and in spite of an admiration for Matthew Arnold's "sinewy delightful style," he feels that "the great Matthew looks at the universe—and for that part at God—*through an eyeglass*, one eye shut, and a supreme air."

Among American authors, Dr. Brown places Lowell first, "with more of the light of common day, more naturalness in thought and word," than Tennyson and Browning, and "no want of depth or tenderness, with humor of the stronger and rarest flavor." "Whittier comes nearest him; Longfellow is a sort of male Mrs. Hemans." President Eliot he met at dinner in 1874, and found "a delightful man." From another letter, written in the same year, we take this sentence:

> I saw a sweet young widow of a nephew of Lowell, who (the nephew) was killed in the war, a very sweet, modest, and blooming (rare among them) woman.

But the chief attraction of the book, after all, is the picture we get of the author of "Rab and His Friends" and "Horæ Subsecivæ." Even the detail that seems superfluous may help to complete the portrait of one of the best beloved of English writers. His singular power of attaching to himself both men and animals is evident here as in his formal writings and his daily life. Bred a strict Calvinist, with a long line of clerical ancestors, he was nevertheless too kind and genial to "hold the doctrine of eternal punishments"; on that point he was "content to remain in doubt." But the outlines of his character are familiar to all our readers. We will simply quote from one of his earliest letters a sentence that shows how soon his generous nature began to take its own way toward perfection:

> What a blessing it is to be able to enjoy these innocent plain things—a bit of green earth, of the sky, a flower, a child's eye twinkling from under the long eyelashes, these are the common things which I would not give up for the treasures of silver and gold.

A Royal Tragedy. By Chedomille Mijatovich. New York: Dodd, Mead & Co. $2.50 net.

The author of this volume, formerly Servian Minister at the Court of St. James and at Constantinople, was connected for more than thirty years with the Obrenovich dynasty, was private secretary to King Milan, and a Cabinet Minister under both Milan and Alexander. More than once he tried to dissuade first the father and later the son from the rash *coups d'état* that were the policy of both, and that mark the several steps in the decline of the Obrenoviches. But the dynasty was not to be saved by good advice; and a Greek would have seen in the two last kings of the house men plainly visited by the gods with the madness that hurries the victim to his violent end. They belonged to one of those families to which dreadful things happen. Only five Obrenoviches ruled over Servia, and all save the second owed their downfall to women. Milosh, the founder of the dynasty, who created the Servian Principality in the first quarter of the nineteenth century, was exiled through his wife's resentment at his numerous infidelities. Michael III. was murdered in Belgrade in 1868, in the presence of the woman for whose sake he was about to divorce his wife. Milan's quarrels with Nathalie embittered the childhood of Alexander, and alienated the Servians from the dynasty; while his premature abdication is supposed to have been due to the persuasion of his mistress, Arthemise Christich, always suspected to have been a secret agent of Russia. How Draga Mashin wrecked the fortunes of the last Obrenovich is well known, though M. Mijatovich adds many details and unravels the thread of many an intrigue hitherto unknown to the general public.

M. Mijatovitch is a Russophobe, and belongs to the party that prefers the influence of Austria for a state that cannot hope to stand free of some form of protectorate. His book is an open attack on Russian perfidy. Milan, the Austrophil, had dared in 1882 to turn his back on Russia and make a convention with Austria-Hungary. From that date, according to Mijatovich, every foolish action of Milan or Alexander was secretly inspired by Russia working for the fall of the dynasty. We are to believe that the marriage with Draga which shocked even ex-King Milan, and alienated all patriotic Servians, was planned by Russia. But whatever the facts, the credulity of the reader will be taxed by the sweeping and sometimes unsupported assertions of the author. Take, for example, this statement:

> In 1897 the Russian minister to Bavaria, Mr. Isvolsky, came specially from Munich to Meran on some secret mission to King Alexander, and spent there several days in company of the young King and his mistress. I daresay, although I have no undoubted proof, that on that occasion Draga placed herself unreservedly at the disposal of the Russian government, to achieve the special objects of the Russian policy in Servia (p. 70).

At the critical moment when Alexander's friends were trying to dissuade him from his fatal marriage, the Czar not only sent his formal congratulations to the pair, but accepted the function of "Koom," or chief sponsor, for their wedding. Mijatovich goes so far as to assert that M. Tcharikoff, the Russian minister, at the time of the assassination of the King and Queen, "was actually at one of his windows, watching, no doubt in great agitation, the development of the tragedy of which he was confidentially informed three or four days before" (p. 203). "No doubt in great agitation" is hardly the stuff of which accurate history is made.

No one can read the story of Alexander and Draga as related here without profound pity for both. For the three miserable years of their reign they were always acutely conscious of their unpopularity, knew that they were the object of numerous plots against which they had no such protection as a Russian Czar can secure, and towards the last never dared to leave the palace. In those two last hours, when they hid in a secret closet listening to the shouts of the infuriated officers who were searching for them, they expiated all their follies. The details given here of their last moments are far more horrible than anything that was published in the newspapers. One is relieved to read in the manifesto of the Regicides, which is printed as an appendix, that the assassins themselves acknowledge that their methods were "very regrettable and perhaps shameful."

In his "Intentions," Oscar Wilde declares:

> Literature always anticipates life. It does not copy it, but moulds it to its purpose. We are merely carrying out, with footnotes and unnecessary additions, the whim or fancy or creative vision of a great novelist. . . . A great artist invents a type and Life tries to copy it, to reproduce it in popular form, like an enterprising publisher.

What an example of this tendency is the tragedy related by Mijatovich! Every essential detail of the events that led up to the last act performed by Alexander and Draga was forestalled by Daudet in "Les Rois en Exil." One sometimes hears it said that Daudet's hero, Christian d'Illyrie, must have been drawn from ex-King Milan. Yet Daudet published his novel in 1879, when Alexander was only two years old, when Milan and Nathalie were still the popular rulers of Servia, before the days of their unseemly quarrels, and when there had been no hint of either exile or abdication. Ten years later, Milan, like Christian, under the influence of his mistress, abdicated in favor of "Sasha," as Alexander was always called, the silent, weak-sighted child of twelve, the counterpart of Daudet's little Count Zara. The scene of Milan's abdication as described by Mijatovich is an echo of Daudet's account, written ten years earlier, of the abdication of Christian. "Puis le baise-main commençait. Christian II. ouvrait la marche, et s'acquittant de cette chose difficile, l'hommage d'un père à son enfant, baisait le bout des doigts frêles." So (p. 29) Milan kneels to pronounce the oath of fidelity to his son.

Not the least interesting part of the book is the apologia of the Regicides, which gives the other side of the picture, the case of the adherents of the Karageorgevich dynasty and of the Russophils. Not that Mijatovich ignores the grievances of the Servians against the unconstitutional policy of the Obrenoviches, but a strong personal attachment to ex-King Milan colors all that he writes. There are some good full-page illustrations, from photographs, of the chief actors in the drama, and the whole is in a readable, though rather sensational, style.

The Egyptian Sudan: Its History and Monuments. By E. A. Wallis Budge, 2 vols. With numerous illustrations; pp. xxviii., 625; x., 618. Philadelphia: J. B. Lippincott Co. $10.

The indefatigable keeper of the Egyptian and Assyrian Antiquities in the British Museum has recently sent forth these two additional large volumes, the result of four missions undertaken for the British Museum between 1897 and 1902, and of a fifth on behalf of the new museum at Khartum, made in 1905-6. With the coöperation of the officials of the army of occupation and of the British government, Dr. Budge had everything to help him in his arduous task; and his volumes are a monument of research, both archæological and literary. He has ransacked the accounts of earlier explorations, and has summarized critically the results. The whole is concluded with a history of the country from the earliest records to 1906. On some accounts Dr. Budge might better have made two books instead of one in two volumes. Even three books might have been better still: one dealing with scientific results, one giving an account of his interesting experiences, and the third devoted to the history proper. The subjects thus indicated are quite distinct and appeal to different classes of readers. As it is, the volumes form a thesaurus, with a physical unity which is somewhat forced.

Little systematic exploration of the Sudan has been done in many years; for

BURLINGAME PUBLIC LIB.

conditions are decidedly unfavorable, not only on account of the terrible climate with its intense heat and nightly cold, but more particularly on account of troubled political conditions. Hopes had been entertained that excavations would reveal much historical material, as has been the case in Egypt. But this hope seems unlikely of fulfilment. Funerary remains, so far as Dr. Budge's excavations prove anything, are almost entirely lacking. The bodies of the ruling classes seem to have been burned instead of being mummified, and the rich stores of amulets, gems, funerary furniture, etc., which have been found north of the first cataract, are wholly absent. Whether more careful exploration of town and cemetery sites, such as that practised by skilled and scientific explorers in the lower Nile valley, will bring its due reward, is doubtful; but one thing is sure, that such results can be attained only at great expense in money and at the cost of untold personal hardship and privation on the part of the explorers. Dr. Budge's work of site-exploration was far from exhaustive. Some places he examined simply by looking over the surface of the ground; some he excavated in small part or merely tested in promising spots. Apparently the simple expedient of recording conditions with the camera was not extensively adopted. The difficulties involved would doubtless be great, but in no other way can an adequate record be kept.

Dr. Budge's account of what he saw and heard is interesting and instructive; his summary of previous labors is valuable, and his history of the country is appreciative and full; but what he has to say about actual excavation and exploration is extremely meagre and disappointing. A bibliography of nearly sixty pages, and an index occupying upwards of forty pages, form valuable aids to one who would pursue the subject in detail.

The Life of Cavour. By Edward Cadogan. New York: Imported by Charles Scribner's Sons.

Mr. Cadogan says in his preface:

> The chief difficulty that I experienced in the preparation of this work lay in the fact that, hitherto, but few authoritative books have been written, dealing with the Italian political history of this epoch, and what few Lives of Cavour have been published are either incomplete or inaccurate. This paucity of published material has proved a serious disadvantage.

First, as to the "paucity." There are eleven quarto volumes of Cavour's speeches; six large octavo volumes of his letters, edited by Chiala; two small quartos of his autobiographical notes and early life, by Berti; three volumes of letters, edited by Mayor, Bianchi, and Bert, respectively; the slender but precious sheaf of letters to Madame de Circourt; Castelli's recollections; William de La Rive's indispensable souvenirs; Chiala's "Politica Segreta"; Zanichelli's Selections in two volumes from Cavour's writings; Artom's biographical elucidation to the abridged edition of the speeches; and, though last not least, Massari's biography, which has much of the authority of an original source. This list, of books of first value only, numbers *thirty* volumes, aggregating about 15,000 pages; besides which there are several score of magazine articles and pamphlets which no biographer should overlook. And this is the man about whom Mr. Cadogan complains there is such a "paucity" of material.

A little reading of Mr. Cadogan's book discloses why he cries paucity; incredible though it seems in one who undertakes to write about Cavour, he apparently does not know Italian. Imagine an Italian, ignorant of English, who presumed to make a biography of Lincoln and complained of the "paucity" of material. It happens that Cavour spoke and wrote French as readily as Italian, and that previous French or English biographers have translated from some of his Italian speeches and letters so that Mr. Cadogan has access at second hand to some of the material, if he can read French. On this point we are not certain, because we find that he borrows (without credit) from the English translation of De La Rive (e. g., p. 45, which corresponds to pp. 104-5 of Romilly's paraphrase), instead of making his own version. Only once does he venture to quote an Italian phrase—Cavour's immortal "Libera Chiesa in Libero Stato," which he renders "A *liberal* Church in a *liberal* State" (p. 131). After that he was well-advised to borrow, and not to guess.

In Mazade and Countess Cesaresco he has excellent guides to the general interpretation of Cavour's career; but, in order to maintain the appearance of originality, he uses no footnotes to show where he has taken his inspiration or his very language. He mentions Mazade only once, towards the end of his book, so far as we have observed; and he credits Countess Cesaresco with only one small anecdote (p. 27). His frequent practice is to "lift" without acknowledgment, sometimes quoting to the extent of whole paragraphs and pages, and then again taking without troubling himself to use quotation marks. For instance, on p. 188, he uses word for word Countess Cesaresco's translation of Victor Emmanuel's instructions to Della Rocca, without giving her any credit, and merely changing "terms" to "words." and "notwithstanding" to "nevertheless." These changes indicate, we infer, the sensitiveness of his conscience.

But he does not restrict himself to the Countess's monograph. He goes back to Dicey's books, to Bent's "Garibaldi," to Jerrold's "Napoleon III.," and to some similar products of a bygone generation, which have, *mutatis mutandis*, about as much value as J. G. Holland's "Life of Lincoln." From the start, he leans heavily on Edward Dicey. Now when Cavour died in 1861, Mr. Dicey, with the facility of a young journalist, dashed off, in five weeks, a biography of him which never was nor can be an authority, although Mr. Cadogan evidently imagines that it is. And he frequently cribs Dicey's translations from the Italian, sometimes, *e. g.*, pp. 329, 330, 331, without acknowledgement.

Such being Mr. Cadogan's methods, we need not be surprised that the book itself lacks value. The main lines in Cavour's career may be learned from Mazade, Countess Cesaresco, and others, but we have a right now to expect something more than a skeleton. And at every point, an expert sees at a glance that Mr. Cadogan is unfamiliar with the latest, or the most authoritative, native material. To take an example, his description of the party groups in 1850 is wholly wrong; to make Cavour a member of the Left is as absurd as it would be to classify Arthur Balfour among the Laborites (p. 96). The number of smaller inaccuracies is literally legion. For example, Cavour was born August 10, not August 1, 1810 (p. 2). He did not resign from the army in 1832 (p. 17). His English friend's name was Brockedon, not Brokerden (p. 16). Rattazzi's (not Ratazzi) bill was carried in the Lower House by a majority of 80, not of 134; and it was the Bishop of Casale, not the Archbishop of Novara, who proposed the bishops' bribe (p. 135). Perhaps the most amusing blunder, however, is in supposing that Massimo d'Azeglio and his nephew Emmanuel (Piedmontese ambassador to London) were the same person. Imagine what the *Saturday Review* would say to a foreigner who rolled Lord John Russell and his nephew Odo into one! We have taken pains to expose this book because it is an example of a certain kind of false scholarship which ought to not be tolerated in English universities or by English critics.

The Philosophy of Friedrich Nietzsche. By Henry L. Mencken. Boston: Luce & Co. $2 net.

Franz Overbeck und Friedrich Nietzsche; eine Freundschaft. Von Karl Albrecht Bernoulli. Vol I. Jena: Eugen Diederichs.

Nietzsche we must regard physically and psychologically as a man essentially unfit who exploded in impotent wrath against a world that was crushing him. He was a victim of fever. His philosophy shows the same relation to reality as a nightmare bears to the objects it distorts and magnifies. If, as is sometimes supposed, truth is struck out from the clashing together of vicious extremes, Nietzscheism may have a useful office to perform in opposing its inhuman individualism to the no less inhuman collectivism that dominates so many minds. For our part we cannot hold such a supposition, believing rather that the conflict of extremes begets only mutual exhaustion, and that real progress is the work of those who through all the noise of opposition keep their eye on the golden mean. However that be, Nietzscheism has on the Continent of Europe become one of the motive powers of society, and it is time the English-speaking people became better informed about the author of it. There is a place, therefore, for Mr. Mencken's book. His exposition of Nietzsche's philosophy is clear, simple, and orderly, quite free from the cobwebs of metaphysics, if he shows bad taste in the details of writing, this may be passed over as a mark of zeal in imitating his master. We can commend the exegesis, though we repudiate the conclusions.

Mr. Mencken, it may be suspected, is not a Grecian, as he certainly is wanting in French. He ought to have emphasized the fact that the superman is fundamentally contrary to the ideal of the Greek aristocrat. Nietzsche got his notion of the slave race and the master race in society from a supposed division of Greek civilization into the "apollonian impulse to conform and moralize and the dionysian impulse to exploit and explore." But the Greek did not look for advance to any such crude balance in society between these two tendencies of conservatism and radicalism. His aristocrat, on whom society was dependent for progress, as Pindar presented him in poetry and Plato in philosophy, was a man whose power rested essentially on self-control and a balance within himself of contrary faculties—the very opposite of the superman. The transference of this balance within the individual to a mechanical division in society of groups representing the extremes of temperament, and the belief that the same equilibrium will result, is one of the numerous errors springing to-day from a confusion of psychology and sociology. It is like a bad jest to suppose that, when the ruling caste has thrown off the sense of duty and responsibility, the slaves will retain these useful illusions and go on submissively performing the drudgery of the world.

The most unsatisfactory of Mr. Mencken's chapters is that on origins. It can only be due to ignorance outside of a narrow circle of reading that he does not once hint at the Roussellian sources of Nietzscheism. This is the more remarkable because even German critics are beginning to recognize that the romantic movement (of which Socialism and Nietzscheism are the two sociological poles) sprang almost full-grown from that teeming head. Rousseau based his philosophy on an absolute justification of the instincts. He regarded society as made up of a number of individuals each supremely egotistic. Harmony resulted not from discipline within the individual, but from a sympathy which allowed every other individual to develop himself without self-restraint. This combination of sympathy and egotism has in social theory split into two opposing schools—the socialists who make sympathy the rule of society and the Nietzscheans who preach pure egotism, extreme collectivism and extreme individualism. Health, it might seem scarcely necessary to observe, depends upon neither of these alone nor upon both together, balanced mechanically, but upon judgment and the rational discipline of the instincts within all.

The first volume of Professor Bernoulli's "Nietzsche" has just appeared and the second is promised for the near future. The work is embellished with a good portrait and has three appendices. The subtitle declares that it has been prepared *nach ungedruckten Dokumenten*. This work is perfectly independent in character, and has offended the devotees of the Nietzsche Cultus, which maintains an institution at Weimar with the philosopher's sister at its head, Mrs. Förster-Nietzsche, the author of the official biography of Nietzsche. Franz Overbeck, of Basel, was the lifelong friend of Nietzsche and the material here given makes the latter a little more human than the Weimar followers desire. Accordingly, through an enthusiastic follower of the philosopher, Peter Gast, the law has been appealed to in order to suppress this volume.

The American Government. By H. C. Gauss. New York: L. R. Hamersly & Co. $5.

This volume of 871 pages is designed, as its author states, for the admirable purpose of making Federal practice "less of a mystery to the millions who are at once the sovereigns of the respective States and of the Federal Nation." It goes, however, far beyond the ordinary manuals of civil government. We find here, for example, extensive lists of salaries in various branches of the government, the navigation regulations *in extenso*, an abstract of the pension laws, the boundaries of all the Congressional districts, a classification by ratings of all the vessels of the navy, a description of the uniforms and insignia worn in various branches of the service.

The fault of the book is that its policy in matters of detail is not at all uniform. The forest reserves, for instance, which are coming to be highly important features of the national administration, are treated in half a page, with not even a statement of their total area. There is no mention of the Naval Militia, with its 5,000 or more of enlisted men. The "permanent annual appropriations" of Congress, although they amount to nearly a hundred and fifty millions a year and are certainly as much a "mystery" to the outsider as any features of our legislative branch, have no mention at all. These are faults which a revision would easily remedy.

No one could browse among government records so much as Mr. Gauss evidently has done without coming upon many odd bits of information. The Weather Bureau official cipher is sampled on page 761. Allusion is made to such little known facts as the existence of a "California Débris Commission," created not to take charge of San Francisco after the earthquake, but to study the obstruction of the Sacramento and San Joaquin Rivers. In general, the expository matter is clear and accurate, treating of actual practice rather than theory, as in such topics as "Senatorial Courtesy" and the Speaker's morning "levee," where members arrange in advance for "recognition" in the afternoon. The author confesses occasionally, like Dundreary, that there are "things no fellah can find out":

> It is a matter of nice, if not altogether material speculation, as to whether the intricacies of the military pay have brought about the need of a corps of specially trained experts for its adjustment or whether the specially trained experts have brought about the intricacies of military pay. . . . The effect has been to put it almost hopelessly beyond the power of the civilian mind to understand all that is comprehended within the term "army pay."

There are eighteen pages of very bad index. The briefest examination discloses a dozen or so of entries which do not correspond to the actual paging. "Military Academy" refers on to "United States Military Academy," that in turn to "Military Academy" or "War Department," the latter having no reference in point except to a "pay table of officers at the Military Academy."

Science.

The thanks not only of scientific men, but of navigators, and indeed of the general public, are due the Syndics of the Cambridge University Press for publishing the scientific papers of Prof. George H. Darwin. In Professor Darwin one finds no exception to the rule that great Englishmen of science are distinguished by ability to keep their feet on the ground. Though the majority of Darwin's papers are chiefly valuable as contributions to pure science, not a few, and especially such as deal with the theory of tides and other oceanic phenomena, have important bearings on the practice of navigation and therewith upon the material welfare of the entire world. The current of Professor Darwin's productivity, which began in 1875, has flowed steadily, with a single interruption (1893-5), through a period of more than thirty years. The resulting total of sixty-eight memoirs, chronological order being disregarded, falls readily into four groups, each of which will constitute a volume. The first, "Oceanic Tides" (G. P. Putnam's Sons), has just appeared. The second will comprise papers treating of tidal friction; the third, memoirs on figures of equilibrium of rotating liquid and on related topics; while the fourth, besides dealing with the theory of periodic orbits, will include articles on miscellaneous subjects. The fourteen memoirs of the volume in hand had their origin in "ideas initiated by Lord Kelvin," and it is accordingly the author's wish that this volume may be regarded as a tribute to that scientist. Owing partly to the mathematical methods of investigation and presentation and partly to the technical character of many of the topics, the work is, of course, in large part inaccessible to the general reader. But this is by no means true of the whole. For example, scientific literature will hardly afford the layman a better insight into the difficulties of scientific research or a better knowledge of the ingenuity and the moral qualities demanded of the investigator than is afforded by the thirteenth article, "On an Instrument for Detecting and Measuring Small Changes in the Direction of the Force of Gravity." Although the object—to detect and measure lunar disturbance—was not attained, it was found incidentally that the "earth's surface is in incessant movement, with oscillations of periods extending from a fraction of a second to a year." An attempt to measure the rigidity of the earth by a study of the tides of long period led to the conclusion, p. 346, that "whilst there is some evidence of a tidal yielding of the earth's mass, that yielding is certainly small and the effective rigidity is at least as great as that of steel." Of great practical importance to navigation is paper No. 7, "On Tidal Prediction," where tables are constructed and so explained as to adapt them to the mathematical capacity of an ordinary ship's captain.

The unscientific reader will find "Thomas Alva Edison: Sixty Years of an Inventor's Life," by Francis Arthur Jones (Thomas Y. Crowell & Co.), a readable book; for it gives a vivid picture of an interesting personality. The literary critic and the scientific man, however, will not regard it as a finished piece of work, since it reads too much like a series of newspaper articles, or contributions to ten-cent magazines. Nevertheless, it holds one's attention to its account of the rise of a telegraph operator to a leading position among American inventors. The author is always laudatory and is not restricted by a sense of proportion. Moreover, the scientific man, acquainted with Swan's work with the carbon filament, Scott's phonautograph, and the thaumatrope, is likely to regard Edison's invention of the incandescent lamp, the phonograph, and the biograph, as developments of old ideas rather than completely new creations; yet the picture of the inventor's remarkable powers of adaptation and extension of the work of others is a true one. Edison is entitled to the great credit of placing the Swan light in multiple, and the conception and execution of the plan of a central lighting station. He modified the phonautograph in an unsuspected way, making it practically a new invention, and he developed the duplex telegraph into the quadruplex. Mr. Jones leaves the impression that the Edison storage battery is a complete success, and that it promises to revolutionize methods of locomotion; yet there are many experts in storage battery work who are not convinced of this. The fecundity of Mr. Edison's mind is fully set forth. It can be said of his ideas that they have been as numerous as the eggs of a salmon, and he would probably confess that, as in the case of the fish, only a small percentage developed to full size. But what a size some of them reached! No one can be brought in contact with him without feeling that he has remarkable powers; not the least is his ability to inspire his workmen with enthusiasm, and to choose able assistants to help him as mathematicians, chemists, and electrical engineers. He has shown great executive ability in organizing an inventor's laboratory of which he has always been the leading mind. The scientific man may object to his empirical methods and lament the cost of such methods; but the results detailed in Mr. Jones's biography are immensely impressive.

The pamphlet of Dr. J. Bresler, *Oberarzt* in Silesia, entitled "Religionshygiene" (Halle: Carl Marhold), is an inquiry into the effects of religion and religious thought upon the body. The author is convinced that the teacher of religion and the physician should coöperate for the highest good of man. He devotes an interesting section of his work to an account of the "Physiognomy of Those Engaged in Prayer."

The Cambridge University Press has started a new magazine, *Parasitology: a Supplement to the Journal of Hygiene*, edited by Dr. G. H. F. Nuttall and A. E. Shipley.

The American Philosophical Society will hold a general meeting in Philadelphia April 23, 24, 25, at which papers will be read on "Art and Ethnology," by Edwin Swift Balch, Philadelphia; "Photographs of Daniel's Comet," Prof. E. E. Barnard, Yerkes Observatory, Williams Bay, Wis.; "Mediæval German Sculpture in the Germanic Museum of Harvard University," Prof. Kuno Francke, Cambridge; "Goethe's Private Library as an Index of His Literary Interests," Prof. Waterman T. Hewett, Ithaca, N. Y.; "Recent Discoveries in the Pathology of Rabies," by Dr. Mazyck P. Ravenel, of Madison, Wis.; "Observations Regarding the Infliction of the Death Penalty by Electricity," Prof. E. A. Spitzka, Philadelphia; "Progress of Demarcation of the Boundary between Alaska and Canada," Prof. O. H. Tittmann, Washington; "Results of the American Museum Exploration in the Fayum Desert of Northern Egypt," Prof. Henry F. Osborn, New York.

The death is announced from Victoria of Dr. Alfred William Howitt, son of William and Mary Howitt. He had played an important rôle in the life of Australia, having led the search party for the Burke and Wells expedition, and filled various governmental offices. He was best known for his anthropological theories. Among his publications in that study are "Kamelaroi and Kurnai" and "The Native Tribes of Southeast Australia." The names of Mount Howitt and Lake Howitt in Central Australia are a memorial of his labors in that region.

Anton Edler von Braunmühl, professor of mathematics at the Technical Academy of Munich, has died in his fifty-fifth year. He has a number of mathematical works to his credit.

Drama.

The Malone Society will soon add two volumes to the four already published in its first year. One is a reprint of the 1605 quarto of the old "King Leir." The other will be a part of the society's "Collections," containing hitherto unknown dramatic fragments and the dramatic records preserved in the City "Remembrancia." In 1908 the society will issue five plays and another part of the "Collections."

Brooke's "Romeus and Juliet," edited by J. J. Munro, offers more opportunity for minute scholarship than Lodge's "Rosalynde" and Greene's "Pandosto," which have already appeared in this section of Duffield & Co.'s Shakespeare Library. Beginning with the fusion of what he calls an original "separation romance" and a "potion romance," Mr. Munro traces the sources of "Romeo and Juliet" from Masuccio Salernitano's "Cinquante Novelle" (1476), with as much clearness as can be expected in these tangled and often hypothetical questions, down to Brooke's poem of 1562, which is here edited and which was the immediate source of Shakespeare's play. In one of the appendices is shown the exact relation of Brooke to Boaistuau, whom he translated, and pretty strong evidence is added to prove that Brooke was influenced in a number of passages by Chaucer's "Troilus and Criseyde." Mr. Munro adds one point to our knowledge of Brooke's life—or, rather, death. In a letter from Henry Cobham to Challoner, dated May 14, 1563, printed in the "Calendar of State Papers, Foreign, 1563," there is mention of "little Brook," who was lost with Sir Thomas Finch going over to Havre. This is apparently our Arthur Brooke, who, as we already knew, was drowned about this time.

D'Annunzio, according to reports in European papers, has finished "Amaranta," a drama of modern passion, and the libretto of an opera entitled "The Rose of Cyprus." He is also putting the finishing strokes to a new version of "Nero." Besides these, he is sketching the plots of two other plays, "Tristan and Isolde" and "Numa Pompilius."

A. R. Waller's translation of the plays of Molière, begun seven years ago, has been issued in eight handsome volumes by John Grant, Edinburgh. From the first the new version commends itself as a notably useful performance. We find on parallel pages a reprint of the authoritative French text of Despois and Mesnard, and a close English prose rendering, which, with certain limitations to be noted, may be described at once as quite adequate. The parallel arrangement should serve a double purpose. The reader whose primary object is a knowledge of the contents of Molière, such as may be gained from any faithful version, cannot escape contact with the original. On the other hand, the reader who does not find the French of Molière particularly difficult might nevertheless be grateful for the ready assistance to be had in moments of stress. The same stress, in diminished degree, seems to have been felt even by the translator, for here and there we come across a gratuitous departure from the sense of the original when that meaning is not at all obscure. Such instances, however, are rare. Nearly all the time Mr. Waller's prose follows Molière's prose or verse with fidelity. Where the present version often fails is in occasional inability to reproduce the high drollery of Molière when he is most extravagant. In the "Femmes Savantes" and in the "Bourgeois Gentilhomme" certain comic passages are turned into English with a fine verve, which unexplainably breaks down into a rather heavy pace, satisfactory but not inspiring. In this matter of unevenness our translator is at one with his predecessor, Van Laun, whose version, in general, shows no marked superiority. We may quote as an example of effective rendering the passage in which Monsieur Jourdain welcomes Dorimène to his house. In the French he says:

> Madame, ce m'est une gloire bein grande de me voir assez fortuné pour être si heureux que d'avoir le bonheur que vous ayez eu la bonté de m'accorder la grace de me faire l'honneur de m'honorer de la votre presence.

This Mr. Waller translates:

> It is too great an honor for me, Madam, to be conscious of my being blessed by fortune in being so happy as to have the felicity of knowing that you have had the kindness to grant me the grace of doing me the honor of honoring me with the favor of your presence.

The volumes are printed on heavy paper and tastefully bound in red and brown linen. There are thirty-one etchings by Champollion after Louis Leloir.

Several French books on the drama have recently appeared. Eugène Lintilhac, onetime lecturer at the Sorbonne, and now a Senator of the French republic, publishes the third volume of his "Histoire générale du théâtre en France"; it is entirely taken up with comedy in the seventeenth century. A. Séché and Jules Bertaut, already known favorably for industrious investigation of nineteenth century documents, are joint authors of a useful book, "L'Évolution du théâtre contemporain." Émile Faguet, the Academician who succeeded Jules Lemaître and J. J. Weiss in the historically influential position of dramatic critic at the *Débats*, contributes the preface; and there is an index of the names cited. Henry Lyonnet devotes the first volume of his "Dictionnaire des comédiens français"—an octavo of 640 pages—to "those of yesterday"; biography, bibliography, and iconography including portraits, autographs, views, and scenes. Émile Leroux (Pierre Nahor), of the Comédie Française, in the guise of a novel, "Sous le masque," describes the entire life and trade of a French actor from his training at the State Conservatoire, through ups and downs of varying adventure and circumstance, to final recognition on the stage.

A. W. Pinero's new play has been put into rehearsal by George Alexander for production in London about Easter. The title selected for it is "The Thunderbolt," and the story deals with "an episode in the history of a provincial family." The cast will include Mr. Alexander himself, Louis Calvert, Norman Forbes, Wilfred Draycott, Julian Royce, Miss Mabel Hackney, Miss May Palfrey, and Miss Kate Bishop.

Rudolf Besier, author of "The Virgin Goddess," which was played by Oscar Asche at the London Adelphi, has translated Von Wildenbruch's "Maid of Rabenstein," a French version of which Bernhardt will produce in Paris before long. The story is mediæval, deals with the love of a noble youth for the daughter of an outlaw, and is reported to have some highly tragic moments.

Music.

Stars of the Opera. By Mabel Wagnalls. New York: Funk & Wagnalls. $1.20 net.

The Story of Minstrelsy. By Edmondstoune Duncan. New York: Chas. Scribner's Sons $1.25.

The growing attention to grand opera in this country is attested by the fact that some 250 performances were given in New York alone during the season closing this week, and by the breaking of ground for new opera houses in Philadelphia and Boston. To the vast majority of operagoers "The singer's the thing," and these singers, fortunately, can be heard, too, in places where there is no opera house. How widespread is the interest in opera-singers throughout the country, is shown by the fact that Sembrich, Nordica, Gadski, Calvé, and Schumann-Heink can make even more money giving concerts East and West than by retaining their positions at the Metropolitan or the Manhattan opera house. In preparing a volume on "Stars of the Opera" Mabel Wagnalls therefore made an appeal to a large circle of possible readers. Her book includes interviews with Sembrich, Eames, Calvé, Nordica, Lehmann, and Farrar. These interviews are all in good taste and authentic, each having been proof-read by the singer who gave it. In comparing the confessions of these famous artists, one is struck by two things: nearly all of them admit being nervous every time they go on the stage, and most of them preach the gospel of hard work. Sembrich says that she is now more nervous than she used to be because she knows better what perfection in art implies; she adds, "My whole life has been made up of hard work, always work." She thinks the task of an opera singer much more difficult than that of an actress, for in the drama it matters not if a word comes a moment sooner or later; but in grand opera a second's deviation might cause a disorder. Emma Eames says: "I am always nervous yet," and she has no time for social gayety. Nordica maintains that a vocalist who "only sings coloratura rôles and nothing but Italian" is not so great an artist as one who has mastered rôles of several schools in several languages. Her own progress has not been by leaps and bounds but "more tortoise-like." Lehmann, at the age of sixty, admitted to the author that she still practised and studied "more than ever."

The wandering minstrel who forms the subject of Mr. Duncan's book may be regarded as in a way the precursor of the opera singers of our time. He did not work so hard, but his emoluments were sometimes comparatively as great as the opera singer's. In the fourteenth century there were festivities in England at which each ministrel received from forty to sixty-five shillings at a time when a workingman got only a penny for a day's work; and in regard to the year 1430 Hearne wrote: "Observe that in those days they payed there mynstrells better than theyre priestés," which, as the author suggests, may have been one reason why the clergy were jealous of the minstrels and persecuted them. Mr. Duncan has collected a vast amount of curious information of this kind in his 337 pages. His style is rambling; he does not aim at framing a regular history, but like Ritson in his "Dissertation," links together "little fragments and slight notices" that may "serve to gratify a sympathetic curiosity."

Oscar Hammerstein triumphantly closed his second season at the Manhattan Opera House last Saturday. There were altogether 115 nights and afternoons of opera, on which, including double bills, 124 operas were sung, in a few cases in part only. Three of them—"Carmen," "Les Contes d'Hoffmann," and "Louise"—reached 11 performances each, and it is likely that "Pelléas et Mélisande" would have won the same distinction had it not been produced so late in the season. At the other end of the list are "Dinorah" and "Andrea Chenier," with only one performance. The total number of operas heard was 23, averaging a little over one a week. Verdi was in the lead, with 29 performances; Massenet came next with 12; Offenbach, Charpentier, and Bizet had 11 each; Leoncavallo had 9; Donizetti, 8; Debussy, 7; Ponchielli, Gounod, Mascagni, Giordano, 4 each; Ricci, Berlioz, Mozart, 3 each; Meyerbeer, 1. Heinrich Conried's last season at the Metropolitan comes to an end with this week. It embraced 20 weeks, during which 131 performances were given, 74 of works by Italians, while the German composers had 45, and the French only 11. Wagner leads, as always, with 30 performances (including the Nibelung cycle to be given this month). Verdi and Puccini had 23 each; Boito, 7; Rossini and Gounod, 6 each; Humperdinck, Thomas, Mascagni, 5 each; Mozart, Leoncavallo, 4 each; Flotow, Giordano, Beethoven, 3 each; Cilea, 2; Donizetti, 1.

The regular season at Covent Garden, London, will begin on April 30 and end July 30. The list of singers engaged includes Nellie Melba, Luisa Tetrazzini, Emmy Destinn, Ellen Gulbranson, Edyth Walker, Maria Gay, Louise Kirkby-Lunn, Mme. Rüsche-Endorf, Alessandro Bonci, Mario Sammarco, Heinrich Knote, Anton Scotti, Paul Knüpfer, Clarence Whitehill, Marcel Journet, John MacCormack, Anton Van Rooy, and the two German tenors, Jörn and Cornelius, who were very successful there last year. There will be three conductors, Hans Richter, Cleofonte Campanini, and Panizza.

One of the operatic novelties to be heard at the Metropolitan next season is D'Albert's "Tiefland," which is having a great success in German cities.

Beethoven's Ninth Symphony with the Chorale Finale to Schiller's "Ode to Joy," composed in 1822-23, the Benedictus from the great "Missa Solemnis" (1818-1822), and the slow movement from the String Quartet in F (Op. 135, composed 1826)—these three works form the fine progamme with which Walter Damrosch will close the Symphony Society's Beethoven Cycle at Carnegie Hall, on Sunday afternoon, April 5. The soloists will be Mmes. Jomelli and Lansing, Messrs. Mannes, Miller, and Cunningham. The chorus of the Oratorio Society will be reinforced by forty selected male singers trained by Alfred Hallam of Mt. Vernon.

Pianists will be interested in the new edition of Liszt's First Concerto just issued by Schlesinger in Berlin; for it is edited by Eugen d'Albert, who was a pupil of Liszt, and who has embodied in footnotes all the hints regarding this work which Liszt gave him and his other pupils in 1882. He corrects some serious errors, especially regarding details of tempo, that have gained currency.

Art.

VICTOR CARPACCIO.*

With Giotto, Botticelli, and Tintoretto, Victor Carpaccio has enlisted Ruskin's special pleading. None of these artists, I feel, deserved such advocacy more, or needed it less. There can have been no time when he was not admired. Contemporary poets sang his praises. The garrulous Boschini, writing about 1660, when grandiose baroque lorded it at Venice, declared Carpaccio to be "as it were the brother of Giambellino." More than a hundred years later Zanetti praised unreservedly his gentle fidelity to nature, and noted his technique as a model for genre painting to the generation of Luca Longhi. Ruskin undoubtedly did a real service in hectoring a generation of hasty tourists into visiting St. George of the Slavonians, but I am convinced that the England that loved Wilkie and was rapidly learning to love the young Millais, Rossetti, and Burne-Jones must have come round to Carpaccio of its own accord, for he commands in some ways the most durable quality of art, charm.

---

*"The Life and Works of Vittorio Carpaccio," by Gustav Ludwig and Pompeo Molmenti, translated by Robert H. Hobart Cust (New York: E. P. Dutton & Co.), has a melancholy interest as the last work of that indefatigable investigator, the late Gustav Ludwig. It brings together in convenient form with abundant illustrations (more than 250) the scattered researches of the two authors, and contains a great amount of interesting information about the times of Carpaccio, and the confraternities for which he worked. The value of the book is chiefly antiquarian. The author's pet theory is that Sebastiano Lazzari was Carpaccio's first master. The attributions are generally of an uncritical sort. Many doubtful pictures are confidently ascribed to Lazzari and his so-called pupil, while the lists lack accredited works of each. In all matters critical the book should be checked by some more cautious authority. It is emphatically a contribution to history, not to connoisseurship. Mr. Cust has turned the Italian original, published two years ago, into fluent and idiomatic English. We note a number of disfiguring misprints, mostly in the captions of the plates, but none that are really misleading. Possibly the average reader should be warned that "Rosalba and Carriera," p. 53, are not two artists, but one. A serious defect is that there are no references in the text to the widely scatterd illustrations, and vice-versa.

In this regard no Venetian except Giorgione, who made charm merely one attribute of power, equals him. One would gladly discourse upon the mysterious attractiveness which makes a work of art, even though in no sense great, exempt from fluctuations of taste, assuring for it an apostolic succession of enthusiasts. One would like to determine the quality that, though not of its essence, gives to greatness itself a kind of buoyancy. To particularize, since a general discussion is out of the question, Correggio never has been and never can be out of fashion. Men may squabble about Jan van Eyck, but not over Memling. Raphael may be in or out of the mode, hardly Perugino, or Leonardo. Was there ever a time in the blackest dark ages when men did not admire Hellenic coins? Why does the Hermes of Praxiteles hang in millions of Western homes, where the power of Myron, the sublimity of Phidias, the god-like simplicity of the temple sculptors of Olympia are unfelt? If we could answer these questions, we might make short work of the criticism of Carpaccio. For his appreciation implies simply the analysis of his charm. In this endeavor we shall get little aid from the learned tome of Messrs. Ludwig and Molmenti, and less, perhaps, from the flights of Ruskin's eminently nonpictorial fancy. In the confidence that the region under survey is delightful we may the more lightheartedly go our own analytical gait.

From Zanetti we may get a first clue if an obvious one. In the oratory of St. Ursula he had noted the rapt attention the poor folk gave to the pictures, and their immediate understanding of the moment and sentiment of the story in each. And indeed, Carpaccio is the consummate illustrator of all his contemporaries. In no other painted stories are the people more genuinely intent about their business, more serenely oblivious of the spectator, less prone to pose in the interest of art. One feels the absence of all formulas, and this among the Venetians, conscious decorators from the first, is rare. Only Gentile Bellini seems to bring to his work the same innocence of the eye. Carpaccio, with a craftsman's intuitive sense of the means at his disposal, has apparently set himself simply to telling his story clearly, with every agreeable trait that his palette could bestow. Thus he stands apart from the surging main current of Venetian painting, near the pleasant by-water of the book illustrators. No painter is really so much akin to him as the nameless draughtsman who did the pictures for the "Hypnerotomachia" about the time Carpaccio was completing the St. Ursula Series. His patrons again suggest the especial character of his art. For the great Venetian churches he did next to nothing. The little people who composed the *scuole* (religious confraternities) were almost his sole clients, and of these the minor, exotic schools, as those of the Albanians and the Slavonians. I presume the altar piece for the Church of S. Giobbe, and the panel for the school of St. John the Evangelist were about the only commissions he had that were reckoned as first class.

This exceptional character of his work has given rise to various speculations as to his artistic origins. Messrs. Ludwig and Molmenti strive unconvincingly to prove that his senior, Sebastiano Lazzari, was his master. Now Victor Carpaccio is so much his own man that it seems of little importance who first taught him to grind colors. For that matter, his technical precedents are plain. In 1466, when Carpaccio could have been only a lad, Gentile Bellini painted two canvases for the famous school of S. Marco. They have not come down to us, but we are perfectly safe in assuming from the work of his pupils and his own later compositions that they were thinly painted, with tense contours and an especial and then novel regard for the placing of the figures and buildings in their true atmospheric relations. From that time on whoever painted a legend for a school perforce did it as much as possible in Gentile's way. Under this influence, let us beware of saying tuition, Carpaccio grew up, transforming the rigid formulas of Gentile into a manner all his own. Where Gentile is in a way epic, Carpaccio's story telling takes a lyrical color. Gentile, who surely is far the greater master, retains with all his sense of character something of the monotony and insensibility of the average mediæval *conte;* Carpaccio's story telling has the flexibility and variety of the Early Renaissance. Put any tale of Boccaccio's beside its hackneyed original and the same difference will be marked.

With Carpaccio set down provisionally as a most winning narrator we are still far from a definition of his charm. This merely brings him into a class with many other painters in many lands. It does not even distinguish his quality, say, from that of Benozzo Gozzoli, who is also an illustrator of the most engaging temper. The personal note of Carpaccio I find in a sort of delicate romanticism. His personages move often in real Venice (but in a Venice that is itself a fairyland), and more often still in a magic Orient glimpsed through the imperfect woodcuts in contemporary books of travel. Of course Carpaccio's Venice was less romantic to itself than it is to us after four hundred years. Yet we must not deny to the Venetians a capacity for appreciating their own picturesqueness. Their painting, their memoirs, too, show how fully conscious they were of their own pageantry. In fact the sense of contemporary romance is never wholly lost among naïve folk. Average London finds surely a daily glow in the spectacle of the Horse Guards; I have heard proletariat Paris cheer the Garde Républicaine as it proceeded to pelt the helms and corselets with stones and scrap-iron improvised from the street gratings. We need not doubt that Carpaccio's Venice found the dandies of the Calza Club, who move daintily through St. Ursula's story, hardly less odd and even more exquisite than we think them to-day. It is significant, too, that these transcripts from the high life of Venice were ordered not for patrician sanctuaries, but to edify the butchers, bakers, and candlestick makers who comprised the minor confraternities. It is among these people that the appeal of luxury and elegance is most strong. We may think of much of Carpaccio's work as affording a kind of sacred family story paper. Its popularity among the humble is the measure of the taste of Venice in her early prime.

Wherever we touch his work we shall find the ingredients of veritable romance. The Oriental piles in the series devoted to St. Stephen, St. Ursula, and St. George are evident attempts at local color many centuries before the phrase was coined. He had reconstructed after Reuwich's design a Jerusalem, concerning which he assured Frederick, Marquess of Mantua, "that in our days there is no other like it for excellence and complete perfection as well as for size." After Gentile Bellini he was the great Orientalist of his times, and in the fantastic exploitation of the theme one of the greatest of all times. Nor is his fancy less vivid when it moves in unplotted fields. Who can forget that grisly champaign, littered with mangled corpses, across which young St. George speeds intently, deftly placing the lance head in the dragon's very jaws? One remembers that steed with head coquettishly askance as if the impaling of a monster found him but half-breathed. The relish of stately incident in St. Ursula's legend, of adventure in St. George's, of bizarre incident in St. Jerome's—all these things mark Carpaccio as sealed of the romantic tribe. Nor is this glamour less strong in an apparently realistic subject, such as the Healing of a Demoniac, painted for the great School of St. John. These *ephebi* who swing gracefully to the oar over a canal as deeply blue as the Lake of Garda, these exquisites who halt curiously between cards and an assignation, these elders complacently waiting for the relic of the Holy Cross to work the accustomed miracle, all these might have been seen in Venice, but only one pair of eyes did see them with just this imaginative warmth. When I mark the contrast between the acolytes praying fervidly in the loggia, and the imposing dispassionate throng directly beneath, I am paradoxically reminded of certain thrilling operatic effects: for example, Aïda expiring melodiously, while the hieratic intonation proceeds unbrokenly above. In short with Carpaccio we are always finding that infusion of lyricism into incident which is of the very essence of romance.

His contemporaries thought him a realist, and in this he partly fooled them and partly not. True romanticism implies the wondering eye, and that is an extraordinarily fine instrument. I need hardly recall the remarkable bits of realism imbedded in Scott's novels to show that the two attitudes may be perfectly harmonious. One might say, indeed, that Scott could give a relative life to such imaginary portraits as his Louis XI. and Cromwell only because he could give absolute vitality to his real portraits, Dandie Dinmot or the squireens of "Rob Roy"; and it seems the defect of Hugo's romances that this saving reality is absent, sentimentality and grotesqueness taking the place of constructive imagination. Now Carpaccio's realm of faery never lacks this substratum of observation. Reassuringly real persons are everywhere — the eternally painstaking scribe in the canvas of the Ambassadors and that magnificent presentment of a Renaissance scholar in his oratory which is incidentally a St. Jerome; one might add the horse who tosses his head in an agony of fear as St. George hales the damaged dragon to the marketplace. In fact, there is hardly a canvas that does not illustrate in many traits the sure and placid notation of something seen. One imagines Carpaccio moving in Venice in a constant thrill of pictorial expectancy. It is the attitude of the little masters of Holland, some of whose technical triumphs he anticipates by a century and a half. His interiors, St. Ursula's bedroom, St. Jerome's study, are seen, with a justness otherwise unexampled in Italy, as cubes of light containing objects enveloped in light as a medium. For anything comparable either as vision or accomplishment we must look to Vermeer, de Hooghe, or Chardin.

But Carpaccio's realism again is of a highly individual sort, consisting in a swift, summary, and skilful notation of the thing seen, not in the painful elaboration of its particulars and palpable relief. This suggestiveness brings him near certain impressionists of to-day. Where he stands apart both from them and from his contemporaries is in the absence of merely technical preoccupation. There is little of the striver or experimentalist about him, in spite of his isolated position. When he had mollified the stern manner of Gentile Bellini, he had learned enough for his own purposes. Just once in the splendid Presentation he vied with Giambellino, but in general the reforms of that master, the revolution effected by Giorgione, the early triumphs of Titian, failed to move him from his placid course. Where they contributed to a great style which we call Venetian, he remained contented with a delightful manner all his own. In his drawings we may detect his inner self. Take the charming sketch at Chatsworth, depicting S. Lorenzo Giustiniani standing with his attendants before a bay enclosed by a distant promontory. The pen has moved tranquilly about the forms in a kind of reverie, hinting at the character, fixing the atmospheric planes, suggesting the radiance of sky and water, but with only the slightest regard for the plastic reality involved. It was a time when precisely the problem of conveying a sense of relief from a flat surface was a general and passionate preoccupation, and it would be hard to cite an artist of equal parts in whom this concern was so slight. Most of Carpaccio's drawings are a weaving of delightful patterns, a snaring of selected incident. Within a narrow range he was almost a great technician, but, dealing preferably with the stuff that dreams are made of, he rarely made the last sacrifice to material ways and means. Always lovable, he seems to me great just once—unless, indeed, the Virgin of the Doge Giovanni Mocenigo in the National Gallery be his. Of that enigmatic masterpiece I still feel that the old attribution is the more tenable, but if it be Carpaccio's, it must be regarded as a conscious and successful adventure in the style of Gentile Bellini, a divagation for which we have already found a parallel in the altarpiece for S. Giobbe. Contentious issues apart, Carpaccio is surely great in that extraordinary vision, The Two Courtesans, in the Correr Gallery. I suppose he may have intended some obvious symbolism in the peacock, the jackdaw, the dogs, which play joylessly, but if there were nothing but the figures, the apparition would not be less overwhelming. There they sit eternally waiting for the undesired smile of the wayfarer. Gorgeous they are, even beautiful, as their white shoulders and soft hands shimmer outside the stiff brocades—beautiful, yes, but with the hard and unhallowed fairness of enamelled blossoms that lie in a goldsmith's window and are sold for a price. The nearer face has the sly animalism of the adept, the younger profile, beside which on the parapet the artist has cruelly set an apple and two downy doves, reveals through its formal exquisiteness the tension born of sated and simulated passions. And both these queens of sordid tragedy are thrust out into a sunlight, kind even to them, but unperceived. A more startling, a more weirdly beautiful vision I hardly know in the whole range of painting. Velasquez might have seen the same thing as pitilessly, Manet might have created a pendant composition, or Degas. It is more real than reality. Last summer I saw such a mask peering over a balcony at Padua—eyes, headdress, facial muscles all composed of some weathered glaze, the furtive unseeing stare of emotional death in life—a veritable symbol of forespent desire. It was such an apparition as comes frequently to the artist, I take it, but rarely to us who follow him from afar. Where had I seen it all before? Why, of course, in Carpaccio's masterpiece at the Correr.

To many this canvas is the index of a greatness that might have been his. Such moments of clairvoyancy could not have been rare with him, but too often some alien dream of romance overlapped them. We were ingrates to belittle the gift he brings, so simple, so refreshing, so immediate in its appeal to the need of romance in us; we shall be something less than critical unless we admit that we have this resource at the sacrifice of something after all much greater. M.

The present revival of interest in the art of William Blake brings out a thin book by Elizabeth Luther Cary (Moffat, Yard & Co.), rather profusely illustrated. There is not much danger of Blake's ever becoming a popular artist—his true qualities are not of a popular kind—and therefore Miss Cary's enthusiasm can do little harm. It would be well, however, if some entirely competent person should take the pains to write a really discriminating essay on that strange genius, who is occasionally great and often childish. It has not yet been done. Particularly welcome, in this volume, are the reproductions, from a manuscript sketch-book, of some of Blake's first sketches, sometimes in conjunction with the completed designs.

A very different artist, who is also enjoying a revived vogue at this time, is George Morland. One grows somewhat tired of biographies of him, and there seems no particular need for that by Sir Walter Gilbey and E. W. Cuming (The Macmillan Co.), except as a vehicle for the illustrations in color of which these publishers make a specialty. The subject was ill-chosen for the purpose. Morland's warm brown tone, however agreeable in the original oil paintings, does not harmonize with white paper and printer's ink, and as colored book illustrations the plates are singularly ineffective, not to say unpleasant. The quality of art in them we must think somewhat thin, and we cannot believe the present valuation of Morland's works other than temporary.

G. Maspéro has contributed to the Bibliothèque de l'Enseignement des Beaux-Arts a handy book of Egyptian archæology. The companion volume on Greek archæology is by Max Collignon, the historian of Greek sculpture.

Owing to the continued interest in the exhibition of the works of Augustus Saint-Gaudens at the Metropolitan Museum of Art, the time for closing the exhibit has been postponed until May 1.

Among the exhibitions at the dealers' galleries in this city are paintings by Eduard J. Steichen, Eugene Glaenzer & Co.'s till April 9; early Dutch and Flemish paintings, Ehrich's, April 10; modern Dutch and Barbizon paintings, Theodore C. Noé's, April 10.

At Christie's, London, March 14, the following pictures from the collection of William Connal were sold: Drawings: Sir E. Burne-Jones, The Bath of Venus, £588; The Wheel of Fortune, £262. Paintings: Sir E. Burne-Jones, A Wood-Nymph, £1,186; The Heart of the Rose, £525; The Pilgrim at the Gate of Idleness, £283; Albert Moore, Midsummer, £1,050; An Idyll, £378; Yellow Marguerites, £262; White Hydrangeas, £262; J. F. Watts, Orpheus and Eurydice, £336; Artemis, £252; D. G. Rossetti, Mnemosyne, £262.

The Prix Lemaire has been awarded to M. Barbeerin, a pupil of Professor Injalbert. The second Prix went to Mr. Bourget, pupil of Professor Mercié, and the third to M. Lejeune, another pupil of Injalbert. These honors are much coveted by the young sculptors of Paris.

The death in his sixty-fifth year is announced of Prof. Julius Lessing, director of the Museum of Industrial Art in Berlin. Among his works may be named "Altorientalische Teppichmuster," "Renaissance im heutigen Kunstgewerbe," "Muster altdeutscher Leinenstickerei," "Silberarbeiten des Anton Eisenhoit," "Kunstgewerbe als Beruf," and "Holzschnitzerei des 15 und 16 Jahrhunderts."

Finance.

CHEAP MONEY AND THE FINANCIAL OUTLOOK.

On Monday of this week the rate for demand loans in Wall Street went to 1 per cent. This, with the exception of one or two midsummer days in 1907, was the lowest rate since the twelvemonth following the setback of 1903. On Monday also, the rate for short-time loans in London declined to 2½ per cent., the lowest figure touched there since the middle of 1904. Our own rate for loans on two or three months' time have simultaneously declined to 3 and 3¼ per cent., the lowest level since the period immediately after the troubles of 1903, and 9 per cent. under the rate at the end of 1907.

On the Stock Exchange, where a rapid advance in prices had been in progress last week, this cheapness of money was assigned as a ground for expecting further recovery, both in financial values and in general trade. For, it was argued, the scarcity of loanable capital, with the resultant rates of from 10 to 125 per cent. for demand loans, and of 6 per cent. with a high commission for time money and merchants' borrowing, was the thing which paralyzed credit in 1907, and brought about the collapse. With loans now offered freely and at abnormally low rates, borrowers can, it was declared, be readily accommodated and the movement of industry proceed as before.

In cases of this kind light may be had by examining previous periods in which conditions have been similar. There are two notable instances. The so-called "rich men's panic" of 1903 was accompanied by great shrinkage of values, liquidation of debt, and curtailment of industrial activity. Actual cash, released from channels of active trade, poured back into bank reserves. By August, 1904, cash holdings of the New York banks were larger by $111,000,000 than they had been a year before. The surplus over the required 25 per cent. ratio of reserves to deposits rose to $58,613,000, which was $37,000,000 above the same date in 1903. Along with this, rates for demand loans or "call money" went as low as ½ of 1 per cent. per annum, and sixty-day loans as low as 1¾ per cent. per annum. The upshot was that large financial and industrial interests borrowed heavily at these inviting rates. Loans of the New York Associated Banks increased $109,000,000 in the eighteen weeks from June to October, and in the autumn a vigorous forward movement was under way, both on the Stock Exchange and in industry at large. Prosperity and trade activity seemed to have followed swiftly on the track of the low money rates.

The other precedent is that of 1894. We had passed through the formidable panic of 1893—a convulsion which, like that of 1907, was far more serious than that of 1903. The sequel, as regards the rate for money and surplus bank reserves was, however, exactly the same as in 1904. Demand loans at New York went below 1 per cent. at the very opening of 1894, and in eleven weeks of the year were quoted as low as ½ of 1 per cent. During the greater part of the twelvemonth, loans for one and two months went at 1 to 1½ per cent.—that is to say, money was cheaper even than in 1904. In February, cash holdings of the New York banks were $109,000,000 above the same date in 1893, and the surplus reserve, $111,623,000, was the largest ever reported, before or since. The cause of these phenomena of 1894 was the same as ten years later—widespread liquidation of debt and trade reaction. But succeeding events were by no means the same as in 1904. The year drew to a close with business and industry steadily slackening. Liquidation continued, trade depression became profound and general, and, except for the brief and premature revival of 1895, the dull times prevailed until well into 1897.

Why should this outcome in 1894 have differed so diametrically from that of 1904, and which period is the fairer precedent for 1908? The answer must be sought in underlying conditions. Money rates may be low for one or both of two distinct reasons. They may decline merely because the supply of reserve money and of loanable capital has increased; this was true both of 1894 and 1904. But they may also decline because financiers who buy stocks on borrowed money, and merchants who conduct their trade on borrowed money, have suddenly decided to limit their operations and reduce their borrowings; in other words, because demand is curtailed. Now this factor also was in operation during 1904 and 1894, but in a different way on the two occasions. Merchants and financiers who held off in 1904, presently discovered that they and the community at large were more frightened than hurt. Real prosperity had scarcely been checked; consumption went on as usual, the setback of 1903 soon appeared to be a transient affair.

No such happy discovery was made in 1894. The panic of the preceding year had disclosed a very weak condition of credit. Failures were numerous and disastrous in almost every branch of commerce; workmen were discharged in great numbers; and both in national finances and in agriculture, things went wrong. In other words, there was not the same basis as in 1904, on which to rebuild; and if there had been, the resources of merchants, manufacturers, and financiers, were too heavily impaired to admit of their borrowing freely. For it must always be remembered that however large may be the surplus reserve in bank, borrowing power must be based directly on possession of sufficient credit, and indirectly on opportunity for profitable use of the borrowed capital. Such borrowing power developed very quickly in 1904; it did not in 1894.

It is, therefore, the actual injury done to finance and industry by the panic of 1907 and by the conditions that caused it, which will determine the ultimate effect of the present low rates for money. This question has already been discussed in this column. Consensus of the best financial judgment at the present time is that conditions are more favorable than in 1894 and less so than in 1904. The absolute test will doubtless have been applied by early autumn.

* * *

A. Viallate, professor at the École des Sciences Politiques, publishes a work of timely moment, "L'Industrie américaine." Timely also are the determined attack and not less exact defence of the great French credit banks, which have at their disposition the major portion of the liquid fortune of France, and, consequently, a preponderant influence in international finance. The attack is signed "Lysis"; the author maintains that French gold is scattered abroad among foreigners, and not applied to necessary uses at home; the defence, understood to come directly from the Crédit Lyonnais, is signed "Testis." The two books give important flashes into what is darkness visible to many an accomplished student of international economy.

"THE RETURN OF THE ESSAY"

Over Against Green Peak

By Miss Zephine Humphrey. $1.25 net. (*April 11th.*)
A humorous and poetic record of New England country life.

Comments of Bagshot

By J. A. SPENDER, editor of "The Westminster Gazette." $1.25 net. (*April 11th.*)
"While affording the easiest of reading, nevertheless touches deep issues deeply and fine issues finely. Not only thinks himself, but makes you think . . . wise and witty."
—*The Spectator* (London)

Words to the Wise—And Others

By MISS ELLEN BURNS SHERMAN. $1.50 net.
"Piquant reading. We can recommend the book."—*Nation.*

The Quest of the Unseen

By OSCAR KUHNS, author of "Dante and the English Poets," etc. (*May*)

OTHER SPRING ANNOUNCEMENTS

Poems for Travelers

Compiled by MARY R. J. DUBOIS. 16mo.
Covers France, Germany, Austria, Switzerland, Italy and Greece in some three hundred poems from about 130 authors. (*May.*)

The Poetic Old World

Compiled by MISS L. H. HUMPHREY. Uniform with "The Open Road" and "The Friendly Town."
Covers Europe, including Spain, Belgium and the British Isles, in some two hundred poems. (*May.*)

Biology and Its Makers

By Prof. WILLIAM A. LOCY, of Northwestern University. With over 100 illustrations.
A readable, untechnical account of the rise and progress of biology; written around the lives of the great leaders, with bibliography and index. (*May*)

IN THE AMERICAN NATURE SERIES

North American Trees

By NATHANIEL LORD BRITTON, Director-in-Chief of the New York Botanical Garden. With the assistance of John A. Shafer, Custodian of the Museums of the New York Botanical Garden. 775 illustrations, 8vo, probable price $7.50 net. (*April 25th.*)

American Insects

By VERNON L. KELLOGG. New, revised edition, with 812 figures and 11 colored plates. 647 pp. 8vo. $5.00 net.
This sumptuous volume covers the entire American insect world, including moths, butterflies and beetles, to which separate volumes are often devoted. Probably the most valuable hand-book of the subject for the technical student or amateur collector. (*April 18th.*)

Insect Stories

By V. L. KELLOGG, author of "American Insects," etc. (*May.*)

Fish Stories

By D. S. JORDAN and C. F. HOLDER. (*May.*)

ALREADY ISSUED IN THE AMERICAN NATURE SERIES

THE BIRD: ITS FORM AND FUNCTION. By C. W. Beebe, F.R.S. $3.50 net.
FISHES. By D. S. Jordan, President of Leland Stanford University. $6.00 net.
FERNS. By C. E. Waters, of Johns Hopkins. $3.00 net.

SPRING PUBLICATIONS

J. B. Lippincott Company Philadelphia

The Struggle for American Independence

By SYDNEY GEORGE FISHER

Author of "The True History of the American Revolution," "The True Benjamin Franklin," etc.

A COMPREHENSIVE history of the whole revolutionary movement from a point of view quite different from the usual one. A great deal of the original evidence, which has heretofore been ignored by historians, is brought to light and made accessible to the ordinary reader.

Two volumes. Illustrated. Crown octavo.
Cloth, gilt top, $4.00 net per set.

Persia. The Awakening East

By W. P. Cresson, F.R.G.S.

A narrative of a trip across Persia, taken by the author and his brother. The book gives many interesting facts about the present-day social and commercial conditions of the country.

Profusely illustrated.
Octavo. Cloth, $3.50 net.

Why Worry?

By G. L. Walton, M.D.

This book on that great American occupation, "Worry," will be informing and helpful to readers in general, while to nervous sufferers it should be invaluable.

The author deals with the "blues" by wholesome natural means. His method is—"an application of old philosophy to new conditions."

Frontispiece. 12mo.
Cloth, $1.00 net.

The Life and Works of Christopher Dock

With a Translation of His Works into the English Language, by Martin G. Brumbaugh, Ph.D., LL.D., and an Introduction by Hon. Samuel W. Pennypacker

This volume is devoted to the life and a translation of the works of America's pioneer writer on education—Christopher Dock.

Illustrated. Octavo. Cloth, $5.00 net.

The Life and Works of James Buchanan

Collected and Edited by JOHN BASSETT MOORE

Professor of International Law and Diplomacy at Columbia University

An exhaustive and scholarly work on the writings and state papers of our fifteenth President.

To be completed in twelve volumes, which will appear separately. Two volumes will probably be ready this spring.

Twelve volumes. Containing a portrait in color and a photogravure.
Octavo. Cloth, $5.00 net, per volume.

NEW SPRING FICTION

Marcia Schuyler

By GRACE LIVINGSTON HILL LUTZ

A sweet and wholesome romance, fragrant of lavender and rosemary—yet thrilling with heart experiences, touched with humor, and shadowed by tragedy.

Colored frontispiece and six illustrations. 12mo. Cloth, $1.50

The Master Influence

By Thomas McKean

Author of "The Vortex"

An exceedingly readable novel, the scene of which is laid principally in New York City, but with fascinating touches of Paris and Sicily.

Colored illustrations by Will Grefé. 12mo. Cloth, $1.50

The Duchess of Dreams

By Edith Macvane

A tale of social ambition, of startling adventure, and of passionate love; placed against the dazzling background of a Newport summer.

Frontispiece in color by Alonzo Kimball.
12mo. Decorated Cover, $1.50

In the Dead of Night

By JOHN T. McINTYRE

A stirring novel of deep mystery, with scenes laid in New York City.

Colored frontispiece and three illustrations. 12mo. Cloth, $1.50

OUTDOOR BOOKS

Our Trees How to Know Them

Photographs from Nature
By ARTHUR I. EMERSON

With a guide to their recognition at any season of the year, and notes on their characteristics, distribution, and culture.

By CLARENCE M. WEED, D.Sc.
140 illustrations. Size, 7½" x 10"
Cloth, $3.00 net

The Small Country Place

By SAMUEL T. MAYNARD

A thoroughly practical book which will be of great value to those who live upon small country places, especially those whose work in the city allows them but a few hours each day to spend about the home.

The author discusses the growing of farm and garden crops, the care of the horse, the cow, and poultry, and similar subjects.

Seventy-five illustrations from photograph , and numerous line drawings.
12mo. Cloth, $1.50 net

Wild Flower Families

By CLARENCE M. WEED, D.Sc.

A popular hand-book which carefully covers the haunts, characteristics, and family relationships, with suggestions for their identification of the more widely distributed herbaceous wild flowers.

80 illustrations. 12mo. Cloth, $1.50 net.

Four Seasons in the Garden

By EBEN E. REXFORD

A book on gardening for the home-maker, by the foremost amateur gardener of the United States. It treats of all phases of the subject, from the simple bed or two along the fence, in a city back yard, to the most ambitious garden the happy suburbanite or country dweller can manage without the services of a professional.

Sumptuously illustrated in tints.
12mo. Cloth, $1.50 net

POETRY

My Bunkie and Other Ballads

By ERWIN CLARKSON GARRETT

These poems tell of army life in the Philippines, the tropics, and out-bound trails, and palms and the phosphor seas.

12mo. Cloth, gilt top, $1.25 net

Ready in May—A Captivating Novel

The Princess Dehra

By John Reed Scott

A sequel to the dashing romance, *"The Colonel of the Red Huzzars."*

The Nation.

NEW YORK, THURSDAY, APRIL 9, 1908.

The Week.

Gov. Hughes continues to be the most impracticable of Presidential candidates. He has definitely refused to name his own delegates at large from New York. If the proposal that he should name them was spread before him as a snare he has avoided it; if as an invitation to set up as a boss, he has spurned it. Let the Convention and the party in general attend to their duties, and he will attend to his. This is magnificent, but it is not politics, so many people say with a groan. Why won't the Governor get out and hustle for the nomination? Why won't he forever be flinging himself at the heads of the voters? This is like asking why he does not make himself over. There he stands, the sort of man God made him, and he can be no other. If the country wants him, he will respond; if not, no sign of disappointment or discontent will escape him. There is no doubt how he will stand the test. But it must not be forgotten that a test of his party also is involved. It will have to show whether it has been so sensationalized in recent years that it cannot appreciate the virile qualities of a strong and undemonstrative man; whether it has become so enslaved that it is no longer free to choose him even if it so desires.

Some weeks ago the Chicago *Inter Ocean* pointed to the likelihood that there would be one "rotten-spot" in the Republican National Convention. It meant the delegations from the Southern States. Since that time, the signs of difficulty on this score have been almost daily thickening. We have had the State Conventions in Florida and in Tennessee, both marked by disgraceful rioting, in which the police had to intervene, and both resulting in contesting delegations. And preparations are openly made in other Southern States to split the Republican party, already small to the point of disappearing, into two minute and quarrelling factions. In Alabama two rival State Conventions are to be held. The same plan is announced for Georgia. In Texas "the recognized faction" (meaning the Federal machine) is to have its State Convention on May 26; the other on a date not yet fixed. Numberless district conventions are in a similar condition of angry schism. The hard task of wrestling with these torn and dissevered factions will be pressed, first of all, upon the National Committee. Its function is to pass, *prima facie*, upon all contests, and to decide which set of credentials shall be held to entitle to a seat. The Convention itself may later reverse the Committee, but it is obviously an enormous advantage to have its preliminary endorsement. Hence the quiet but keen contest now going on for the "control" of the National Committee. The Taft partisans confess that they did not have it last December, but boast that they have since acquired it. Yet the "allies"—as the anti-Taft managers are called—deny this, and assert that they retain their majority. Whatever the fact, it is evident that the high stakes are being played for desperately; and that, given the antecedents and dubious standing of certain of the committeemen, especially from the South, there will be virulent charges of foul play, no matter which side secures the control.

Hisses and catcalls at every mention of Mr. Bryan's name in the People's Party convention at St. Louis are not such surprising manifestations of sentiment, when one considers the real reasons which the Populists have for maintaining a separate organization. If Bryan were consistently and continuously "good enough" for the Populists, as one wing of the party asserted, the party needs no policy save the precautionary one of waiting to make sure that the Democrats nominate him at Denver. But the alliance made with the Democrats in two campaigns cannot to-day bring up altogether pleasant retrospections. The People's Party made such a start as no other minor party in our history. The first time it nominated candidates at all, in 1892, they received 22 electoral votes and a popular vote of 1,040,886. Then came the fusion. The regular Democratic vote for Bryan and Sewall was only 800,000 behind that of McKinley and Hobart. A million Populists added would have carried the day, but the Bryan and Watson ticket polled only a beggarly 222,583. The middle-of-the-road men were wise to put their own ticket in the field in 1900, for though Barker had only 50,373 supporters, the Roosevelt "wave" in 1904 did not prevent the casting of 117,183 votes for Watson. The first Populist convention met, as it said, "in the midst of a nation brought to the verge of moral, political, and material ruin." That was the year before a panic. This is the year after a panic. Populism is a creed for hard times, and if it ever expects to hold up its head, this should be a fitting moment. Existing industrial conditions can be described in language as pungent as that which the Populists employed sixteen years ago. Whether it will harrow the feelings as much, is another question. If it is a common place that ideas once thought dangerously radical are now feared by nobody, it is equally true that strong language in respect to problems of state has largely lost its power to startle. Generally speaking, no third party can make a successful canvass on platitudes, for the platitudes are always appropriated by the older and bigger organizations. In losing the power to astound people, the Populists have lost their best weapon. They shouted in 1892 that "the amount of circulating medium be speedily increased to not less than fifty dollars per capita." It was then $23.42 per capita. The Treasury, with something like humor, chose the day of the Populist Convention of 1908 to announce that the amount has already risen to $33.91.

The originality of the tariff letter from Vice-President Fairbanks read at the Indiana Convention lies in the time which he deems appropriate for revision. We have heard from Democrats who want the Dingley law modified without delay, Republicans who want it modified by the next Congress in 1909, and Republicans who do not want it modified at all. None of these proposals satisfies Mr. Fairbanks. He would have the change made by the present Congress in the interval between election day and the regular meeting in December. There are two arguments for this course. First, it is perfectly certain that the Republican party, controlling the President, Senate, and House, can do anything it pleases with the government at present, while there is no telling how the government may be constituted after March 1. Second, it is desirable not to protract unnecessarily the unsettling process of revising the tariff. Since the short session of Congress, lasting from December to March, is generally regarded as barely long enough to pass the appropriation bills, and the election takes place this year just twenty-nine days before the beginning of the regular session, that is the period which Mr. Fairbanks thinks sufficient to discuss and settle "scientifically" thousands of items! Better go over at once to Leslie M. Shaw's theory that if a revision could be accomplished overnight and without discussion it would hurt business less than one conducted with care and deliberation.

Speaker Cannon, like another "Joe," is "devilish sly." His resolutions the other day calling upon the Administration to explain why it has not prosecuted the Paper Trust, cut both ways. They are the reply of Mr. Cannon to the wicked charge that the tariff ever raises prices to the consumer; and, at the same time, look rather hard in the direction of the great enforcer of the Anti-Trust act—except when he chooses not to enforce it. The Speaker remains of his old innocent opinion that the tariff can harm nobody—except, possibly, by not making the duties high enough; but a monopoly may be oppressive, he admits, and so he wants to know what action, "if any," the Department of Justice has taken against the particular Trust that grinds the faces of the poor newspapers. If there are stand-patters in the matter of prosecutions of corporate criminals, Speaker Cannon is evidently willing to compel them to stand up and be compared with tariff stand-patters. But we imagine that, while the two sets are angrily glaring at each other, nothing will be done.

When Mr. Roosevelt first became President the late Admiral Taylor is reported to have said: "Let's take our licking from the press, and admit our mistakes and begin all over again." But nothing was done. Criticism came from the sea-going officers and passed from bureau to bureau with the official "contents noted." Secretaries came and went, Moody, Morton, Bonaparte—all men of ability in their own line, but knowing nothing about the navy. They were told of existing conditions, but they were in the hands of the bureaus. Mr. Metcalf completed the succession of what the navy calls the "rubber stamps," but he sat tight and again did nothing. Now the inefficiency of our naval construction has come to light, and reaches the public as a great shock. People had been led to believe that our navy was inferior to none, but the letter of Admiral Evans has opened their eyes. The inference against the capacity of our naval constructors is very damaging. Sir William White was made to resign as chief constructor of the British navy for much more venial faults than are now fastened upon our responsible officers. On the other hand, the names of Sims, Goodrich, McCalla, Hill, Key, and Vogelgesang will go down in the annals of our navy as the bold champions of the truth. The country should be proud to possess officers who for years have been risking their all for the sake of the betterment of the navy. They have and deserve the thanks of the entire nation, as the people now know that they have been right. Their private protests to the Department, and their open testimony before a hostile Senate committee, have been a public service. The only question remaining is how long the President will wait before pressing for the needed thoroughgoing reform.

The result of the vote in the Committee on Military Affairs on Senator Warner's bill for the reinstatement of the negro soldiers shows, in the first place, that Senator Foraker persists in hating his enemies, and, in the second place, that the President has found out the precarious nature of that historic reed known as Democratic support. By a vote of eight to four the committee decided to report adversely a measure which would have allowed every member of the Brownsville regiment to secure reinstatement in the army, on proving his individual innocence. The President was behind the bill, but the Democratic Senators who went with Mr. Roosevelt, the rigorous defender of discipline against a negro regiment, refused to join forces with Mr. Roosevelt, the exponent of a policy of justice done, though the heavens fall, to a negro regiment. The New York *Tribune's* Washington correspondent gropes painfully, and somewhat innocently, after Senator Foraker's motives. Was he "prompted to deprive the negro soldiers of that measure of justice asked for them by the President by anger because his own bill had been rejected"? Or was Senator Foraker afraid that his own contentions as to the responsibility for the Brownsville affair would be disproved by such testimony as would be taken in the individual examinations under the Warner bill? It may be that neither reason weighed so heavily with the Senator from Ohio as the desire to prevent the President from escaping the odium of his Brownsville thunderbolt.

Baltimore is the first city to follow New York in offering an exhibition of sculpture pure and simple. The armory of the Fifth Regiment in that city has been turned into a flower garden, where monuments rise among copses and trees. It is lucky for Baltimoreans that Maryland is not so fastidious as New York regarding the use of armories When the National Sculpture Society looked about this city for a place to exhibit in, the armories proved the only convenient and effective halls, but they had been made legally unavailable. Unless New York is provided with a building fitted for such combination shows of architecture, sculpture, and landscape gardening, we shall have the singular spectacle of the citizens of a city too indifferent to the arts to furnish a showplace for the artists who would come there in the hope of fame from all parts of the world. Meantime, the German Emperor has "cast his come-hether' over Manhattan, and set out to compliment the city by offering a complete, well-equipped sculpture show by German artists. Last autumn Herr Eberlein made a preliminary dash, a short reconnaissance, on his own account, and left to the Metropolitan Museum a bust as pledge of his esteem. Now, direct from his art-loving Majesty, comes Herr Schott, another sculptor whose renown is great on the banks of the Spree, with proposals for the use of the sculpture hall at the Metropolitan for a combined exhibit of German architecture and sculpture. No one who has observed the energy and persistence of the Emperor in making Berlin the paradise of sculptors will doubt for a moment that we shall have the best of German sculpture, so far as the Kaiser's virtuosity goes. Undoubtedly, the exhibition will reflect his own ideals, which are not those of all Germans. Politically speaking, it would please the Emperor better to hold an art exhibition in Paris, where they defend themselves rather savagely from his advances; but he can console himself that in New York there is a likelihood that his embattled sculptors will find clients, while France remains inclined to patronize native talent.

From the fact that the New York Methodist Conference has passed a resolution calling upon the General Conference to amend the Book of Discipline so as to lift the ban from certain amusements, it would not be safe to infer that the thing will be done. The historic position of the Methodist Church in condemning cards, dancing, and the theatre is not likely to be given up yet. Pastors of metropolitan churches may think a change advisable for the comfort of their congregations, but the great body of ministers, away from the large cities, would probably be still against any letting down of the standards. Of course, it is notorious that thousands of Methodists openly violate the Book of Discipline in the matter of amusements. That eminent Methodist, William McKinley, went to the theatre occasionally. Some other churches, the Presbyterian for example, are no better off on the score of the consistency of their members. It is, however, a sign of the times when even one prominent Methodist Conference resolves in favor of repealing a church prohibition which no longer prohibits, and of making new rules which will come somewhere near squaring with practice. One of the clergymen who voted for the resolution explains that there was no desire actively to countenance worldly amusements, but only to leave them to "the conscience of the individual."

That athletics, whatever else they do, favor physical development, would appear to be a truth so obvious as to require no more demonstration than the fact that they help make Presidents popular and magazine heroes attractive. Not so obvious are the figures which Dr. F. J. Born, the medical director of the Yale gymnasium, brings forward to enforce the point. He takes his average student and his football, crew, or track team man and compares their lung capacities in the following table:

		Av. student.	Difference.
Crew	326 cu. in.	240 cu. in.	86 cu. in.
Football team	315 cu. in.	240 cu. in.	75 cu. in.
Track team...	290 cu. in.	240 cu. in.	50 cu. in.

To this the scoffer might reply that the table shows only what every one knows, that the athletes are in the nature of the case above the average in strength and lung capacity. What was the athlete's lung capacity before he went into serious athletics—that is the question; and in answer to that we get the following comparison between the 'varsity and freshman football teams for 1907:

	'Varsity.	Average student.	Freshman.
Height	70.3 in.	67.8 in.	69.2 in.
Weight	183.4 lbs.	137.0 lbs.	185.3 lbs.
Breadth of shoulders	17.5 in.	16.1 in.	17.1 in.
Girth of neck......	15.5 in.	13.9 in.	15.2 in.
Girth of chest (normal)	39.8 in.	34.4 in.	39.3 in.
Girth of chest (inflated)	41.7 in.	36.0 in.	41.0 in.
Girth of waist......	33.4 in.	28.0 in.	32.2 in.
Girth of right biceps	14.2 in.	11.6 in.	13.3 in.

Whatever else this table was intended to show, it brings out this fact: that between the members of the freshman teams and of the 'varsity team there is very slight difference. It logically follows that four years of college athletics —do what?

After having adopted an abstract "vow" in favor of Home Rule for Ireland, the House of Commons on the next day passed the first reading of the bill to found two new Irish universities, one at Belfast and the other in Dublin. This has long been a cherished project with Mr. Balfour, though he never could bring his own party to agree to it. He manfully stood up to approve this Liberal measure, however, and his speech in favor of it brought him thanks from the Nationalists. As this support by the leader of the Opposition makes the bill non-contentious politically, there is good reason to hope that it may be enacted into law at this session of Parliament. The details of the measure are necessarily intricate; existing institutions have to be coördinated and the right of control carefully specified. But any large plan of improving and dignifying university education in Ireland would meet a long-cherished aspiration.

Sir Edward Grey's proposals for the erection of Macedonia into a practically autonomous province under a governor appointed by the Sultan, but with the consent of the Powers, has failed to meet with ready acceptance anywhere on the Continent. This was to be expected. Still less hearty a welcome will be given the plan brought forward by the Greek Premier, M. Theotokis. This calls for the division of Macedonia into definite zones of influence, Bulgarian, Servian, or Greek, according to the sentiment of the majority of the population in each zone. The minority is to be held bound to abide peacefully by the régime established by the predominant element, or else to emigrate to one of the zones in which their fellow-countrymen constitute the majority. The Greek statesman claims for his plan the advantage that it fulfils the promises which were held out by the Powers in the Mürzsteg programme, to be kept after Macedonia had been pacified. Macedonia is not pacified; on the contrary, the promises held out by the Powers have become the powerful reason for the prevailing state of anarchy, by stimulating the different nationalities to civil strife with a view to extending their as yet undefined spheres of influence.

Paris has a good-sized "affair" on hand now in the form of a violent controversy between Jules Claretie, director of the Comédie Française, and Octave Mirbeau. His latest play, "Le Foyer," after being tentatively accepted for the Comédie Française, was recently returned to its author because of the objectionable way in which it dealt with a supposed Academician and Senator, who is one of the principal characters. The quarrel has widened from one of personalities into a contest between conservative tendencies as embodied in the French Academy, and radicalism which is entrenched in Parliament, where M. Mirbeau has been able to rally a strong support. A special session of the council of ministers is supposed to have discussed the expediency of removing M. Claretie from the post he has held for so many years. The outcome is not yet decided. A similar cleavage between Parliament and the Institute is depicted in an interesting light in an article by Pierre Caron on "A French Coöperative Historical Enterprise" in the latest number of the *American Historical Review*. The enterprise he refers to is a commission appointed in 1903 under the Ministry of Public Instruction to collect and publish documents relating to the economic life of the French Revolution. The reason why Parliament was asked to endow the work is frankly stated:

> From the Institute, little disposed to assume a task so heavy, and indifferent, if not hostile, to the period of the Revolution, nothing was to be expected. Neither was anything to be expected from the Comité des Travaux Historiques, a body much inclined to the same prejudices.

Compared with Portuguese politics, the heart of darkest Africa, the forbidden city of Lhassa, and the North Polar regions are sources of radiant light and explicit information. Just what is going on in the country on the western fringe of the Iberian peninsula is difficult to understand, even after months and columns of supposedly elucidative comment in the press. A King is shot down in broad daylight in a crowd, and no one seems to know who was behind the deed, and no one seems to care. There is a general impression that the murders may have been the work of a Republican fanatic who thus expressed the discontent of an entire nation with an outworn system of corrupt monarchical politics. Yet at the elections that have just closed, the monarchist parties join in the old combination for manipulating voting returns against the advocates of political reform, specifically against the Republicans with whom a few months ago they were zealous allies against King Carlos. In the last Parliament, dissolved by Dictator Franco, there were four Republican Deputies. In the new Parliament, after conducting so fierce an agitation and playing so desperate a game, the Republicans, according to our still meagre dispatches, have succeeded in choosing only five candidates in Lisbon, which they were supposed to dominate so far as popular sympathy is concerned. To the outsider, it is mad folly on the part of the monarchist parties thus to stifle a movement which cannot be repressed, as experience has often shown. It is playing with fire; and Portugal may be driven to revolution more speedily by the selfishness of party politicians than by the excesses of a dictatorship.

The time-honored Russian explanation of the ills that come to the Czar's empire is to ascribe them to the pernicious influence of "foreigners." Responsibility for the recent revolutionary upheaval was laid upon the non-Russian nationalities—the Jews, Poles, Armenians, Letts, and Finns. At present the Russian press is discovering that the country is in the grasp of the Germans —a discovery which might have been made at any time during the last 150 years. A writer in the *Novoe Vremya* asserts that, out of 315 higher functionaries in the Ministry of the Interior, 200 are non-orthodox, and that, of these 200, all but two bear German names. Altogether, out of 646 employees in that one Department, no less than 529 are "foreigners." In the Baltic provinces the Germans are accused of working for the dissemination of Teutonic ideals and the German tongue with a zeal that argues disloyalty to the Russian Government. In southern Russia there are over a half-million German colonists, whose settlements are so many oases of skilful cultivation and prosperity in the dead level of mujik incapacity and destitution. The colonists maintain close relations with their fellow-Teutons in the Baltic provinces; and this, again, makes the *Novoe Vremya* scent disloyalty. But inasmuch as the German colonists have been settled within the empire for nearly two centuries, the term "foreign" applies as aptly to them as to the Jews who have been within the present bounds of the empire for 400 years.

ECONOMICS AND POLITICS.

A good deal has been written about the economic interpretation of history. Some of it is fanciful: if Abraham had paid for the burying ground which he bought of Ephron in gold instead of silver, America would never have been discovered. With that sort of thing the bimetallist controversy made us familiar. But there is also the sober investigation of the past which has succeeded in showing how much more potent than kings or forms of government have been the economic forces which have determined the rise and fall of nations. We refer to such studies only to express wonder why similar inquiries have not been made respecting current politics. It would be possible to make out a very plausible argument that the ups and downs of parties in this country have been caused less by their principles and their leaders than by the ebb and flow of trade, the prices of commodities, the wages of labor, the returns on capital, and so forth.

With the general statement that hard times are bad for the party in power, everybody is familiar, and nearly everybody agrees. That is one of our political traditions. But all of its implications are not often admitted. It has been said that a politician would be capable of denying that two and two make four, if he or his party had an interest in so doing; and it is certain that partisans will not concede the inevitable working of a political law—against themselves. It was natural and proper and, of course, determined by a fixed fate, that the panic of 1893 should turn the Democrats out of office; but the Republicans who so allege would be the last in the world to confess that the panic of 1907 will break their hold on the country. They have wise and useful party principles, and great leaders, that have stood the test of time; and the American people are not going to be so rash or foolish as to discard them just because an unfortunate business depression has unexpectedly befallen us.

Saying nothing about the facts, and refraining from prophecy—that "most gratuitous form of blunder"—we must remark that this very question of party doctrines being sound and beneficial, and of party chiefs being geniuses, is one about which men's views are astonishingly altered by changing economic conditions. This is the irony of the whole situation. A public man will go on for several years urging a policy which he declares to be at the root of all our national prosperity, as well as of justice and morals, and a prosperous people will acclaim his voice as not that of a man, but a god. Yet the same man will utter the same sentiments in an hour of financial apprehension and commercial retrograding, and lo! the same people who lauded him before and grovelled at his feet will cry out upon him as an arrant humbug and a public calamity. Yet his position in either case may have had nothing to do with the course of events by which he is judged. At the earlier period, as at the later, social and economic causes were working their will, unaffected by the little man, so hot, prancing about them. When all the people were saying amen to him, he was not nearly so wise and wonderful as they thought; and when the fickle crowd turned against him as the author of all their woes, he was far from having any such responsibility, or being so foolish, as they imagine. Politics had been all the while but as a fly upon the wheel of economics. And the Comic Spirit, observing all this, and seeing how men are praised for what they had no share in, and blamed for that with which they had no concern, must be moved more than before to exclaim: "Lord, what fools these mortals be!"

Foolish or not, such things go to make up the inexorable laws of politics. The mightiest is under their reign as truly as the lowliest. President Roosevelt has not been able to escape it. He has not changed in any essential way, but the refracting medium through which people observe him has changed, and the very ones who two years ago thought they saw a demigod, now believe that they see a destroying monster. Everybody must have met dozens of people of his own acquaintance in whom economic conditions have now completely swept away political prejudices or even convictions. A man gets notice that the dividend has been passed on $10,000 worth of stock which he owns, and instantly the President, who but yesterday was the bravest, the most heroic, the wisest, and greatest of his day, becomes that reckless and ignorant meddler for whom "I would never vote again, sir, if I had to take Bryan or Debs or the devil instead."

All this is comedy, but with a very strong dash of tragedy in it, so far as Republicans are concerned. Nemesis has caught up with them. Who does not recall their attitude towards President Cleveland during the grinding years 1893-4? They dismissed the soberest and clearest truth he might utter as if it were the ravings of a madman. How expect them to pay the slightest attention to a President under whom the mills were closed and the unemployed walked the streets? If you wanted to see convincing proof of his stupidity and blundering, just look about you. Away with such a party and such an Administration! Not till they themselves were in office and confronted with business reverses, did the Republicans discover that economic laws were more powerful than party legislation, and that panics come in cycles, anyhow, so that the party—it is *their* party—should not be blamed.

THE THREATS OF "LABOR."

We note a prevalent amazement, approaching stupefaction, at the demands and menaces of organized labor at Washington and elsewhere. People with short memories and easily fluttered judgment are saying that no Presidential campaign ever saw anything like the present demonstrations. Possibly not, in point of mere size and noise. The facilities for publicity have been enormously increased in recent years; where labor leaders used to whisper in the ear of politicians in a closet, they now bellow what they have to say from the housetop. This makes the outcry seem entirely novel, though it is so merely in form. Samuel Gompers has a great command of the press, and is able to make himself out, through that haze, a terrifying figure; but he is not essentially different from his predecessors in the world of labor-politicians—Jarrett and Powderly and Martin Irons.

In the deliverances of all such men, there is always a certain vehemence and exaggeration of which the motives are clear. In the first place, the labor leader seeks to serve notice upon his followers that he is "on the job." He is defying the capitalistic oppressor, to his beard; he is haranguing Congressional committees; he is uttering dire threats. All this is, from the labor point of view, merely a proof of efficiency in office. If a question were to arise, for example, about electing another man President of the American Federation instead of Mr. Gompers, his tremendous vocal activities at Washington would be pointed to as evidence of unrivalled fitness for the position. And, in the second place, a man like him invariably clamors for more than he really expects. By pitching his terms high, he thinks he stands a better chance of getting at least something in the end. It probably never enters the head of Mr. Gompers that either Congress or the President will concede one-half of his present demands; but if one-quarter are conceded, he will have triumph enough.

In his real or calculated excitement on Saturday, Mr. Gompers told the Judiciary Committee of the House that, unless Congress meets the wishes of labor, there will speedily be oath-bound and secret organizations of workingmen in this country which will do dreadful things. Of all the threats of labor leaders, however, this must come nearest to being *brutum fulmen*. To make labor unions strictly secret would deprive them of half their reason for being, and would take away from their officers very nearly *all* of theirs. Imagine Mr. Gompers compelled to operate and orate only in secret! Such a scheme would be clearly unconstitutional, as inflicting upon him a cruel and unusual punishment.

We desire to treat with all seriousness and respect the claims which the authorized spokesmen of labor unions are now putting forward in Washington. If they have just grievances, either as individuals or collectively, Congress should lose no time in correcting the injustice. But a close examination of Mr. Gompers's address fails to disclose any real ground of complaint. He emitted a great cloud of words to the effect that the Anti-Trust law, as interpreted by the courts, deprived organized labor of its fundamental rights, the denial of which was really a denial of its title to existence. But this is an obvious misunderstanding, or misrepresentation. No statute, no court, has taken away the right of laboring men to combine, for lawful ends. They are nowhere forbidden to strike. In all peaceful ways of promoting their interests, in fact, the law shields instead of hindering them. It is only when violence is threatened or personal injury is inflicted or public order is disturbed, that the law lays its restraining hand upon them. This has long been the ruling of the courts. The only change recently made is to decide, as the Supreme Court has at last done, that boycotting is illegal under the Sherman act, as it always has been illegal at common law.

Now, to legalize the boycott is, evidently, the bottom demand of Mr. Gompers. This fact was brought out by the searching questions of Mr. Littlefield. President Roosevelt is against the boycott, though he has given a too hasty approval to the bill of the Civic Federation, introduced by Congressman Hepburn, which, in the opinion of many good lawyers, would have the effect of making the boycott legal. Mr. Gompers refers to the boycott as one of the indispensable "weapons" of organized labor. Of course, he means peaceful weapons; but it is clear that a "peaceful" boycott might as directly destroy a man's property as if enemies had burned down his factories. If the Standard Oil Company combines to ruin a small competitor, organized labor cries out on it, and approves the law whose aim is to punish it; but when the same even-handed justice is applied by the courts to the ruinous acts of laboring men in combination, Mr. Gompers would have us believe that the heavens are about to fall.

It is at this point of seeking to exempt one class of men from the equal operation of the law that the pretensions of organized labor must be firmly met, and its threats defied. Let workingmen combine for political action as they please. The "labor vote" has almost invariably been a delusion and a snare to politicians depending upon it; but there may be a change in that respect. Certainly, laboring men are entitled to back up their views with their ballots. But neither by their ballots nor in any other way can they set themselves up as a class privileged to do with impunity what in other men is a crime. On this fundamental of democratic citizenship the President firmly takes his stand. Secretary Taft is equally explicit. Mr. Bryan has not found it convenient to declare his position.

CHINA AND RUSSIA IN MANCHURIA.

Baron Rosen's statement in regard to the controversy supposed to be in progress between the Russian government and our own over the infringement of Chinese rights in Manchuria, is welcome as a rational commentary amid a good deal of more or less foolish talk. The common impression seems to be that our consul at Harbin has found it necessary to protest against the assumption by Russian officials of governmental powers incompatible with the maintenance of Chinese sovereignty. The Russians are not only organizing an independent municipal government at Harbin, but are said to have demanded that foreign consular officers, and specifically our own consul, should be accredited to and required to do business with the Russian authorities instead of the representatives of the government at Peking. There is here a confusion of widely different questions, between which the Russian ambassador at Washington justly distinguishes. It is probably true that some form of municipal organization is being established at Harbin, the junction point of the Trans-Siberian and the Manchurian railways, and the home of a larger Russian population than is to be found in any other town of Eastern Asia, not excluding Vladivostok. On the other hand, it is patent that no such absurd demand could have been put forward by Russia as to insist on the American consul's applying for his exequatur to the Czar's representatives at Harbin. That was a claim which Russia did not put forward even in the days of her ascendency before the war.

Even the organization of separate Russian municipal governments, however, might seem dangerous. But Baron Rosen explains such measures as arising naturally from the terms of the Manchurian Railway lease of 1895, which granted to the railway company the rights of administration in the leased territory, together with the right of exercising military protection along the line of the railway. This latter right Russia, as Japan along her portion of the road, continues to exercise. The need for municipal organization was not a pressing one before the war, when the railway stations from Harbin down to Mukden were, for the most part, lonely sidings with a handful of officials and Chinese squatters settled about each, and Harbin itself was a Chinese town with a comparatively small Russian population.

It was, of course, the war that made Harbin, just as, according to most authorities, it was Harbin in great measure that made the war. When the town became the chief base of supplies for the Russian armies, it entered upon a marvellous development. Its flour mills, drawing their supplies from the surrounding fertile plain of the Sungari, are estimated to have supplied more than half of the daily needs of Gen. Kuropatkin's men. The hospital district, the railway administration district, the barracks, constituted small towns in themselves. The railway facilities at Harbin, towards the end of the war, are said by B. L. Putnam-Weale, in "The Coming Struggle in the Far East," to have been carried to the point where it was possible to entrain an entire army corps in a day without disturbing the ordinary civilian traffic. While the armies were fighting out the issue with Japan in the South, Harbin, responding with almost non-Russian efficiency to every demand put upon it, experienced the inevitable war-boom. Towards the end of 1906, Mr. Putnam-Weale estimated its European population at 80,000, and though the number was then rapidly declining, and has probably sunk to a much lower point, Harbin has remained, and is likely to remain, one of Russia's two greatest outposts in the extreme East; more important even than Vladivostok, possibly, because of the demonstration of the effectiveness of rail power which the Trans-Siberian gave during the war.

Under such circumstances, the proposed erection of some form of municipal institutions throws no startling light on Russian policy in Manchuria. The Russian concession at Harbin is an area of one hundred square miles, and within that area the Russo-Chinese Bank, the nominal lessee, has been sub-letting ground for building and commercial purposes for the term of its own concession, which is thirty-six years. It follows that the Russian authorities are practically in control at Harbin, so far as the European population is concerned, and under existing conditions it is not difficult to understand how a foreign consul engaged in looking after the interests of his countrymen would be brought into more frequent contact with the Russian administration than with the officials of the Chinese government, whose authority extends only over the native population. That opportunities for the infringement of paramount Chinese rights are always present in such a situation is, of course, undeniable. But, in point of fact, Chinese sovereignty has never been an immaculate aggregate of unquestioned rights. The principle of exterritoriality is too widely recognized in China to permit any alarm over what a great Power would consider an attack on its rights, or even its dignity.

That there is no immediate danger to China of harm from the side of Russia is apparent. Mr. Putnam-Weale, who a few years ago was of far different opinion, believes so now. He goes even so far as to point out that Russia's efforts in Manchuria have largely redounded to the benefit of the Chinese people, if not of the Chinese government. Around the Russian railway settlements there have sprung up Chinese colonies which are rapidly bringing large sections of territory under cultivation. Especially is this the case along the main line of the Siberian railway from Harbin westward through Tsitsi-har, the capital of the northernmost of the three Manchurian provinces. This province, with an area of 150,000 square miles and a population of only 3,000,000, is being invaded by Chinese immigrants from Shantung, moving with the line of the railway, and pushing the agricultural belt into Mongol territory at the rate of ten miles a year. The advantage to the maintenance of Chinese authority in the region is apparent.

CONCERNING "DEAD" OPERAS.

In a recent number of the *New Music Review*, Philip Hale poked fun at the Wagnerites who used to prate about Italian opera being dead. In the light of the figures for the operatic season just ended, those Wagnerites do indeed seem foolish. At the Metropolitan, 74 of the 130 performances were of works by Italian composers, and at the Manhattan the Italians had 61 out of 125 representations. In London we find a similar state of affairs. The announcements for the season at Covent Garden beginning on the last day of this month include 17 operas by Italians, as against a dozen by all others. This seems conclusive, so far at least as New York and London are concerned, but the figures do not confute the aforesaid Wagnerites. The Italian operas they had in mind were the works of Rossini, Donizetti, and Bellini, and those are still dead. The London list contains only one of Bellini's 11 operas, one of Rossini's 37, and one of Donizetti's 67, notwithstanding that the company includes two of the three greatest surviving artists of the old-fashioned *bel canto* school—Melba and Tetrazzini. Their rivalry will, it is expected, provide the chief amusement of the season. At our opera-houses Bellini was not heard at all, while Donizetti and Rossini were represented by only one opera each.

It is the young Italians who have come to the front for the time being, while Verdi, whom no one pronounced dead prematurely, because he belongs, in his best works, to the modern dramatic school, more than holds his own. To him belong one-half (30) of the Italian performances at the Manhattan, and 23 of the 74 at the Metropolitan, while Puccini also had 23 at this house. The other "young Italians"—Mascagni, Leoncavallo, Cilea, Giordano, Ponchielli (and Boito, who stands by himself)—helped to swell the statistics. Leaving Boito aside, the common characteristic of the living Italian composers is their facility in writing flowing melodies (seldom remarkable for originality) which give the singers opportunity to pour out their voices in that lavish volume and intensity which provoke applause as infallibly as horse-radish provokes tears. Sir Hubert Parry once wrote that certain composers of the seventeenth century "had found out the trick of making a specious show without meaning, and of giving the appearance of animation without any intrinsic energy in the ideas." This remark applies to most of the new Italian operas now so much in vogue, including those of Puccini, which, however, have compensating merits. Next to this appeal to the gallery—and the boxes!—the most important factor in the present vogue of these operas is that most of them are based on plays which had become very popular before they were set to music. The battle was thus half won at the start. But all of these works may well be as ephemeral as those of Rossini, Donizetti, and Bellini "History teaches us," wrote Dr. Hanslick, "that operas for whose 'immortality' partisans were once ready to fight deadly duels, have an average life of forty to fifty years."

If we now turn to French opera, we might easily get the impression that it is moribund. On the Covent Garden list, of 29 operas only 3 are by Frenchmen—"Faust," "The Pearl Fishers," and "Carmen." At the Metropolitan, "Carmen" was not sung at all during the past season of twenty weeks; "Faust" and "Mignon" alone were there to recall the glory of the French school, and they owed their presence in the repertory to the popularity of Caruso and Geraldine Farrar. It would have been possible, therefore, to write convincing articles on the decline and fall of French opera, had it not been for one thing: the appearance in the field of Oscar Hammerstein. He undertook to show New Yorkers that there is a young French school as well as a young Italian, and he had the shrewdness to see that the way to impress his audiences with this fact was to import the Parisian artists who had won success for these works in France and Belgium. His efforts were brilliantly successful. French opera at the Manhattan not only balanced Italian, but, in spite of the sensational success of Tetrazzini, the three operas which had the greatest number of repetitions—eleven each—were all made in France—"Louise," "Carmen," and "Les Contes d'Hoffmann"—while "Pelléas et Mélisande" and "Thaïs" also got ahead of all but two of the Italian operas.

If modern Italian and French opera is alive and lusty, how about German opera? Gustav Mahler has shown that "Don Giovanni" and "Fidelio" are alive, "Marta" has become popular again, and "Hänsel and Gretel" is a great favorite. Mr. Dippel has secured D'Albert's "Tiefland," which is a sensational success in Germany, for next season, when Mr. Mahler will also show that Weber's operas are still alive. In most minds, however, German opera means Wagner; and Wagner's operas, we are once more assured solemnly, are dying, if not dead already. To be sure, they had thirty hearings at the Metropolitan this season; but the audiences were smaller than those on Italian nights when Caruso sang, wherefore all hope must be abandoned by the dismayed Wagnerites. It might be pointed out, on the other side, that only a few years ago, when Jean de Reszke was the "Caruso" of the day, the biggest audiences were always on the Wagner nights; that England has a regular Wagner craze, demanding his operas in English as well as in German; that in Germany the number of Wagner performances increases from year to year, his operas having been sung last season 1,710 times, as against 725 performances of Lortzing and 721 of Verdi, the two composers coming next in popularity; and that in Italy the three leading houses opened the present season with Wagner. But such trifles do not worry the prognosticators. They are shouting once more that the Wagner bubble has burst; and who would begrudge them their delight at seeing it burst every two or three years?

Jean de Reszke was brought over from Paris for the express purpose of helping to drive out the German devil; but in a few years he had become the chief apostle of Wagner, and almost created a monopoly for him. And now some unprincipled persons are already chuckling at the new practical joke Fate is preparing to play. As if on the hunt for more Italian music still, the directors of the Metropolitan engaged the manager and the conductor of the Milan Opera for our next season. But both Gatti-Casazza and Toscanini are zealous partisans of German music, and owe their greatest triumphs in Italy to their staging and interpretation of Wagner's operas. So it promises to be another case of when the dead awake.

EDUARD ZELLER.

To have seen one's self for sixty years the foremost authority in an important division of knowledge is, in the humbler domain of scholarship, a destiny comparable to the lifelong primacy in letters of a Voltaire or a Hugo. A "Zeller Philolog" —there are doubtless such in Germany—would be required to describe the evolution of "Die Philosophie der Griechen" from the three modest volumes put forth by the young professor of theology in 1844-52, to the fifth edition of Part I., section i., Berlin, 1891, and the fourth edition of Part IV., section ii., issued with sixty pages of fresh critical and controversial matter by the nonogenarian in 1903. Superseding at once by virtue of its severe philological method and its lucid, if perhaps over-systematic, marshalling of the facts its rivals of the early nineteenth century, the now forgotten Ritters and Brandises, it still holds the field against all twentieth-century competition. After the completely revised second edition of 1856 the author wasted no further time in recasting his work or reconsidering his categories, but devoted the leisure of half a century to filling out the original *cadres*. In no other way could even German industry have kept pace by deftly inserted analyses and critical discussions with the ever-multiplying special literature of the vast subject; and organized the enormous mass of bibliographical and philological erudition that swells the six final tomes of what from the point of view of the philologian is the best history of philosophy ever written.

But is the rigor of the philological game always applicable to such elusive entities as ideas, and may not its affected objectivity sometimes prove an illusion? Zeller himself, though like other emancipated Hegelians he never quite cast off the spell of the Hegelian manner, protested from the start against Hegel's *à priori* constructions of history, and though he rightly held that the historian of philosophy must possess a philosophy of his own, believed that it need not color the impartiality of his exposition. He succeeded so well in his aim that it requires close observation aided by study of the more outspoken utterances of the three volumes of his "Essays and Addresses" to infer from his history his personal opinions and detect his preferences. This seeming objectivity is due partly to the eclecticism of his mind, and to the mediating, conciliatory temper which his friends admired, still more perhaps to the subtle mixture in him of the Aristotelian and the Hegelian. The Aristotelian analyzed and classified systems with scientific impartiality. The Hegelian, inspecting them as chains of dialectic, tested their weakest links, and discoursed of their historic sequences and filiations in large undefined abstractions. Thus, though the attentive reader may feel that more than justice is done to Aristotle and the Stoics and something less than justice to Plato and Empedocles, it is extremely difficult to get within the double dialectical and philological guard and touch any specific weak point or error. He measures philosophers by "die folgerichte Fortbildung der Gedanken" and the plausibility with which their categories subsume vast masses of fact, rather than by the surety with which they apprehend or the poignancy with which they express essential truth. A philosopher, he holds, must produce a system "with coherent, interdependent, subordinate, and derivative principles." It does not occur to him when picking flaws in Plato or Schopenhauer to ask whether all system-building is not either illusion or poetic construction, to be judged by the principles of literary architectonics rather than by the formal logic of consistency. Gomperz's frank evaluation of disconnected suggestions by the degree in which they anticipate or conform to the best modern thought on the same subject, is not really less philosophical or less objective, and makes a far more readable and instructive book. But for the student who wishes all the facts and all the comment on the facts, "Zeller" will long remain a synonym of Greek philosophy.

There was, however, it must be remembered, another Zeller, the "last of the Romans," as Vatke called him, the latest survivor of the Tübingen school, pupil and son-in-law of Baur, editor of the Theologische Jahrbücher from 1842 to 1857, and author of "Die Apostelgeschichte." Entering at the age of eighteen the Tübingen Theological School, where the memory of the great Suabians, Schelling and Hegel, was still cherished with pride, he became associated as fellow student, or colleague, with Strauss, Vischer, and, later, Schwegler, in an intimacy of common enthusiasm for truth and scorn of everything that fettered its free expression—to which all fondly looked back in later years. Baur, a great teacher as well as investigator, was seeking to replace the *à priori* vagueness of Hegel and the Platonic indifference to historical detail of Schleiermacher by a positive critical reconstruction of the historic origins of Christianity, starting from the antithesis of Paulinism and Ebionitism. His distinction between the historical Christ and the ideal Christ of the common Christian consciousness led logically to the "Leben Jesu" of his brilliant iconoclastic pupil, Strauss. Zeller, a warm friend of Strauss, was by temperament a liberal rather than a radical, and while recognizing the validity of his friend's destructive criticism preferred to pass on with Baur to positive and constructive work. In his own critical studies he quietly took for granted the principle whose enunciation in "Essays and Reviews" a quarter of a century later stirred up such a tempest in the teapot of Victorian England—the Bible is to be studied by the same methods as any other book. For this, like Jowett, he suffered persecution in the form of withheld promotion; but was soon called to a chair at Berne, and thence in 1849 to Marburg, where the clamor of the pietists brought about his transference from the theological to the philosophical faculty—a compromise not unknown in twentieth century America.

The passage from New Testament to philosophical studies caused no violent break in his life or thought. The Hegelianism of his youth was progressively modified by the philologist's preoccupation with concrete detail, by the scientific spirit of the age, by the perception of the failure of the post-Kantian systems, and the necessity which he was among the first to proclaim of a return to Kant and epistemology. But there is no record of a spiritual crisis in his life. He acquiesced from the beginning in Strauss's assumption that miracles do not happen, but rejected without acrimony the suggestion (in "The Old Faith and the New") that consciousness, like heat, may be only a mode of motion. He never accepted a merely mechanical explanation of the world; he maintained the freedom of the will even against Schleiermacher and Baur, asserted like Matthew Arnold his right to the name of Christian, and believed that a liberal and rational theology would supply a sufficient basis for the Christian ministry.

If space permitted, a more complete and unified philosophy might be collected from his latter essays. But the true unity of his life and work is not to be sought in any such system, but in his devotion to the philological method equally applicable to Heraclitus and to the Gospel of John, and in the life itself, the perfect realization of the ideals of the German teacher and scholar. A professorship won by merit and in the face of opposition, but not too late; a happy marriage with the daughter of his teacher; a *magnum opus* achieved in youth and kept up to date through life; promotion decade by decade, culminating in a call to Berlin; the accumulation with whitening hairs of every honor, degree, and title which the Fatherland had to bestow; at the end of fifty years of teaching a Jubilee Volume, of which the dedication is written by a schoolmate and lifelong friend; the preservation beyond four-score years of unimpaired vigor for teaching and investigation; and yet beyond that many years of tranquil but not idle retirement in the old home province in the companionship of wife, son, and grandchildren; honored acclaim from all Germany on the ninetieth birthday, and still an *epimetrum* of the overflowing cup, and then "quiet consummation have."—'Ο θεωρητικὸς βίος κράτιστος.

PAUL SHOREY.

The University of Chicago.

NEWS FOR BIBLIOPHILES.

The books from the library of the late Dr. John Gott, bishop of Truro, which were sold at Sotheby's March 20 and 21, had been included in H. Sotheran & Co.'s Catalogue "Bibliotheca Pretiosa," issued about a year ago. It was the unsold portion (including many wonderful books) which was consigned for sale at auction. The four folios of Shakespeare, priced by Sotheran at £7,000, were bid up to £3,850, at which price they were "bought in." Roberts's edition of the "Merchant of Venice," 1600, a good copy, but with a small hole in B1, brought £290; Spenser's "Faerie Queene," 1590-96, first editions of both parts, a very good copy, with the blank spaces for the Welsh words and the four unnumbered leaves at the end of the first part, £113, a low price; a large-paper copy of Spenser's "Complaints," 1591, lacking the leaf "The Printer to the Reader," and having two other leaves remargined, £97, and a small paper copy of the same, perfect, £53.

The most valuable book in the sale was Caxton's first edition of Voragine's "Golden Legend," 1483, genuine throughout, and perhaps the finest copy known. It was catalogued by Sotheran at £4,000, but brought only £1,300 at the sale. A block book, the "Biblia Pauperum," first edition (according to Heineken), probably printed in Holland and before 1450, lacking three leaves, was sold at £1,290. It had been priced by Sotheran at £2,000. "Paradise Lost," 1667, the variety with the author's name in large type (called the first title by Baxter and most other recent students), reached £192; another copy, 1667, with the author's name in small type (called the first title by Professor Masson, but the second by most others), £155; another, 1669, with the seventh title-page, £27; and a fourth copy, 1669, with the eighth title-page, £25 10s.

The series of editions of the Book of Common Prayer was a very long one, the following being the more important: Edward Whitechurch, 1549, first issue, perfect and genuine throughout, £105; second issue, perfect, but lower margins of some leaves repaired, £72; third issue, perfect, but with slight repairs, £84 and Grafton's 1550 edition with the ritual set to music, £158. Other prices were: Butler's "Hudibras," three parts, first editions, old russia, £35; "Robinson Crusoe," first editions of the three volumes, 1719-20, £145; Fletcher's "Purple Island," a large-paper copy, 1633, £26.

First editions of several Nineteenth Century English authors are the most interesting books in the Anderson Auction Company's sale, afternoon and evening April 13. Dickens's novels in original numbers comprise "Pickwick," "Master Humphrey's Clock," "Dombey and Son," "David Copperfield," "Bleak House," "Little Dorrit," "Tale of Two Cities," and "Edwin Drood," each set being in a levant morocco solander case. The octavo novels of Thackeray are uniformly bound by Riviere and each one has a specimen cover of one of the original numbers inserted. Keats's "Endymion" is the earliest issue with the leaf containing the one line erratum as well as the slip with five lines. The Browning items include "Paracelsus," "Strafford," "Sordello," and "Bells and Pomegranates," the complete series bound in one volume. Of Tennyson's "Poems chiefly Lyrical," 1830, there are two copies, one having page 91 misnumbered 19 the other correctly numbered. Shelley's "Cenci," 1819, and "Rosalind and Helen," 1819; Locker's "Lyra Elegantiarum," 1867, the first issue which was suppressed on account of containing copyright poems by W. S. Landor; and Longfellow's "Evangeline" are other first editions. Dean Sage's privately printed "Ristigouche and its Salmon Fishing," the first Elzevir Horace, 1629, a number of Log Books of British Ships of War mostly from 1808 to 1815, and Brackenridge's "Modern Chivalry," Part II., Carlisle, Pa., 1804-05 are other valuable lots.

Their sale of April 14 includes a copy of Mr. Bixby's privately printed edition of Aaron Burr's Journal; Roscoe's Novelist's Library illustrated by Cruikshank, 19 vols., a complete set; Scott's works, 100 vols.; books on Natural History, etc. On the 15th and 16th they sell the library of the late George O. Manchester of Chicago.

The Merwin Clayton Sales Co. has a three-days miscellaneous sale on April 14, 15, and 16. A set of Shakespeares, the Staunton edition extended from 15 to 40 vols. by the insertion of 2700 extra plates, is the most notable single lot. First editions of Leigh Hunt (35 lots), books on China (36 lots), books on natural history, first editions, Shakespeareana, etc., are included.

One of the commonest first editions of Mark Twain is his "Autobiography and First Romance," published as a pamphlet (and also in cloth) by Sheldon & Co., in 1871. A "remainder" was discovered a few years ago and for a long time one or more copies was in almost every sale. It has just been discovered that these "remainder" copies are not of the actual first edition. The reverse of the cover (or title) in the first edition was blank, whereas in most copies it has the advertisement of a firm of jewelers. A dealer catalogues the first issue at $5.50 and the other at $1.

Correspondence.

PRUSSIAN RAILWAYS AND THE MILK RATE.

To the Editor of The Nation:

Sir: In your review of Lord Avebury's "Municipal and National Trading," August 22, 1907, your reviewer says:

> Some of our readers may remember that a certain American author recently got himself into very hot water by stating that the failure of the Prussian government to make "group rates" on milk led to the stabling of countless thousands (14,000) of cows in the city of Berlin. We observe with regret that Lord Avebury has reproduced this celebrated passage, *verbatim et literatim*, and shall expect to see the advocates of government ownership rend him limb from limb.

In justice to Lord Avebury and to myself, I beg you to publish the following statement:

In Berlin proper, a city of 1,998,500 people, concentrated within an area of 25.4 square miles, there were in December, 1904, no less than 10,443 dairy cows, stabled in 763 courts and backyards, and supplying 20 per cent. of the milk consumed in Berlin proper. In that year the leading commercial organization of Berlin reported that in consequence of the lack of fresh air, sunlight, and exercise, tuberculosis was not uncommon among those cows. It cited Prof. von Behring's opinion that milk from tuberculous cows was one of the chief causes of tuberculosis in human beings. In the County of London, with an area of 121 square miles and a population of 4,600,000 people, the milch cows decreased from 6,253 head in 1898, to 4,602 head in 1905. The stabling of dairy cows within the County of London, the London County Council deems a "noxious trade." If one were to carve out of the area occupied by any large American city, an inner area which should have an average density of population of 116 persons to the acre—which is the average for Berlin proper—one would find within that area not a single milch cow kept for dairy purposes.

In Prussia, under the distance tariff, the freight charges on milk increase so rapidly with the increase in the distance from Berlin, that 85 per cent. of the dairy cows whose milk is carried by rail into Berlin are concentrated within fifty-six miles of the city; and that less than 4.5 per cent. of those cows are stationed more than 75 miles distant. By contrast, as far back as 1894, the Lackawanna Railway alone carried into New York city, from points distant more than 200 miles, no less than 17.5 per cent. of the milk brought into New York by rail. In the years 1895, 1896, and 1901 to 1905, the annual reports of one or both of the two leading commercial organizations of Berlin—the Aeltesten der Kaufmannschaft and the Chamber of Commerce—asked the Railway Department to lower the freight charges on milk, to establish milk trains and to introduce refrigerator cars. They said that the extension of the dairy belt to points distant 187 miles from Berlin was the only means of giving Berlin an adequate supply of milk at reasonable prices. They added that the extension also would benefit the distant farmer, who at present must sell his milk in the comparatively low-priced local markets, by giving him access to the higher-priced market of Berlin. In 1907, the Chamber of Commerce petitioned the Railway Department to carry milk in tank cars on the terms upon which it carried wine, beer, and other liquids in tank cars. It proved that on those terms milk would be brought to Berlin even from the Danish Province of Jutland, a distance of 300 miles. The petition was prompted by the fact that in October, 1906, the Berlin Milk Trust (Milch-Centrale) had raised the price of milk to the record level of 5 cents per quart when delivered over the counter, and 5.5 cents per quart when delivered into the house.

Thus far the Railway Department has ignored and repulsed the Aeltesten der Kaufmannschaft and the Chamber of Commerce, because the government fears the political hostility of the near-by producers of milk, who would resent the fall in the price of milk which would result from increasing the supply by admitting the milk of the more distant farmers. In 1900 the Bund der Landwirte—or Farmers' Union—perhaps the most powerful political organization in Germany, espoused the cause of the near-by farmers throughout Germany, and organized in the leading cities of Germany so-called Milch-Centralen, or Milk Trusts. The Berlin Milk Trust was organized by Mr. Ernst Ring, who at the time was one of the leaders of the Conservative Party in the Prussian Diet. He became the first chairman of the Berlin Milk Trust; and he was succeeded by Mr. D. Hahn, the chairman of the Farmers' Union. Mr. Ring is reported in the German newspaper press to have assured the members of the Berlin Milk Trust that he was "close" to the government, which would not permit the Railway Department to defeat the Trust's efforts to fix the price of milk. The Aeltesten der Kaufmannschaft and a number of newspapers have stated that a recent police regulation concerning the quality of milk, and favorable to the Milk Trust, was not demanded by public necessity and convenience. Several newspapers and at least one member of the Imperial Parliament have asserted that the Imperial government had "disciplined" the judge of the Imperial Reichsgericht—the highest court in Germany—who had delivered a decision adverse to the Berlin Milk Trust.

In "Government Regulation of Railway Rates" I wrote:

> In Germany the state ownership of the railways has led to the establishment of the doctrine that no producer or trader may be deprived of the advantages accruing to him by virtue of his geographical position. In Germany they have no group rates on milk. And in the year of Our Lord 1902 the firm of Von Bolle was stabling within the city of Berlin 14,000 milch cows, which supplied milk to 50,000 families. In addition, there were in the suburbs of Berlin hundreds of dairies, each one stabling a considerable number of cows.

In a footnote I cited an article by Mr Brand, railway secretary, as authority for the statements as to the absence of group rates and the presence of cows.

In the *Journal of Political Economy* for February, 1906, Mr. B. H. Meyer, professor at the University of Wisconsin, as well as railroad commissioner of Wisconsin, repeated the charge made at the meeting of the American Economic Association in December, 1905, and subsequently inserted in the *Congressional Record*, to wit, that I had violated the canons of "fair play and truth," as well as my "duty as an academic man," by failing to inform the reader that Mr. Brand had stated "that the requirements of the agricultural and dairy interests have been met in a most satisfactory manner, and that an experience of twenty years has met all demands reasonably well." A careful reading of Mr. Brand's article will show that Mr. Brand's statement is:

> The Prussian rates on milk, of nearly twenty years' standing, on the whole, have met the expectations of the men who made them. . . . Unfortunately there are not available data as to the volume of the milk traffic in successive years, or as to the receipts from that traffic. But since the volume of the traffic is increasing continuously, and the area usable for dairy farming is expanding constantly, one must conclude that the existing arrangements are fair to the public as well as to the Railway Department.

I was within my rights as an author in rejecting the foregoing verdict without exhausting the reader's patience by stating, first, that I rejected it; second, why I rejected it. In the first place, Mr. Brand's verdict was not supported by a single statistical fact, while it was contradicted by his own leading statement: that in the last two decades the extraordinarily rapid growth of the leading cities had made it constantly more difficult to supply those cities with milk; so that large dairies had been established in the very hearts of the cities; for instance, in Berlin, the well-known dairy of Mr. Bolle was said to have 14,000 cows. In the second place, Mr Brand's verdict was completely overthrown by the record of the achievements of the American railway companies in promoting the milk supply under the practice of group rates; which record was set forth in Milk Producers' Protective Association vs. Railways, to which I had referred the reader. In passing I may add that I did not accept Mr. Brand's statement as to the 14,000 cows until I had consulted all of the official records to which I had access. These records had shown that the number of cows had increased from 2,584 head in 1883 to 10,010 head in 1900. That increase from 250 cows for each 100,000 people in 1883 to 230 cows for each 100,000 people in 1892, and finally to 530 cows for each 100,000 people in 1900, showed conclusively that the supply of "rail" milk had not kept pace with the growth of the city of Berlin.

The proof sheets of Prof. B. H. Meyer's paper charging me with "garbling" Mr. Brand's article and with being without "due respect for fair play and truth and a slight realization of [my] duty as an academic man" were sent to me. I immediately put Professor Meyer in possession of the facts enumerated in the two preceding paragraphs, asking him not to publish the charge just quoted. Professor Meyer persisted in publishing his charge, writing me that he could only pity me for having rejected Mr. Brand's statement on such meagre data. I was surprised at Professor Meyer's verdict, which could mean only one thing, to-wit, that Mr. Brand's position was sound beyond the possibility of argument.

HUGO R. MEYER

Malvern, Victoria, Australia, February 11.

[In view of the important new evidence Prof. Hugo R. Meyer has adduced in support of bis general criticism of the policy of the Prussian railways in adjusting rates on milk, we think that his original error in overstating the number of cows stabled in Berlin may well be forgotten. Our own criticism of his book has not been directed against his main argument in the unfortunate controversy over milk rates, and does not need modification.—THE REVIEWER.]

INTELLECTUAL CONDITIONS AT HARVARD.

TO THE EDITOR OF THE NATION:

SIR: In your issue of March 26 you say something about athletics at Harvard, and your position on the matter. You also quote President Hadley of Yale as saying that various things are "a more serious cause of interruption to college work than are most of the intercollegiate sports"; and that if sports keep the students together, more harm than good would be done by discouraging them. I think if you will look carefully into the matter you will find that President Hadley is justified in what he says, and I will try to make it clear.

There are at the present time about seven hundred men in the freshman class at Harvard. Of this number about two hundred men go there with no intention whatsoever to study. Their idea is to have a fine time and just get through their courses. The leaders in this set belong to the first families from Boston, New York, Philadelphia, and Washington. There are about one hundred of them. The rest are the sons of the *nouveaux riches* from such cities as Chicago and Omaha, and they copy or try to copy the sons of the first families. In my class, which, of course, was much smaller than the present freshman class, there were about sixty of these men. I therefore maintain that athletic sports are a great benefit to Harvard both physically and morally, as a great many of these men go into athletic sports.

In answer to your question how the colleges got along before intercollegiate sports came to save them, I would add that in the old times there probably was no intellectual or moral discipline.

RICHARD SEARS,
Harvard, 1891.

Boston, March 30.

WORDS AND BONDS.

TO THE EDITOR OF THE NATION:

SIR: The following note, suggested by the performance of "Twelfth Night" by students of Cornell University, is presented for what it is worth. In Act III., sc. 1, of that play the Clown says: "But indeed words are very rascals since bonds disgraced them,"—upon which Dr. Furness remarks: "I have given every explanation that I can find of this dark passage, and I confess that none of them affords me a ray of light."

Is not this "dark passage" clear enough if, following the suggestion in the antithesis between *words* and *bonds*, we suppose Shakespeare to have had in mind the expression (proverbial before his time): "An honest man's word is as good as his bond"? And is not the meaning simply that verbal contracts (*words*) are but slippery things since the more binding written contracts (*bonds*) superseded them? Of course, there is the usual play on words; *bonds* may be taken in the sense of fetters—and even, thirdly, in the sense noted by Hudson. But is not the obvious meaning the one I have suggested?

F. C. PRESCOTT.

Ithaca, March 23.

"PORTALA" IN BRET HARTE'S "ANGELUS."

TO THE EDITOR OF THE NATION:

SIR: In Bret Harte's beautiful poem on "The Angelus," as heard at Mission Dolores, San Francisco, occur the lines:

> Once more I see Portala's cross uplifting
> Above the setting sun.

Can any of your readers inform me through your columns or directly, who was Portala? I can find no reference to him in our National Library here, either in biographical dictionaries or in works on Spanish-America.

ALFRED WEBB.

Rathgar, Dublin, March 21.

AMERICAN BOOKS IN EUROPE.

TO THE EDITOR OF THE NATION:

SIR: A correspondent in Liège writes me as follows:

> I should like to learn why our booksellers find such difficulties in getting books from America. We ordered a complete set of —— —— from our London bookseller (—— ——) in December last, and in March we are still vainly waiting. It seems impossible to obtain the —— ——, which I ordered in 1907 through my Brussels bookseller, and as for American catalogues, they are as scarce as German catalogues are plentiful. You may find it advisable to inform your publishers of the situation, and I shall be grateful if you can help my pupils and myself with information that will allow us to buy American books.

I send this to you in the hope that our publishers may devise some way of coping with the difficulty. This is not the first time, by any means, that I have received similar complaints from the Continent.

ALBERT S. COOK.

Yale University, April 3.

Notes.

Houghton, Mifflin & Co. have become incorporated under the laws of Massachusetts, and will hereafter continue business under the name of Houghton Mifflin Company. Beginning with August 1, the *Atlantic Monthly* will be published by the Atlantic Monthly Company, of which Ellery Sedgwick, Waldo E. Forbes, MacGregor Jenkins, and Roger Pierce will be members, Houghton Mifflin Company retaining an important interest. The editorship will remain in the hands of Bliss Perry.

Meanwhile, under the old firm name will be published this week: "Leaf and Tendril," a new volume of essays by John Burroughs; "Home from Sea," by George S. Wasson, author of "Cap'n Simeon's Store"; Spenser's Complete Poetical Works in one volume, edited by Prof. R. E. Neil Dodge; "On the Training of Parents," by Ernest Hamlin Abbott, associate editor of the *Outlook*; "Lives of Great English Writers from Chaucer to Browning," by W. S.

Hinchman of Groton School and Prof. F. B. Gummere of Haverford College.

John Lane Company has arranged to publish translations of all the works of Anatole France, including the "Joan of Arc," the second volume of which has just appeared in Paris. The general editor of the series is Frederic Chapman.

Under the title "The King's General in the West" John Lane Company are about to issue an illustrated life of Sir Richard Granville (1600 to 1659), compiled from various sources by the Rev. Roger Granville, sub-dean of Exeter Cathedral. Sir Richard Granville was an adherent to the royal cause, and his character has been the subject of attack and vindication from the days of Clarendon on.

We are to have more about the life of her late Majesty. The King has authorized the publication of Sir Theodore Martin's "Queen Victoria as I Knew Her," and the book is to be issued next month.

Henry Holt & Co. will soon publish two new volumes of essays. One, "Over Against Green Peak," by Miss Zephine Humphrey, is described as a humorous and poetical record of American country life. The other, "The Comments of Bagshot," by J. A. Spender, editor of the London *Westminster Gazette*, contains a little of everything.

A new and revised edition of "The Symbolist Movement in Literature" (E. P. Dutton & Co., first published in 1899) brings to our attention one of the best of Arthur Symons's books. Without in the least subscribing to Mr. Symons's acceptance of symbolism as the consummate flower of literature, one may be glad to have so sympathetic and at times penetrating a study of Verlaine, Mallarmé, Huysmans, and their school. We name these three because Mr. Symons writes of them from personal knowledge; particularly his account of Mallarmé presiding over his "Tuesdays" is graphic and even amusing.

A revised edition of Bliss Perry's "Walt Whitman" comes to us from Houghton, Mifflin & Co. The phraseology has been modified here and there, and some new material has been added in an appendix, but the work needed little correction, and is substantially the same as it was. Mr. Perry takes full responsibility for the statements attacked by Horace Traubel in the *Conservator*, and retracts none of them.

The third edition of Baedeker's "Spain and Portugal" has just been issued (Charles Scribner's Sons). There are nine maps and fifty-seven plans; and the material and arrangement are in the well-known style of Baedeker. As a handbook for the traveller and a work of reference in its field the volume is unsurpassed.

The third volume of the translation of Alexandre Dumas's "Memoirs" (The Macmillan Co.) covers the years from 1820 to 1830. As in the previous volumes, the author surveys mankind from China to Peru, including scores of pages upon Victor Hugo, some of them, such as the account of "Hernani," drawn literally from "Victor Hugo raconté par un témoin de sa vie." But there is much that is interesting about Dumas's own plays, particularly "Henri III.," told in his own exuberant way.

Thomas B. Mosher has issued a reprint of Francis Thompson's "Hound of Heaven" in one of his charming little pamphlets. That poem, perhaps the best known of the poet whom death has brought into common talk, is yet so little known that it may be worth while to quote the first stanza as an illustration of the whole:

I fled Him, down the nights and down the days;
I fled Him, down the arches of the years;
I fled Him, down the labyrinthine ways
Of my own mind; and in the midst of tears
I hid from Him, and under running laughter.
Up vistaed hopes I sped;
And shot, precipited
Adown Titanic glooms of chasmed fears,
From those strong Feet that followed, followed after.

It would be a pleasure to praise unreservedly H. H. Ballard's translation of "The Æneid," which is now completed by a second volume containing books vii. to xii. (Houghton, Mifflin & Co.). It is manifestly a conscientious piece of work, carried out *con amore*, and we are more than ready to welcome any attempt to woo readers to the classics. But the use of the English hexameter as an equivalent for the Latin must be regarded as a mistake. That metre is suitable for half-humorous idyls such as Clough's "Bothie of Tober-na-Vuolich" or for fully sentimental idyls such as "Evangeline," but it cannot convey, or at least never yet has conveyed, the gravity and reflective pathos of Virgil. It is no accident, therefore, that Mr. Ballard's work is most successful in passages that have something of Longfellow's romantic tone, as, for example, in the beautiful lines of the eighth book:

Through murmuring waters
Glided the oiled fir keels, while the waves looked on them with wonder;
Wondered the groves at sight of the far-gleaming shields of the heroes
Floating along the stream, and the painted hulls of the galleys.
Onward by night and by day the sailors kept steadily rowing;
Now long windings they passed and by strange-looking trees were o'ershadowed,
Now green groves they cleft on the peaceful breast of the river.

That represents the mood of the original fairly well, and a considerable number of equally graceful passages might be cited. But a large part of the poem is, we must say frankly, far from Virgilian, and, what is even more important, hard reading in its present form.

"L'Année scientifique et industrielle," founded by Louis Figuier, and now in its fifty-first year, appears for 1907 under the editorship of Émile Gautier. Paul Fesch publishes "L'Année sociale et économique" from January 1 to December 31, 1907, for France and other countries as well.

"La Bibliographie française," covering the period from January 1, 1900, to December 31, 1904, is issued by H. Le Soudier, Paris, according to the classification unanimously adopted at the International Congress of Publishers held at Brussels in 1897. A single alphabetical list comprises names of authors, titles, and subjects by class-words; in all, there are nearly 100,000 titles and subdivisions. The price is 40 francs.

The "Almanach des gens de lettres" for 1908 catalogues the members of the French Academy and the Académie des Inscriptions et Belles-Lettres, and the prizes of which they dispose for literary work until 1910; the year's lectures at the Faculty of Letters at the Sorbonne and at the Collège de France; the Goncourt Academy, Société d'Histoire Littéraire de la France, and other similar societies of men of letters, with the *syndicats* for mutual protection of critics, authors, and composers. There are short separate sections for Belgium and Switzerland, where the French language is used; and a list of "la critique littéraire," giving ten pages of names and addresses of critics of journals and reviews.

Our chief quarrel with Douglas Sladen's "The Secrets of the Vatican" (J. B. Lippincott Co.) is its misleading title, for the book divulges none of the real secrets. We should like to know, for instance, who it is that gives the intensely political business of the Curia the pious dress in which it appears before the world; or who is the power behind the throne, and how he gets there, so that Leo XIII. was allowed to speak in non-Jesuit tones while Pius X. repeats what the Jesuits teach him. But these and similar matters one can learn only in Rome itself from the innermost Papal circles. What Mr. Sladen undertakes to do, and does very well in a somewhat diffuse, journalistic way, is to describe the daily life of the Pope; the personnel of the Papal Court; the various congregations (which correspond to the departments and bureaus of other governments), and the method of electing, crowning and burying a pope. Having covered the personal field, Mr. Sladen goes on to take his reader through "the parts of the Vatican not generally shown to the public," and here we find him a pleasant guide, neither too archæological nor too shallow. He has fed on Hare and on Hare's successors, and he seems to have absorbed the various familiar French works on his subject; but he mentions so few Italian authorities that we may doubt whether he knows them. To cite a typical instance, in his account of the conclave we see no reference to De Cesare or to Berthelet. Anybody, who wishes to study seriously any of the topics treated by Mr. Sladen will naturally go back to specialists for final information; but Mr. Sladen will give general readers much entertaining information. We do not see why he drags in the quarrel of the Vatican with France, which has nothing to do with his subject; or why, having dragged it in, he allows the Catholic Archbishop of Westminster to write an unusually partisan version of the rupture, instead of seeking to provide an account which, if not impartial, should at least seem to aim at telling the truth. But the real value of the book lies almost as much in the illustrations as in the text. They include many unusual pictures, besides maps and diagrams. And, rarer still in English books of this kind, there is an excellent index.

One of the tangible results of the founding of the Società della Storia del Risorgimento recently is the publication of a bi-monthly review, *Il Risorgimento Italiano*. Its editor is Prof. Beniamino Manzone, head of the *liceo* of Carmagnola, the competent scholar who edited the earlier review of similar title from 1896 to 1898. The first number contains an important document by Garibaldi concerning the expedition of the Thousand, and several other articles, besides bibliographies, reports from archives and museums, anecdotes, notes and queries, and other pertinent contributions.

Like its predecessor, it will be indispensable for students of this period. It is well printed, with facsimiles and illustrations, and costs yearly twenty-four lire post free to subscribers outside of Italy. Bocca Brothers, Turin, are the publishers.

The scope of "Die Lebenskräfte des Evangeliums," by Johann Warneck, since 1892 a missionary in Sumatra, is indicated by the sub-title, "Missionserfahrungen innerhalb des animistischen Heidentums" (Berlin: Martin Warneck). The volume contains much new data on the animistic type of religion, and is accordingly of scientific value, independent of its argument in favor of Christian missions.

Dr. Edwin Mayser of Stuttgart will soon publish the second and final volume of his monumental "Grammatik der griechischen Papyri aus der Ptolemäerzeit," which includes a discussion of the Ostraca finds and the Egyptian inscriptions of the same period (Leipzig: B. G. Teubner). The first volume, of 538 pages, which appeared some months ago, deals with etymology and forms, and the new volume will deal chiefly with syntactical problems. The book parallels and goes beyond the work of Karl Dieterich, Albert Thumb, and others.

A comparatively recent candidate for recognition as a lyric poet is Erna Ludwig, whose collection of "Gedichte," is published by R. Piper & Co., Munich. These poems, appearing chiefly in the *Süddeutsche Monatshefte,* had met with considerable favor. The author finds her themes in the daily experiences and problems of life, particularly in the family.

C. F. Amelang, Leipzig, recently issued the "Geschichte der althebräischen Literatur," by Prof. H. Budde of the University of Marburg, with an extensive supplement on the Apocrypha and the Pseudepigrapha of the Old Testament, by Prof. Alfred Bertholet of the University of Basel. This work adopts the progressive critical and scientific views of the series of which it is Volume VII., Die Literaturen des Ostens. On the other hand, the recent "Einleitung in das Neue Testament," by Prof. Fritz Barth (Gütersloh: C. Bertelsmann), is an expression of conservative scholarship. It deals in detail with the origin of the different New Testament books, their collection into a canon, and the text of the New Testament. The work may be called a conservative counterpart to Jülicher's "Einleitung," which lately appeared, much enlarged, as one of the Mohr series, Grundriss der theologischen Wissenschaften.

Reports of adverse votes on the question of providing tax support for free libraries in this State, and of the discontinuance of such support where it had been voted in previous years, have become so frequent as to occasion some concern on the part of the Library Division of the New York State Education Department, and to prompt a word of warning in its official Bulletin. While the adverse votes are in many cases attributed to circumstances purely personal or local, it is pointed out that even here they are a sign that the library has failed to reach the majority of the voting population, and that to throw the blame for this, as is generally done, on the ignorance or unworthy motives of the voters is futile, and often obscures the real difficulty. The Bulletin says:

> Unpleasant as it may be to admit it, we venture to say that in a majority of cases, where public support is refused to a library, it is as much the fault of the library as of the public. To deserve a place on the tax list—that is, to be put in a position where every man and woman having property in the community is compelled to support it—the library must be something more than a mere agency for the free distribution of fiction or of providing entertainment for the idle part of the community. However small, it must be so supplied with serious literature and must be so organized and administered as to command the respect of the village or city.

The announcement has been widely published that Mr. Carnegie has given $5,000,000 more to the Foundation for the Advancement of Teaching, with the proviso that the pension system be extended to the State universities. President H. S. Pritchett also announces a plan for the exchange of teachers between Prussia and the United States. In brief, the idea is "to effect a permanent arrangement by which teachers of the United States shall be assigned for a year or half-year to schools in Prussia, and vice versa." The circular continues:

> The instruction to be given in Prussia will be the teaching of English in a conversational way. It is not, however, necessary that the teacher should be a teacher of language in this country, but that he should be a cultured man, able to conduct such exercises in an interesting manner. . . . From the point of view of the young, ambitious American teacher, the opportunity to spend a year in Prussia is an attractive one, and should be considered in about the same way as a fellowship in a good American university. In either case the remuneration is slight. The American teacher who goes to Prussia for a year will receive from the Prussian government from 100 to 110 marks a month ($25 to $27.50). It is estimated that this is equivalent to about $40 to $45 a month in a small town in the United States, and that it will meet the actual living expenses of the teacher during the year. . . . In no case are teachers to take part in the formal instruction of the institution which they visit. They do not do the work, or even part of the work, of a regular teacher. This would impose too heavy a burden upon the visitors, and would render their relationship with the students too didactic. The plan is for the visiting teacher to teach conversation in his own language in an informal manner for not more than two hours each day, his classes being small groups of upper classmen who wish to perfect themselves in the language of the teacher. . . . The candidate for appointment to a position in Prussia should be a graduate of a college which requires for admission the usual four-year high school course. He must have been for at least one year a teacher, though not necessarily a teacher of languages, and must have reasonable facility in the German language. The teacher who goes to Prussia will enter a *gymnasium*, or a *real-gymnasium*.

The arrangements for bringing the German teachers to this country are similar in effect. The committee to consider applications and recommendations consists of President Pritchett; Prof. Julius Sachs, Teachers College, Columbia University; Prof. Calvin Thomas, Columbia; and James G. Croswell, head master of the Brearley School, New York.

The Rev. Dr. Edward Abbott, rector emeritus of St. James's Protestant Episcopal Church, Cambridge, Mass., a brother of the Rev. Dr. Lyman Abbott, died last Sunday at the Homœopathic Hospital in Boston. He was born in Farmington, Me., in 1841, the fourth son of Jacob Abbott, the author. He was graduated from New York University in 1860, and studied theology at Andover Theological Seminary. From 1869 to 1878 he was associate editor of the *Congregationalist*, and editor-in-chief of the *Literary World* from 1877 to 1888, and again from 1895 to 1903. Besides published sermons and frequent contributions to magazines and weeklies, Dr. Abbott was the author of many books on historical and religious subjects, as well as one volume of verse, "The Baby's Things." Among his books are "Conversations of Jesus" and "Phillips Brooks."

James Jeffrey Roche, United States consul at Berne, Switzerland, died April 3. He was born in Ireland in 1847, but his parents soon removed to Prince Edward Island. His education was obtained at St. Dunstan's College, Charlottetown. After seventeen years in business in Boston, he became, in 1883, assistant editor of the *Pilot*, under the late John Boyle O'Reilly. He succeeded to the editorship, but entered the consular service in 1904. His books are: "Songs and Satires" (1886), "Life of John Boyle O'Reilly" (1891), "The Story of the Filibusters" (1891), "Ballads of Blue Water" (1895), "Her Majesty the King" (1898), "By-Ways of War" 1904.

The death is announced of Major Arthur Griffiths in his seventieth year. He was a veteran of the Crimean war, but was perhaps better known for his work as inspector of prisons, and for the novels in which he made use of the knowledge thus gained. His most important publication is his book of memoirs called "Fifty Years of Public Service."

The Rev. Frederick Mayer Bird died at South Bethlehem, Pa., April 2. He was born in Philadelphia in 1838, and after graduation from the University of Pennsylvania attended the Union Theological Seminary in this city. Having served a few years as rector at Spotswood, N. J., he became chaplain and professor of psychology, Christian evidences, and rhetoric at Lehigh University. From 1893 to 1898 he was editor of *Lippincott's Magazine*. He was author of "The Story of Our Christianity" (1893); he edited several collections of hymns and wrote on hymnology, and he was a frequent contributor to the *Nation*.

Sir James David Marwick, at one time town clerk of Edinburgh, and afterwards of Glasgow, has died at the age of eighty-one. Among his published works are "History of the High Constables of Edinburgh" (1865), "Extracts from the Records of the Burgh of Edinburgh" (1869-92), and "Extracts from the Records of the Burgh of Glasgow" (1876-1905). He also wrote an autobiographical "Retrospect," which brought the narrative of his life down to 1873.

The Right Rev. J. Mortimer Levering, president of the Moravian Elders Conference, and head of the Northern Province of the Moravian Church in America and Alaska, died April 4 at the age of fifty-eight. Bishop Levering was highly versed in Church law, and was the author of "A History of Bethlehem."

Franz Kielhorn, professor of Sanskrit at Göttingen, died very suddenly and without any premonitory sickness, March 19, in his sixty-eighth year. Like Bühler of Vienna, he was an Indianist whose rigorous European training in classical philology and Sanskrit was fructified by intimacy with the native pandits during a long residence in India. At the age of twenty-six he went to Poona as professor of Sanskrit at Deccan College, and to his Poona colleagues he dedicates one of his great tomes "in memory of sixteen happy years." His earlier works were devoted to the native systems of grammar, in which discipline, as is known, the Hindus far outrivalled the Alexandrines. His later years were occupied with Indian inscriptions and chronology, and his results, published in the *Indian Antiquary* and *Epigraphia Indica*, are and will long remain of fundamental importance for historians of India.

EXPLORATIONS IN CHINESE TURKESTAN.

Ancient Khotan: Detailed Report of Archæological Explorations in Chinese Turkestan carried out under orders of H. M. Indian Government by M. Aurel Stein. Vol. I. Text with descriptive lists of antiques by F. H. Andrews, 72 illustrations; pp. xxiv., 621. Vol. II. Plates of Photographs, Plans, Antiques and MSS., with a Map of the Territory of Khotan from original surveys. 119 plates; pp. vii. New York: Henry Frowde. $33.75.

Not so very long ago, the city of Khotan, on the southern edge of the Tarim basin, was not much more than a name to us. Its position varied a good deal on maps, until Russian explorers (Pjewtsow, Prshevalski) and the Swedish traveller Sven Hedin laid the foundation of our present map of this territory. Dr. Hedin's discovery of sand-buried cities in the neighborhood of Khotan was a revelation to the scientific world. But how much still remained to be done, chiefly from the archæological point of view, the present work will show. The interest attaching to archæological exploration of this region is chiefly due to the fact that it was in ancient times the meeting-ground of the most heterogeneous nations, all of whom left traces, partly hidden under the sand of deserts, in the shape of architectural works such as stupas, mounds, ruins of temple walls and dwelling houses, products of art and industry, and a variegated list of implements of daily use. Literature, too, is represented in the shape of wooden tablets, sgraffiti, and contracts and letters in several languages and scripts. The same forces of nature which in the shape of winds had created those sand dunes, the ruin of once flourishing seats of human life, have also become instrumental in preserving the relics to our days.

Dr. Stein is not the only explorer who has devoted himself to this work, but he is certainly, as far as publications go, the most successful from the archæological point of view. The publication of these volumes had been preceded by a "Preliminary Report on a Journey of Archæological and Topographical Exploration in Chinese Turkestan" (London, 1901), which excited the curiosity of the scientific world, and a more popular work, "Sand-Buried Ruins of Khotan" (London, 1904). The journey, the full details of which are now before us in two large volumes, was performed in 1900 and 1901, at the instance of the Indian government, in whose educational service the author holds a high position. The attention of Indian scholars had been first drawn to Eastern Turkestan as a field of archæological research in 1890, when Col. Bower obtained the manuscript, written on birch-bark, now bearing his name, and deposited it in the Bodleian Library of Oxford. Other discoveries soon followed, not only of manuscripts on palm-leaf and paper, but also of xylographs, coins and seals, terra-cottas and pottery, figures of stone, metal, or wood, and miscellaneous objects. Dr. Stein started from Kashmir, crossed the plateau of Pamir, and in July, 1900, arrived at Kashgar. Having visited some ancient ruins in this neighborhood he went to Yarkand, and from there, after traversing part of the desert of Taklamakan, reached Khotan in October. The site of the ancient capital, Yotkan, was carefully searched with remarkable results in the discovery of ruins, coins, terra-cotta figures, and other antiquities. Towards the close of the year the traveller turned his attention to long-forgotten oases in the adjoining desert, chief among them those of Dandan-Uiliq and Endere. On the way from Khotan to these oases, as earlier on the way to Khotan, a number of other oases and old sites were searched with good results.

It is impossible to give in small compass even an approximate idea of the richness of that mine. But attention must be drawn to the excellence of Dr. Stein's method, both in research and publication. He has faithfully followed the principles laid down by Prof. Flinders Petrie, who in his "Methods and Aims in Archæology" says:

> To leave a site merely plundered, without any attempt to work out its history, to see the meaning of the remains found, or to publish what may serve future students of the place or the subject, is to throw away the opportunities which have been snatched from those who might have used them properly.

The second volume, with its plates and map, is a regular *orbis pictus* of the culture in ancient Khotan, and the first volume, giving full archæological information in a highly scientific manner, is the best illustration of Dr. Petrie's "Methods in Archæology." The interpretation of so many different kinds of relics required the coöperation of a number of specialists. In the appendices, therefore, Prof. Éd. Chavannes analyzes and translates Chinese manuscripts on paper and wooden slips from Dandan-Uiliq, Niya, and Endere; L. D. Barnett and A. H. Francke edit Tibetan manuscripts and sgraffiti; Dr. S. W. Bushell and Prof. E. J. Rapson contribute an inventory of coins found or purchased; Prof. D. S. Margoliouth discusses a Judæo-Persian document from Dandan-Uiliq; T. W. Thomas and Sylvain Lévi furnish notes on Tibetan subjects; A. H. Church, professor of chemistry, on specimens of ancient stucco from Khotan sites; and Prof. L. Lóczy, the Hungarian geologist of Central-Asiatic experience, on sand and loess specimens from the region of Khotan. Many other scholars, each of them an authority in his specialty, have contributed towards the success of this book.

Among the objects described and illustrated the manuscripts on paper, leather, wood, etc., are of the greatest interest. Among them are several Indian scripts and languages (Sanskrit, Brami, Kharoshthi), Tibetan, non-Sanskritic unknown languages, Judæo-Persian, and Chinese. Since Chinese literature in its standard histories and the accounts of Buddhist travellers (Fa-hién, Hüan-tsang, Sung Yün, etc.) furnish an historical framework, the few dates contained in Dr. Stein's manuscripts are of value as indicating the latest periods at which certain sites, since buried by the flying sands, may have been inhabited. In Dandan-Uiliq fragments of documents were dated as late as 790 A. D. and Chinese coins also as late as the eighth century. Among the antiquities at Endere a sgraffito is dated 719 A. D. These dates bear on the identification of a territory near Khotan, named Tu-huo-lo, described by the Buddhist traveller Hüan-tsang (645 A. D.) as "deserted." Dr. Stein's identification of Tu-huo-lo with the ruins at Endere will, in the face of the Chinese dated sgraffito, involve an anachronism, unless we assume that the site had been deserted before Hüan-tsang's time and resettled afterwards. This, from what Sven Hedin has told us about causes leading to the abandonment of sites, seems unlikely; and we must look further for clues.

The interest attaching to this problem is increased by the fact, overlooked in Dr. Stein's report, that members of a celebrated family of painters (probably related to the kings of Khotan), namely Weï-ch'ï Pa-chï-na and Weï-ch'ï I-shöng, are mentioned as natives of Tu-huo-lo. Both artists, father and son, had emigrated to China, and I-shöng had been received there with princely honors, in 627 A. D., while his younger brother, also a painter, had remained in his native country. I-shöng's style in art is described as quite different from that of the native Chinese artists of the T'ang dynasty; Chinese art historians stamp his work as decidedly "exotic." His subjects were mostly Buddhistic. It is highly probable that the wonderful specimens of local pictorial and sculptural art secured by Dr. Stein at Dandan-Uiliq and other sites, with their unmistakable Græco-Buddhist and Persian features, are representatives of the style cultivated by I-shöng; and since the manner introduced by him and his school into China can be shown to have been adopted by Korean artists, who again influenced the earliest development of art in Japan, we get sight of the channel through which Hellenistic elements, amalgamated with the religious art of northwestern India, wandered from there by way of the Khotan region to China, and thence partly through Korea, partly direct, to Japan.

To return to manuscripts: the discovery of Chinese documents seems a matter of course in a country that was a dependency of China during so many generations. Quite unexpected, however, was the great number of ancient Kharoshthi documents unearthed chiefly in the Niya site of ruins. Kharoshthi is an Indian script peculiar to the region of Takshasila, the Taxila of classical authors, according to Arrian "a large and wealthy city, and the most populous between the Indus and Hydaspes." The common use of the Kharoshthi script points to some relationship between the people of Khotan and its neighborhood with those of Taxila during the first centuries of our era. Evidence thus favors Dr. Stein's theory of Indian immigration, even before the introduction of Buddhism into Khotan, ascribed by Hüan-tsang to a legendary "ancestor king" (*sién-wang*). The Kharoshthi documents, the analysis and translation of which are in the hands of E. J. Rapson, professor of Sanskrit in London, have not all been deciphered yet, but they seem to contain no clues of historical value, though highly important from a cultural and linguistic point of view.

Dr. Stein made the interesting discovery that several public collections in Calcutta, London, Paris, St. Petersburg, and probably elsewhere, had been supplied with forged antiquities, and he devotes part of his book to "Islam Akhun and His Forgeries." This wily antiquarian, whose portrait with that of his colleague, the "Treasure-seeker" Turdi Khwaja, has been inserted in Dr. Stein's account, seems to have had a regular factory of "old books," especially those in "unknown characters," and the exposure of his frauds appears to us one of Dr. Stein's most important services.

CURRENT FICTION.

The Heart of a Child. By Frank Danby. New York: The Macmillan Co.

If the author were not insistent upon the point we should hardly have noticed that Sally Snape's heart was that of a child. From being that of a hard-headed waif intent on her daily bread, it slowly developed into a Diana-like organ, if one can fancy a Diana brought up in the slums and becoming by turns factory girl, dressmaker's "showgirl," chorus girl, dancer at a musical comedy theatre, and finally Lady Kidderminster. Through these chances and changes an "instinctive fierceness of virginity" was her shield—her buckler, a practical habit of attending strictly to business, and her chief charm a grateful disposition. Of heart or child we discern not much. If Sally often knew surprisingly little, considering how very much she knew, the responsibility seems to be with the author rather than with herself. We cannot make her quite coherent, though she is vivid by reason of her much-dwelt-upon red hair, green eyes, and slim figure. The things that made life hard for her are revealed in the fullest detail. And though Sally is pervasive the real topics of the book are the surroundings which shaped, threatened, and finally exalted her. It is impossible to escape the feeling that the novel was written for this detail work, which concerns itself with phases of life probably true and certainly unedifying. The sordid cataloguing is done with brisk touch and with affronting thoroughness, but it is an open question whether the goodness of Sally, the steadfastness of Kiddie, the wisdom of the district visitor and the saintliness of Kiddie's mother all put together make enough righteousness to save Sodom.

A Modern Prometheus. By Martha Gilbert Dickinson Bianchi. New York: Duffield & Co.

Prometheus was a Jesuit priest, "whose chains were laid upon him by the grim, incontrovertible decree of Deity." Very hard he strove to bring into the Church the beautiful American Clare, whose luckless marriage to an Italian count had left her disillusioned, sad, bitter, and painfully engrossed with her own soul. First the Jesuit Father sets before her the duty of returning to her husband. Then, when the count has providentially been killed, he seeks to draw her into a sisterhood. Round her rally her mother, her girl cousin, and a faithful lover, who, scantily interested in what Gertie flippantly calls "a posthumous love affair," look upon a convent with agony. Assisi is the scene of the conflict. The background is like other Umbrian backgrounds of story, with its many touches of Italian life and its many figures of peasants, priests, and tourists, its incidental legends, art-histories, and church dogma, its landscape and birds, its fruits and flowers and stars. The story itself is not commonplace, and the interest holds to the end—indeed slips over the margin, since the last word leaves one guessing whether Clare, borne away from Assisi, in safety for the time being, will not some day return.

The repellant part of the matter is that Clare, whose plaint and moan are ever directed against lying, should still feel the sway of the priest even after she has learned that he has encouraged her to believe a false accusation against a faithful friend. Momentarily shocked into decision, she is left in the last paragraph still shilly-shallying with her immortal destinies, her faith in her spiritual guide unbroken. In truth, she is an exasperating heroine of the familiar type of the *précieuse* in emotions and self-pityings. The mother is an engaging figure of devotion and tact; the priest, a not unheroic figure, barring his one lie told for the winning of two souls; the faithful American lover has the virtues, the humor, and the horse-sense of his race, and the same is to be said of the gay little girl cousin.

The Politician. By Antonio Fogazzaro; translated by G. Mantellini. Boston: Luce & Co.

"Daniele Cortis," which now appears in English dress for the third time, as "The Politician," is probably familiar to many American readers, either through the translation published in this country in 1887, or through that published in London in 1890. No doubt we owe this third version to the interest awakened in America by Fogazzaro's great trilogy, recently translated by Mrs Prichard-Agnelli under the titles, "The Patriot," "The Sinner," and "The Saint." "Daniele Cortis," it will be remembered, was written in 1885, eleven years before "The Patriot," but, as we read it over with these later novels fresh in our minds, it still seems one of the best things Fogazzaro has done. Indeed, the American reader who happens to possess no special knowledge of the affairs of church and state in modern Italy may find it more readable than the novels of the trilogy.

When a foreign work has already been made accessible to us we naturally look to each succeeding translation for qualities which shall bring us nearer the original. In the present version, not only is the English thoroughly shiftless and awkward, nowhere rising to the plane of Fogazzaro's Italian, but the pages are sown thick with the most astonishing errors in translation. Six or seven sentences are brought off with a meaning directly opposite to that of the original, three or four, at least, with no meaning whatever, and shades of meaning are everywhere ignored or confused. In several passages speeches or portions of speeches, uttered by one character, are carelessly transferred to another—with particularly disastrous effect in one of the closing scenes, where Daniele's tonic "It is our duty" is given Elena to utter in the same breath with her failing cry of "O Daniele!"

The Magistrate's Own Case. By Baron Palle Rosenkrantz. New York: The McClure Co.

This book is unusual in that it is a detective story to all appearances quite uninfluenced by the masterpieces of that form of fiction. The close thread of narrative in the first person is absent. So is the preternatural power of the investigating protagonist. The magistrate who is assigned to collect evidence in a murder case involving persons close to him makes some surprising disclosures in the early stages of the inquiry. But when, for example, he displays knowledge of the contents of a certain will, it transpires directly that "analysis and deduction" had nothing to do with the case. The magistrate merely happened to have studied law years before in the office of the English solicitors who drew up the testament. In fact the story proceeds not so much in the magistrate's discovery of new facts relative to the mystery, as in his mentioning from time to time facts which he had really known all the time. It is not in the least surprising that the opposing advocate accused him of being the real murderer.

It may be that on the singular plan here applied a first-class story of mystery could be constructed. The effect of this one is to vindicate the contemporary writers who imitate Poe and Wilkie Collins.

British Colonial Policy, 1754-1765. By George Louis Beer. New York: The Macmillan Co. $2 net.

It is strange, in view of the absorbing interest which Americans have in the history of the Revolution, that no adequate study has ever been made of the deeper causes of that event. Chamberlain, Woodburn, Egerton, Hertz, and Howard,* to name only the most conspicuous of recent writers, have each presented a solution or a group of solutions, but no one of these writers has done more than deal with the secondary issues, leaving the fundamental difficulty still untouched. Judge Chamberlain saw a conflict of principles, but conceived that conflict only in terms of parliamentary control. Professor Egerton and Mr. Hertz each in his own way deemed the combination of an iniquitous colonial policy and a blundering ministry a sufficient cause for colonial revolt; while Professor Howard, identifying British colonial policy with the navigation acts and restrictive measures, deemed these the primary cause. No one of these writers has made any pretence of a thorough examination of the evidence in the case and no one of them has convinced his readers that he has solved the problem.

---

*Chamherlain, "The Revolution Impending" in Winsor's "Narrative and Critical History," Vol. VII., pp. 3-62; Woodhurn, "Causes of the American Revolution" in Johns Hopkins University Studies, Series X., No. 10; Egerton, "A Short History of British Colonial Policy," 1897; Hertz, "The Old Colonial System," 1905; Howard, "The Preliminaries of the Revolution," The American Nation Series, Vol. VIII., 1905.

Mr. Beer now comes before us with a new essay upon the subject. For some years he has been known as a student of England's commercial policy and a writer of marked ability in dealing with problems of this nature. For the writing of this essay, which is but the first part of a larger whole, he has made unusual preparations. No one before him has ever attempted to examine in detail or systematically the evidence which the British archives furnish. Even the Englishmen, Egerton and Hertz, are no exception; for Egerton dealt with manuscript material very sparingly, while Hertz neglected it altogether. Mr. Beer, on the other hand, has had the courage and patience to undertake a systematic search of the British departmental records, volume by volume, page by page, in the effort to discover exactly what "colonial policy" meant to those in whose hands lay its enforcement. The book before us contains, therefore, a digest of this material, so far as it concerns the years 1754 to 1765, and presents, not an *ex parte* statement of the British side of the case, for Mr. Beer holds no brief for either party, but a logical and convincing exposition of British imperial ideals and the methods employed to make those ideals real. If there still lingers in the mind of the American historical student any belief that Great Britain was consciously or intentionally oppressing the colonies during these years it will be dissipated by this thoroughly coherent and consistent account of the aims of British administrators and statesmen as represented not by their speeches but by their acts. That these acts were not always wise is a matter of secondary consideration; the important question is not how the British programme was carried out but what it was, and how far it represented an inevitable and normal tendency in the development of the British imperial system.

The truth is that Great Britain, as far as her relations with the colonies were concerned, was during this period on the horns of a dilemma, and Mr. Beer shows with a great wealth of facts and figures what this dilemma was. According to the accepted theory of colonial empire, Great Britain owed the colonies protection, while they in their turn owed the mother country obedience. In the execution of this policy Great Britain aided the colonies with troops, money, and presents to the Indians, and in 1754 attempted to organize them for purposes of defence in a union among themselves. The Albany plan failed, owing to the particularistic tendencies in America, and because of this unfortunate event Great Britain was forced to utilize the very unsatisfactory requisition system of obtaining provincial troops, and to bear not only the expense of the war with France, but the burden of gifts and compensations to the colonies for aid rendered. At the same time Great Britain was hampered in the struggle not only by the military lukewarmness of the colonies, but also by their trade with the enemy, whereby the French were supplied with provisions and naval stores. The British government endeavored to break up this "traitorous" practice by the use of her navy, by writs of assistance, and by the strengthening of her admiralty courts. When by the peace of 1763 the decision was reached to retain Canada instead of Guadeloupe, British policy was confronted by the necessity of reforming the system of imperial defence, if the Empire was to be held together; and a series of measures looking to that end was inaugurated. The first of these measures concerned the renewal and stiffening of the navigation acts and trade laws, and in themselves would probably never have led to revolt, because their object was to encourage and not to restrict colonial industry. The second group of measures aimed to reform the administration of the trade laws, and involved the suppression by means of the navy of contraband trade and smuggling. This move strengthened the hands of the imperial government at the expense of local or personal colonial profit, and provided a revenue to meet the increased expenditure necessitated by the vast territorial accessions to the empire. The third group of measures was designed to meet the all-important problem of colonial defence, which was no less exigent after 1763 than it had been before.

In the carrying out of these various measures, the government could obtain no coöperation on the part of the colonies; and at this point the divergent tendencies in the two countries became manifest. The tendency in America was particularistic and intensive; whatever interfered in any degree with self-government was resented by the colonists, and, despite the assertion of many writers, loyalty to British ideals was practically dead in America. On the other hand, the tendency in Great Britain was toward empire, uniformity, and centralization—a tendency manifestly destructive of local political independence such as the colonies demanded, and of the right which they claimed to control their own destinies. British statesmen, seeing only the imperial ideal and largely ignorant of affairs in America, sought for a solution of an insoluble problem. They abandoned one project and another that looked to greater coherence and efficiency, and finally were driven to the apparent necessity of establishing a standing army and of raising a revenue in America. All measures from 1763 to 1768 were but the logical result of events after 1754, and had their origin in the refusal of the colonies to coöperate in the furthering of an imperial organization, to which their history, traditions, and practices were unalterably opposed.

This was the dilemma that faced British statesmen of the period. Could wiser rulers have avoided it by employing means that would have reconciled these two opposing tendencies? Union among the colonies was impossible; representation of the colonies in Parliament was impracticable; the bearing of the entire burden of defence by Great Britain was unfair and unwise; to leave the empire unprotected was suicidal. Where lay the solution? Would the concession of a greater measure of self-government by a far-sighted minister and King have made for greater integration? At this point Mr. Beer is content to leave the problem. He has brushed aside all secondary considerations that obscure the main issue, and has presented in all its seeming hopelessness the one primary cause that made Revolution inevitable. He concludes:

> In its broader phase, the fundamental question at issue was the political independence of the American colonies. The struggle on the side of the colonies was only superficially concerned with increased civil and political liberty; it was essentially a movement for national independence. This movement came into violent conflict with British imperialism, whose aim was to increase the administrative efficiency of the empire. Both the British and the colonial ideals were justifiable from their respective viewpoints, each being in harmony with one of the two underlying tendencies in modern historical evolution.

Proceedings of the British Academy, 1905-6. Published for the Academy by Henry Frowde.

This, the second volume of Proceedings of the recently established British Academy, contains a little over four hundred and fifty pages, covering the meetings of two years. But the contributions, though mostly short, are in a number of cases noteworthy, and the Oxford Press has brought them out in handsome form.

A wide range of subjects is represented. The general purpose of academies is discussed, first in Lord Reay's address for 1905 (which contains, we may observe in passing, a welcome plea for classical education), and again in Shadworth H. Hodgson's paper on the "Inter-Relations of the Academical Sciences." Of the nature of memorial addresses are Thomas Hodgkins's account of Ernest Curtius and James Fitzmaurice-Kelly's contribution, "Cervantes in England." The latter, delivered in commemoration of the tercentenary of "Don Quixote," constitutes an interesting chapter in literary history. Pure philosophy is represented by Prof. George Frederick Stout's paper on "Things and Sensations" and by Prof. Bernard Bosanquet's restatement of the argument for a teleological, as opposed to a mechanical, interpretation of the world, or rather as including the mechanical interpretation in a higher synthesis. Only one article deals with a subject in physical science; Prof. Silvanus P. Thompson contributes a study of Petrus Peregrinus de Maricourt and his "Epistola de Magnete," a treatise, written in 1269, in which the invention of the mariner's compass was practically achieved. Urgent questions of international law are treated by Prof. T. E. Holland and Sir Edward Fry in papers on the rights and duties of neutrals in time of war, as illustrated by recent events; and a practical issue of a different sort is expounded by Prof. W. W. Skeat in his discussion of the problem of spelling reform.

These scattered essays, which illustrate the diversity of studies fostered by the Academy, occupy only about a third of the volume. The remaining contributions are all concerned in some fashion with early British history or Celtic antiquities. Two substantial articles by Sir John Rhŷs, entitled "Celtæ and Galli" and "The Celtic Inscriptions of France and Italy," have already been noticed in these columns. (See the *Nation* of July 5, 1906, p. 12; September 12, 1907, p. 254.)

A paper by Prof. William Ridgeway, "The Date of the First Shaping of the Cuchulainn Saga," brings archæological evidence to bear on one of the fundamental problems of Irish literary history. The method of investigation is practically the same as that employed, less thoroughly, several years ago by J. von Pflugk-Harttung in a contribution to the *Revue Celtique* (Vol.

XIII., pp. 170 ff.), but the results are very different. Whereas Mr. von Pflugk-Harttung assigned the Cuchulainn saga to about the tenth century, Professor Ridgeway would put it near the beginning of the Christian era, only a little later, in fact, than the age in which the events of the cycle, according to the saga chronology itself, purport to have taken place. Of the two dates, without doubt Professor Ridgeway's is the nearer right, though his article leaves many difficulties undisposed of. He succeeds in showing similarity between numerous features of the so-called La Tène civilization and those described in the Cuchulainn cycle. But he does not explain very satisfactorily the situation with regard to cremation; and his theory of the antiquity of writing among the Irish lacks positive evidence. Other details might be criticised on the side of literature and linguistics. His repeated references to the "Táin Bó Cúailnge" as a "poem" are strange, even if he knows the document only in translated form. But, on the whole, the significance of his observations can hardly be denied, and they make for the confirmation of native Irish tradition concerning the age of the substance of the heroic sagas.

F. J. Haverfield contributes an essay on "The Romanization of Roman Britain," a subject on which he speaks with acknowledged competence, though he appears to us in this instance to overstate his case. His thesis is that in the lowland area Britain was at least as thoroughly Romanized as northern Gaul. He makes use chiefly of archæological evidence, with incidental consideration of language and institutions.

The last article, by Prof. Alexander Souter, on "The Commentary of Pelagius on the Epistles of Paul," has as much interest for Celticists as for students of New Testament interpretation. For the famous heretic, whether Brythonic or Gaelic in origin, was a product of the Celtic Church, and his commentary appears to be the oldest surviving book by a native of Britain. Professor Souter's article gives a critical review of investigations on the subject since the publication of Zimmer's "Pelagius in Irland," and reports in particular the author's own discovery of what he believes to be a pure Pelagius manuscript in the Grand Ducal Library at Karlsruhe.

Sir George Grey: Pioneer of Empire in Southern Lands. By George C. Henderson. New York: E. P. Dutton & Co. $4 net.

The life of a British colonial Governor, who was the autocrat of three important colonies for long terms and through critical periods, who shaped political and ecclesiastical constitutions, conducted protracted wars, moulded and reconciled aboriginal peoples, ruled without and with responsible ministers, conceived smaller and larger federations, and wound up an historic career by returning as a private citizen to a colony he had despotically ruled, sitting in the popular branch of its Legislature, like John Quincy Adams, and becoming its masterful Premier and the eloquent leader of the Opposition there, should be interesting to the American reader, had it no other claims on his attention. But if we add that this hero of colonization produced philological works that received the praise of Bunsen and Max Müller, of Lassen and Sayce; collected the legends and translated the mythology of a race; broached sociological theories that attracted McLennan and Lubbock; and founded libraries that place him, in the judgment of Max Müller, by the side of Sir Thomas Bodley, we may admit that the title "the great proconsul," first given him by his official biographer, is not unmerited.

The most important source of information about the Governor, and the best picture of the man, are still to be found in the biography referred to, "The Life and Times of Sir George Grey," by W. L. Rees; London, 1892. Mr. Rees had singular qualifications for writing the book. His relations with Sir George Grey in his later years were of the most intimate character; he was Grey's spokesman in the press. It was therefore natural that Grey should select Mr. Rees as biographer. To him Grey told the story of his life, and Mr. Rees, in many parts, has done little more than reproduce the narrative. It might be accepted almost as an *apologia pro vita sua*; but it has one defect: it is not impartial. In this fresh biography Professor Henderson has taken his task as seriously as if Grey had been an historic European statesman. He has slurred over the brief but eventful London episode in Grey's later life; but all else he has illuminated afresh and sometimes transformed.

During "the forty years' peace" there was little prospect of work or promotion in the British army, and Lieut. Grey volunteered to head one of those exploring expeditions whose distressing experiences in barren and tropical tracts form an interesting part of the history of Australia. In 1838-9 he made two journeys in northwestern and western Australia, where he discovered rivers, mountains, and plains. His travels and discoveries have been described by himself in a work that deserves to be republished, and they have been the battlefield of controversy. To the sociologist the interest of the journeys and his subsequent work as Resident in southwestern Australia lies in a greater discovery than any of his geographical finds. Grey first discerned those peculiar features of the Australian family relationships that have since been elaborated by Lorimer Fison and Howitt, by Gillen and Baldwin Spencer, and he believed that his statement of them started McLennan on the line of inquiry that has been so fruitful. He also first proved that the numerous Australian dialects are all varieties of a common tongue. Through his intercourse with the blacks Grey served his apprenticeship to colonial administration, and in 1840 he was appointed Governor of South Australia, where there was trouble with the natives. By the exercise of discretion, firmness, and a large humanitarianism, he temporarily solved the native problem there. The whole of Professor Henderson's contribution to this subject is new. The stern retrenchments and the administrative reconstructions by which Grey restored financial equilibrium to a bankrupt colony, and sent it forward on a career of stable prosperity have never before been so fully or clearly described.

Grey had earned his promotion to a more important sphere of labor, and in 1845 he was appointed Governor of New Zealand. His doings there have been narrated in minute detail by G. W. Rusden, in a "History of New Zealand." To this part of his subject Professor Henderson could have nothing of importance to add. He even takes something away. His account of the suppression by Sir George Grey of the Maori rebellion in the North is inadequate in many particulars. He does not mention that an English general, Sir Everard Home, was in command of the troops, and he incorrectly describes the incident that led to the capture of the chief Maori fortress. On the other hand, he raises afresh and suggestively discusses a question that will interest American readers: whether a conquering power can equitably seize the uncultivated lands of an indigenous people, and he decides in favor of Dr. Arnold and Earl Grey, who held that it could. Out of Grey's work as Governor rose a literary masterpiece that Professor Henderson makes no attempt to appraise. He describes the "Polynesian Mythology" as a "text-book," which it could not be. It is a first-hand collection of myths, legends, and traditions, which Grey himself took down from the mouths of priests and chiefs and translated with great elegance.

Grey was always in demand when a crisis had arisen in a colony, and from the islands in the western Pacific he was transferred in 1854 to South Africa, where he was appointed high commissioner and Governor of Cape Colony. There he had a great and agitated career. His autocratic spirit, which had made him rebel in New Zealand against the Secretary for the Colonies, had still fuller scope in South Africa, where his activity was one long war with the Colonial Office.

When the Indian Mutiny broke out, the Governor of Bombay appealed for aid to his nearest neighbor. Grey promptly answered the appeal. At the risk of being swept into the sea by a Kaffir or Zulu rising, he dispatched to India all the British troops at the Cape, horses (even his own carriage horses), stores, and specie. So far there is no dispute about his patriotism. But Grey asserted that he did much more. He used to relate, and Mr. Rees again tells the story, that when the troops destined to support Lord Elgin's mission to China in 1857 touched at the Cape, the high commissioner, stretching his powers, issued orders to the commanders of the regiments and the captains of the transports to divert their course from Singapore to Calcutta, and he claimed all the credit hitherto given to Lord Elgin for the timely aid that saved India. Professor Henderson accepts Grey's narrative, and assigns him all the glory; but Mr. Rees admits that he has found no acknowledgment in histories of the Mutiny of Grey's extraordinary act. There is none. The War Office, the Colonial Office, and the British government ignored it. All the praise has been given to Lord Elgin, as if his magnanimous renunciation (for it involved the failure or delay of the China mission) were solely in question. Yet Grey stood his ground. In 1890, in the New Zealand press, he reasserted his claims. He was then publicly told by an officer of the troops thus diverted to Calcutta that his "orders," given at the Cape, were not accepted and not obeyed. The transports were intercepted near Singapore and diverted by Lord Elgin's orders. Grey's belief seems a delusion deserving the attention of the Society for Psychical Research, and yet it cannot be decisively shown to be an hallucination. A second point relates to a Kaffir rising in the same year. Let the reader compare the narrative of the series of events given by Mr. Rees, inspired by Grey, with the narrative of the same events by Professor Henderson, and then ask himself whether Sir Robert Walpole was not right when he said that history was a tissue of falsehood. The two accounts have but one name, and hardly one incident in common.

Two years later Grey was recalled from the Cape after a succession of acts of insubordination that almost amounted to rebellion. The crowning offence consisted in the active steps he took to federate all the South African States, the two Dutch republics included. Professor Henderson believes that Grey was then at the point of accomplishing the federation of South Africa, and he cites a letter from President Reitz to Grey in 1893:

> Had British ministers in times past been wise enough to follow your advice there would undoubtedly be to-day a British dominion extending from Table Bay to the Zambesi.

It is probably a delusion. South Africa was not then ripe for federation. In any case, as Grey himself admitted in conversation, it would have been a federation in which the Boer element was in the ascendency. This danger the British government plainly saw, and therefore recalled him.

Letters and Literary Memorials of Samuel J. Tilden. Edited by John Bigelow. Two vols. New York: Harper & Bros.

There is less material of first-rate political importance in these volumes than one had hoped. They will stand as little more than an appendix to the "Speeches and Writings of Mr. Tilden," and to Bigelow's "Life." Tilden does not appear to have been a profuse letter-writer. Smith M. Weed wrote to him in 1885 that "M. [Daniel Manning] likes better to send messages than to write, although he probably *learned that from you.*" Be that as it may, few of Tilden's letters here printed throw new light upon the crises of his public life. There are swarms of appeals to him by others, suggestions, almost demands, but his answers are lacking. We find D. B. Hill bluntly asking Tilden to help him get the Democratic nomination for lieutenant-governor in 1882—"if you will speak a good word for me, it will settle the question"—but there is no hint of what the reply was, if any. At the time of the disputed Presidential election in 1876, and the Electoral Commission of 1877, politicians and private citizens of all sorts were writing to Tilden; so far as these records go, they got no writing from him.

Though these letters add but little to our knowledge of the man, they fall in perfectly with that conception of his character which those who have studied it most closely have slowly formed. His capacious mind early showed an extraordinary power of picking its way through the jungle of detail, and a wonderful command of lucid statement. The Tweed Ring and the Canal Ring afforded him room for the display of these abilities, now historic. In the same line, in a minor matter, is a letter to Jay Gould, now first printed. Gould had rather insolently written to Tilden reproaching him for taking a retainer against the Erie, on the alleged ground that Tilden had been paid $10,000 for conducting a certain litigation in behalf of that company. Tilden's reply (vol. I., p. 258-61) is a model of orderly exposition. It was a complete extinguisher to Gould's flaring impudence.

Politically, as we have said, the additions which the "Letters" make to known facts are slight. There is really more that is new about 1880, and subsequently, than the critical years 1876-7. It is made clear that Mr. Tilden never really favored the Electoral Commission, though he was willing to be consulted about its composition and powers, after the scheme had been decided upon. When the high hopes which the Democrats built upon it fell, he turned a deaf ear to every suggestion of a resort to force. His mind was too legal, and he was too good a patriot, for that. But he long nourished his hurt. If health had permitted, he would have been a candidate again in 1880. Even in 1884, some would have had him stand, among them no less a man than Lyman Trumbull, as we learn from from his letter (Vol. II., p. 642). Tilden's relations with Cleveland were apparently not very cordial. The candidate of 1876 did not expect the candidate of 1884 to be successful. He had been told by Charles A. Dana of "the desperate situation in which presumption and incompetence have involved the Democratic party." And President Cleveland was not so deferential or yielding to Tilden as it was thought he should and would be. There was evidently a certain coldness and some fault-finding. A letter of Tilden's to Daniel Manning, June 9, 1885, contains an implied criticism, which is really a tribute, and which, while throwing light upon Mr. Tilden's methods, has its sardonic bearing upon controversies which have lasted to the present. We can quote but two paragraphs:

> The importance of the little postmasters is very great. In many of the purely rural districts there is one to every hundred voters. They are centres of political activity. They act as agents and canvassers for the newspapers of their party, and as local organizers.
>
> The immense power of this influence is now wholly on the side of the Republicans. To allow this state of things to continue is infidelity to the principles and cause of the Administration.

The Builders of Florence. By J. Wood Brown; with 74 illustrations by Herbert Railton. New York; E. P. Dutton & Co. $6 net.

Here is a really valuable book on Florence. The author, with genuine modesty, declares that its purpose is limited, and that he simply wishes to present "some notions, more or less ordered, touching the complexity of the city's life at certain chief points." In truth, however, he has gone deep, and he displays a thorough knowledge of the essential structure of Florentine evolution. What he does is, briefly, to take the geographical and racial elements of Florence—to show how heredity and environment shaped the people in the city by the Arno—and then to trace their unfolding, through history, and their self-expression through the arts, from early days down to the practical extinction of the republic at the beginning of the sixteenth century.

This method gives some striking results. By pursuing it, for example, Mr. Brown approaches the typical buildings of Florence from the historical, social, political, or religious side, rather than from the architectural. So Santa Maria Novella, or the Duomo or the Bargello becomes the outward expression—the organ, so to speak—of certain dominant needs or ideals. Technically, of course, each represents the constructive genius of its designer; but behind the designer was the collective impulse, whether communal or ecclesiastical, which it was his business to satisfy. We must hasten to add, nevertheless, that Mr. Brown is a careful student of architecture, and that his criticisms and comparisons are weighty, delivered with the authority of an expert. Take, for instance, his analysis of superficial decoration, that Tuscan specialty; or of the construction of the Baptistery; or his rapid survey of the evolution of orders from the Gothic to the Flamboyant; or his identification of the Baroque with the rise of Jesuitry. A single quotation will bear witness to Mr. Brown's ability to interpret architecture by history. After stating that the Jesuits were the highest expression of the Latin revival in the Roman Church, after the Reformation, he says that they, "as devoted and skilful instructors of youth, had inherited a profound respect for classical studies." He adds:

> But the texts they prepared for their schools were freely treated, not merely expurgated—see their well-known edition of Martial—but modified in a Christian sense. This handling of the ancients might seem innocent, laudable even, were it not for two serious consequences which inevitably followed. The moral difference between Paganism and Christianity tended thus in Jesuit hands to disappear, and a habit of interference with standards was formed which ultimately came to be of fatal consequence. Paganism, in purged and, so far, falsified texts, had been lifted towards Christianity; it only remained that Christianity in its turn should be lowered, in a toleration of pagan and worldly ideals, and the syncresy would be complete. (P. 238).

The analogy between this state, and the Baroque Order—typified, for instance, by the Church of the Gesù, at Rome—Mr. Brown succeeds, we think, in demonstrating.

But not less valuable than his more elaborate studies are the stimulating thoughts he sprinkles over his pages. He has a gift of pregnant suggestion, and as he is familiar with the history and customs not less than with the literature and fine arts of Florence, he continually finds explanations in unexpected quarters. No reader will probably agree with him at every point, but there are few readers who can fail to be refreshed by his strongly individual and well-pondered opinions. With this conviction, we think it just to call attention, in our brief review, to the general worth of the work, rather than to combat subordinate statements with which we may differ. The illustrations by Mr. Railton are well chosen, mostly from pen-and-ink sketches in the architectural draftsman's manner. The substance of the book is so important and so interesting that we hope another edition of it may soon be issued, in small format with half-tone pictures, and at a price which would place it within reach of many readers.

Poland: the Knight Among Nations. By Louis E. Van Norman, with an introduction by Helena Modjeska. New York: Fleming H. Revell Co.

In what he calls his "foreword," Mr. Van Norman disarms us by frankly confessing that he has written as a journalist. His book is nothing more or less than a series of chapters, disconnected save that in each some phase of Polish life or history, past or present, forms the peg on which to hang the discourse. The narration, if there be one, thus travels back and forth, skips from subject to subject, from music (Chopin *et al.*) to astronomy (Copernicus, *solus*), from politics to women, from history to economics, and so on—a record of impressions formed by a year's residence and travel in Poland. Loosely written, and at times indifferent as to matters of fact, the book must not be taken too seriously. But if Mr. Van Norman's warm sympathy for his subject sometimes takes him too far, if his effort to make the most of it is often too visible, yet on the whole he has written an interesting and pleasant work. We may even go so far as to think portions of it valuable. Its merit is inevitably unequal; thus the chapters "What Poland owes to her Women" and "Polish Music and the Slav Temperament" have the quality of an article in a Sunday newspaper; while that entitled "Russia's Open Door," treating of the economic development of Russian Poland, must be ranked higher.

To us the political side of the book far outweighs the sentimental and artistic. Now, to hazard a metaphor, Poland historically was the Ireland of Central Europe. So long as Prussia was nothing but the mark of Brandenburg, Russia an inchoate mass, and Austria occupied to the east with the Turk, and later with the French to the west, Poland on the whole was seriously threatened by no external danger. No sooner, however, had her three great neighbors settled down into the entities that we recognize to-day, than the peculiar constitution of Poland offered food for thought. It must be admitted, we think, that the elective character of her monarchical system might prove a menace to her neighbors. And even if it did not, she had no definite national policy, was rent by ever-recurring internal dissensions, and might become, in short, a nuisance. We freely grant that these are not reasons why one country should possess itself violently of another's territory, and we have no wish to justify the various partitions; but we may well ask if Poland deserved to endure; or better, because more practical, whether she could expect to endure. Does not the survival of the fittest apply here as elsewhere? History has brutally answered these questions, and if we revive them here, it is merely to point out that historical evolution too is inexorable, and that Poland in wilfully ignoring all elements of national strength other than her own violent aristocracy, simply invited the disaster that ultimately overcame her. She lived to fight, and could never fight to live, because her people had never been allowed to develop any real strength. The middle classes have saved France, and have made England, but Poland neither had nor wanted a middle class. These conclusions force themselves upon the careful reader of Mr. Van Norman's book, even though he himself avoids any express discussion of the conditions leading to them. His text is well, but in a certain sense, unfortunately expressed by his subtitle; he is looking for the fine qualities that we poetically couple with knighthood, the truth being that most knights were brutes, and as they have disappeared, so has the "Knight among Nations" and perhaps for much the same reason.

Thus it is that we may seriously ask whether the present efforts to keep alive Polish national spirit can have any great practical result. Mr. Van Norman clearly proves the existence to-day, chiefly in Russian Poland, of a growing commercial spirit, or in other words, of an active modern middle class. But to the cool observer it would seem too late for this class to develop a Polish nationality.

The Princes of Achaia and the Chronicles of Morea: A Study of Greece in the Middle Ages. By Sir Rennell Rodd. 2 vols.; pp. xvi, 301; iv, 334. New York: Longmans, Green & Co.

To most readers the vicissitudes of the states founded by the Crusaders in Greece constitute an unknown chapter of mediæval history. Shakespeare indeed knew that there had been dukes of Athens, and the modern traveller in Greece is constantly reminded of the Frankish occupation by the massive ruins which still survive, but the rest of us have been content, with Gibbon, not to "pursue the obscure and various dynasties that rose and fell on the Continent or in the isles." Various these dynasties certainly were, but many of them are in name at least far from obscure, and their fortunes form a curious chapter in the tangled relations between East and West in the later Middle Ages. Moreover, the Frankish conquest brought feudal institutions into sharp relief by throwing them against a classical background; and whatever a modern Grecian may think of the profanation of Hellas by troubadours and tournaments and knightly adventurers, there can be no question of the romantic flavor of the events which made a Lombard marquis warden of the pass of Thermopylæ, put a knight of Flanders over seven-gated Thebes, and sent the barons of Escorta to parliaments over the buried temples of Olympia.

The story begins, of course, with the Fourth Crusade, so cleverly diverted by the Venetians to commercial ends, and the partition which followed the conquest of the Eastern Empire in 1204. By that partition the region south of Salonike was divided into a number of fiefs, whose holders had the right to build castles, coin money, administer their own justice, and engage in private war with their neighbors. These lords were mostly French, and the Peloponnesus in particular became a sort of New France, where the barons prided themselves on marrying only in the best French families and speaking as good French as that of Paris. The founder of Frankish power in this region was Geoffrey de Villehardouin (nephew of the famous chronicler), who established himself as prince of Achaia, and whose descendants soon extended their power over the whole of the Morea and some of the neighboring islands. Their exploits form the theme of the principal literary monument of the Frankish invasion, the Chronicle of Morea, a romancing Greek poem also known through French and Catalan versions and recently made accessible in an excellent edition by an American scholar, Dr. John Schmitt. The romantic period in the story of Achaia comes to an end with the death of William Villehardouin in 1278; and the successive marriages of his daughter with princes of the houses of Anjou, Hainault, and Savoy prepared the way for the feudal anarchy which followed. The fourteenth century is, however, not without episodes of considerable interest, such as the exploits of the Catalan freebooters so vividly recounted in the vernacular by Ramon Muntaner, and the influence of high finance, as exemplified by the rule of the members of the great Florentine banking house of the Acciauoli. The last prince of Achaia, Centurione Zaccaria, of Genoese descent, was forced to give way to the Greek empire in 1430, and the Palæologi were soon replaced by the Turks.

As an historian of the Morea Sir Rennell Rodd has the advantage of long residence in Greece and a strong feeling for the country and its people, and he has labored through the principal sources as well as the great collection of Hopf. He writes clearly, and while specialists will find little that is new, his book will have interest for many visitors to the lands of which he speaks. The work lacks unity of plan, since it often wanders beyond the Morea without rising to the level of a general account of the Frankish states in Greece; and it hardly succeeds in making a connected account out of a number of episodes which are essentially personal and dynastic. An adequate treatment of the subject should be based upon a wider view of Eastern relations and a more thorough study of institutions. Sir Rennell is not sufficiently at home in the history of western Europe in the period of which he writes, and his unfamiliarity betrays itself most clearly when he has occasion to refer to western chronicles, which he still uses in the obsolete editions of DuCange and Hearn. He thus, for example, falls into the old error of making Philippe Mouskes a bishop of Tournai and depreciating the value of his chronicle by dating it a generation too late.

There are fifty pages of appendices containing notes, genealogical tables, and a discussion of the date and versions of the Chronicle of Morea. This is one of the books, of which far too many are now issued, which, to the convenience of the reader and his purse, should have been printed in one volume instead of two.

The Procedure of the House of Commons: A Study of Its History and Present Form. By Josef Redlich; translated from the German by A. Ernest Steinthal. 3 vols. London: Archibald Constable & Co.

This is a work of German thoroughness, in point of scholarly research, and of a lucidity and philosophic grasp which is, we will not say more than German, but uncommon in any language. It is no surprise to find Sir Courtenay Ilbert, Clerk of the House of Commons, speaking regretfully in his introduction of the fact that it had been left to an Austrian scholar to write a book which some competent Englishman ought long ago to have produced. The leading English treatises on the House of Commons are purely historical or statistical—compilations of its privileges and precedents. Professor Redlich has taken the same material and grouped it about its explanatory principle in most interesting and masterly fashion.

Apparently, this Austrian was prompted to his study by despairing contemplation of victorious obstruction in the Reichsrath. If the Austrian Parliament could not transact business, how had the English Parliament retained its power to do so? The difference was largely one of procedure. At first, it might seem that the mere rules governing the conduct of business could not be so vital; but as Dr. Redlich pushed his investigation to their origin and scrutinized them in their evolution, they began to reveal to him a whole system of political and governmental development. His skilful and convincing unfolding of this makes up the originality and fascination of his work.

We have space only to indicate his method as applied to the course of the nineteenth century. At its beginning, the mere procedure of the House had no vast importance, because there was no vast amount of business to get through. The Commons then were as indolent, and sat as short hours, as the Lords to-day. Even Mr. Gladstone could recall the time when "between six and seven o'clock the House, as a matter of course, had disposed of its business and was permitted to adjourn." No eleven o'clock rule, or midnight guillotine, in those days! But with the extension of the franchise, the ferment of democracy, the amplifying of the scope of government, an enormous pressure of bills, with demands for new legislation, came upon the Commons. The ancient forms were cracked to bursting. Merely to save themselves, Ministers and Parliamentarians had to devise new ones. Little by little the Government came to "lead the House" in the sense of deciding what bills it might pass, or even consider. With this enlarged and stiffening control, went on, *pari passu*, a heightening of party discipline, so that the Leader of the House could marshal his "fine brute majority" at will, since the members knew that, if they did not vote as they were bid, they would soon cease to be members at all. On top of all this, came the defiant and alarming system of obstruction invented by Parnell, and applied by him with such fertility and remorselessness that the Mother of Parliaments seemed for a time to be about to fall upon days as impotent as ignoble. But English political genius was equal to surmounting even that crisis, though the changes in the procedure of the House which resulted, and are still in process, were deep in significance and effect. We now see procedure knitting itself to the political facts. The Government of England is nothing but a committee of the House of Commons. That committee—called a Ministry for convenience—lays its hand upon the rules of the House, on the one side, and reaches out on the other to render political parties docile enough and solid enough to make the rules of the House work, and get the business of the nation done.

We are aware that this barely hints at the full and instructive inquiry of which Professor Redlich gives us the rich results. But his volumes themselves would have, in any event, to be turned to by one who would truly appreciate their merit. The first two are the more general and philosophic; the third is largely a setting forth of the rules of the House actually in force. The whole is fortified by wide reading, both historical, political, and biographical, and made vivid by contact and conference with men active to-day in English public life. Mr. Steinthal has put the work into flowing and idiomatic English. It can be heartily commended to student and general reader alike.

Science.

"The California Earthquake of 1906," edited by David Starr Jordan (San Francisco: A. M. Robertson) contains eight separate articles, by as many authors, each discussing the subject from a somewhat different point of view. The general scientific or, more properly, geological matters, are treated by President Jordan, Prof. J. C. Branner, G. K. Gilbert, and Dr. H. W. Fairbanks; the more strictly seismological aspects by Dr. F. Omori of the Imperial Earthquake Investigation Committee of Japan; the engineering and architectural lessons, by Prof. Charles Derleth, jr.; certain local details by Stephen Taber; and the human side of the sudden calamity, by Mrs. Mary Austin. The articles, with the exception of that of Professor Derleth, were collected from various magazines. They afford an interesting account of the catastrophe; but the advantage of presentation from different points of view is offset in part by the unavoidable repetitions incident to a compilation. Professor Derleth's advice as to minimizing damage to buildings, water supply, and business activities by future shocks, is perhaps the matter which will be of greatest value to people elsewhere, who live in dread of similar visitations. The book has abundant illustrations, but half-tones cannot be satisfactorily reproduced upon rough paper.

"The Copper Mines of the World," by Walter Harvey Weed (Hill Publishing Company) is a timely work. Applications in the service of electricity and the ever-increasing demand for brass have made copper second in importance to iron in industrial life. In the last ten years the production has almost doubled, the increase coming chiefly from North America. In recent times, the United States has contributed somewhat over half the world's supply, the yield in 1906 reaching 408,475 long tons in a total of 711,675. With the improvements in concentrating and smelting, lower and lower grade ores have become profitable, until now the miner eagerly utilizes what was the wall-rock of yesterday. The author of the present work seeks to meet the general interest in copper mines by a comprehensive treatment of the subject. He is exceptionally well-qualified for the task: to nearly twenty-five years on the United States Geological Survey, he has added a wide professional experience. His work opens with seven chapters of a general introductory character, discussing geographic distribution, production, mineralogy, geology, and the structure, genesis, and classification of the deposits. The treatment then becomes geographical, and we find in order chapters on the mines, present and prospective, in Europe, Africa, Asia, Japan, Australasia, South America, West Indies and Central America, Canada and Newfoundland, Mexico, and finally the United States. The descriptions are well written and are well illustrated. The author would do well, however, to go carefully over the figures and amplify their descriptive legends, since, as in the cases of Figs. 10, 12, 14c, 26, 43, and 97, the reader cannot interpret what he sees. In Fig. 92—a portion of Sonora bears the name New Mexico. But aside from slips of this kind, the work is well done, and the book is a valuable manual of reference.

"Mosquito Life," by Evelyn G. Mitchell (G. P. Putnam's Sons), is not merely an entertaining (although loosely written) book about the subject in general, but also a memorial to Dr. J. W. Dupree, who died a couple of years ago at Baton Rouge after a busy life of much usefulness. Dr. Dupree made an extended and careful study of the mosquito, and a selection from his material is used in illustrating this work. Yet more is apparently to be utilized in a larger monograph which the Carnegie Institution will publish. Miss Mitchell includes also many drawings and observations made by her while working with Dupree. For the easier identification of adult forms as well as eggs and larvæ she appends several original keys which bid fair to be very useful to the student. Nearly sixty pages are devoted to notes on the commoner species. These are helpful, but would be much improved by a somewhat more systematic treatment.

At the Ninth International Geographical Congress, to be held at Geneva July 27 to August 6, the governments of eleven countries (France, Austria, Hungary, Spain, Portugal, Belgium, Switzerland, Rumania, Turkey, the United States, and Brazil) will be officially represented, and delegates are also expected from between eighty and ninety learned societies. For the purpose of the meetings, the field of geography has been divided into fourteen sections. Already over one hundred and eighty papers, reports, etc., have been received or promised. Among the contributors are Sir Clements Markham, Sir John Murray ("The Floor of the Ocean"), Dr. Hugh Robert Mill ("The Relation of Rainfall to the Configuration of the Land"), Capt. H. J. Lyons ("The Survey of Egypt"), Dr. G. Hellmann, president of the Berlin Geographical Society, Prof. Henri Lorin ("Native Labor in Equatorial Africa"), Capt. Roald Amundsen ("A Projected Expedition for the Exploration of the North Polar Basin"), Lieut.-Col. Delmé-Radcliffe, Prof. W. Libbey of Princeton, and Capt. E. de Vasconcellos.

The present year will be the one hundred and fiftieth anniversary of the first Swedish polar expedition under Rolandsson Martin to Spitzbergen, the fiftieth of the first Spitzbergen expedition of Prof. Otto Torrell, and the twenty-fifth of the expedition of the Sophie under A. E. Nordenskiöld. The geographers of Sweden have accordingly decided to hold a memorial celebration, after the manner of the similar festivities of 1894, when about all the surviving participants of Swedish polar expeditions held a reunion. Torrell and Nordenskiöld are both dead, but prominent participants, such as Profs. Duner, Guennerstedt, and Thore Fries, survive.

Louis Houllevigue, in "L'Évolution des sciences," treats of more certain sciences and their reciprocal penetration in a higher unity. He sees in the new chemistry, in discoveries regarding the sun and the Milky Way, in speculations on the organization of matter, a majestic harmony solidly based on mathematics and physics—"the true scientific humanities which form the indispensable foundation of all study in whatever science." In somewhat different spirit, but with like high theory, Jean Taussat considers "Monisme et animisme" in their value as hypotheses for Transformism.

Sir John Eliot, K.C.I.E., has died suddenly in his sixty-ninth year. He had been director-general of Indian Observatories since 1899, and had published various books and papers on the meteorology of that country. His most important work was the "Climatological Atlas of India," for which he was preparing a handbook to serve as a companion volume. The manuscript of this book was not finished, but is left in such a condition that it can easily be prepared for the press by other hands.

Drama.

SWINBURNE'S NEW TRAGEDY.

"The Duke of Gandia" (Harper & Bros.) has one virtue that strikes the eyes. It is brief; and this, when one considers the unconscionable length of "The Queen-Mother" and "Bothwell," is no unimportant merit. It is, in fact, no full-grown play, but a single act divided into four rapid scenes—a hard, biting light flashed four times upon a group of evil characters, and then darkness, after as before. Francesco Borgia (Duke of Gandia) and Cæsar Borgia are revealed quarrelling; their father, Pope Alexander VI., their mother, Vannozza Catanei, and their sister, Lucrezia, enter and retire, pass for a moment through the fierce cold glare of Cæsar's jealousy and are seen no more; Cæsar has his brother murdered and thrown into the Tiber; the body is brought before the horror-stricken father, and there is an explanation between father and living son:

Caesar. God
Must needs forget—if God remember. Now
This thing thou hast loved, and I that swept him hence
Held never fit for hate of mine, is dead,
Wilt thou be one with me—one God? No less,
Lord Christ of Rome, thou wilt be.
Alexander. Ay? The Dove?
Caesar. What dove, though lovelier than the swan that lured
Leda to love of God on earth, might match Lucrezia?
Alexander. None. Thou art subtle of soul and strong.
I would thou hadst spared him—couldst have spared him.
Caesar. Sire,
I would so too. Our sire, his sire and mine,
I slew not him for lust of slaying, or hate,
Or ought less like thy wiser spirit and mine.
Alexander. Not for the dove's sake?
Caesar. Not for hate or love.
Death was the lot God bade him draw, if God
Be more than what we make him.
Alexander. Bread and wine
Could hardly turn so bitter. Canst thou sleep?
Caesar. Dost thou not? Flesh must sleep to live.
Am I no son of thine?
Alexander. I would I saw thine end,
And mine; and yet I would not.
Caesar. Sire, good-night.
[*Exeunt.*

And that is all.

Nor are these scenes more a play in substance than in length. There is no dramatic nodus, no conflict of moral characters, indeed, no sense of morality at all. We seem not to be present at the conclusion of some hideous human tragedy, but to be looking into a cage of untamed panthers, ready in the torture of their confinement to seize and rend one another. There is a certain feline grace and swiftness about the very language; if such a comparison were not too fanciful, one might say that the frequent use of a full stop after the first syllable of the verse has the effect of a sudden pause in the turning motion of such restless animals. To many readers, Mr. Swinburne's excessive use of Catholic symbol and phrase in the mouths of these inhuman creatures of blood and lust will be wantonly offensive. The court of Alexander VI. was not a place of innocence, we may suppose, but even the Borgias had the common emotions of mankind.

A text of Henrik Ibsen's "Brand" supplied with critical notes and an Introduction by Julius E. Olson, professor of Scandinavian languages and literature in the University of Wisconsin, is announced for early issue by the John Anderson Publishing Company of Chicago. This is the first critical and annotated edition of any of Ibsen's plays published for English students.

Charles Rann Kennedy's play of "The Servant in the House," now acting in New York, is to be brought out in book form by Harper & Bros. about May 1.

The scene of the three-act comedy, "The High Bid," which Henry James has written for Mr. Forbes-Robertson, is laid in the great hall of an old country mansion, mortgaged up to the hilt. The owner is a young man, and a Radical, who, tempted into unworthy ways, finds deliverance at the hands of a beautiful young American girl. It is her intervention which saves this ambitious politician for his lands and political creed, and awakens him to a better appreciation of his ancestral place. The piece is said to be very light in structure, but so ingeniously made that the actual and imaginary times of representation are identical.

Music.

Outlines of Music History. By Clarence G. Hamilton. Boston: Oliver Ditson Co. $1.50.

Kleines Handbuch der Musikgeschichte. Von Hugo Riemann. New York: Breitkopf & Härtel. $1.35.

In commenting on the second series of "Studies in Musical Education History and Æsthetics," published by the Music Teachers' National Association, we alluded to the remarkable increase in the number of educational institutions that include courses in music. As practical musicians seldom read books, it is only with reference to those institutions that one can comprehend the great activity of the publishers in issuing new histories of music. The latest of these is by the professor of music at Wellesley College. It is intended primarily for class work, but also for the general reader. It has been the author's aim to survey the entire field of musical development in the light of recent research, and he has succeeded in making a volume commendably free from superfluous facts. There are numerous illustrations, including portraits of the leading composers. Surely Bizet deserved to be thus distinguished; he was the most original genius France has ever produced. Inasmuch as Grieg protested against the expression "effeminate Gade-Mendelssohnian Scandinavianism" being attributed to him, Professor Hamilton will do well to eliminate that line from his next edition. He should also remember that the plural of *leitmotiv* is not *leitmotiven* (p. 205), but *leitmotive.* Some readers will welcome the fifteen-page appendix, containing a chronological table of events in modern musical history, with contemporaneous historical events.

Of all writers of musical histories, Prof. Hugo Riemann of the University of Leipzig is the most industrious. A few years ago we had occasion to review his "Geschichte der Musik seit Beethoven," a magnificent survey of the nineteenth century, which should be translated, as it has no equivalent in the English language. It offers entirely new points of view, superseding the ludicrous classifications of composers in the books of Naumann and many other historians. A shorter treatise, covering the whole field of musical development, was published previously under the title of "Katechismus der Musikgeschichte." This has been Englished, and is on the whole the most thorough book on the subject in our language. But it is written on a very impractical plan, and the catechistic form of question and answer is out of place in so erudite and advanced a treatise. In recent years Professor Riemann has been at work on a "Handbuch der Musikgeschichte," which will comprise three or four volumes; the "Kleines Handbuch" under consideration in the present review being a compendium of that elaborate treatise. Its 292 pages comprise a vast deal of reliable information. As in all of Riemann's books, a somewhat disproportionate amount of space is given to the earlier centuries; but as he is one of the few living scholars who have made valuable original researches in the mediæval and ancient history of music, this is pardonable. He now gives us, if not the final, at any rate, the latest word on many disputed points in musical history. His treatment of the Hucbald organum (parallel fourths and fifths, pp. 43-4), illustrates this point. Unfortunately there is no index, but the abundant marginal notes are useful. Music in America is disposed of in fifteen lines, but Max Reger has seven lines! With all his erudition, Dr. Riemann does not seem to know that it was not Berlioz (see p. 265) but Weber who first made use of leading motives in a way that suggested Wagner's system. Weber's "Freischütz" has eleven such motives, which recur thirty-four times, and this opera was writen nine years before the Symphonie Fantastique of Berlioz, who was an ardent admirer and student of Weber.

New York's season of grand opera has not come to an end as yet. At the Academy of Music on Monday, April 13, the Italian Grand Opera Company, under the direction of Ivan Abramson, which has toured the Western cities and established a record of ten weeks in Chicago, will present six popular operas for one week—"Rigoletto," "Il Trovatore," "Faust," "Lucia di Lammermoor," "Aïda," and "La Traviata." Among the principals are Jennie Norelli, Virginia Novelli, Georgiana Straus, Virginia Colombati, Maddalena Bossi, Domenico Russo, Luigi Samoilov, Cesare Alessandroni, Eugenio Zara, Eugenio Bozzano. Angelini Fornari will conduct.

Next season the Saturday evening concerts of the New York Symphony Orchestra will be changed to Tuesday evenings, by expressed preference of a great majority of subscribers. The dates of the evening series are November 10, 24, December 8, January 5, February 2, March 2, 16, 30. The afternoon concerts will be given on Sundays, as usual. The Sunday series will open on November 1 and continue to March 7, omitting only three Sundays, December 20, and January 10 and 17, when the orchestra will be away on its annual winter tour.

One of the most interesting concerts of the season will be held here May 2. Sembrich and Paderewski will be heard. Mme. Johanna Gadski will sing at her annual New York recital at Carnegie Hall, Friday afternoon, April 10. At Carnegie Hall on April 18, Fritz Kreisler and Josef Hofmann will be heard together.

The Parisians are paying more and more attention to the works of Bach. Not only is there a Société J. S. Bach, which gives concerts at regular intervals, but this association also secures foreign aid. It has engaged the famous Dutch chorus De Toonkunst to give at the Trocadero, on April 14, the first complete performance ever heard in Paris of the "St. Matthew Passion." The orchestra will be the no less celebrated Concertgebouw-orkest of Amsterdam, under Willem Mengelberg.

Art.

The Santuario of the Madonna di Vico: Pantheon of Charles Emanuel I. of Savoy. By L. Melano Rossi. Forty illustrations. New York: The Macmillan Co. $6.50 net.

It required courage to write this big monograph, for English readers, on a monument begun only in 1596, completed in the eighteenth century, and virtually unknown. Signor Rossi, we presume, would hardly have undertaken this apparently unpromising task if he had not had a larger game to play. As a matter of fact, the Madonna di Vico is merely a text for a general plea for Neo-Roman architecture, and more particularly for a disquisition on domes. In fact, one would have welcomed fuller treatment of this remarkable church with its elliptical dome, 119 feet on the longer axis, 80 on the shorter, and swelling 52 feet above its drum.

When Charles Emanuel I. of Savoy, the shrewdest head of his time, wished to build a pantheon for his race, he characteristically chose the site of a miracle shrine, the Madonna of Vico in Piedmont. He had never declined to profit by the weaknesses he did not share. The elliptical plan was drawn by his military engineer, Capt. Ascanio Vitozzi, who lived to carry the walls nearly to the level of the drum. The sanctuary was conceived strictly as a support for the dome. Eight apertures between the massive piers gave space for the vestibule and choir; for two recesses which, from their position, may roughly be called transept; and for four mortuary chapels. Owing to ecclesiastical opposition and the pro-French sympathies of the people of Mondovi, the work suffered all sorts of delays. Charles Emanuel I. was buried there, but his descendants in disgust were driven to found their Walhalla at Superga. After more than a hundred years, during which both money and courage failed to complete Vitozzi's unexampled dome, the work was carried through in the five years between 1728 and 1733, by Francesco Gallo, military engineer of Victor Amadeus II. Within recent years the structure has been rightly declared a national monument.

For Signor Rossi this oval dome is the ideal. He regards it as a derivative from Santa Sophia, the cupola and longitudinal half-domes of that church being fused into a single elliptical shell. He emphasizes the honesty of its construction, the buttresses which plainly grasp it like great claws, the absence of iron ties or hidden support of any kind; finally, the sincerity of its single shell, alike within and without. With it, almost all domes are compared to their disadvantage, blame falling particularly upon Wren's ambitious cupola over St. Paul's. Especial advantages are claimed for the oval form; and, in fact, it affords a beautiful interior, being visible from all points of the church and offering a fascinating variety of curved perspective. We can imagine no more appropriate covering for a great concert hall; and in this connection it is strange that Signor Rossi, who is well read in all matters American, never mentions the extraordinary oval of the temple ceiling at Salt Lake City.

In the merits he claims for the interior of the dome at Mondovi, and for its decoration by Sebastiano Galeotti we thoroughly agree with the author. Most Renaissance domes sacrifice interior to exterior effect, become mere wells, and force upon the decorator impossible tasks. Indeed, the vaulted ceiling, which Signor Rossi so scorns, as we see it in innumerable baptisteries, is usually both more pleasing in interior effect and more suitable as a surface for decoration than any of the domes after Brunellesco. And this brings us to Signor Rossi's argument for sincerity, which seems to us beside the mark. Why condemn the double-shelled dome if there is a real conflict between its use as a ceiling and as an external crown? Why is the surmounting roof any more false than that of a Gothic church which dissimulates the real form of the vaults! Because, our author would say, the false dome seems to support the lantern, which is actually upheld by a concealed masonry cone. Very well, we would say, if it seems to support it, if there is no evident instability, nothing more is required of the architect *quâ* architect. As for the vaunted sincerity of the dome of the Madonna di Vico, it is won at a heavy cost. It is hard to imagine a construction more wastefully massive. The sum of the cross sections of the eight piers is actually within a little of the cross section of the dome itself. At this price one may always have honest construction. In general one may say that the exterior of this dome has been ruthlessly sacrificed to the interior—as will often happen with "honest construction." It is impressive, but not remarkable, as seen from the front; from the side it is clumsy in the extreme; and one can hardly imagine uglier proportions than those existing between the base, the lantern (unduly lifted by the buttresses), and the cupola.

When Signor Rossi passes from particulars to generals he is usually interesting. His constant interweaving of quotation becomes annoying in the end, and the monograph would gain from a judicious condensation. Yet his appreciation of Neo-Roman, including Baroque, architecture, is sound and timely. We do well to consider what energy and originality of design underlie the great structures executed with the Palladian forms. The lovableness of Gothic, the charm of the early Renaissance, have somewhat blunted our generation to the power of post-Bramantesque building. We want educating in it, just as we need education to feel the quality of a tragedy of Corneille or Racine. We are too much inclined to dismiss a whole period because of our own bad town halls. If Signor Rossi's book helps us to see that a great style must be judged by its great examples, not by its stupid perversions, it will do a good service. Professional architects have presumably known better than to join in this cheap condemnation, but laymen may well read of the "exuberant flights of Baroque" that they are "neither academic nor imitative, but although exaggerated and in bad taste, nevertheless true and genuine inventions, fully in harmony with an excited artistic feeling."

The failure of the Royal Academy to represent art and artists in England is an old story, and the societies started in opposition or reform have been without end. The latest is the Allied Artists' Association, which is to hold its first exhibition, with the Salon as model, in the Royal Albert Hall, London, this summer. Like many other societies in the past, it begins with ideals and regulations that are irreproachable in theory. It is to be no pleasant private club, it is to consist of no little narrow clique. The two objects it announces are, first, to enable artists to submit their work freely and without restriction to the judgment of the public, and, second, to unite, by adopting the principles of coöperation, in the defence and maintenance of their rights and properties. Of this second object nothing need be said. An artists' society, on the lines of the authors', would, no doubt, be an excellent thing. But the first object, the announcement goes on to state, is to be achieved by "an annual summer exhibition or Salon in the heart of London, to which each member of the Association will be entitled to send five works, all of which will be exhibited and grouped together, if desired. For this exhibition there will be no Selective Jury." Theoretically, nothing could be finer. But it needs only a moment's reflection to realize the disaster to which such a liberal policy is likely to lead. The Association does not even protect itself—as societies like the International and the New English Art Club have been careful to do—by making the quality of an artist's work a condition of membership. An artist becomes a member, not by election, but by, it seems, the easy process of paying the small subscription of one guinea a year. There are now in London many societies whose exhibitions suffer from the commonplace of amateurish work of members that the jury has not the courage to refuse. The International, in its best days, alone exercised the duty of rejection with distinction. The prospect of an immense place like the Albert Hall filled with the work of any and everybody who can afford to pay a guinea a year is appalling.

At Christie's, London, March 21 and 23 the following pictures from the collection of G. R. Buruett were sold: Drawings. Turner, Goarhausen and Katz Castle, £50; Bow-and-Arrow Castle, Isle of Portland, £105; Lulworth Castle, £220; H. Harpignies, A View over a River, with an angler in the foreground, £58; J. S. Cotman, A View in a French Town, with market figures, £71; W. Hunt, Primroses and Birds' Nests, £86; J. Israëls, Gathering Potatoes, £141; Pipering Food, £168. Pictures: F. Brangwyn, The Lord Mayor's Show in Olden Time, £126; Corot, A Woody Landscape, with a peasant woman and two cows on the bank of a river £157; A View Near the Coast, with buildings, a peasant seated in the foreground, £178, Allée dans le Parc de Cambri, £504; River Scene, with a figure in a punt, evening, £231; Ville d'Avray, £304; C. F. Daubigny, View on the Coast, £273; A Stormy Day on the Coast, £110; On the Oise, £157; A Landscape, with a stream, evening, £157; A Village on the Oise, £367; A Coast Scene, with a bather and sailing boats, £136; Gathering Seaweed, £199; H. Fantin-Latour, Portrait of the Artist's Sister, seated, reading, £105; H. Harpignies, A Landscape, with a lady and child under some trees, a river with boats in the background, £315; J. Israëls, Prayer, £123; An Old Fisherman, £157; An Old Woman, seated, sewing, £210; A Fisherman's Wife and Child, on the shore, £168; A Girl at a Window, £126; J. Maris, A Landscape with an old Bridge over a Canal, £168; A Coast Scene, with stranded boats and fishermen, £263; A Dutch Town on a Canal, $157; Near Marlotte, France, £126; A. Mauve, The Bank of a River, with horses and cart, £105; A. T. J. Monticelli, A Party of Ladies Embarking, £120; F. Ziem, Sunset, £241; J. B. Crome, A Woody Road Scene, with a cottage and peasant, £110.

At the National Arts Club in this city the spring exhibition of members' work will remain open till April 25. Among the exhibitions in the dealers' galleries are landscapes and cattle-paintings by G. Glenn Newell, at Powell's, till April 10; portraits by Piero Tozzi, Fishel, Adler & Schwartz's, April 11.

The exhibition of the National Sculpture Society is now open at Baltimore.

Benjamin Curtis Porter, the portrait painter, died in this city April 2. He was born in Melrose, Mass., in 1843, studied in Boston and opened a studio there; in 1882 he opened a studio in this city. In 1878 he was elected an associate of the National Academy of Design, and in 1880 an academician; among his other honors were medals at the Paris Exposition of 1900, the Buffalo Exposition, 1901, and the St. Louis Exposition, 1904.

Finance.

THE ERIE'S FLOATING DEBT.

In April of last year, half the railways of the country were anxious applicants in the money market. Their case was this: they had been planning extensive and costly improvements on their lines—new track, new cars, new locomotives, new tunnels, new stations. The need for this outlay seemed to be imperative at the time, towards the close of 1906, when James J. Hill gave out his estimate that $1,100,000,000 per annum must be spent in the next five years by American railways in order to keep up with the demands of traffic. Under these constant demands, it began, even before 1906, to grow difficult for railways to sell their stocks and bonds in the quantities desired. They had a preliminary notice in 1903, when the bond market shut down upon them so suddenly that $200,000,000 had to be borrowed on three-year notes at high rates of interest.

There were plenty of people, then, who warned the railways and the bankers that this was dangerous financiering, of a kind that got the railways into serious trouble in 1873 and 1893. But the companies came safely out of 1903, and refunded their maturing notes in bonds when the bond market again became practicable. This easy escape had the result of depreciating caution. The companies spent more than ever before, and when a ready sale of bonds or stock was not in sight, they borrowed from the banks. The short-term notes of the early months of 1907 were floated to take up these bank loans. Most of the notes, like those of 1903, were made to run three years, paid 5 or 6 per cent., and were sold at a slight discount from par. The Erie Railroad was a belated and not a very popular borrower. The best its banking friends would do for it was to discount at 7 per cent. its one-year notes for $5,500,000—that is, to say, they sold to the public at 93 Erie notes which were to pay no interest, but which were to be redeemed at par this month.

A week ago, nothing had been done by the bankers or the directors to provide for payment, and Wall Street suddenly took fright over the prospect that the company, on Wednesday of the present week, would be thrown again, as it was after the panics of 1893 and 1873 and 1857, into the hands of receivers. The directors showed amazing slowness to act; it was suspected that many of them had made up their minds for a receivership—especially when it was found that, in addition to the $5,500,000 one-year notes in the public's hands, the company now owed $5,000,000 more to banks and individuals. At last, on Saturday, it was announced by the company that a syndicate had agreed to underwrite a three-year loan to pay off this $5,000,000, but only on the express understanding that all holders of the one-year notes should forego their right to cash payment, and agree to accept new three-year 6 per cent. notes in exchange for their present holdings.

This was equivalent to saying that, unless every note-holder of 1907 assented, the Erie would be thrown into bankruptcy. That is what Wall Street calls a "club"; it caused much bitterness, especially since it was these very directors who, towards the close of 1905, increased the dividends on stock of this unstable property, and who last autumn were only prevented by the Public Service Commission from paying the same dividends in 4 per cent. ten-year notes.

A great many people have been asking, What is really the matter with the company? Many knew nothing more of Erie than that it paid out $2,500,000 in cash dividends during the fiscal year 1907, after appropriating $1,600,000 to improvements, and yet that it had $1,700,000 left over from the surplus earnings of the year. Its earnings had, of course, suffered since then, along with other railways; but how could such a margin have been wiped out so quickly? The company has reported in full on results of the seven months following that fiscal year. Between July 1, 1907, and January 31, 1908, gross earnings had increased by $36,756 over the same months a year before, but net receipts, after deducting operating charges, had fallen $3,348,894. The shrinkage was progressive. In November, December, and January, inclusive, net earnings were only $930,000; but fixed charges for the period were $3,000,000.

The three questions asked this week in connection with the episode have been: Why could not the Erie be helped along by an ordinary new bond issue; what would have been the effect on financial markets of a failure to pull it through, and what does the situation mean as regards the position of other railways? Erie could hardly float a loan with the general public; even the richer railways are not venturing to try the experiment just now. As to the effect on financial markets of a receivership, all that can now be said is, that such an event, under all conditions, would not be cheerfully accepted. But as for the bearing on other railways, these facts are to be remembered: First, the company is even now burdened with some relics of the plundering régime of the sixties and seventies. Second, Erie's reorganization from its insolvency of 1893 was imperfect in its lack of providing adequate working capital for building up the road. Its plan went through in 1895, when panic influences had not passed off, and capital was hard to raise. Union Pacific, reorganized as it was in the reviving prosperity of 1897, found the process vastly simpler.

This is one reason why Erie is far from being a type of the railway position generally. Nor is any such pressure imminent on other companies. The $6,000,000 Rock Island notes due April 1 were provided for weeks in advance, and the only other issue maturing in the next six months is the $15,000,000 Interborough Rapid Transit 4 per cent. loan due May 1. Plans for refunding those notes have already been announced. As to the other railway notes maturing six months or a year hence, that is a question of the future.

The Nation.

NEW YORK, THURSDAY, APRIL 16, 1908.

The Week.

While the Massachusetts Convention was technically a defeat for those friends of Secretary Taft who wanted a resolution of "preference" put through, it cannot be denied that the strength shown by his adherents was greater than had been expected, and must help his candidacy elsewhere. It was admitted even by Senator Crane that a majority of the delegates in the convention favored Taft's nomination. Nothing but the strong desire to avoid a contest prevented a pro-Taft plank from being offered; and, if it had been, it would probably have been adopted. This fact will be used, and properly enough, by those who maintain that the Secretary's votes at Chicago are not to come exclusively from the South and the West. Consequently, we shall now hear the "band-wagon" argument for Taft used more confidently than ever.

The passionate third-termer is bringing forward a new set of reasons why Mr. Roosevelt should accept the Republican nomination. Senator Bourne, for instance, has given no intimation hitherto that he questions the fitness of Secretary Taft for the Presidency. Only, the argument has been, if we can have the master mind, why have the follower; why take the good-enough fellow instead of the real thing? But now the third-termer is actually beginning to murmur his doubts of Mr. Taft's availability. The Secretary of War's chances, for instance, have been hurt by the growing hostility of the colored voters. With him at the head of the ticket, the defection of the negroes might give Indiana, Ohio, even Illinois, to the Democrats. Therefore President Roosevelt should run again. But why are the negro voters incensed against Mr. Taft? Because of his share in the Brownsville affair. What was the Secretary's part in the Brownsville affair? Standing by the President's summary action in that matter. If the negro voters of this country, therefore, are embittered against the Secretary of War, ought they not to be still more bitter against the President? They probably are. Then would not the same reasons hold against his candidacy as against Mr. Taft's? No, answers the third-termer, and correctly. The Secretary of War is merely human. The President is Mr. Roosevelt. Other men profit by their virtues and suffer by their vices, succeed through wise action, and fail through blundering. But nothing can hurt Mr. Roosevelt. From his vices and his virtues, his happy strokes and his failures, he coins the same pure metal of popularity.

In the pious belief that it has already done everything really worth while, Congress is preparing to adjourn as early as May 10. The passage by the Senate of an employers' liability bill, which Mr. Dolliver asserted to be purposely drawn to fail before the Supreme Court, gives, for instance, a sense of something attempted, something wrought to earn a summer's repose. Since there is to be no more general legislation, and the President is likely to acquiesce in letting Congress go home, it might just as well do so. The question may be raised however, whether we are not developing, as part of our political system, the tradition that there is only one period in four years when projects of general legislation have a chance. For twenty years past the sessions preceding Presidential elections, though classed as "long" sessions, have been growing shorter. That of 1888 lasted till October 20, that of 1892 till August 5, of 1896 till June 11, of 1900 till June 7, and of 1904 till April 28. The intermediate long sessions have shortened, too, but none in these two decades has adjourned more than a day before July 1. The disposition of the State Legislatures to do as little as possible and adjourn has been equally noticeable this year. The Presidential year becomes more and more an *annus non.*

"Love laughs at the locksmith, and the Trusts can well laugh at the Attorney-General." So said a Republican Congressman, Mr. Perkins of Rochester, in some remarks last week in the House on the International Paper Company and the tariff. That was before the Attorney-General had given his reply to the Cannon resolutions asking why the Paper Trust had not been prosecuted for violating the Sherman act. Mr. Bonaparte now reports, practically confirming the anticipatory gibe of Mr. Perkins. The Department of Justice has been "investigating," but has as yet found nothing criminal. It is, however, going to keep on investigating. If anything turns up, Congress will be duly informed—unless to inform it would defeat the ends of justice. So there we are left. Speaker Cannon will probably allege that there remains enough hope, though faint, in the activity of the Attorney-General, to prevent Congress from laying even a finger on the print-paper schedule of the sacred tariff. On the other hand, the President is for the immediate removal of the duty on wood-pulp, and for a corresponding reduction in the duty on paper made from it. With him stand a certain number of Republicans, and the entire Democratic membership of the House. John Sharp Williams is moving heaven and earth to get the House a chance to vote on this recommendation of the President's, but the Speaker and his fellow-oligarchs block the way. As Mr. Perkins said, a bill to reduce any part of the tariff, when referred to the Ways and Means Committee, even with the backing of the President, has about "the same prospects of a favorable report as a bill imposing a severe penalty on bigamy would have if introduced into a Congress of Mormons."

The calculated muddle into which this particular question of tariff reduction has been manœuvred ought not to blind any one to the facts in the case. Effort has been made, for example, to show that the Dingley tariff did not increase the duty on printing paper. Mr. Dalzell has asserted this; Mr Tirrell of Massachusetts attempted to prove it. His contention was that the Dingley tariff fixed a specific duty of $6 a ton, whereas the 15 per cent. ad valorem duty of the Wilson tariff, with paper at 2 cents a pound, came exactly to the same thing, $6. But all this showing of alleged facts was utterly demolished, in advance, by the speech which a newspaper man, who is also a member of the House, Mr. Hitchcock of Omaha, delivered in the debate of March 4. With a wealth of trade statistics and committee hearings at command, by the use of which he completely silenced Dalzell and Payne, he proved that the price of paper at the time the Dingley bill passed was less than 2 cents a pound. It really averaged about a cent and three-quarters. Warner Miller himself, who was advocating the paper duty before the Committee on Ways and Means, and who was shortly afterwards one of the organizers of the International Paper Company, testified:

> We are selling a much better article of paper—I dare not say how cheap, with Mr. Norris [of the New York *Times*] in the room—but less than 2 cents a pound.

At the most, therefore, the ad valorem duty on paper under the Wilson tariff was a little more than $5 a ton. The Dingley bill marked it up to $6, and increased the duty on wood-pulp about 33 per cent. Almost immediately thereafter the International Paper Company was formed, and to-day the price of paper is some 50 per cent. higher than it was when the Dingley tariff was framed. It would not be fair to deny that the greater cost of materials and labor has had something to do with this heightening of the price; but, so far as the tariff is concerned, the facts are as we have stated. And if our mills are hampered by our diminishing resources of wood-pulp, President Roosevelt's argument for opening our ports freely to foreign supplies is certainly strengthened. Despite his belated zeal for tariff-reform, however, we have not expected that this Congress would pay any heed to what Chairman Payne contemptuously calls a "piecemeal" recommendation.

Congressman Hobson's wild predictions of a coming world-war, and his appeals for more and more and yet more battleships, were effectively answered in the House on Saturday. Fortunately, Mr. Burton of Ohio was on hand to speak, as ever, for sanity, for civilization, and for the higher moral purposes of this nation, which were potent years before we dreamed of an invincible navy. When the movement for international peace is more promising than ever before, it is inexcusable for the United States to play the part of the swashbuckling patroller of the seas. As Mr. Burton pointed out, America's mission is that of peace, not of war, and it is no more her duty to enforce peace among the nations by being armed to the teeth than it would be for a clergyman to enforce the gospel at the point of a revolver.

The one obvious fact about the Aldrich bill is that it cannot possibly go through the House in the shape in which it left the Senate. Whether a sufficient number of votes can be mustered to pass it in some amended form, is a question which Speaker Cannon apparently means to test at once; for he has arranged for a party caucus this evening to consider a course of action. Indeed, late dispatches go so far as to intimate that the meeting may not in reality be a "caucus," but only a "conference." In the same cautious spirit, the Speaker is credited with having approved several amendments introduced by Representative Vreeland of New York, which considerably modify the bill. These alterations strike out the two extremely foolish provisions tacked upon the Aldrich bill in its last days in the Senate—the clause forbidding national banks to lend to a concern in which any of its directors are interested, and the clause which, after requiring "country banks" to keep more of their reserves at home, allows them to invest one-third of such home reserves in securities. The second of these provisions, considered as an application of the lessons of the recent panic, was merely laughable; the first, however worthy its general purpose, would have virtually put out of business many banks in the smaller towns. Mr. Vreeland next undertakes to graft on the Aldrich bill a clause authorizing "emergency currency" based on deposits of commercial paper approved by the clearing house of the district and by the Secretary of the Treasury. This provision, it appears, does not replace Mr. Aldrich's original plan of accepting State and municipal bonds for such collateral, but merely proposes this commercial paper as an additional facility. It therefore retains the fundamental vices of the Aldrich bill, and gives the banks the option of putting out emergency notes on a more scientific basis. We should say, therefore, that Mr. Vreeland's changes do not greatly improve that obnoxious measure. The truth is that the voice of practical business men, in the recent committee hearings, has been so overwhelmingly against the clumsy makeshift of the Senate, and in favor of a currency commission, that the sponsors of the measure have had to change their attitude. Had the Speaker persisted in his idea of "jamming through" the bill, he would have been compelling the business community to accept a "relief measure" which it did not want.

E. H. Harriman is the only person who comes creditably out of the recent muddle in the affairs of the Erie. The Erie was drifting into bankruptcy, and the persons responsible for its troubles were not lifting a hand to help it. These directors had been ready enough to increase dividends on the stock two years ago, when the propriety of paying any dividends on so ill-equipped a property was gravely questioned. They went so far, on the very eve of last October's panic, when further cash disbursements of the sort were impossible, as to declare dividends at the former rate, payable in ten-year notes bearing interest at 4 per cent. Only the decisive veto of the Public Service Commission stopped this inexcusable undertaking. But when it came to the serious question of meeting five millions of maturing indebtedness, which could be done only by outside help or by arrangement with the company's creditors, these same directors took no step whatever until four days before the hour of reckoning. To put forth under such circumstances, as they did last Saturday, a demand for extension of the notes in the hands of the public, was absurd. To avert receivership, not only must payment of the $5,500,000 one-year notes be provided for or deferred, but $5,000,000 more money must be procured. A syndicate was to look after this second requirement, but "upon the express condition, and not otherwise, that *all* of the said $5,500,000 unsecured notes maturing April 8" should be exchanged, deposited, and extended in the form of a three-year obligation. This proposal, which Wall Street promptly described as "clubbing-in the note-holders," was made when assenting notes held by foreign investors, or by distant home investors, could not possibly arrive in time. By Wednesday of last week it was evident that this belated plan had failed; and then it was that Mr. Harriman intervened with his offer to care for all of the obligations. In an affair of this sort we are not greatly concerned over ulterior motives. The plain fact is that somebody did not do his duty at a critical juncture, and that somebody else did. When a ship is laboring heavily, and the officers are preparing to leave it to founder with its passengers, any one who stops the leak and keeps the vessel afloat deserves credit. If he gets his salvage, also, he will have earned it.

"Gooding and Graft" is an expression which has elicited a three or four thousand-word opinion from the Supreme Court of the State of Idaho. Gooding is the Governor of the State, and "Gooding and graft have become so thoroughly known as synonymous terms," said the offending newspaper, "that the rank and file will have no more of it." The court looked at the question from all sides. Certainly, it thought, the defendant "did not intend to give Gooding a certificate of good character testifying to his honesty and integrity or apply to him an endearing term. The very reverse is disclosed." It was urged that, where a word is capable of two constructions, one actionable and the other not, it is the duty of the court to give such a word an innocent construction, if possible; but the court declared that it was unable to find any definition or general use of the word "graft" which would indicate an innocent act or motive on the part of a person designated as a grafter. "To charge one with being a grafter," it ruled, "has a tendency to impeach his honesty, integrity, and reputation." Various dictionaries were quoted, and the judges finally took the view with which any first-class "yeggman" brought before them would have agreed, that "to graft" was "to steal or to swindle." And so the case of the Governor and the newspaper was remanded for trial. Of course, seven-eighths of all the graft is not obtained by stealing, but by improper influence. As the Supreme Court of Minnesota defined it,

> Graft is commonly used to designate an advantage which one person, by reason of his peculiar position of superiority, influence, or trust, extracts from another.

It is in the extraction that the odium and the libel lurk. Hereafter the word cannot be lightly used as a synonym for any malefactor at the head of a corporation, or any political ringster.

Mr. Asquith's re-made Cabinet presents the minimum of change from Sir

Henry Campbell-Bannerman's. The promotion of Winston Churchill was expected, and fully earned, though it involved the risk of losing his seat in Manchester. He has, however, already thrown himself into the struggle for reëlection in a constituency which he wrested from the Conservatives three years ago, with a zeal and pugnacity worthy of the fighting son of a fighting father. If he wins, the triumph will be the greater because it is scarcely looked for. For Mr. Lloyd-George to be made Chancellor of the Exchequer, represents a great and rapid advancement. Yet no man in English public life has grown more swiftly in general esteem. His settlement of the great railway strike last year brought him much renown; and he is a skilled orator and first-class debater. The retirement of Lord Elgin from the Colonial Office makes room for Lord Crewe, who has made a name for himself as Liberal leader in the Lords. The change which will excite most comment, if not most surprise, is the elevation of Mr. Morley to the peerage. It is pretty well understood that there are somewhat pathetic personal reasons for his retaining the office of Secretary for India, though unequal longer to the work of the Commons. There may be flings at an old Radical becoming a peer, but whether as viscount or commoner, John Morley may be counted upon to maintain the same lofty views of the duties of government, and of inalienable human rights, with which his name has been long identified.

Premier Clemenceau continues to tread the middle path of moderation, and the country seems to be with him. The Chamber of Deputies, by a vote of 345 to 205, has adopted an important amendment to one of the laws dealing with the devolution of ecclesiastical property. The amendment provides that funds bequeathed for the celebration of masses shall be transferred to societies of aged priests, by whom the terms of the bequest shall be fulfilled. The government supported the amendment, and thereby removed one of the principal reasons on which charges of spoliation by the state have been based. Significant, however, was the vote itself. A majority of 140 is large, but not large as majorities have been going in the French Chamber when the question of church and state is up. Voting against the government there must have been a considerable section of the followers of M. Combes, who have been trying to overthrow the present Radical Ministry and reëstablish the old *bloc*, including the Socialists. In face of a double danger from Conservative and Radical extremists, the Premier has boldly held to his position, and more than once he has been able to make use of extremist against extremist. Thus, a few days ago, when, in the discussion of an amnesty bill, the Socialists insisted that recently convicted anti-militarists should be included in its provisions, M. Clemenceau sharply rejected the proposal, and was sustained by a vote of 460 against 73.

The progress of the Liberal cause in Russia has been attended with such frequent disillusionment that only the most confiding nature will cling with hope to this or that particular concession by a benevolent government. A few days ago the Duma was reported to have achieved a notable triumph in bringing about the dismissal of an assistant Cabinet Minister. The Budget Committee of the Duma was said to have made the disgrace of the unpopular official a condition for its acceptance of the government's financial proposals. Thus, it has been asserted, the principle of Ministerial responsibility for which the first Duma battled and came to grief, has been acknowledged, though in a quiet way. The obvious reply is, of course, that any concession from the government which comes as a favor, and not as a right, contributes little to the solution of Russia's problem. The Czar has taken away much; it pleases him now and then to give a little. Or, rather, it pleases Premier Stolypin. The latter has full right to regard his work with much complacency. His policy of strong-handed reform has succeeded for the moment. He has maintained his position against court cabals, and he has managed the Duma adroitly. But it has all been done at a cost of violated pledges and defeated Liberal hopes which the future must take into account.

The German Boerse bill which abolishes the official Boerse register, or speculators' list, and restores time trading in industrial and mining stocks, was passed by the Reichstag last week. Such action, coming as the result of a twelve years' experiment on the part of a country not given to over-hasty legislation, should be a lesson to us. Reckless financial methods and overspeculation ushered in, about 1890, a period of sharp decline in values, and gave rise to a popular demand for the restriction of stock-speculation and dealing in futures. Agrarian pressure carried the government farther than it intended to go, and in its final form the Boerse Law of 1896 not only established a register for speculators to whom trading on time was restricted, but prohibited dealing for monthly account in seven leading mining and industrial stocks, and also dealing in futures in grain. The Boerse register has proved a failure, in so far as it was intended to protect the outsider, and has directly encouraged dishonest speculation. Operations in industrial securities have been largely transferred from German to foreign exchanges. Industrial stocks have fluctuated more violently since the law than before. That Conservatives and Agrarians have recognized the necessity of a change indicates that the case was pressing.

To have had a distinguished career for 111 years, and then to become a weekly—this is the fate of the Munich *Allgemeine Zeitung*, long one of the most powerful newspapers of the Continent. For decades a great political factor, quoted as often in the foreign press as the *Kölnische* or the *Frankfurter Zeitung*, it has long been on the downward path. Liberal though not radical in its views, and ever a warm supporter of the Federation, it has found but little response in a country so dominated by church and church influences as Bavaria. Even though it has excellent art and musical and literary departments, it has lacked the ability to arouse enthusiasm or obtain for itself the advertising patronage which it has needed and which its rival, the *Neueste Nachrichten*, has so richly enjoyed. Indeed, it frankly confesses that in the last two years of its publication its deficits have amounted to no less than $175,000. In its new form as a weekly, the *Allgemeine* bears a strong resemblance to the *Nation*, and to English weeklies like the *Spectator* and the *Athenæum*. As it announces that it will be independent in politics and religious matters, it has entered a too long unoccupied field, in which it should exert important influence.

The famine in India is serious and growing worse. The weekly bulletins from the Viceroy to the Secretary of State for India now tell of a population of more than one and a half millions which is in receipt of state relief in the form of employment on government works or of gratuitous aid. The distress is centred in the United Provinces of Agra and Oudh, in northern India, where, at the end of March, the number of men engaged on relief works was 957,000, and of those in receipt of free aid 378,000. The Viceroy's telegrams observe with official self-restraint that "there are some signs of deterioration in the general condition of the people, and crime is increasing." The price of grain is abnormally high. It is again the old story of a swarming population clinging to the very edge of subsistence when conditions are most favorable, and reduced by the slightest shortage of rain or a backward season to extreme distress. On an area of 107,000 square miles, 50,000,000 struggle for a living. The problem is tremendously difficult; yet public opinion, appalled by the regular recurrence of famine, is coming more and more to look to the suzerain power in India as charged with the duty of furnishing a solution.

EXTRAVAGANCE AND DEFICITS.

A "general alarm" has been sent out by the Republican managers in Washington on the subject of swollen appropriations and the increasing Treasury deficit. It was high time. At this date last year the Treasury had a surplus of receipts over expenditures of $52,000,000; whereas now there is a deficit of $41,000,000. That means that we are $93,000,000 worse off. By the end of the fiscal year, the deficit, which marches steadily along at about $8,000,000 a month, can scarcely be less than $55,000,000. This will have to be set over against a surplus of $72,000,000 in 1907. It is not surprising if Republicans feel that the contrast, showing, say, $125,000,000 to the bad in one year, will not be a powerful campaign argument for the party of supreme financial ability.

Senator Hale has done well to bear down hard on the fact that, in a period of shrunken revenues, it is the continuing appropriations which play the mischief with the Treasury. When economy is most called for, economy is impossible. We see how this is in the current government figures of receipts and expenditures. To date, the Treasury has paid out $57,000,000 more than a year ago, though at the same time its income has been $36,000,000 less. Why is this? Why cannot the Treasury, like a railroad or a factory, cut down expenses when receipts fall off? Because Congress votes the money out inexorably, by appropriation bills which have to be met whether the Treasury is in funds or not. This simply illustrates the old maxim in public finance that it is policy which makes extravagance. When a government embarks on lavish plans, lavish outlays are inevitable. Once assent to the plans, and the necessity of finding money to carry them out follows as the night the day.

The particular application of this truth which Senator Hale makes is in connection with our military policy. An army bill has just slipped through, practically without debate, carrying $98,000,000—or $20,000,000 more than that of a year ago. The naval bill has jumped up similarly $20,000,000, now having a total of $120,000,000; in a short time it will be $150,000,000. Even as the case stands to-day, this great peaceful and industrial nation is expending, Senator Hale showed, something like 70 per cent. of all its revenues for war purposes—including, of course, pensions. Yet on top of this, and with huge deficits in sight for both this year and next, schemes are afoot for doubling the army. Within a few days, the General Staff has, according to report, been at work on plans for increasing the army to 125,000. There is the usual preliminary talk of the ease with which Germany or France could land 100,000 men on our shores; and it is said that the President and Secretary Taft are horrified at the sudden discovery of our defenceless condition. For our part, we do not take all these yarns too literally. We do not believe that Mr. Taft is ready to commit himself to any ambitious plan of military aggrandizement. In fact, as Senator Hale has rather cruelly intimated, it is not probable that the Secretary knows very much nowadays about what is going on in the War Department. What is proposed is, we suppose, more work by military experts. They always magnify their office, and would, if possible, also magnify military expenditures. But it is the business of those who have the power of the purse, and who stand jealously for the historic control of the civil over the military authorities, to refuse to be drawn into the overweening and costly projects of the technical war-makers. Lord Salisbury once put the case neatly in writing to Lord Cromer in Egypt. "Do not," he said, "be misled by army experts. They would, if they could have their way, make us garrison Mars in order to prevent an invasion from the moon."

There is force in Senator Hale's complaint that the military appropriations are eating up all the funds, so that nothing is left this year for public buildings or river and harbor improvements. Political abuses in connection with the latter kind of public outlay have undoubtedly occurred, and will continue to occur. One thing, however, may be said about expenditure for court-houses, post-offices, deepening the channels of rivers and ports, building breakwaters, jetties, etc. That is generally a productive expenditure; while money spent on ships and guns is absolutely unproductive. Incidentally and temporarily, of course, employment is furnished to a certain number of men in ship-yards and elsewhere; but the great bulk of the money laid out in battleships and ordnance is so much capital made unremunerative. Other government appropriations yield at least some return on the money invested. Hence it is only a reasonable policy always to hold down the unproductive expenditure in favor of the productive, instead of exactly the reverse, as is proposed by the Administration this year. This is to omit mention of the most conclusive arguments against extravagance in military appropriations. We mean, of course, the moral ones.

CONDITIONS IN CUBA.

Gov. Magoon's removal of the six Cuban provincial governors has smacked of the sensational because it is in marked contrast to the policy of compromise pursued from the beginning of the present American intervention. The plan has been to placate and soothe wherever possible. True, actual plotters against the government, like Masso Parra and his fellow-conspirators, have been brought up with a round turn; but wherever the disaffected or dangerous have appeared, they have generally been met half way. Gov. Magoon's vigorous move and the circumstances which provoked it must, however, draw public attention to the grave conditions in the island. On February 1 next the President has decreed that the second Cuban republic be established. How will affairs stand then? What guarantees are there that the new Cuban government will last longer than the old? These questions become more serious when one considers the prevalent belief in official circles that, if the Cubans do not succeed this time, their chance will be gone forever. A bare hint to this effect appears in the official correspondence growing out of the intervention in 1906. But even if President Roosevelt's successor be disposed to follow his excellent policy of helping the Cubans to their feet again, there should still be some guarantee that the new republic will be inaugurated under happier prospects than the old.

It is now frankly admitted in Havana that the island was turned over to its people by Gen. Wood before a proper structure of government had been reared, or a proper set of laws enacted. As a staff correspondent of the New York *Tribune* recently phrased it, the failure to create such laws "was the chief cause of the downfall of the second Palma Administration and of the American intervention." The Spanish laws were framed for oppressing the island rather than for uplifting it, and Gen. Wood added to the legal confusion by the many military orders and the decrees which he engrafted upon the existing body of law—some of them of great value, like those which created the writ of habeas corpus and established justice in Cuba without charge to the suitor. But the administration of Gov. Magoon found no more pressing duty than the creation by Executive decree of a series of new laws. There was no sanitary code except that of the city of Paris, which President Palma had proclaimed by executive decree. More unfortunate still was the lack of any law governing the Executive, or prescribing the functions of the executive departments. Other statutes needed have been those relating to elections, municipalities and provinces, the judiciary, the armed forces, the civil service, and the diplomatic and consular corps. As if this were not enough, the abominable penal code has called for revision, and there is crying need of a new code of civil procedure, and of notarial, mortgage, and commercial laws. It is with this stupendous undertaking that the Magoon administration has been engrossed, while rehabilitating at the same time the various departments of the government.

Substantial progress in revising and

drafting the statutes has been made, thanks largely to the skill of Col. E. H. Crowder of the Judge-Advocate-General's Department of the army, who was formerly legal adviser to the military governor of the Philippines, and who has been commended for "exceptional legal ability and training" in Gov. Magoon's annual report. But though six of the new codes are either completed or in hand, but ten months remain for drafting and adopting all the others. It is doubtful whether an attempt can be made, for instance, to attack the mortgage law and the law of commerce. But even if they are put through with the others, the President's policy of withdrawal on February 1 next will throw on the new government, in addition to all its other difficulties, the task of administering this enormous mass of new law. If, as many believe, the lack of suitable laws would have got an Anglo-Saxon administration into bad trouble had one ruled Cuba in Palma's stead, certainly the sudden creation of all these new statutes will call for the highest statesmanship on the part of the Cuban government of 1909. In this field alone work which might well have been spread over ten or more years will have been crowded into two.

Similar haste has been necessary in rehabilitating the executive departments, all of which had been maladministered. For instance, the splendid public institutions, like the correctional and industrial schools and the insane asylum near Havana, built by Gen. Wood, were starved for lack of funds, or in a deplorable state from mismanagement, or else abandoned altogether. Yet the present policy calls for restoration, the installation of new methods, and the disciplining of employees within twenty-six months.

Inevitably, therefore, annexationists and anti-annexationists, Cubans and Americans alike, in Cuba, look forward with misgivings to the early withdrawal of the American government. Those Cubans who believe that they can eventually learn to govern themselves, complain that the United States will repeat its error of 1902 if it leaves in 1909 with its constructive work half done. All this, of course, is quite aside from the personality of the incoming government. But when the candidates now in sight are taken into account, the outlook for a successful Cuban government seems less hopeful. For the best Cubans, with rare exceptions, decline to participate in politics, and the candidates now in the field have no platforms and no policies save the desire for office and its emoluments. For this failure of the best Cubans to come forward, the United States is not, of course, responsible. But the situation it creates should make our government consider carefully whether in the interest of Cuba and in the United States it ought not to change its decision for a very early withdrawal; for to stay a while longer may be the best way of avoiding a third intervention. What is worth doing, in Cuba, as elsewhere, is worth doing well.

THE GOVERNOR'S FIGHT.

Gov. Hughes must be admitted even by his enemies to deserve the praise which Lincoln gave to Grant—"he fights." His public speeches on Saturday and Sunday are equivalent to a declaration that he means to fight out the battle against race-track gambling if it takes all summer. In this, there is no new departure for Gov. Hughes. From the first days of his term of office at Albany, he made it clear that his policy would be to seek from the Legislature the passage of needed laws, but, if this was refused, to go behind the Legislature and appeal directly to the people. He followed this plan last year, with the result that the obstinate Legislature finally crumpled up meekly before him. This year, with a much more clear and telling moral issue than he then had, he proposes to move immediately upon the gamblers' works.

It is a fair and honorable warfare upon which Gov. Hughes has set out. He is to fight as an honest gentleman, not as a crooked politician. As before, he spurns the suggestion that he should use the patronage of the Governorship in order to compel a surrender by his opponents. At this moment, the "boss" of Albany, against whom the church-going people of Albany have passed resolutions of strong condemnation, has in office a large number of his political mercenaries whom Gov. Hughes could throw upon the streets by a nod or a stroke of his pen. But he will not stoop to place-jobbing. He lets Boss Barnes and his underlings rail at him and vote against him, without one thought of reprisals. Their enmity he doubtless counts an aid in the moral crusade upon which he has entered. The Governor is no Odell, to get his way by hole-and-corner bargaining, log-rolling, or the vindictive use of the veto power. Neither will he compromise a moral question. He could have got the race-track bills through, amended so as to take effect September 1. But the mandate of the Constitution, like the behests of conscience, knows nothing of a time limit on absolute duty. A public vice which the Legislature is forbidden by the supreme law of the State to allow, ought not to be allowed for a month, or a day, longer than it takes to pass the appropriate legislation. It is the immediate and unescapable moral imperative, upon which Gov. Hughes stands, and will stand

That he means business, and knows how to go to work, was shown by the mass-meeting which he attended at Utica, on Sunday. It was made up of the best people of the city, who felt no qualms in coming out on Sunday to demonstrate their support of a moral cause; and resolutions were passed declaring that Senator Ackroyd had grossly misrepresented his constituents in voting with the gamblers. Moreover, a committee of prominent citizens was appointed to see the Senator in person, and convey to him in plain terms the moral sense of the community in which he lives and for which he is supposed to speak at Albany. In like manner, the church in Auburn of which Senator Wilcox is a member had a meeting in which he was called upon to cease affronting decent sentiment; and in Albany, clergymen and church-members openly denounced Senator Grattan for his course, and even had hard things to say of William Barnes, jr.

Now, this sort of campaign is one which Republicans in this State cannot afford to resist. Gov. Hughes knows how to appeal to the very bone and sinew of the party. He can address himself to the steady-going people in the country districts who still believe in "the party of moral ideas," and who give it its majorities. They may not be very rapid in their mental processes, but they can be depended upon to find out the real motives in the opposition to the Governor on this race-track issue, and to side with him, both because they think he is right, and because they believe that abhorrent political forces have been set in motion against him. An experienced observer up the State sounds a warning to Gov. Hughes's opponents, in the New York *Tribune*, when he says that, if the sober and long-headed Republicans in the rural regions "get the idea that the party leaders are devoting more time to killing the Governor's bills, in an effort to head him off from the Presidential nomination, than they are to furthering good legislation, then it'll be a sorry day for the Republican party in this State." When we add the power which Gov. Hughes has to rally the thinking and religious people of the cities, and see with what power of statement and moral earnestness he is setting forth to stir them, we begin to understand how formidable a fighter he may prove himself. Some people who professed admiration for his tenacity and courage in the insurance investigation may now have a chance to know what it is to have him, thoroughly roused, in action against themselves.

Even the politicians and gambling interests opposed to the Governor know that he is not a man to be "called off." If any one goes to whisper to him that his course will "hurt the party," Gov. Hughes will ask the question, in a loud voice, how the party can possibly be hurt by giving heed to the Constitution as it expresses the moral sentiment of the people. The argument of "regularity" will fall flat with a man who cares more for public justice than he does for the command of a caucus. So will selfish appeals with one who would rather satisfy his own conscience than promote his political chances. Let who will vote for the Governor at Chicago, or refuse to vote; he has enlisted for the whole war for a great moral cause. It is a fine and inspiriting attitude in a public servant, and the people of this State should hold up his hands.

THE EMOTIONAL RACES.

The frivolous Chinese nation is just now passing through a period of fervid anti-Japanese sentiment. The Chinese are not generally looked upon as frivolous or sentimental. But how else can we characterize behavior like that of the people of Canton, under the spur of the recent dispute with Japan over the seizure of the steamship Tatsu with arms intended for Chinese revolutionaries? The settlement of the controversy on terms regarded by the Cantonese as a betrayal of national interests has been followed by the proclamation of a boycott against Japanese products. That in itself shows a considerable amount of sentiment in the Chinese character, for even the sensitive West finds it hard to see why one should cut off his own profits just to hurt his enemy. But when supposedly staid Cantonese merchants meet in public assembly and listen to a twelve-year-old boy's recital of a dirge descriptive of China's wrongs, and thereupon tear their garments and weep and vow relentless warfare against the Japanese manufacturer, we seem to be in the presence of a new phase of Chinese character. Is Oriental stolidity not so elemental as the world has long supposed it? Do emotional stresses and conflicts find play beneath the impassive yellow and brown faces of the East? Such ebullitions as the present one at Canton or the boycott of three years ago directed against ourselves would seem to point towards that conclusion.

In the field of politics we have been receiving much enlightenment these last few years concerning the true nature of the unchanged and unchanging East. Asia no longer lifts her brooding eyes to watch the armed legions thunder by, and drops them again. Chinese stolidity, Hindu quietism, Persian supineness are fast being disproved by such supposedly Occidental circumstances as political agitation, revolution, constitutionalism, and parliamentarism. Mr. Kipling's "East is East and West is West" is being as vigorously assailed as it was warmly received only a few years ago. Is it true, then, that also in matters non-political the Asiatic stands much nearer to ourselves than we have believed, or been willing to believe? The capacity for emotion, for refined sensation, has been there in the Eastern soul; only we have been the victims of ignorance and faulty interpretation. We choose to look upon the ceremony of hara-kiri as an exemplification of physical impassivity; why not emphasize its character rather as one of the most striking manifestations of the sentimental? The devotees who cast themselves under the wheels of Juggernaut are to us the victims only of a religious mania; but H. W. Nevinson has finely said that this is because the Western mind finds it practically impossible to understand a longing for reunion with infinity so passionate as to impel towards self-destruction. And Mr. Nevinson goes on to state, perhaps too bitterly, his preference for the sentiment underlying the practice of widow-burning in India over the sentiment that explains the astonishing popularity of "The Merry Widow" in the West.

But why only Asia? In the West we have fallen into the habit of ranging the nations in a certain gamut of the emotions. There is at one extreme the Slav nature, the "temperament" *par excellence*, built up almost solid out of feeling. Then comes the Latin temperament, in which training tempers blood; and so on through Scandinavian mysticism, German sentimentalism, American dash, tinged with a trace of neurosis, and finally British—what shall we call it?—unemotionalism, rigidity, frigidity? In any case, that is, in broad lines, the accepted gradation. Yet as when drawing distinctions between West and East, we here are victims of the fallacy of generalizing on more or less superficial manners. Do Frenchmen always weep on the slightest provocation, and Englishmen never? Does the British temper always run to facts and figures, and the Celtic temper to fairy-lore? Mr. Chesterton has declared that Nelson's dying words, "Kiss me, Hardy," are typical of the English nature, and Mr. Bernard Shaw has used the same incident of Nelson and Hardy to point out the contrast between the poetic emotionalism of the average Englishman and the matter-of-fact Irish temperament. As between American high-tension and British self-control, we have the famous experience of "Mr. Dooley" at an international athletic meet in England. He had enjoined himself not to let his American exuberance put him to shame before a vast crowd of calm-faced Englishmen. He had watched one American athlete after another carry off the honors without emitting a cheer. And it was only when, in one of the close sprints, his British neighbor leaped into the air and smote him on the back and besought the English runner to give his lantern-jawed American competitor the elbow, that "Mr. Dooley" turned toward his neighbor and remarked: "If it were not for the Anglo-Saxon brotherhood and our common heritage, I'd paste you in the eye." Like most of us, "Mr. Dooley" had been too credulous of tradition.

Anglo-Saxon unemotionalism will be vindicated only when we have no Mafeking nights in London, no anti-Japanese window-breaking in San Francisco, no fisticuffs on the floor of Congress, no appeals to the Flag to justify robber-tariffs or subsidies, no surrender to the fear of sudden crime-waves, no foamings at the dangers of socialism and anarchism, no more new religions having for their basic principle the influence of altruistic love on the diaphragm, no vast alternations between hope and despair with the varying tone of Presidential messages. The lines of temperament between people are vanishing before a closer observation and sympathy. All peoples keep a check upon themselves, and all peoples are apt to go off their heads. The two most emotional rulers of nations to-day are an American and a German. Contrast Mr. Roosevelt and William II. with M. Fallières and Victor Emmanuel III., and the accepted perspective changes.

SHAKESPEAREAN MEMORIALS AND NATIONAL THEATRES.

Enthusiastic believers in the efficacy of a national or an endowed theatre as a cure for all the evils of the contemporary stage are conducting a lively agitation just now on both sides of the Atlantic. That an unearned income is the one thing essential to the establishment of the ideal theatre they are all agreed, but on most other points they are widely, not to say hopelessly, at variance. In England the excitement was started by the report of the special committee on the proposed World's Memorial to Shakespeare. These gentlemen, after months of deliberation, came to the conclusion that a magnificent monument of some sort, to which all the world—meaning chiefly the United States, outside of Great Britain and her colonies—might contribute, would best fulfil the purpose. They thought that if a vast sum of money were to be expended, it would be wisest to have something solid, permanent, and generally intelligible.

Their scheme was no sooner announced than it was attacked on all sides by persons who had plans of their own, or had hoped to benefit directly or indirectly by the subscriptions. The advocates of a national theatre, headed by John Hare, are loud in protest. Apparently, they had been regarding the memorial as a providential aid for their own pet project, and, in their disappointment, they eloquently denounce the folly of permitting some sculptor to disgrace London with another monstrosity. Others declare in favor of a theatre for Shakespearean or Elizabethan representations only. Several of them quote Milton to prove that Shakespeare needs no monument at all, without perceiving that the famous lines might apply to a theatre just as well as to a statue. A third party, with some dim glimmering of the necessities of the case, urges the establishment of an academy of dramatic arts.

It is not our purpose to discuss the merits of these rival memorials, but to point out one remarkable feature of the voluminous correspondence provoked by them. All the advocates of an endowed theatre confidently enumerate the advantages which, as they assume, must inevitably arise from it without showing any comprehension of the formidable preliminary difficulties which must be overcome before any theatre, justifying its endowment by its manifest superiority, can open its doors. They seem to imagine that nothing but money is required to produce an ideal theatre. most without exception they ignore the fact, patent enough to all experienced students of the stage, that the first, indispensable, and most onerous step in any such undertaking, if it is to have a chance of real success, is the creation of a body of new and competent players, able to acquit themselves without discredit in widely different types of drama. No such organization could found to-day, even if all the "stars" were pressed into service. It would be comparatively easy to find performers fairly efficient—according to their law of perpetual self-reproduction—in the modern social, realistic, or emotional play; but the English-speaking performers capable of satisfactory work in poetic romance or tragedy, or the older artificial comedy—in all those higher branches of the drama, in a word, which require eloquence, passion imagination, or style—may be counted on the fingers of one hand. Fifty years ago England had what was practically a national theatre. It was called Sadler's Wells, and was situated in Islington. In that poor suburb Samuel Phelps and his associates played the English classic drama—Shakespeare, Jonson, Congreve, Beaumont and Fletcher, Marlowe, and others—as it has never been played since, and drew all cultivated London for nearly twenty years. He had no subsidy, but he had actors.

Until these have been secured, a national or Shakespearean memorial theatre is but a dream. It would be more prudent to begin at the beginning and make sure of the company before building a costly theatre to put them in. And this is a consideration which the promoters of the New Theatre in this city might find it worth while to ponder. There are noble possibilities in the enterprise they are planning, if they will only realize that there are some things which no amount of money, but only patience, experiment, tact, and drill, can procure. It is understood that their aim, and expectation, is to furnish performances varying in character, each of which shall be thoroughly good of its kind. This is most praiseworthy. What they need for the purpose is malleable youth—such as F. R. Benson impresses into his service—and they cannot be to active in the search of it, or of the proper men to train it. The notion that there is an abundance of ready-made talent is a delusion which, if it exists, is likely to cost them dear. Their theatre will lose all significance if the performances do not from the first exhibit a degree of artistry superior to that of any rival.

There is something pathetic in the faith, here and in England, in the potency of endowment to foster art. No one doubts that the existing commercial syndicates have made the stage a by-word and a cause of hissing; yet, in their way, they have brought greater financial prosperity to the stage than it has ever known before. They have destroyed art, but they have multiplied theatres and given steady employment and assured salaries to thousands o performers, who, without them, woul have starved. Poverty and competitio are, and always have been, the hotbed of genius. The subsidized theatres of the European Continent, the Français and others, are good conservators of traditions, and therefore valuable as books of reference are. But even in traditions they no longer have any monopoly, while the greatest actors of modern times, Edmund Kean, Macready, Phelps, the Booths, Salvini, Duse, Bernhardt, Irving—not to mention others—profited by no protection, state or other. What our stage needs is not coddling, but a dose of wholesome adversity.

PARIS BOOKNOTES—CORRESPONDENCE AND BIOGRAPHY.

Paris, March 20.

The "Correspondance de Stendhal (1800-1842)" is published in three volumes by Ad. Paupe and P. A. Cheramy, with a preface by Maurice Barrès—an ingrained Stendhalian as are so many of the rising intellects of France. Stendhal was a true prophet in his own case; he foretold that the obscurity which so persistently hovered over his work during his lifetime was to lighten in the eighties. Within twenty-five years he has become a Doctor of Young France. Hence the interest of his letters, which also have value from the light thrown on the history of his time, of which he was most observant. More than 700 letters are given, of which 200 are published for the first time. The first volume comprises the years of apprenticeship (1800-1806), and of active life (1806-1814); the second shows the man of the world and *dilettante* (1815-1830); the third is from the state functionary and novelist (1830-1842). There are three portraits, and the index has more than 3,000 names of persons, literary works, journals, and the rest.

The second volume of Émile Zola's Correspondence dates from the end of the formation of his mind and character, where the first volume left him. In 400 pages it gives all his letters, which it has been decided to publish concerning letters and art. Its main interest is from the light which it sheds on the history of his work from 1864 until his death. During the first years, when he was making his way slowly and painfully, his chief correspondent was Antony Valabrègue, a Parnassian poet and art writer, who had studied with him at Aix. Curious passages show the growth of his final naturalism from an embryo theory of the art work as "a window opened on creation; and, framed in the window, there is a transparent screen through which we see objects more or less distorted, with changes depending on the nature of the screen." There is the classic screen, the romantic, and the "realist," which the young writer prefers while waiting to work out his full theory. In the course of time he feels called on to write to various friends and critics, such as Jules Lemaître and others whom Dreyfus politics later sundered from him, in defence of the ever increasing coarseness of his writings. Later still, when his "Débâcle" was cried out against as an insult to France, he used the one argument which he was to carry with him into the political fray that has won him burial in the Panthéon—"to tell the truth." He never seems to have doubted his own knowledge of the truth or have suspected that there was other truth which ought singularly to modify the relief in which he set his own limited human documents.

As Zola, in literary art, held from Flaubert, so Flaubert owed much to a now almost forgotten writer, Louis Bouilhet, whom friendships with a generation that was revolutionary in art should save from oblivion. Étienne Frère has written a volume on his environment and heredity and friendship with Flaubert, who called him "my literary *accoucheur*, my conscience and compass."

"Jules Verne (1828-1905)," by Charles Lemire, should have a welcome from many of the numberless readers who have nourished a youth sublime with his fairy tales of science. This modest biography of an uneventful existence, given over to correct living and unwearied labor in writing many books, portrays the man, the writer, traveller, and citizen, his work, and the memory and monuments he has left behind him.

Special readers will be interested in two biographical works from unpublished documents of the thirties, years of intellectual ebullition. The first, "Un Romantique sous Louis Philippe," by Adolphe Boschot, is devoted to Hector Berlioz's storm and stress from 1831 to 1842. The other is the second volume of Abbé Charles Boutard's "Lamennais," dealing with the not less stormy Liberal Catholicism in its beginnings from 1828 to 1834. Arvède Barine (Madame Vincent), in one of her entertaining volumes of popular higher literature, writes of sample authors of that erratic time under the title "Poètes et névrosés"—Hoffmann, De Quincey, Edgar Poe, and Gérard de Nerval. Dr. R. Gourg, a doctor of letters whose book was perhaps a university thesis, writes of an older man, whose influence cannot be easily estimated among all that youth drawing its inspiration from Shelley and Byron, most of all on the Continent—"William Godwin (1756-1836)." The same author publishes, along with a French translation, a study of the "Commonplace Book" of Berkeley, the philosopher.

S. D.

NEWS FOR BIBLIOPHILES.

In the Pyser auction in this city a few weeks ago, there was sold a copy of the Second Series of Lowell's "Biglow Papers" with London imprint, dated 1865. The catalogue contained this note; "The very rare First edition antedating the first American issue by two years." Though three copies had previously turned up in Boston sales, this was the first to be offered publicly in New York. The Second Series of the Biglow papers was printed first in the *Atlantic Monthly* and collected into a volume published in Boston in the autumn of 1866, though the title is dated 1867. Meanwhile, from the types of the magazine a few "separates" were taken of "Mason and Slidell," the second of the series, but, so far as is known, not of any others. That there were earlier London editions is not generally known, but the various issues enumerated below show that the work was very popular in England. All were bound in fragile paper covers and are extremely rare. There is a nearly complete set in the British Museum, and the following descriptions are in part from those copies.

(1.) The | Biglow Papers. | By | James Russell Lowell. | Second Series. | Part I. Containing | 1. Birdofredum Sawin, Esq., to Mr. Hosea Biglow. | 2. Mason and Slidell: a Yankee Idyll. | Authorized Edition. | London: | Trübner & Co., 60, Paternoster Row. | 1862.

Title, with imprint on the reverse and pages 3-52 of text, the imprint being repeated at the bottom of p. 52. Pink paper covers, the first page printed from the types of the title-page, but surrounded by a rule. Below the rule is "Price One Shilling."

(2.) Similar to Part I., but lines 6 to 8 read "Part II. Containing | 1. Birdofredum Sawin, Esq., to Mr. Hosea Biglow. | 2. A Message of Jeff Davis in Secret Session."

Title, with imprint on reverse, and pp. 53-90 of text, the imprint being repeated on p. 90. Issued in the same form as Part I., but above the rule on p. 1 of cover is found "Originally published in the Atlantic Monthly."

(3.) Similar to Parts I. and II., but lines 6 to 9 read "Part III. Containing | 1. Speech of Honourable Preserved Doe in | Secret Caucus. | 2. Suthin' in the Pastoral Line."

Title and imprint and pp. 91-120 of text; no imprint on p. 120. The cover is like that of Part II. These are all dated 1862 and the copies in the British Museum were received there on August 9 of that year. These three parts together form signatures A, B, and C, each 8 leaves; D, 2; E and F, each 8; G, 4; H and I, each 8. The three title-pages (those of Parts II. and III. not being included in the pagination) are A1, E1, and H1.

(4.) The | Biglow Papers. | By James Russell Lowell. | Second Series. | Authorized Edition. | London: | Trübner & Co. 60, Paternoster Row. | 1864.

Title, with imprint on reverse; Contents, reverse blank, and text, pp. 3-133; with imprint on pp. 52, 90, and 133. It is made up of the identical sheets of the three separate parts with additional leaves at the end. The titles, dated 1862, have been torn out, so that signatures A, E, and H each have seven leaves only; in place of A, the new title and contents are pasted on. In two copies examined the original stab-holes for Part II. are visible, showing that bound copies of that part had been used. The additional leaves are signatures I and K, each 8 leaves, K8 being blank and used as a pastedown. The front cover is printed from the types of the title-pages but surrounded by a rule.

(5.) Title, text, pagination, and signature marks are identical with the preceding (No. 4) and differing only by the absence of imprints on pages 52 and 90. The cover of this issue is of glazed paper; that of the earlier issues being unglazed. The British Museum copy was received November 2, 1864.

(6.) The | Biglow Papers | By | James Russell Lowell. | Second Series. | Authorized Edition. | London: | Trübner & Co., 60 Paternoster Row. | 1865.

The paging is identical with the preceding, the text ending with page 133, with imprint at foot. The book was resignatured for more economical printing. The title is one leaf printed separately and pasted on The contents (A1) and text are signatures A to H, each 8 leaves, and I, 4, the last leaf blank, and pasted down on the back cover. In pink glazed paper. The copy sold in the Pyser sale was of this edition.

(7.) The | Biglow Papers. | By | James Russell Lowell. | Second Series. | Authorized People's Edition. | London: | Trübner & Co., 60 Paternoster Row. | 1865.

This edition, though printed from the same plates, shows slight variations. The title and cover now read "Authorized People's Edition," instead of "Authorized Edition," as in the earlier forms; there is no imprint on verso of title; a new chapter is added, filling pp. 134-141, and the table of contents has eight numbers instead of seven. The signatures are again rearranged, the book now consisting of signatures A to I, each 8 leaves, the title being A1. It was issued in green paper covers, with "Price one Shilling" at the top above the border.

Preston A. Perry, well known in the West as a lecturer on book collecting and allied subjects, carried with him a number of rare and interesting manuscripts, books, and bindings, to exhibit before his audiences. His collection is to be sold by the Anderson Auction Company of this city April 21 Many unusual items are included, among them a Latin Bible in manuscript, in two volumes, with the date 1447; Wendelin of Speir's Lactantius, Venice, 1472; a large fragment of Jenson's Pliny, 1472; the Nuremburg Chronicle, 1492; Brandt's "Stultifera Navis," 1498; the Dante of 1481 with two plates by Botticelli; Fabyan's Chronicle, 1533; Fraunce's "Lawyer's Logike," 1588; More's "Utopia," 1556; an imperfect Fourth Folio Shakespeare; a "chained book"; a papyrus of the Book of the Dead said to have "come from a mummy probably about 2000 B. C."; and Persian, Hebrew, Arabic, Pali, and Japanese manuscripts. Included also are specimens of the works of the principal modern binders.

Correspondence.

PORTALA.

To the Editor of The Nation:

Sir: Alfred Webb. in the *Nation* of April 9, asks about Portala, mentioned in Bret Harte's "Angelus." Portala was the first governor of California, 1767-1770. A fairly complete account of his administration may be found in Hittell's "History of California," Vol. I, pages 509-10. The cross mentioned in Bret Harte's poem is described in the same volume, page 328. In the histories, the name is usually spelled Portola.

Demarchus C. Brown, Librarian.

Indiana State Library, Indianapolis, April 11.

To the Editor of The Nation:

Sir: Portala, the subject of Mr. Webb's inquiry, was evidently Capt. Gaspar Portolá (known also as Gov. Portolá), who, in 1769, led an expedition by land from Lower California to the present site of San Francisco—of which expedition he gave an account in his "Diario del Viage á la California." "The swart commander in his leather jerkin," of the stanza preceding the lines quoted in the inquiry, stands presumably for him; and "the priest in stole of snow" of the next line for Padre Junípero Serra, who accompanied the expedition as head of the missionaries and figures as the "pious Padre *Serro*" in "The Miracle of Padre Junipero," likewise by Mr. Harte.

For a full account of the expedition your correspondent is referred to Chapter vi. of Vol. XIII. of Hubert Howe Bancroft's "History of the Pacific States of North America," which volume is the first of five devoted to California. Prof. Josiah Royce, who gives an abstract of this chapter in his volume on California in the American Commonwealth Series, follows Bancroft in his spelling of the Governor's name, Portolá. As regards Harte's version of the name, to which he adheres in the poem, "Friar Pedro's Ride," it appears that "The Angelus" was written in 1868, while Bancroft's history, based upon documents which Harte in all likelihood had never seen or heard of, was in process of publication in 1886. In Palou's biography of the padre, the Governor's name is given without the accent on the ultimate.

C. H. Coxe.

Philadelphia, April 11.

A BIOGRAPHY OF DR. RICHARD HODGSON.

To the Editor of The Nation:

Sir: The friends of Dr. Richard Hodgson think it desirable to collect material for a biography of him and his work in psychical research, and I am desirous of securing correspondence with him that may be loaned to us for this object. All such correspondence will be copied and filed, and the original letters returned to the owners. The copies will be placed in the hands of a suitable biographer as soon as he has been selected. No public use of such material will be made except in the manner prescribed by his biographer. It would also be desirable to have the loan of any other material than correspondence that may be serviceable in the work, whether it be discussions, personal anecdote, or impressions of the man. Privacy in all these matters will be duly respected.

James H. Hyslop.

No. 519 West One Hundred and Forty-ninth Street, New York, April 11.

Notes.

Fifty new titles are now added to Everyman's Library of E. P. Dutton & Co., bringing the total up to 318. And with the new books comes the announcement, of which the publishers excusably make some boast, that the price of the whole series has been reduced from fifty cents to thirty-five cents the volume.

"The Life and Correspondence of John Thadeus Delane," editor of the London *Times* from 1840 to 1876, has been compiled by his nephew, Arthur Irwin Dasent, and will be published this spring by Scribners. Those were the days when the *Times* was

England, and the memoirs ought to be interesting.

A new sketch of the lives of Bishop Ken and Izaak Walton, by Edward Marston, known as "The Amateur Angler," is said to make a considerable amount of material accessible for the first time.

The Cambridge University Press (Putnams) is about to issue the Latin text of St. Augustine's "Confessions," with English notes by Dr. John Gibb and William Montgomery.

In May we are to have from Doubleday, Page & Co. a new novel by Maurice Hewlett. His theme this time is the Spain of fifty years ago, and the title is "The Spanish Jade."

W. P. Ker's excellent essays on mediæval literature, called "Epic and Romance," have been added to the Eversley series of the Macmillan Company.

The January number (Vol. II., No. 1) of the *American Journal of International Law*, belated and just issued, may be regarded as a Hague Conference number. Dr. James Brown Scott, its managing editor, who was a delegate to the Conference, contributes the opening paper, discussing the work of that Conference; the articles that follow consider more in detail, and perhaps more technically, certain phases of the general subject. The results of the Conference, concerning which some skepticism has been expressed, are clearly summarized by Dr. Scott: provision for meeting in eight years for a third session; a convention for the non-forcible collection of contract debts, substituting arbitration for an appeal to arms; the establishment of a prize court to safeguard the rights of neutrals; laying the foundation of, if not putting the finishing stone to, a great court of arbitration. The Supplement, itself a pamphlet of 265 pages, contains a number of important documents connected with the Hague Conference, and is therefore very valuable for reference.

According to the English newspapers, the name of Dr. Stephen Paget, son of the famous Sir James Paget, surgeon to Queen Victoria and King Edward, ought to be on the title-page of the "Confessio Medici" published by the Macmillan Company. It is a pleasant book, whoever is the author. Like the "Religio Medici," which suggested half its name, it is the proclamation, by one compelled by his trade to "rake in the bowels of nature," of life's underlying mystery, and of his faith in the human soul. There is much talk of other things, by the way: here a fling at Christian Science ("I should like to collect and publish what our chief physicians and surgeons know of the works of Christian Science," he says; and we wish he would do it, and that the "healers" would then collect and publish what they know of doctors), here a few words about that gossiping soldier and physician Paré (famous for his saying "Je le pansay et Dieu le guarit"), and again an expression of the joys of hospital life which may not be so clear to the doctor's readers and patients.

The Cambridge Poets of Houghton, Mifflin & Co. are now so well known that nothing need be said of the general form and appearance of the new "Spenser," edited by R. E. Neil Dodge. If anything, the type seems to be even clearer than in some of the earlier volumes, where, as here, much matter is crowded within single covers. In the case of Spenser, more than of almost any other poet, the accuracy of text is important. He was a deliberate archaizer and inventor; his forms and even his spelling are an integral part of his designed effect. We cannot say that we have compared the present text with the originals, but it is fair to believe that in this respect the most scrupulous care has been exercised. The printers' "copy," according to the editor's statement, was collated throughout with the original editions in the British Museum, and the proof-sheets were again, for the most part, compared with the same editions procured in this country. We think Mr. Dodge was right in retaining the spelling of the 1590 text of the first three books of "The Faerie Queene" rather than that of 1596. We are not sure that he has been justified in conforming the use of capitals to modern practice, but no one can object to the expansion of such contractions as "Lo," to Lord, or to the modernization of the punctuation. As for the editorial apparatus, we note one grave error, as it seems to us. Archaic and obscure phrases are explained in the Notes, or in the Glossary, or in both. Now the only really convenient method is to give such explanations at the foot of the page, or, as is done so admirably in the "Folio Shakespeare," on the side margins; it is annoying to have to turn from the page one is reading to some out-of-the-way place at the end of a book whenever a word is dark, and especially exasperating when there is a doubt as to which of two such places must be consulted. The plan of the Cambridge Poets may have vetoed the use of marginal interpretations, but at least all the obscure words might have been gathered into a single alphabetical glossary. For the rest, we have only commendation for Mr Dodge's work. The Biographical Sketch is based on full knowledge, and the various Introductions are critically sound. It is a pleasure to observe that Mr. Dodge does not attribute the *longueurs* (of which some unfit readers complain) of the poem to the allegory. "Indeed," he says, "this supposed domination of the poem by allegory, the allegory of abstractions, will hardly bear the test of simple reading." It is the high and aerial quality of the poem, and its corresponding lack of substantial passion, by which such readers are really repelled. Altogether, we may commend this as the best edition of a poet still warmly cherished by a select audience. So far as we have looked into the Notes, they are well-informed and useful.

Miss Dorothy Neville Lees has added a pleasant sequel to "Scenes and Shrines in Tuscany" in her "Tuscan Feasts and Tuscan Friends," published in an attractive form by Dodd, Mead & Co. Here, as in her earlier book, she describes many phases of rural Tuscan life, which, living as governess in Florentine families who spent their summers among the hills of Tuscany, she has had exceptional opportunities for observing. Her descriptions of the life at a beautiful Italian villa, of the household servants, and the neighboring *contadini* are full of interest. With humor and vivacity she draws a delightful picture of certain Tuscan children—of the little Bianca Maria, her quaint and winning seven-year-old charge; of Pio, aged three, almost an ancient Roman in his solemnity and dignity; and of some of the *ragazzi* among the servants at the villa. Among the particularly good chapters are those giving an account of a Tuscan fair, of the funeral of a *contadina's* baby, of the exquisite Tuscan irises and the preparation of the orris-root perfume. All this and more is interesting, although it is interlarded with commonplace statements of well-known facts. The book has two irritating blemishes. Miss Lees is so stirred by Italy's fatal gift of beauty that she pauses continually to soliloquize in platitudes with exuberant sentimentality. It should be said, however, that she offends in this respect less than in "Scenes and Shrines." The other defect is her habit of translating the remarks of her Italian acquaintances literally from the Italian idiom and in the Italian order, and by this libellous method making the most graceful appear the most imbecile of tongues. Bianca Maria is climbing a hill; she exclaims, "Am hot . . . and I have need to repose myself; in this coat so thick I arrive never at the top." There are few errors apart from occasional misprints; but we must admit that Miss Lees appears to be strong in credulity, when she accepts the story of Dante's recall to Florence (in 1316), and weak in ethnology, when she says that the original home of the Pelasgi was near the Land of Uz.

"The Log of the Laura in Polar Seas," by Bettie Fleischmann Holmes (privately printed at the University Press, Cambridge, Mass.), is a rather elaborate diary, of a hunting cruise in the summer of 1906, to Spitzbergen, East Greenland, and the island of Jan Mayen. The style is pleasing and unaffected. The party encountered no musk-oxen or walrus, but found plenty of use for their guns, and secured numerous seal and a score of polar bears. Although both the flesh and skins of the specimens bagged were generally put to good use, the repeated accounts of the killing of wild creatures—such incidents as the shooting of one hundred auk "in a short time"—nevertheless form an unpleasant feature of the book. The scientific value of the cruise was small. It is as an example of fine bookmaking that the volume is chiefly noteworthy, and the best of taste on the part of the editor has saved it from all appearance of pretentiousness, in spite of the sumptuous Italian paper, the handsome Bodoni type and the numerous beautiful photographic reproductions. Unfortunately the book is without an index and is provided with an inadequate map.

"The Career of a Journalist," by William Salisbury (New York: B. W. Dodge & Co.) is a vulgarly written account of vulgar experiences. It is a book, nevertheless, to provoke disquieting reflections in those who look upon our newspapers as an important influence in shaping the tastes and opinions of American citizens. The author professes to have been engaged for nine years, chiefly as a reporter, on Western dailies. He relates his achievements with an appearance of entire frankness; and though he has obviously touched up the incidents somewhat in order to make them more interesting, he has told the unhappy truth only too often. With all allowance for smartness and exaggeration, the tale is in certain large essentials veracious; it is substantiated by the tone of the newspapers to which he says he contributed. He offers a convincing explanation of some of their most repulsive traits, namely their sensationalism and their subserviency to the advertiser.

"The English Reformation and Puritanism, with other Lectures and Addresses," by Eri B. Hulbert, a memorial edited by A. R. E. Wyant, has been issued by the University of Chicago Press. Dean Hulbert was a hard-working teacher and executive officer in the university, who, after several years in the ministry, had turned to the teaching of church history. This volume contains as Part I. a number of addresses, testimonials, and other tributes, to Dr. Hulbert, all of which, by an error in the table of contents, are credited to the editor. The second part consists of a dozen lectures on the English reformation and Puritanism, with seven occasional addresses. Among the latter are two of considerable interest to the general reader. One is an exposition of the English Education Act of 1902; the other, entitled "The Man and the Message for the Twentieth Century," contains this passage:

> I do not know whether man ascended from the lower animal kingdom or not. My personal knowledge on these abstruse topics is extremely limited. Candid and qualified men who have given their lives to the investigation pronounce an affirmative verdict. I am not prepared to say they are wrong. . . . The fundamental saving and ethical truths of Christianity remain the same.

The implication is added that any theological system being adapted to the age in which it flourishes is almost necessarily ephemeral. In general we may say that Dr. Hulbert's point of view is elevated, his horizon broad, and his purpose sincere. His lectures are therefore good history and not cramped by the immediate purpose for which they were prepared. We may differ from some of his judgments, his estimate of Elizabeth, for example; but in most cases, as in this, the difference is over an historical conundrum. Dr. Hulbert's modesty prevented his printing any considerable work during his life, so it is eminently proper that the best he has left behind him should be put into permanent form for the use of his friends and admirers.

"Jesus Christus für unsere Zeit" is a volume containing a series of lectures by Prof. J. Haussleiter of Griefswald, Prof. Wilhelm Walther of Rostock, Prof. Wilhelm Lütgert of Halle, Superintendent T. C. H. Kaftan of Kiel, and Prof. Erich Schaeder of Kiel, all men of the conservative school. Among the special topics are the Life of Jesus, the Personality of Jesus, the Teachings of Jesus, and the Uniqueness of Jesus and of His Purposes, (Hamburg: Gustav Schlovessmann).

A. Huck, pastor in Schiltigheim, whose excellent Greek synopsis of the gospels has recently been issued in its third edition, has now in the press of Mohr, Tübingen, a "Deutsche Evangelien-Synopse," containing, besides the parallel texts of the three Synoptic Gospels, extracts from John's Gospel and data from extra-canonical sources.

In a small work of less than a hundred and fifty pages, entitled "Loca Sancta," (Halle: Rudolf Haupt), Dr. P. Thomsen, furnishes a carefully selected and arranged list of all the places in Palestine mentioned in the writings of the first six Christian centuries. The work supplements the edition of Eusebius's "Onomasticon," issued about three years ago by Erich Klostermann, but carries the subject down to the rise of the Moslem power. An excellent index and a map make the book valuable in studying the geographical problems of the Old and the New Testament.

"Die religiöse Frage im Lichte der vergleichenden Religionsgeschichte," by Dr. G. Brunner (Munich: C. H. Beck), aims, by a comparison of the principles of Christianity with those of other religions, to prove the superiority of the former.

Dr. A. W. Hunziker of the University of Leipzig publishes an interesting investigation, in his brochure entitled "Der Glaube Luther's und das religionsgeschichtliche Christentum der Gegenwart" (Leipzig: Georg Böhme). He tries to prove that the current critical conception of Christianity does not derive from Luther and his teachings.

The commemoration of the centennial of the birth of Johann Hinrich Wichern, the father of that vast enterprise known as Inner Missions in Germany, occurs at Easter of the current year. The occasion will be marked by the appearance of a number of publications dealing with Wichern and his works. The most important is "Joh Hinr. Wichern's Lebenswerk in seiner Bedeutung für das deutsche Volk," by M. Hennig, director of Wichern's famous institution in Hamburg, known as Das Raue Haus, where this biography is published. This book is really a collection of six essays by specialists on the educational principles and social reform programme of Wichern. His movement has permanently modified practical church work in Germany.

Martin Schanz's first volume of the "Geschichte der römischen Literatur," bearing the special title "Die römische Literatur in der Zeit der Republik," has been issued in a third and thoroughly revised edition, more than doubled in size (Munich: C. H. Beck). It is one of the series known as Handbuch der klassischen Altertumswissenschaft, edited by Iwan von Müller.

The new "Balladen-Buch," edited by Ferd. Avenarius (Munich: Callwey), is a complementary volume to the excellent "Hausbuch deutscher Lyrik," and reproduces the best modern German ballad poetry. The book contains portraits of Arnold Böcklin, J. V. Cissarz, Angelo Jank, Max Klinger, Moritz von Schwind, Hans Thoma, Albert Welti, and Ludwig von Zumbusch.

"Aus Mexiko," by Orla Holm, with *Beiträge* by Ralph Zürn (Berlin: Fontaine & Co.), is one of the better class of studies dealing with the peoples of a foreign country. Its contents are historical and descriptive, evidently based on more than a passing visit. Herr Zürn in his contribution has set forth the value of Mexico as a land for German colonization.

The Engberg-Holmberg Publishing Company of Chicago announces as almost ready a college edition of the Swedish poet Tegnér's "Frithjofs Saga," with introduction and notes by Prof. George T. Flom of the University of Iowa. A special feature of this edition will be an account of all translations of the poem.

Two moderate volumes recently published in Paris offer compendious acquaintance with the writings of two authors of our time, who seem to have made successful appeal to posterity. "Les Plus Belles pages de Clemenceau" are chosen from the narrations, social philosophy, journalism and criticism, and eloquence of one whose distinguished literary talent has been somewhat obscured by a stormy political career. "Vingt-cinq années de vie littéraire" of Maurice Barrès is prefaced by the rising Clerical critic, Henri Bremond; the volume shows a talent soaring with age to higher accomplishment, beginning with the intensive culture of the Ego and ending seemingly in absorbing race passion, caught from indulging in politics as a sportive distraction. These two authors, one of the Revolution and the other of the counter-Revolution, alike belong to the noble classic tradition of French prose.

The publisher Emilio Treves of Milan has asked Prof. Dino Mantovani of the University of Turin to write a biography of Edmondo de Amicis, and has supplied a large amount of material, including letters and unpublished manuscripts.

An exhibition of text-books and of other means of instruction in modern languages will be held in connection with the meeting of the National German-American Teachers' Association at Milwaukee, Wis., June 30 to July 3.

The third meeting of the New England College Librarians will be held at Radcliffe College, April 27. Dr. John S. Billings of New York will deliver the address.

There is to be next September a grand celebration of Tolstoy's eightieth birthday in St. Petersburg or Moscow. A central committee has been formed in Russia to take charge of the proceedings, aided by branch associations in other countries. The following persons have already consented to serve on the British committee: George Meredith, Thomas Hardy, H. G. Wells, Henry James, the Hon. Maurice Baring, J. M. Barrie, J. Galsworthy, Prof. G. Murray, Bernard Shaw, Laurence Irving, Sir Donald M. Wallace, Aylmer Maude, Mrs. Garnett, H. W. Nevinson, A. Sutro, Lord Redesdale, the Earl of Lytton, Maurice Hewlett, and Prof. P. Vinogradoff. Edmund Gosse will act as president of the committee. Besides the international address to Tolstoy on the occasion, it is proposed to issue a cheap edition of his principal works in the leading languages of Europe. To this end contributions are solicited.

We have to announce the death of three distinguished Oriental scholars: Prof. Gustav Oppert of Berlin has died at the age of seventy-one. His first work of importance was done in the Bodleian Library, where he catalogued the collection of Hebrew manuscripts. He was then appointed sub-librarian at Windsor Castle, and in 1872 was made professor of Sanskrit at Madras. He returned to Europe in 1894, and the next year was appointed professor of the non-Aryan languages of India in the Berlin University. He has to his credit many works on the weapons, commerce, religion, and dialects of India. C. A. C. B. de Meynard, aged seventy-two, was at the time of his death professor of Persian and Arabic at the Collège de France. For a while he had been attached to the French legation in Persia. He is the author of a "Dictionnaire turc-français" and other books on Oriental subjects. Hartwig Derenbourg, who was born in 1844, died in Paris April 13. He was a chevalier of the Légion d'honneur, and distinguished otherwise by various titles and offices. In 1889-1900 he edited the fourth part of the "Corpus Inscriptionum Semiticarum," and he has also to his credit a long list of philological and biographical works dealing with Arabic subjects.

THE DYNASTS.

The Dynasts, a Drama of the Napoleonic Wars. In three parts, nineteen acts, and one hundred and thirty scenes. Part III. By Thomas Hardy. New York: The Macmillan Co. $1.50 net.

Four years ago we gave a dazed and tentative notice to the first part of Mr. Hardy's huge closet drama. We were impressed by the fine martial stir of the piece,

> Clamorque virum clangorque tubarum,

by the startling stage directions whereby the reader was deified into a spectator sitting above the clouds, beholding Europe far below stretched out on the map like "a great tiger," by the marching and countermarching of vast armies, but as the creeping of insects, and by the ghastly vividness of certain other annotations wherein a blind, inanimate will is seen stretching its filaments through the destinies of millions of human puppets. Yet, as a whole, the first part seemed to us a *succès manqué*, a piece of imaginative incunabula, the characteristic product of a moody, or, as Mr. Hardy calls it, a "nervous and quizzical" age, a product which might some day, in an age of stronger artistic feeling, be made by another hand the basis of a masterpiece. On the appearance of the second part, two years later, we found ourselves still more deeply impressed with the things that were striking in the first part. We found, too, the philosophic adventure of the piece, the exhibition of the mutations of history as the operation of

> Unmaliced, unimpassioned, nescient Will,

enlisting along with our admiration a kind of anxious interest that gave the poem power not only over our "nervous and quizzical" intellects, but even over our hearts. We began to suspect that we had not done justice to the first part. Now, with the publication of the third and last part, that suspicion has become a certainty. We have read the final volume with the complete absorption of every faculty, and going back from it to read again the first and second parts, with the original preface wherein the plan of the whole was laid down, we have become aware of a work marked, despite its superficial uncouthness, by a colossal unity and a staggering significance—a fitting and in a way a triumphant climax to that long series of novels in which Mr. Hardy has embodied both his poignant knowledge of the world of men and his grim, undeluded philosophy.

The enterprise in "The Dynasts" is nothing less than a new justification of "the ways of God to man." For Mr. Hardy there was considerably more to justify than for Milton. The seemingly purposeless wars that made the rivers of Europe run red with blood and brought anguish to a million homes, were rather more stubborn facts to explain than a dim traditional "Fall." Napoleon, "The Christ of War," as Mr. Hardy audaciously calls him, was, too, a more vital and compelling figure than the fallen Prince of Darkness, while "The Great Foresightless" that he candidly substitutes for a benign anthropomorphic deity must be justified, if at all, not by the easy appeal to the age-old beliefs and devotions of the race, but only by the cooler, less persuasive methods of the pure reason. Yet in the end, though the justification is conditional and tentative, it lingers in the mind with an insistent and reassuring potency.

In this third part of "The Dynasts" the great panoramic spectacle of the Napoleonic wars draws splendidly to its tremendous close. In the first act, from our station in the clouds we observe the cautious warfare of Wellington in Spain, and the disastrous Russian campaign of Napoleon. The scene is set for colossal tragedy. Yet even more than in the preceding parts the action is humanized by the racy human talk of soldiers and camp followers, by the telling exhibition, not only of the horrors, but of the sordidness, the discomforts, the humors of war. Then in successive acts we have the battles of Vitoria and Leipzig presented with a union of imaginative vision and technical understanding that is an education in military tactics; the abdication, the sojourn in Elba, the return, and finally in the last two acts the great concluding catastrophe of Waterloo. From the beginning of the sixth act in the famous ballroom at Brussels to the final scene in the wood of Bossu where Napoleon broods over his defeat, Mr. Hardy is at his very best, and in this kind outside of the chronicle plays of Shakespeare there is none better. The passion of the battle as it is uttered in the nervous Anglo-Saxon profanities of the generals, or reflected in the comments of the Intelligences that speak from the clouds in verse forms ranging from sapphics to rondeaux, fairly takes the reader by the throat.

Whirled along by the spirit of war, the reader forgets for the moment the philosophic adventure in which he has engaged, but when the scene closes for the last time on the figure of the beaten and broken Napoleon weakly brooding on the edge of the bloody field, the questionings come thick, and in the "After Scene," which passes in "The Overworld," Mr. Hardy has prepared his most explicit answer, the final utterance of that virile philosophy that is the central force of his novels. The scene opens with the last of the panoramic stage directions, which have been throughout one of the most effective *poetic* factors of the work:

> Enter the Spirit and Chorus of the Years, the Spirit and Chorus of the Pities, the Shade of the Earth, the Spirits Sinister and Ironic with their Choruses, Rumors, Spirit-messengers, and Recording Angels.
>
> Europe has now sunk netherward to its far-off position as in the Fore Scene, and it is beheld again as a prone and emaciated figure of which the Alps form the vertebræ, and the branching mountain-chains the ribs, the Spanish Peninsula shaping the head of the *écorché*. The lowlands look like a gray-green garment half-thrown off, and the sea around like a disturbed bed on which the figure lies.

Then ensues a final trialogue between the Spirit of the Years, who voices, perhaps, Mr. Hardy's most characteristic mood, the Spirit Ironic, the expression of the intellect unswayed by any feeling save that of bitter amusement, and the Spirit of the Pities, which last, as he points out in his original preface, "approximates to the Universal Sympathy of human nature, the spectator idealized of the Greek chorus." First, the Spirit of the Years expresses his own conclusion of the whole matter:

> Thus doth the Great Foresightless mechanize
> In blank entrancement now as evermore
> Its ceaseless artistries in Circumstance
> Of curious stuff and braid, as just forthshown.
> Yet but one flimsy riband of Its web
> Have we here watched in waving—web Enorme,
> Whose furthest hem and selvage may extend
> To where the roars and plashings of the flames
> Of earth-invisible suns swell noisily,
> And onwards into ghastly gulfs of sky,
> Where hideous presences churn through the dark—
> Monsters of magnitude without a shape,
> Hanging amid deep wells of nothingness.
> Yet seems this vast and singular confection
> Wherein our scenery glints of scantest size,
> Inutile all—so far as reasonings tell.

To him replies the Spirit of the Pities, with a faltering, yet audacious question:

> Thou arguest still the Inadvertent Mind,—
> But, even so, shall blankness be for aye?
> Men gained cognition with the flux of time,
> And wherefore not the Force informing them,
> When far-ranged aions past all fathoming
> Shall have swung by, and stand as backward years?

The debate is then taken up in fine lyric measures by the Choruses and Semichoruses of the Years and of the Pities. To the concluding question of the former,

> To what tune danceth this Immense?

the Spirit Ironic puts in a characteristic word:

> For one I cannot answer. But I know
> 'Tis handsome of our Pities so to sing
> The praises of the dreaming, dark, dumb Thing
> That turns the handle of this idle Show!
>
> As once a Greek asked I would fain ask, too,
> Who knows if all the Spectacle be true,
> Or an illusion of the gods (the Will,
> To wit) some hocus-pocus to fulfil?

Here most readers of Mr. Hardy's novels would have expected the debate to end, leaving us in the temper of an ironic agnosticism. But the true lover of Hardy, who has pondered the eternally optimistic implications of human sympathy, even the kind of grim, untearful sympathy with the woes of mortals that lurks in "Tess of the d'Urbervilles," will not be surprised to find that the very last lines of the whole vast panorama of nineteen acts and one hundred and thirty scenes are given, not to the Spirit Ironic, but to the Chorus of the Pities, and that in them the faltering questioning with which the after scene opened has become affirmation:

> But—a stirring thrills the air
> Like to sounds of joyance there
> That the rages
> Of the ages
> Shall be cancelled, and deliverance offered from the darts that were,
> Consciousness the Will informing, till It fashion all things fair!

It would be easy to debate the propriety of the monstrous form that Mr. Hardy has chosen, to point out technical flaws in its execution, but it would be beside the mark here. When all is said, the reader feels that the monstrous form befits the monstrous subject, and that in an age too "nervous and quizzical" for the epic it could scarcely have been other. As to infelicities of detail, they should no more disturb us than swallow nests should disturb us, *pace* Lowell, on the façade of the "awful past." The answer to technical criticism of "The Dynasts" is: There it is; a complete and powerfully moving whole, the characteristic and significant climax to the lifelong work of a richly endowed man of letters; one who, given by nature a poet's imagination, toiled long in prose lest luring fancy lead him astray from human life as it is, yet never in his novels lost sight of the wheeling of the eternal stars over the sordid human scene, who towards the end of his life coming to treat a vast, long-meditated theme involving in its implication the whole body of his thought, slipped off the restriction of prose to express, if with an ocasional unhabituated awkwardness, a vast poetic vision in a powerful and compelling poetic medium.

CURRENT FICTION.

Come and Find Me. By Elizabeth Robins. New York: The Century Co.

It is hard to imagine for what quality this tale was judged worthy of serial publication in a leading magazine. It is very long-winded, not much happens, and the people are hardly deserving of prolonged study for their own sakes. No doubt because it belongs to the order of purely artificial and commonplace, yet elaborate, fiction which seems to be popular just now—the school of Robert Hichens and Miss Ellen Glasgow. There is an affected preface; the whole thing breathes the complacency of the professional writer who has been purred over by editors and interviewers, and is blandly ready to turn out a new "superior article" whenever his public likes. The supposed action takes place partly in a California town and partly in the neighborhood of Nome. The object to be found is a stream full of gold nuggets which has been stumbled upon by a young surveyor years before the Klondike boom began. Himself physically disabled from going back into that difficult country to retrieve his find, he cannot convince anybody else that there is anything in his story. Disbelieved on every side, he almost comes to discredit his own memory, and remains a plodding bank-clerk, till his superannuation and the blaze of the Klondike discoveries send him back at last upon the old trail—just too late, as it chances. In a larger sense, perhaps, the thing to be found is the North Pole; and the trick is actually turned by another person of the story. He manages to get back alone to the borders of civilization, bringing with him marvellous records of what he has seen at the Pole. But he is satisfied to have won the game for himself, and, fantastically reluctant to rob other men of the same possible triumph, destroys, as he is about to die, the proofs of his achievement. This is all very well as material for fiction, but it would have to be felt far more simply and strongly than it has been here to compass any sort of serious effect. The two heroines involved have some degree of individual and complementary value as sketches; but with all the elaboration of their treatment they remain sketchy. The young scientist who discovers the Pole is an impossible prig and bore, and both heroines are naturally in love with him. One of them, however, finally falls to the lot of a very good young fellow, who, with the very good old fellow, her father, suggests through the verbal mist which obscures it all the quality of a very good story which might have been.

Arkinsaw Cousins: A Story of the Ozarks. By J. Breckenridge Ellis. New York: Henry Holt & Co.

Current American fiction is prolific in attempts to wrest from local condition and color their marketable literary meaning. To "exploit" a new neighborhood or a new dialect has become a sort of game of which the grand prize is vaguely felt to be a something which shall challenge the world by its fresh power; a something, in short, in the direction of the "great American" novel. Doubtless, if such an achievement is to be hoped for, there is as good a chance in this direction as in any other. But not much of value can be expected to result from local studies undertaken in a spirit of biological zeal or amused exploration. In this respect Kipling has set a pretty bad example. In the beginning, like most men who succeed, he seized the world by the handle which was nearest; he does not cease to be the conquering Anglo-Indian, even when he treads the deck of a Gloucester schooner. "Arkinsaw Cousins" is striking among stories of its kind for its spontaneity, its zest born of affectionate intimacy with the subject. Consequently, though it is not without crudity of detail, the affair as a whole is unusually refreshing:

> In Core City, Arkinsaw, lived the Thornberrys. Of all the men in the county, Winthrop Thornberry was the richest; whereas Hodgins Thornberry, if not the poorest, was the most worthless. Old Timothy Thornberry and his grandson, Will, owned the grocery on the corner; another grandson, Peter, was cashier of the National Bank; while a third, Oscar, conducted a restaurant.

By such ingenuous and Austen-like means are our characters presented. There are other male Thornberrys, with females duly thereto appertaining; a group of kindly and amusing folk described, you feel, by one of themselves. The story of it does not particularly import, being quite irrelevant to the real matter. And it must be said that one or two of the characters, introduced as in one sense or other foils to the amiable company of the Thornberrys, do what they can to throw doubt upon the author's sincerity. But they cannot do much.

Flower o' the Orange. By Agnes and Edgerton Castle. New York: The Macmillan Co.

This volume contains seven stories—two Elizabethan, three of the eighteenth century, and two roughly of the early nineteenth—of varying length and pretty consistent charm. In these pages of chivalrous adventure there is a pleasant sense of color and breathing life, a smooth texture of romance, and a belief that "adventure comes to the adventurous, whether they seek with alert eyes the secret byways, or whether fate tarries for them on their unconscious threshold." As in few books of this kind History, instead of playing the school mistress to the reader (having instructed the writer), sets her easel to paint a background. The best of these stories are by far the first five, for in them the action is quicker and spicier, more youthful and fresher. The last pair of tales, one of the sick lord and dairymaid type, the other a "love match at sixty," are less successful. But all in all, "Flower o' the Orange" is a courtly book, and good for a fireside evening.

The Vermilion Pencil. By Homer Lea. New York: The McClure Co.

Mr. Lea is a voluminous writer, and submerges this slight story in a descriptive welter of typhoons, architectural detail, ornate heathen gods, and extraordinary ceremonial mysteries. The tale is of a Breton priest in China, who, sent to convert a viceroy's wife, gradually yields to her fascination and elopes. Before he makes this plunge, however, Fate—frequently encountered with the invariable large F—bestows on him the symbol of the Great Deluge Family, a socialistic brotherhood having branches in London, New York, and Paris. The runaways are caught, and the temptress is doomed to a horrible death. At the supreme moment, the mild priest, no longer a Christian, plays his trump and frees the lady, whose husband has conveniently just died. There are no characters in the swarm of natives, who, in costume, fill the stage. The Rev. Mr. Hook, a long-tongued treasure-hunting parson, comes nearest; but he is an accident. The atmosphere and a certain wealth of words and invention recall Hugo's wildest excursions. Nature is wrenched asunder and the dictionary deracinated. The following is typical: "the brilliant crepuscular rays from the Western sky, the darkness with its labyrinthian uncertainty, the mangling crunch of the wind, the conflagration of the heavens, the crucifix, chaos, then the calm sun of noonday," and so on.

"The Vermilion Pencil" is a lurid and grotesque impression of China.

Priest and Pagan. By Herbert M. Hopkins. Boston: Houghton, Mifflin & Co.

Often as the contrast between the religious and the unmoral nature has been "said in rhyme" and fiction, Mr. Hopkins has given to his theme a new turn. To begin with, his pagan is introduced as a gazer at his own cenotaph, constructed while he idly let himself be considered at the bottom of the sea. The priest, too, is unusual in having a Jewish strain which impels him to leave the loved church of his founding and preach Christianity to the Jews. Further, the heroine is a girl with a talent for whistling and, unknown to her parents, exercises it on the vaudeville stage. And finally the action takes place in the Bronx, whose local color—how changed since Hopkinson Smith's revealings of the French restaurant!—still affords in artist hands ample room for the showing of beauty, crowded though beauty may be by rushing civilization. Of this chance Mr. Hopkins makes the utmost, setting the idyllic features of his picture against the impressive stone of church architecture, not slighting the trolleys and the huts, but dwelling appreciatively on meadow, river and wood.

The portrait of Berwyn, a "negation," "remote," "well-nigh inhuman," really portrays. In the case of Cresson, the priest, his phases and changes appear often abrupt to the point of incoherence, yet looked at backward from the last page he takes on a late distinctness which is perhaps at least as strong a proof of his reality as if he had been throughout unnaturally consistent. Meantime it is refreshing to read a story where the ultra-modern, the civic, the suburb, the slum, are the themes, yet where the undignified does not enter, and where morality and even religion are in good social standing.

The Call of the Deep. By Frank T. Bullen. New York: E. P. Dutton & Co.

These "Further Adventures of Frank Brown," a sequel to an earlier volume, are good entertainment for boys. The writer professes to record incidents of actual sea life aboard British sailing vessels twenty-five years ago. The rise of the hero from common sailor to the rank of captain is the unifying element. The narrative contains the usual wicked commanders, outrageous mutinies, storms, and hair-breadth 'scapes, wherein our sense of security is rarely joggled, because the idea that fair play ultimately succeeds is early premised. The spirit of manliness, the healthy contempt for "girls and tea-parties," and the equally healthy love affair which crowns Frank's good fortunue, will compensate, in the youthful minds, for a decided lack of literary finish, and novelty of plot. The masters are challenged, but they may rest easy.

STUDIES OF PETRARCH.

Saggio Critico sul Petrarca, Di Francesco de Sanctis; nuova edizione a cura di Benedetto Croce. Pp. xx., 316. Naples: Morano.

The name of Francesco de Sanctis is virtually unknown to English readers. A few casual phrases in Symonds's "Renaissance in Italy," and a friendly but wholly inadequate notice in Saintsbury's "History of Criticism," are almost the sole references to his work in our language. But with his ideas English-speaking people are more familiar than they suspect; for from his pages much that is illuminating in Symonds's treatment of Italian literature (including many of the most personal "impressions") seems to have been directly transferred. In Italy itself he has of late lost ground, with the growth of those scientific and historical methods which the Italians, like ourselves, owe to Germany; but in the greatest of his disciples, Benedetto Croce, he has an advocate who will not willingly let his memory die. Again and again Signor Croce has returned to the defence of his master; and now, at the request of the publisher, Morano, he has edited De Sanctis's luminous and penetrating study of Petrarch's art and mind. "The name of Francesco de Sanctis," he tells us, "called to me with such an *affettuoso grido,* that I could not resist his appeal, so long as I lived; and—who knows?—if any one should offend his memory even after I am dead, I would leap from my grave, *den Kaiser, den Kaiser zu schützen.*"

De Sanctis was born in 1818; the patriot's inevitable exile was his for a while; he taught at Zurich, until he was called to occupy the new chair of comparative literature at the University of Naples; for a brief space he was minister of public instruction; he died in 1883. He was therefore the contemporary of Matthew Arnold, and of a generation that looked to Sainte-Beuve for its critical guidance. But though he owes something, even a great deal, to this school of Frenchmen, he drew his intellectual nourishment from the Germans; he is, in an historical sense, the Coleridge of Italy, but the Coleridge of a Latin race, keen to seize on pregnant ideas, and to use them for the purposes of literary discussion, but careful not to burden his mind and style with the whole weight of an *a priori* system. Hegel's "Aesthetik" was his most fruitful field; and it is marvellous to see how he has anticipated posterity in separating the chaff from the wheat, and in developing those ideas which could illumine the history of his own literature.

His chief work is, of course, his "History of Italian Literature," which Brunetière thought the most delightful as well as the most philosophic of all literary histories. It is really a history of Italian civilization; and the Italian soul, unfolding itself in books rather than in space and time, is interpreted in a series of acute and luminous studies. To call it a mere series of essays is, however, to mistake its purpose, or to be misled, as Signor Croce says, by the fact that the chapters bear such titles as "Dante," "Ariosto," "Machiavelli," or "Marino"; no work could possess greater unity of treatment and continuity of ideas. Recent scholarship has found fault with it for ignoring minor authors; and it is true that De Sanctis touches them but lightly in passing, and uses each of the great monuments of literature to interpret the whole of its own age. But as an expositor of the contents of these greater works, of their intrinsic power, and historical significance, he has had no equal in Italy; and English literature still awaits an historian with kindred powers of exposition and insight.

These talents De Sanctis focusses on the genius of a single author in his "Saggio critico sul Petrarca." Like Sainte-Beuve, he is anxious to find the secret of the man's mental life, but unlike Sainte-Beuve, only as the man has unfolded that mental life in his books. Signor Croce, as editor, contrasts the study of De Sanctis with that of a typical erudite historian, Adolfo Bartoli, who has devoted the seventh volume of his "History of Italian Literature" to the life and works of Petrarch. In nine chapters, Bartoli discusses the character of Petrarch, his mysticism, his relations with the Papacy and with Rienzi, with Italy and the Empire, with the Italian princes, with the Renaissance, with Laura, with his friends and children; the history of poetry itself is swamped by the interest in external detail. This is the reverse of the method of De Sanctis, who centres his attention on the poetry of Petrarch and the mind of which it is the expression; if he digresses at all, it is to follow out a train of ideas to their logical consequence, and to give them such precision and permanence as may make them tenable beyond the sphere of their sources in the original facts. Modern scholarship, with its hidebound empiricism, can find few better antidotes than the study of De Sanctis and of his disciple, Benedetto Croce. The former's "History of Italian Literature" and the latter's "History of Æsthetics" ought to be made accessible to English-speaking readers by immediate translation.

Petrarch: His Life and Times. By H. C. Hollway-Calthrop; 24 illustrations. New York: G. P. Putnam's Sons. $3.50 net.

Petrarch is surprisingly modern, in spite of his fourteenth-century dress. This is not only because he touched great interests which are still vital—interests of Church and State, interests of learning, patriotic interests for an Italian—but because he was personally so modern, of the gentleman-and-scholar type which does not grow old. The world remembers him now for his sonnets to Laura, but his letters, his life, his friendships, not to mention the important political affairs in which he took part, would serve to keep his career from oblivion. Mr. Hollway-Calthrop has endeavored to write in English a rather compact, straightforward biography of this many-sided personage. He bases his study upon the Italian sources—Fracassetti above all—but, as his purpose is narration and not critical examination of the material, he wisely refrains from long discussion of debatable questions, and thus he is able to produce a life-like, attractive, and most probable portrait. Being well acquainted with the historical environment in which Petrarch flourished, he succeeds in blending the individual career with the larger movements that swept through Christendom in that century.

But what we have most enjoyed is to see the way in which the inmost nature of the man emerges from his obsolete erudition and the antiqueness of his surroundings. What a sane poet he was! What a stanch friend! What a mellow scholar! That letter of his to Boccaccio, who was upset by Peter of Siena's dream, might well be laid to heart by the adepts of spiritism to-day; and his many exhortations in praise of scholarly industry, and his refusal to make old age an excuse for sloth, might be written by a modern as indefatigable as President Eliot. His calm, not to say friendly, attitude towards death is not less noble or less genuine than Whitman's. Mr. Hollway-Calthrop has so arranged his material as to bring out these qualities. He writes clearly, without mannerism or particular distinction, and he has put within reach of readers of English the best biography, so far as we are aware, of Petrarch.

Robert Owen. By Frank Podmore, 2 vols. New York: D. Appleton & Co. $6 net.

The New Harmony Movement, by George B. Lockwood. New York: D. Appleton & Co. $1.50 net.

Robert Owen, described by Leslie Stephen as "one of those intolerable bores who are the salt of the earth," born in Wales in 1771, lived eighty-seven years, a bore to the last and the salt losing nothing of its savor. Though Owen's career has been several times described, the finding of new material gives excuse for Mr. Podmore's two ample volumes, a detailed record, sympathetic, but often sharply critical—by no means the work of a blind admirer. Perhaps there is no career of the nineteenth century more interesting to the sociologist than that of Robert Owen. Mr. Podmore denies to him the possession of business ability, ascribing to good luck his earlier success. This conclusion we think Mr. Podmore's own pages refute: though the poor boy married well, and came upon the stage when the cotton manufacture was prosperous, only industry, mechanical ingenuity, and practical sense could have brought about what Owen achieved. These qualities were combined with a fine spirit of humanity, to which the biographer does full justice. Of Owen's early years at New Lanark, during which, while making a large fortune for himself, he redeemed his work-people from wretchedness, and set an example which impressed profoundly the rough-shod world of those days, no reader of the story can entertain any sentiment other than admiration. He brought about a marvellous mitigation of the horrible conditions that affected the working classes of that time. His beneficence touched remarkably the hearts of men. While the masses turned toward him as a saviour from their many woes, those high in place seemed disposed to make of him a friend and guide. Lords and bishops studied his methods with a sympathy that did them credit; the Duke of Kent, father of Queen Victoria, became intimate with him; Nicholas of Russia, then a grand duke, a boy of nineteen, made a sojourn at Owen's home at New Lanark, and schemed to put him at the head of a colony in Russia. Visiting the Continent, Owen was warmly welcomed in France by Cuvier, La Place, and Madame de Staël; about Geneva he met Oberlin, Fellenberg, and Pestalozzi; while in Germany he discussed with Alexander von Humboldt his plans for reform. In America, he addressed in the Federal capitol an audience containing the President and both houses of Congress.

With years his schemes grew bolder. Mr. Podmore thinks that, self-made man as he was, he had no philosophy but what he had derived at second hand from Rousseau. Embarrassed by partners of sordid minds, independent in fortune, his heart growing ever warmer toward his fellow-man, he undertook boldly nothing else than to establish "the New Moral World," a reorganization of society. To carry out this idea, he bought 20,000 acres at New Harmony, Indiana. Here he established a famous community in which much was said and done that made the world look askance. In religion, Owen was a deist of the eighteenth-century type, and he denounced orthodoxy in unmeasured terms. Though austerely virtuous, he instituted a new sacrament of marriage, in which, since the feelings are not under the control of the will, no pledges of enduring love were to be exchanged by the contracting parties: the bond was not indissoluble. The family was denounced, inasmuch as the sympathies of men and women ought to be under no limitation, but broad as the human race; the children should be the "property of the community," and reared apart from their parents by teachers and guardians especially endowed and trained. Later in life Owen became an enthusiastic spiritualist. Putting himself thus at odds with his environment, Owen naturally met with failure. At New Harmony he sank £40,000, four-fifths of his fortune; nor were other schemes, a multitude of which he took up afterward in England, for bringing to pass the "New Moral World," more successful. His good heart and purpose were generally admitted. His wisdom, however, sometimes indeed his sanity, was questioned; and since he continued to advocate his reforms, sometimes wise, sometimes foolish, with all his old zeal and persistence, the society he so yearned to regenerate shunned him as "an intolerable bore," until he died discredited and neglected.

When all has been said against Robert Owen that can be said, it nevertheless remains plain that in his century he was a noteworthy benefactor in many fields. In the English speaking world he was the path-breaker for the kindergarten, for manual training, for industrial education in general; he led in movements to ameliorate child labor, unreasonable hours, starvation wages, and in the introduction of plans for coöperation and the betterment of working-men; he was a pioneer in the advocacy of international arbitration and a peaceful federation of nations. Though blind to important facts in human nature, obstinate, and unteachable, he was always brave, sweet-tempered, well-intentioned, and did a work which all students of sociology should ponder.

Mr. Lockwood's work, occupying itself especially with Owen's American enterprises, and containing interesting accounts of Owen's eminent sons, and the other noteworthy figures who gathered as helpers and disciples about the initiator, is a good supplement to the volumes of Mr. Podmore, the books together setting forth this important episode of nineteenth cenutry life as has not been done before.

Sidon: A Study in Oriental History. By Frederick Carl Eiselen. New York: The Columbia University Press.

This is the fourth volume in the Columbia University Oriental Series. It is furnished with an introduction by Prof. Richard Gottheil of Columbia, to whom, as his teacher, the author, now professor of Semitic languages and Old Testament exegesis in the Garritt Biblical Institute, Evanston, Ill., dedicates his work.

Dr. Eiselen's purpose is to study the history of Sidon "from the earliest times down to the present day" and to this end he has "gathered together the various references to Sidon upon Assyrian and Egyptian monuments, in Hebrew literature, in the classical authors, in the records of pilgrims, and in the historical works of Mohammedan writers." It is strange that the history of the Phœnician cities, which played such an important part in the old world, and which are relatively so accessible, should be involved in such obscurity. The very endeavor to bring together all that is known about Sidon makes plain our lack of material for a consecutive history.

The author gives disproportionate space to a speculative discussion as to the origin and early development of Sidon. We are in sympathy with his view, which he derives from the name itself, that the city probably existed in a pre-Phœnician and pre-Semitic period. The Semitic occupation of Phœnicia he assigns to about 4000 B. C., while the Semitic migration in which the Phœnicians had a part, the "Canaanitish-Phœnician," began, according to him, about 2800 B. C. This migration came from Babylonia, which, according to a tradition reported by Greek writers, was the original home of the Phœnicians. Dr. Eiselen seems to us, in the first place, to have placed the date of the Semitic occupation of Phœnicia about 1,000 years too early. In the second place, we do not believe that the "Canaanitish-Phœnician" stock came from Babylonia.

Successive floods of Semites, from the earliest known times down to the Moslem conquest, poured out of Arabia northward, splitting at the desert into two streams, one entering Babylonia, the other Syria and sometimes Egypt. At times these two streams formed independent nations; again, they remained in some sort of relation, the centre of influence lying now to the east, now to the west of the Syrian desert. That a racial connection existed between the occupants of Babylonia and Syria, including Phœnicia, before or after 2000 B. C., is made clear by the identity of divine and personal names in the two regions. At this period, also, as we learn from Babylonian sources, the centre of power was to the east of the desert. This does not mean, however, that the Canaanitish population came from Babylonia, but that both Babylonian and Canaanite were derived from the same stock. The tradition as to the Babylonian, or, to be more accurate, Persian Gulf origin of the Phœnicians (so far as there was such a tradition, for, as pointed out by Dr. Eiselen himself, the mythology of Sanchoniathon presupposes an autochthonous origin), is a late reflection of this early condition of the dependence of Phœnicia upon Babylonia politically, and in the sphere of civilization and religion. Apparently, however, the people who are commonly known as Phœnicians did not actually come into existence until a later date, and the Semitic inhabitants of Phœnicia about 2000 B. C. bore much the same relation to these later Phœnicians as the Anglo-Saxon to the English.

The first historical mention of Sidon occurs in the Tel el-Amarna tablets, about 1400 B. C. At that time Sidon, a dependency of Egypt, was fighting against invading foreigners. The proper names indicate that at least the governing element was Semitic, but, if we interpret history correctly, the city was not yet Phœnician. The invaders seem ultimately to have prevailed, and Sidon, with the rest of Phœnicia and Syria, was lost to Egypt. A great folk movement was then affecting all Syria, Asia Minor, the Ægean archipelago, and adjacent regions. The Phœnicians, like the Hebrews and the Philistines, whom they probably antedate slightly, were in some manner an outcome of that movement; but precisely how, or at what date, this people actually became Phœnicians, as we understand that name, we do not yet know.

In a later chapter and period, Dr. Eiselen discusses the dates of the Sidonian Kings, Esmunazar, Tabnit, etc. (p. 147);

including them among the "vassal Kings of Alexander and the Ptolemies," and placing Tahnit about 320 B. C. (p. 156). In this conclusion he has not, we think, attached sufficient importance to the facts connected with the discovery of Tabnit's tomb. An actual acquaintance with the site and conditions would probably have inclined him towards the earlier dates of Reinach or Porter. The Alexander sarcophagus and the other sarcophagi with it cannot be placed lower than *circa* 300 B. C. When the shaft was cut for this tomb, all knowledge of Tabnit's tomb had been lost, as is evident from the commencement in the side of that shaft of a tomb chamber which would have interfered with the Tabnit tomb. Before their work of cutting this tomb-chamber had proceeded far, the stonecutters ascertained from the sound of their instruments on the rock that they were about to break into another tomb. Accordingly the work was stopped, and the shaft sunk to an unusual depth to get beneath the Tahnit tomb and thus avoid interference. It seems difficult to suppose that all knowledge of the location of the tomb of a King like Tabnit could have been lost in less than a generation. Moreover, the conditions of interment in the two tombs are such as to suggest a considerable interval between them. The actual evidence of the excavations seems to us to favor a date for Tabnit a century or even two or three centuries earlier than that which Dr. Eiselen suggests; and, as he himself points out, in our present knowledge of the history of Sidon, to place the Esmunazar dynasty in the fifth or sixth century B. C. would certainly not interfere with or crowd any other dynasty. We may add that in general Dr. Eiselen's account of the antiquities of Sidon, and especially the funerary antiquities, leaves much to be desired.

The value of such a monograph lies largely in its completeness. One should be able to ascertain from it both the significant facts and the books from which detailed information can be obtained. For the latter purpose there should have been a full bibliography, instead of incomplete and scattered references in the foot-notes.

The Oxyrhynchus Papyri. Part V., edited by Bernard P. Grenfell and Arthur S. Hunt. London: The Egypt Exploration Fund.

The present volume, issued under the auspices of the Graeco-Roman Branch of the Egypt Exploration Fund, lacks something of the varied human interest that characterized the miscellaneous contents of the former volumes of the "Oxyrhynchus Papyri." It is distinctly a scholar's book, and it contains in its ample bulk but five documents. On January 13, 1906, Messrs. Grenfell and Hunt, digging in the rubbish heaps at Oxyrhynchus, had the good fortune to light upon a quantity of literary papyrus-rolls, torn up and thrown away in the third century after Christ. This waste paper of that far-off day introduces us in the present publication to extensive fragments of two previously unknown works of classical Greek literature, and to earlier authority than was hitherto known for the text of considerable parts of two familiar compositions. For good measure a single leaf of parchment is included, which was discovered in another mound a month earlier.

This leaf contains, on *recto* and *verso*, forty-five lines from an uncanonical gospel, detailing an interview in the Court of the Men in the Temple at Jerusalem between the Savior (as he is consistently called) and one of the chief priests, a Pharisee. The priest rebukes Jesus and his disciples for their presence in that sacred place without proper purification. In answer to the Savior's questions, he relates his own ceremonies of purification, and his interlocutor replies with the beginning of a stern homily upon the difference between such formal acts and the true purification of the soul. The writer of the account has so confused an idea of the topography and ceremonial of the Temple, as made known to us by trustworthy authorities, that the editors charge him with drawing heavily upon his own uninstructed imagination, and are inclined to attribute the composition of the document to a period not earlier than the middle of the second century. The sentiments of the homily are apparently a mere elaboration of the well-known utterances of Jesus on the cleansing of the outside of cup and platter, and on the worthlessness of the Pharisees as guides to righteousness.

The first of the four classical works was comprised in 380 separate fragments, painfully mutilated, but presenting precious remains of the lost Pæans of Pindar. This work had been written on the back of old papyrus, revamped and patched up for the purpose; but the valueless cursive document that had filled the more honorable *recto* served, at any rate, a useful purpose in helping the editors to determine the proper succession of certain of the Pindaric verses. Yet considerable doubt remains concerning portions of the text. Fragments of seven distinct pæans are thus preserved, together with other bits, and a considerable number of passages are sufficient in length and completeness to give a fair idea of the character of the whole work—truly Pindaric in metre, style, and imagery, if not measuring up in grandeur to the previously known work of the poet.

The second previously unknown document consists of some twenty-one columns of a history of Greece, composed on an elaborate scale. These fragments pertain to the years 396-5 B. C. The author is believed by Prof. E. Meyer and Ulrich von Wilamowitz-Moellendorff to be Theopompus, of whose Hellenica, in continuation of Thucydides, only four fragments of more than a few words each have been otherwise preserved. Blass, on the other hand, was certain that the papyrus is to be ascribed to Cratippus. One thing is sure: the historian was of first-rate importance, and was well informed. He differs widely from Xenophon, but was certainly followed by Diodorus. The most valuable part of the work thus preserved is an account of the Constitution of Bœotia in 395 B. C., which furnishes much new and decisive information. Professor Meyer has written an elaborate commentary, which is soon to be published.

The two papyri of works previously known are of the Symposium of Plato, and the Panegyric of Isocrates. The Symposium is in the latter half of a papyrus-roll of about 200 A. D., and the text runs from 200B to the end. It is the largest literary papyrus found at Oxyrhynchus. The text agrees closely with no other manuscript, but appears to be eclectic, as does the text of so many other papyri. It also tends to establish the antiquity of readings challenged by modern critics, and in a few instances supplies new and excellent readings. The quality of text of the Panegyric is unfortunately poor, though the manuscript dates from the earlier part of the second century after Christ. The Codex Urbinas (Gamma) still retains its preeminence, unchallenged by this more ancient rival.

All the papyri are accompanied by ample introductions and commentary by the editors, whose diligence and learning are now so much taken for granted as to render praise, although not gratitude, superfluous. The seven facsimile plates are perfect examples of the art of reproduction.

The excavations at Oxyrhynchus are now at an end, though "the publication of the vast store of Greek papyri from [the site] will be the work of many years to come." The Graeco-Roman Branch lacks funds, and has suspended spade-work for the present season, but hopes to resume in fresh fields in the winter of 1908-09.

The Palaces of Crete, and Their Builders. By Angelo Mosso. Illustrated. New York: G. P. Putnam's Sons. $5.25 net.

During the last eight years excavations in Crete have been so fruitful, and have opened so many fresh problems for archæologists, anthropologists, and philologists, that final publications of the new material have necessarily been slow to appear. The excavators have, indeed, published in various periodicals preliminary accounts of their work; but these reports, detailing the progress of each successive year, cannot give us a comprehensive picture of the whole. To collect the mass of material, to arrange it systematically, to study it from every point of view, and to see how it helps to solve the problems of this Mediterranean civilization, is the task which the Cretan excavators have now set themselves. The undertaking is so difficult and complicated that we may well be content to wait a little before each excavator presents us with the results of his work in this final form. In the meantime, we welcome handbooks written by outsiders. For though these will naturally not carry the authoritative weight of a publication by an excavator who has been in the field for many years, they at least give us a concise account of what has up to now been achieved.

R. M. Burrows's "Discoveries in Crete" (see the *Nation*, October 10, 1907, p. 329) was a work of that kind. The title, "Palaces of Crete, and Their Builders," leads us to expect another such attempt; but this is in no sense a scientific treatment. The author calls himself in the preface an amateur archæologist; and so, indeed, he is. What he has written may be much more appropriately styled "a journal, with impressions of travel in Crete." There is scarcely any system in the presentation of the facts. The author takes us from place to place, according to the route he travelled, and offers us his personal impressions on the excavations, the scenery, the people, or the sunset. Indeed, the personal element often becomes obtrusive. Moreover, there are many mistakes in the text, like the following: On p. 180 are figured two vases of the third Late Minoan period, which Mosso places at about 1500 B. C., a date manifestly too early; on p. 183 the famous lily vase from Knossos is put down as coming from Hagia Triada, again, p. 72, the author says that more than 2000 inscribed tablets have been discovered in Crete, whereas the actual number is over 6,000.

With all its faults, however, the volume has a pleasing freshness and spontaneity As we are taken over the various ruins, we are conscious that we have for our guide a man of intelligence and enthusiasm; and, even though his imagination often runs away with him, we pass our time in pleasant and even stimulating company. Besides relating his impressions of travel, the author, who is by profession an anthropologist, has tried to prove that the people of that primitive Mediterranean civilization were not Indo-Germans, but of an entirely different race. For this purpose, he has written several chapters on the religion, customs, and art of the Cretans. He upholds the theory which is now gaining ground, that the Cretans belonged to the "Mediterranean race," which did not come from the north, but was of southern origin, and that civilization spread *from* the basin of the Mediterranean, and *not* in the other direction.

Achtzehneinhalb Jahre hinter russischen Kerkermauern: Schlüsselburger Aufzeichnungen. Von M. W. Noworusski. New York: Imported by G. E. Stechert & Co.

Whoever still recalls George Kennan's vivid and fearful narrative of life in Siberian exile should follow with keenest sympathy the fate of Michail Wassiliewitsch Noworusski, torn from friends and books by an autocratic whirlwind, put through a mock trial, and hurried off to a dark, damp, and loathsome prison, to spend eighteen and a half years in servitude and solitude that might well reduce any one to bestiality and childishness. Noworusski, who was a student in St. Petersburg, preparing his university thesis, formed the chance acquaintance of several other students, and unwittingly allowed one of them, a revolutionist, to use his room in his absence during vacation. In that room, without Noworusski's knowledge, bombs were made, and later, when assassinations were attempted, Noworusski was arrested and charged with the crime. Under stress of confusion, he foolishly lied. The most damaging evidence against him was the possession of Lewes's "Physiology," together with a piece of green paper like that used in sealing a bomb; but this was enough to sentence him to death. He went through the agony of the death watch, but at the last minute was reprieved and resentenced to imprisonment for life. A few hours later he found himself in Schlüsselburg fortress, within a narrow earth-floored cell, his home for the best part of his remaining life, into which the friendly sunshine came but half an hour each day.

Much of the book naturally deals with Noworusski's wearisome months under the iron heel of Slavic bureaucracy. In the beginning each prisoner was held in solitary confinement, with scarcely enough furniture and clothing to keep well, with nothing to occupy the mind or body, save an hour's exercise each day between two pacing soldiers when no other prisoner was in sight. Under such rigid surveillance it was nearly fifteen years before Noworusski learned that in the court, almost under his very window, three comrades had been executed two or three days after their arrival with him in Schlüsselburg. According to the changes of political weather in St. Petersburg, the barometer rose and fell in the distant prison: after a while, a milder régime permitted two, and then three, prisoners to walk and talk together for a couple of hours each day; sandy spots were turned into vegetable and fruit gardens—frequently plundered, it is true, by the unfeeling soldiers—trades and workshops were introduced, a library was established (numbering in all some 3,000 volumes), and periodicals, including well-known English journals, were distributed. Board partitions were almost razed, and opportunity was given the unfortunate men to vie with each other in showing attention to the one woman of the prison, Vera Nikolajewna Figner, kept there under special privations for twenty-one years. The presence of this representative of the weaker sex, Noworusski says, mentioning Bret Harte, awakened in every man, whatever his character, much the same reverence that the American author describes in his narratives of pioneer life in California. Suddenly, on orders from the Russian capital, the library was closed and many of its books, particularly a history of the French Revolution, were removed; fence partitions in the court yards were rebuilt, workshops closed, and the periodicals stopped. Only the official church paper and the *Chemical News*, both considerably scissored, found their way into the darkened walls. As a protest, all the prisoners fasted for nine days, reducing themselves to fevered skin and bones, and Vera Figner refused food for ten days. The sacrifice availed little, for it was about three years before the books came back from St. Petersburg. Notwithstanding all these ups and downs, however, several of the prisoners managed to advance in self-culture, to assist in improving the prison, and even to contribute toward the making up of valuable scientific collections for the Natural History Museum of St. Petersburg. One herbarium secured special recognition at the Paris Exposition of 1900.

One thing that strikes the reader of Noworusski's narrative is the way in which the prisoners, like the shipwrecked and isolated Robinson Crusoe, set about helping themselves. Denied communication with others, so that they knew practically nothing of the war with Japan, and "were as men on a distant planet," tired of their own voices and small talk, and glad even to count and recount the knots in boards, their minds inevitably turned to reflecting, divining, inventing. One of the most ingenious of their contrivances was a system of telegraphy by means of knocks on the walls—a sort of Morse alphabet—by which they talked with each other.

Noworusski gives a number of incidents of significance to the psychologist. For example, when, after spending nearly twenty years within high walls, Noworusski saw a mass of flowing water again, it appeared to him black, as it had appeared the year before to Vera Figner, when she was released. This peculiar impression he ascribes to the fact that the idea of water had been kept before him chiefly through black illustrations in books and papers. Moreover, as if he had fallen back into childhood, he continually hesitated to venture alone, fearing he should be unable to reach the street or house he was making for; he found immediate stimulation in the presence of a friend, as the child is stimulated by the guiding hand of the nurse. He was often compelled to abandon church service, on account of the effect on his nerves of singing; and he was unable, for a long time, to listen with composure to instrumental music.

Noworusski's style—possibly polished a little by Luise Flachs-Fokschaneanu, who has translated the work from the Russian manuscript—is clear and pleasing; his sense of humor never fails him, and he is capable also of painting tragedy. Such brief descriptions as that of the execution of the youth—the solemn procession with the condemned past his cell in the dusk, the return, half an hour later, of the soldiers alone, silently crossing themselves—reveal the power to feel and move others to deep feeling. So, too, there is the lighter side of life in his description of the chaos reigning when pardon suddenly came to the prisoners. Most remarkable of all is the temperate spirit of the author who, while not hesitating to criticise those whom he holds responsible for his misfortune, advocates no more violent means of reform than the ballot, and wastes no time in idle regrets, rejoicing indeed, if only his lost years have furthered the cause of freedom in Russia. The several portraits in the volume, particularly that of the sweet-faced Vera Figner, with her firm-set mouth, must suggest the monumental folly in maiming the powers and arresting the development of such sons and daughters who, if properly guided and encouraged, could be of inestimable service to any country and any age.

The Gospel of St. John in West-Saxon, 1904; *The Gospel of St. Matthew in West-Saxon,* 1904; *The Gospel of St. Mark in West-Saxon,* 1905; *The Gospel of St. Luke in West-Saxon,* 1906—all edited by James Wilson Bright. *The West-Saxon Psalms,* being the prose portion, or the "first fifty," of the so-called Paris Psalter, edited by James Wilson Bright, Catherine Donovan, and Robert Lee Ramsay, 1907. Belles-Lettres Series. Boston: D. C. Heath & Co.

It is a singular circumstance, considering the place always held by the Bible in the life of the English race, that both in England and America the interest in the English versions which antedate the Reformation should have been limited to so small a circle of scholars. In the case of the Anglo-Saxon versions especially, apart from the difficulty of language, there has been the additional obstacle that the principal texts have not hitherto been accessible in scholarly editions of moderate price. This obstacle has now been removed by the publication of the excellent series named above.

While profiting, of course, from the labors of his eminent predecessors Thorpe and Skeat, Professor Bright offers us, nevertheless, entirely independent editions—among the best we have of any Anglo-Saxon prose—which give us a complete record of all manuscript readings down to the minutest detail, and so, in that respect, are likely to prove definitive. The authoritative manuscript in Corpus Christi College (Cambridge) forms the basis of the text of all four gospels, but the variants of the other manuscripts are printed at the bottom of the page. In the volume devoted to the Gospel of St. John, we have a general Introduction to the series, in which the editor discusses such subjects as vernacular scripture in Anglo-Saxon times (including Bede's lost version of St. John), the manuscripts and their relation to the archetype, and the relation of this archetype to its Latin source. There are also notes, a bibliography, and a glossary. In the case of the other gospels we have merely the texts with the record of variant readings. It may be remarked that Professor Bright is inclined to ascribe to one hand the translation of all four gospels. The Latin original was, of course, the Vulgate, but in an impure text, containing many readings which are found commonly in manuscripts of the Irish type.

The volume containing the prose Psalms in the so-called Paris Psalter gives the text of the Paris manuscript, with variant readings for the introductions from a new text discovered by the editors in a British Museum manuscript of the Cotton collection. It also gives the Latin rubrics and *argumenta* (for the whole Psalter) which supplied the material for the rubrics and introductions to the individual psalms in the Anglo-Saxon version. Finally, it contains an excellent bibliography—analytically arranged—of both the prose and verse psalms in the Paris manuscript. The editors expect to publish later a critical introduction which will review all preceding study of the subject and offer a fresh discussion of some of its problems. The Anglo-Saxon introductions especially are worthy of attention, since it has been proved that they are ultimately derived from the heretical commentary of Theodore of Mopsuestia, a man of genius who anticipated by about fifteen hundred years some of the most interesting results of modern historical criticism of the Old Testament. In the preparation of their critical introduction the editors would do well to consider, among others, two matters relating to the Paris manuscript: first, the prominence which is given to St. Martial in the litanies at the end of the volume—a circumstance which may contain a hint as to the English monastery where the work was composed; secondly, the fact that the Paris manuscript was written for a woman—or women. Was this true of the translation itself as of the fragmentary fourteenth century version of the New Testament published by Miss Paues? It was doubtless for nunneries that such versions were most often made in the Middle Ages.

In conclusion, we recommend these volumes to the attention not merely of specialists in early English literature, but of all serious students of the history of the English Bible.

Pekin to Paris: An Account of Prince Borghese's Journey Across Two Continents in a Motor-Car. By Luigi Barzini; translated by L. P. De Castelvecchio; with an introduction by Prince Borghese. 100 illustrations. New York: Mitchell Kennerley. $5 net.

This vivacious account of a ride on a motor-car from Pekin to Paris last summer appeals first, of course, to the automobilist, as the record of the most perfect test to which this new means of transport has been subjected. He will find in it many helpful suggestions for his comfort and safety in a long tour, and he cannot fail to be impressed with the vitally important part which the chauffeur played. Prince Borghese unhesitatingly attributes his success in winning the prize offered by the Paris *Matin* to the skill and unremitting devotion of his driver. And the book closes with his name, the climax of a plea for the establishment of regular schools to train thoroughly reliable men.

There is much of general interest, however, in Signor Barzini's narrative, which is a compendium of the telegrams which he sent almost daily, for the automobile followed the telegraph line across both continents. True, the volume contains much wearisome detail of rescues from swamps and broken bridges, and there are frequent poetic digressions which might well have been omitted. But the attitude of the people was always entertaining. In the purely Chinese villages there was absolute indifference, as if hundreds of motor-cars were passing daily. The Tartars, on the other hand, were devoured with curiosity and examined the machine carefully to find the imprisoned beast, though the most widely spread conviction was that the car was dragged by an invisible winged horse. In China and Siberia the travellers were treated with unfailing courtesy by the peasants, but in European Russia they were received with silent hostility in many places, for "the idea has obtained that motor-cars are vehicles exclusively used by the enemies of religion and the Czar." Perhaps the incident most significant of the changing conditions in Asia was the finding of a telegraph station at a well in the Gobi desert in Mongolia, almost 200 miles from the nearest town. Here lived a Chinaman whose solitude was supported by two joys, his little daughter, and the telegraph.

> For long hours he is wrapped in the tick-tack of keys and receivers, listening in them to the voices of the far-off world—voices from St. Petersburg, from London, from Tokio. He merely transmits the messages, the news passes him—orders, mysterious diplomatic communications, passionate words go by. When the great conversation of the continents is over, the telegraphist takes advantage of the clear line himself, and then a less important conversation commences. The operators in the desert greet one another, tell one another the small news of the day, their trials, their hopes. These conversations take the place of the daily paper for those hermits.

The race began, it may be added at Pekin on June 10, and Paris was reached August 10. The automobile traversed the nearly 10,000 miles, 7,500 of which were without a track, without serious mishap, and, except in about 120 miles, when crossing the mountains in China, unaided. While the contest has conclusively demonstrated the strength of the motor-car, it has also proved the possibility of the substitution of it on the great Asiatic plains for the camel caravan, and the consequent development, commercial and agricultural, of the continent. The work of Signor De Castelvecchio is so well done that it is difficult to realize that the book is a translation. The illustrations are attractive reproductions of photographs of scenes in Asia, as well as portraits of the three travellers. There is also an excellent map.

Science.

Henry Holt & Co. have now ready the fifth volume of their American Nature Series, "American Insects," by Prof. Vernon L. Kellogg. It is a revision, with some additions, of a book of the same name hitherto published without connection with this series.

Like several other books of the series to which it belongs, the New Library of Medicine, "The Care of the Body," by F. Cavanagh (E. P. Dutton & Co.), is exceedingly suggestive. In some seventeen chapters the author discusses a wide variety of topics: sleep, baths, exercise and fatigue, clothing, hair, eyes, ears, and many other things. Incidentally he touches numerous matters of interest, for example: the unwise restraint of children, the relation of original sin to the reflexes, the justification of the matutinal yawn, the soporific value of meditation, alkaline dust as the cause of the nasality of American speech, the question of subsidizing the physician, the unsanitary character of much of our clothing with comments on the lining of gloves, the harmfulness of pockets, and the desirability of washable overalls. Everywhere the discussion is illuminating, often enlivened by a gentle sarcasm and an irony of such mildness that it never cuts severely. Dr. Cavanagh's views are in the main rational and sound, and his statements of fact are fairly accurate except in the assertion, which he makes twice in the course of some twenty pages, that the tiny sweat orifices have altogether an area of ten thousand square feet! The general criticism may be made that there is often a lack of explicitness as to the remedy for the evils which the reader is asked to recognize; in fact, the book appeals to a rather well-bred and somewhat limited class of readers who, to be sure, need enlightenment hardly less than the great rabble to whom the proper care of the body is a good deal of a mystery.

Of the "Treatise on Chemistry," by H. E. Roscoe and C. Schorlemmer, the second volume, on the metals, has been issued in a new edition, completely revised by Sir H. E. Roscoe and Dr. A. Harden (The Macmillan Co.). Roscoe and Schorlemmer's "Chemistry" has maintained its position for thirty years as the most comprehensive, systematic treatise on the subject in the English language. It is characterized by the completeness of its descriptions of the elements and their compounds, and by the unusual attention it pays to the history of the science. Most of this matter has remained, of course, substantially unchanged by the revolutions that have taken place in the fundamental conceptions of chemistry; and in the present edition the new knowledge of the last decade has been incorporated or added without altering the familiar framework and style. To none of the other volumes have recent discoveries contributed so much that is novel and revolutionary as to this one on the metals. When the work was last revised inorganic chemistry was regarded as an exhausted field and the young men searching for a profitable *Arbeit* were adding volumes of new carbon compounds. Now they are studying the laws of chemical equilibrium, the genesis and disintegration of radium, the vibrations of the corpuscles inside the atom, the theory of solutions, the significance of valence, and the behavior of bodies at the temperature of liquid air and of boiling carbon. All this will ultimately necessitate a radical rearrangement of the science, for which, however, the time has not yet come. Perhaps, when the next decennial edition of Roscoe and Schorlemmer is issued the old facts will be fitted into the new theories.

E. Boirac, rector of the University of Dijon, offers a volume of investigation and philosophy which may serve as an introduction, not before written, to "La Psychologie inconnue," to wit, the experimental study of psychical sciences. The author thus explains his aim:

> All these phenomena were formerly called occult—suggestion, hypnotism, animal magnetism, telepathy, spiritism. It is to be regretted that they have been so long left to be worked by charlatans and more or less given over to empirics and dreamers, whereas they might be scientifically cleared up by a systematic application of the experimental method of Claude Bernard and Pasteur.

In the series Die Vegetation der Erde (Leipzig: W. Engelmann), the eighth volume has appeared, "Grundzüge der Pflanzenverbreitung in Chile," by Karl Reiche. There are 374 pages, 55 drawings in the text, 33 tables, and 2 charts. Since 1896 the author has been engaged in research in Chile.

Prof. J. B. Woodworth of Harvard will go to Brazil in June in charge of the Shaler Memorial Expedition to South America. The object will be to study the highlands of southeastern Brazil for evidence bearing on the question of glaciation in the carboniferous period. On the completion of the work in Brazil, Professor Woodworth will proceed to the coast of Chile south of Valparaiso for the purpose of investigating the shore-line changes and the nature of the rock movements in the recent epoch.

The Fourth American Scientific Congress, will be held in Santiago, Chile, December 25, 1908, under the auspices of the Chilian government.

The dates announced by the University of Cambridge for the celebration of the hundredth anniversary of the birth of Charles Darwin, and the fiftieth anniversary of the publication of the "Origin of Species," are June 22, 23, and 24, 1909. It is proposed to invite representatives of universities and other learned bodies, together with distinguished individuals, to visit the university on the occasion. A programme of the celebration will soon be issued.

Drama.

TUDOR FACSIMILE TEXTS.

With two folio and ten quarto volumes now before us it is possible to form an opinion as to the value of the Tudor Facsimile Texts, edited by John S. Farmer and issued for subscribers by T. C. & E. C. Jack of Edinburgh and London. These collotypes are almost exact reproductions of the originals, and will serve every purpose of the most minute student. In one case, that of Massinger's "Believe as Ye List," the reproduction has been compared in detail with the original manuscript by J. A. Herbert (Manuscript Department, British Museum), and we quote his report as indicative of the correctness of the photographic copies in general. He calls the work "a faithful reproduction," with only the following "very slight flaws":

> (1) Page 6v, line 1, " 'em"; the dash over the *e* in the manuscript to indicate the apostrophe is clear. (2) Page 8v, last line, the "y" of "they" is somewhat plainer than the photo. (3) Page 9v, line 2, "better" is clearer in original. (4) Page 14r, line 1, the edge of leaf is frayed and crumpled, and so practically impossible to flatten out for photographing; the first word seems to be "fellowe"; the second word "despatched." (5) Page 18r, line 2, "Antiochus" is faint in manuscript as here, but slightly more legible. (6) Page 18r, line 3, the first two words slightly plainer in MS. are "borne dumbe." (7) Page 20, last line, the last two words, also rather fainter in photo than in originnal, are "personall appearance."

All the volumes are interleaved with good vellum paper both to keep the plates from rubbing and to serve for private annotations.

The publications so far may be divided into three groups. Four of the plays come from the collection of Cox Macro, an antiquary of the eighteenth century, and are now in the possession of J. H. Gurney of Keswick Hall. These are "Mankind," from a manuscript supposedly of the year 1475; "Wisdom, or Wind, Will, and Understanding," of 1460; "The Castle of Perseverance," of c. 1440, and "Respublica," of 1553. These had all been reprinted by the Early English Text Society. A second group comes from the "Irish find of 1906," bought at Sotheby's by the British Museum. It includes three plays hitherto lost: "Wealth and Health," from an edition of c. 1557-8; "Impatient Poverty," of 1560; and "John the Evangelist," printed some time between 1546 and 1586. There are also four plays from editions hitherto unknown: "Nice Wanton," from a text of c. 1565, the earliest edition being 1560; John Heywood's "Play of the Weather," 1565(?), earliest known edition 1533; Richard Wever's "Lusty Juventus," from the first and hitherto unknown edition of 1540; and "King Darius," from a hitherto unknown edition, an earlier and presumably first printing being of 1565. The facsimile of Massinger's "Believe As Ye List" may stand alone. It is endorsed: "This Play . . . may be acted this 6 of May 1631, Henry Herbert," and is in the actual handwriting of Massinger. It is, with the exception of Ben Jonson's two masques, the only play by an Elizabethan dramatist preserved in the manuscript of the author, and has thus a unique and great interest.

As for the value of these expensive facsimiles some regretful doubt may be expressed. In the case of the greatest dramatists no trouble and expense may be regarded as too great to preserve and render accessible the exact text, but all, or nearly all, of these plays have only historical interest, and it should seem that a careful transcription would serve every purpose. Only a trained scholar can read these black-letter texts with ease, or the manuscripts at all, and the price of such facsimiles is prohibitive to any but the richest libraries. Still the Massinger play was bought by the British Museum in 1900 for £69, and would have cost much more if it had been generally known as a holograph. The facsimile, which has practically all the value of the original save that of sentiment, costs only £2 2s., and may be reckoned cheap in comparison. There is, for those who can afford it, a certain inspiration in handling so exact a reproduction of what has upon it the difficult sanctity of age, and we can hope that a sufficient number of subscribers may be attracted to guarantee the continuation of the series. Some fifty plays are already promised, and more will be added if the funds are forthcoming. The working value of such a series, it may be added, increases in direct ratio to the number of reproductions.

A new play by Eugene Walter is to be produced in the Bijou Theatre in this city Saturday night, and there will be a certain curiosity to see whether it is an improvement upon his promising but crude "Paid in Full." It is called "The Wolf," and is a melodrama of the Canadian Hudson Bay territory. The principal characters are played by Ida Conquest and William Courtenay.

"The Luck of McGregor" will be produced in the Garden Theatre on April 20. This is a romantic drama of the colonial period, written by Edward Vroom, who will play the part of the hero himself. Many years have elapsed since Mr. Vroom was last seen in this neighborhood. Older playgoers will remember his appearance in an English version of Coppée's "Pour la couronne," in which he proved himself a romantic actor of uncommon grace, vigor, and skill. Since that time he has acted with success in England. Mr. Vroom, in his younger days, supported Edwin Booth and other famous actors, and has had that training in the romantic drama of which most of our contemporary players are so much in need.

The success of the revival of "The Admirable Crichton" at the Duke of York's Theatre, in London, has necessitated the postponement of the production of the new comedy written by J. M. Barrie, until September. The scenes of Mr. Barrie's play are laid partly in Scotland and partly in England, and the general tone is said to resemble that of "Quality Street." As in the "Little Minister," the humorous element is largely due to the presence of several Scotch characters.

A. E. W. Mason's first play, "Marjory Strode," which has just been produced by Cyril Maude in his London theatre, The Playhouse, has been received with a good deal of critical favor. The hero is a gallant young French officer, a prisoner on parole, who falls in love with the daughter of the English squire, who is responsible for his safekeeping.

A short time ago there was produced in Paris, at the Théâtre Antoine, a four-act comedy, entitled "Les Jumeaux de Brighton," by Tristan Bernard, who took Plautus's "Menæchmi" as his model, and followed it pretty closely. The piece has been acquired by Charles Frohman, who will produce it in an English version by John N. Raphael.

The death of Mrs. Henry Thornton Craven (Eliza Nelson), in England, at the age of eighty-one, removes one of the last remaining links with the stage of Macready. She was twenty-four years old when, after having fulfilled certain engagements under that great actor, she took part in his farewell performance, in which her husband also appeared. After that her success was chiefly in the "domestic drama" then popular, of which her husband, Mr. Craven, the author of "Milky White," "The Post Boy," "Meg's Diversion," and other once successful plays, was a prolific producer. With her husband she played for some years in Australia.

The death of Willie Edouin, one of the most comical of English low comedians, was reported in a cable dispatch from London April 14. He was born in 1841, and he was one of the few remaining representatives of a school which in its day contributed many accomplished actors to the more serious drama. Occasionally he himself made excursions in that direction, but he was most potent with the cap and bells.

Music.

Programme Music in the Last Four Centuries. By Frederick Niecks. New York: H. W. Gray Co.

When Charpentier introduced imitations of the street cries of Paris in the score of his opera "Louise" he was hailed by many as a daring realist and innovator. He was, however, anticipated four centuries ago by Clément Jannequin, who wrote a descriptive piece called "Les Cris de Paris," in which he introduced a great number of these cries, among them "Red and hot wine," "Hot pies," "Delicious tartlets," "Fresh herrings," and "Old shoes." He also wrote programme music on other favorite subjects, including war, hunting, and imitations of animal voices, particularly bird voices. Battle pieces were specially liked in the sixteenth century. "The record of all the battle and hunting pieces alone would fill a goodly volume," says Professor Niecks. Indeed, the author of this book has found so much to take up his space (548 pages) in the last four centuries that he does not, even in a footnote, mention the fact that the ancient Greeks already had music intended to call up such incidents as the contest of Apollo with the serpent Python.

Such pieces, to be sure, are, in the words of Ernest Newman, not real programme music, but merely "the rawest part of the raw material out of which programme music is made." Some of the greatest composers, among them Haydn and Beethoven, did indeed on a few occasions imitate the song of birds, but they did it in an apologetic manner. Until the middle of the nineteenth century there was a decided prejudice against programme music of any kind; it was not regarded as quite respectable, and this attitude had some strange results. As Professor Niecks remarks:

> It used to be very common with composers to conceal their programmes. They were either afraid of the prejudiced critics, and kept their secret, like Weber in the "Concertstück"; or were themselves affected by the prevailing prejudice, and tried, like Schumann, to excuse their practice by explanations intended to allay their own doubts as well as the wrath of others.

Even Beethoven, who was usually a law unto himself, when he had embodied in his Pastoral Symphony what our author pronounces "the most magnificent picture of a storm, whether color- or tone-picture, that so far has been given to the world," apologized for his rashness, declaring that this composition was "more the expression of feeling than painting." Fortunately his deed made a deeper impression than his words, and others were encouraged to follow in his footsteps; among them was Mendelssohn, whose most original works, as everybody now can see, are precisely those in which he allowed his creative power to be fertilized by poetic subjects, as in the "Hebrides" Overture, the "Midsummer Night's Dream," and the "Calm Sea and Prosperous Voyage." Programme music had by this time become an infinitely more refined art than it was in the days of bird and battle pieces by Jannequin and others. It was now and thenceforth concerned with soul-painting as well as with body painting.

Professor Niecks traces its development and gradual transformation with much acumen and erudition; his book is the most elaborate and valuable treatise on the subject in any language. He rightly maintains that the programme need not be verbal, but may also be pantomimic or pictorial, and he therefore gives a chapter to Wagner who, though avowedly opposed to programme music, contributed in his operas countless examples of tone-painting. The works of Berlioz and Liszt are analyzed in detail and the author observes justly that "important as Berlioz is in the development of programme music, Liszt is far more so. Indeed, he is the most important of all." Of the Americans, the author considers in detail only MacDowell.

Professor Niecks confesses that the results of his inquiry modified to some extent his previous notions and judgments. He found there was a great deal more of programme music in the world than he had supposed, even apart from the fact that in reality such songs as Schubert's and operas like Wagner's may be included in it. The arguments by which he includes Bach, Schubert (in his instrumental works), Chopin, and Brahms in his book are somewhat flimsy, unless indeed we bear in mind that programme music, as he understands it, "is so comprehensive that a history of it goes far towards being a History of Musical Expression." To him it is clear and certain that "all good music has a programme, taking the term in its very widest significance," and that, rightly understood, we may therefore say that "programme music is the only high-class music."

Lawrence Gilman is preparing a life of Edward MacDowell, to be published this autumn by John Lane Company. He will be grateful for the loan of letters or other material bearing on the subject. His address is No. 227 East Seventy-second Street.

A new musical league has been founded in England, similar to Germany's Tonkünstler-Verein, the object of which is an annual festival, at which are performed new works by contemporary composers and older works that are undeservedly neglected. The president of the Musical League is Elgar, the vice-president is Delius, and among the members of the committee are Granville Bantock and Percy Pitt.

Puccini has been invited by President Diaz to write an opera for the opening, five years hence, of the $5,000,000 opera house to be built in Mexico City.

Art.

The History of Sculpture. By Ernest H. Short. New York: E. P. Dutton & Co. $3 net.

This book is readable and suggestive. Mr. Short has carried out in a vivid and familiar style his central idea of coördinating sculpture with contemporary life. He disclaims utterly the text-book idea, and in this way is able to get rid not only of biographical and bibliographical details irrelevant to his purpose, but even of any mention of sculptors who, in his eyes, are lacking in prime importance. The book is, therefore, quite simple in its lines and lacking in detail, even in its treatment of the sculptors who are regarded as of sufficient significance to be discussed. The material is further reduced by Mr. Short's decision to limit himself to those periods of sculpture that have a message for our twentieth century. Greek sculpture before the fifth century, late Roman, mediæval, and even Gothic work, as well as several phases of the post-Renaissance period, are passed over with a few words as not sufficiently "human," that is, realistic.

The treatment of the broad lines of developed Greek sculpture, of Hellenistic and early Roman work, of the Italian Renaissance, and of the modern French and English schools is graphic, though we should prefer greater fulness in the description of the mass of sculptured material and the exclusion of irrelevant historic reflections. The political and social conditions of the times, the character of the patrons of art, the current forces that moulded and developed the personality, and the themes of the sculptor are the ideas on which the author constantly dwells. This mode of presentation certainly adds human interest; but it is also a mode of extreme difficulty. To keep within bounds presupposes encyclopædic historic knowledge and deep insight. To judge the book and not be led astray by it a reader must really know more than the author and sit in judgment on his historic interpretations, which seem often quite unjustified. To say, for example, that the psychological turn given to the Florentine sculpture of the Renaissance by Donatello and his contemporaries was due to the increasing strength of the democratic movement in Florence in the fifteenth century as compared to the previous age, is to talk nonsense. The effect of political conditions on this aspect of sculpture would be hard enough to trace at best; and as a matter of fact the golden age of the democracy was then closed and liberty was doomed. The Renaissance was the age of despots. When as a second cause of the same humanizing of sculpture Mr. Short gives the passing of education from the exclusive control of the clergy into the hands of the humanistic philosophers, he seems to forget the great lay universities of Padua, Bologna, and the rest, whose golden age was previous to the Renaissance, and to attribute an impossibly widespread influence to the small coterie of humanists in the early fifteen century.

With these and innumerable kindred reservations the book is stimulating. But it is not really a history of sculpture. It is rather a collection of readable essays for leisure hours.

Two recent volumes of John Lane Co.'s Spanish Series deal with painters: Goya, by Albert F. Calvert, the general editor of the series, and Velazquez, by Mr. Calvert and C. Gasquoine Hartley. It cannot be said of either book that its text offers anything new or important. The principal value of these works will be found in the almost unprecedented fulness of illustration, there being 136 reproductions in the Velazquez, and 612 in the Goya. The grouping of these illustrations at the end of the volumes has its convenience for future reference, but the entire absence of plate numbers makes consultation while reading extremely difficult. At first one is inclined to regret the presence, in the Velazquez, of a number of reproductions of manifestly spurious pictures, but the demonstration of their spuriousness by their confrontation with genuine works, has its value also. Of the many works of Goya illustrated very few go far to justify the exaggerated reputation that has recently been made for that painter. Most of the portraits are stiff and badly drawn, while the compositions are not only fantastic but slovenly and the horror generally misses fire.

The latest issues to reach us of the Newnes-Scribner series of Drawings of the Great Masters and Great Etchers are devoted respectively to Michelangelo and Rembrandt. E. Borrough Johnson writes of the drawings of Michelangelo with real enthusiasm, if without much critical insight. His selection of material for illustration, is, however, extremely faulty. Leaving out of the question the drawings attributed by Berenson to Sebastiano del Piombo, about which there may be a reasonable difference of opinion, there are a number of things here reproduced that are manifestly not by the artist. The Night and the Morning are drawings after the statues, not studies for them, and are probably seventeenth century work. Much the same thing may be said of Plates 22, 36, and 38, of figures in the Sistine Chapel. Plate 40, labelled Studies of Men for the Last Judgment, has nothing to do with that picture, and has been attributed to Raphael. On grounds of style we should ourselves be inclined to question, also, Plates 4, 13, 21, 28, 39, 41, 43, and perhaps two or three others. Certainly many of these might have been advantageously replaced by undoubted and magnificent examples. A. M. Hind's text to the Rembrandt is what the text of these volumes seldom is, an original and important contribution to the subject, giving us not only a critical account of Rembrandt's etchings, but an entirely new list of such works as the author accepts as authentic, 293 in number, arranged and numbered as nearly as possible in chronological order. The sixty-one plates are well selected, and, for the most part, admirably reproduced.

To the Newnes Art Library (imported by F. Warne & Co.), is added a volume on Raeburn, which contains a brief biography by R. G. Clouston and forty-nine reproductions of portraits by the sturdy painter of men.

A paper read before the Rhode Island Historical Society by Prof. William Carey Poland of Brown University, and now printed as a pamphlet, gives some account of "Robert Feke, the Early Newport Portrait Painter." Professor Poland begins his study with Gustavus Hesselius (1682-1755), a Swede by birth, who is the earliest painter in North America of whom we possess any record, and then passes to his particular subject. Feke, he shows, was of English, not of Dutch descent, and was born at the beginning of the eighteenth century. He discusses the various portraits attributed to the artist, and in conclusion begs that any one who has further knowledge of Feke or Feke's works will communicate with the author at No. 53 Lloyd Avenue, Providence, R. I.

The sixth volume has appeared of the important Catalogue of the Collection of French and Foreign Portraits kept in the Print Department of the Bibliothèque Nationale of Paris. This collection, which is the largest in existence, contains 200,000 different pieces. The Catalogue was begun by Georges Duplessis, and is continued by P. A. Lemoine. The present volume goes from "Lafayette" to "Louis Philippe I." The entire Catalogue will take eight volumes, with text in two columns. Only 150 copies are offered for sale, at twenty francs a volume.

Salomon Reinach continues his series of museum works by a "Répertoire" of the paintings of the Middle Ages and Renaissance in two volumes: the first contains 1,046 engravings, the second 1,200; and there are three indexes.

Prof. D. G. Lyon, curator of the Harvard Semitic Museum, has been given leave of absence from April 25, through part of the next academic year, to supervise excavations at Samaria. The site is one of the largest, and one of the most important in Palestine. On the surface are remains of buildings erected by Herod in the first century B. C. Beneath these there may be remains of Hebrew palaces and of the homes of the people; still lower, perhaps, relics of Canaanite occupation. Tombs hewn in the rock are also sure to be found. The village in its name, Sebastie, perpetuates the Greek name Sebaste, which was given by Herod. The only mosque in the village was formerly a church of the Crusaders.

The ancient Circus Maximus in Rome is to be reconstructed as it was in the time of the Emperor Trajan and used as of old for athletic contests. It is expected that the work will be completed by 1911.

Paintings belonging to T. J. Blakeslee were sold in this city at auction April 9 and 10. The ascriptions were in some cases doubtful. The following were among the higher prices: Sir Joshua Reynolds, Mrs. Hutchinson, $2,250; Mrs. Thomas Orby Hunter, $2,100; Little Girl with a Kitten, $1,150; Romney, Lady Clanricarde, $3,500; Mrs. Hugh Scott, $3,800; David Garrick and Mrs. Siddons as Romeo and Juliet, $1,500; Mrs. Wright, $2,600; Captain Beauchamp, $1,025; Léon Richet, After the Storm, $1,375; Nicolas de Largillière, The Duc de Penthièvre, $1,550; Sir Thomas Lawrence, The Hon. Maria Liddell, $5,300; Lady Ogilvie, $3,950; Sir William Beechey, Miss Lennox, $3,600; Mrs. Marshall, $3,200; Francis Cotes, Lady Hertford, $1,825; Pierre Mignard, Mme. de Graffigny, $1,950; Jakob van Ruysdael, Mountains in Norway, $4,300; Sir Henry Raeburn, Lord Glenlee, $2,100; George Joseph Bell, $2,300; Master Cathcart, $1,950; J. Hoppner, Dr. Woods, $1,100; George Henry Harlow, Portrait of a Lady, $1,125; Gainsborough, Lady Knighton, $3,250; Cornelius de Vos, Three Dutch Children, $1,125; Botticelli (doubtful ascription), Virgin and Child, $2,300; Franz Pourbus, Anne of Austria, $1,100; Caneletto, Grand Canal Opera House, $1,000; P. F. Mola, Venus Rising from the Waves, $1,200; Lely, Countess of Exeter, $1,800; Daniel Mytens, Charles I., $1,200.

The paintings of Fishel, Adler & Schwarz, art dealers in this city, were offered at auction April 8, 9, and 10. The following prices were paid: Detaille, Twenty-third Dragoons, $2,400; Israel, The Philosopher, $1,125; Neuhuys, Family Happiness, $2,950; Industrious Granny, $2,550; Ziem, On the Lagoon, $1,225; Rosa Bonheur, Tiger, $1,050; Mauve, Plowing, $3,200; Daubigny, Approaching Storm, $3,200.

At an auction at Christie's, London, March 28, the following pictures were sold: Drawings: D. Gardner, Lady Fawkener, with Her Daughter and Grandchild, £1,312; Three Children of the Hon Edward Bouverie, £525; O. Humphrey, Lady Barbara Ashley, £210; J. Downman, Mrs. Rawlinson, £210; J. Russell, Mrs. Sarah Bell, £336. Paintings: Romney, Mrs. Dorothea Morley, £2,887; James Morley, £315; Mrs. Anne Poulter, £1,575; Edmund Poulter, £420; J. Hoppner, Lady Caroline Ponsonby, £220; Landseer, The Return from the Warren, £346; Lawrence, Lady Caroline Lamb, £325; H. de Bles, St. Catherine and St. Barbara, £735; Bernardino Luini, St. Anne, £210; J. van Huysum, Flowers and Bird's Nest, £220; J. Crome, A Woody Landscape, £215; Morland, Blind Man's Bluff, £1,050; B. E. Murillo, A Woody Landscape, £262; G. B. Tiepolo, The Immaculate Conception, £430.

Among the exhibitions in the dealers' galleries in this city are portraits by Paul K. M. Thomas, at Clausen's, till April 18; paintings by Alethea Hill Platt, G. M. Glaenzer & Co.'s, April 18; portraits by J. Mortimer Lichtenauer, M. Knoedler & Co.'s, April 18; drawings by Henri Matisse, Photo-Secession Galleries, April 25; etchings, wood-cuts, and original sketches, Frederick Keppel & Co.'s, May 9.

The National Academy of Design has

elected the following associates: Architects, John M. Carrère and Rutherford B. Mead; sculptor, Chester Beach; painters, J. J. Sbannon, Cullen Yates, Ernest Lawson, W. Granville Smith, Colin Campbell Cooper, Edward F. Rook, Charles W. Hawthorne, Miss Lillian Genth, Robert David Gauley, Gifford Beal.

Dr. Johannes Sieveking, keeper of the cast Museum at Munich, has been appointed head of the Munich Antiquarium, which also comprises the vase collection placed in the Pinakothek. The post has been vacant since the death of Prof. A. Furtwängler.

Paul Placecanton, pupil of Cormon and Dameron, and member of the Société des Artistes Français, has died in his forty-sixth year. His work was chiefly landscapes and marine views of the Midi.

Another French artist, Joseph Le Pan de Ligny, of the Société Nationale des Beaux-Arts, has died at the age of forty. He was a native of Guignen, and devoted himself largely to painting Breton scenery and interiors.

KEEPING UP PRICES.

Since the sudden and violent trade reaction which followed the panic of last October, two of our larger industries have followed diametrically opposite paths. The dry goods business, at the opening of the year, was practically at a standstill; buyers from the interior were not even visiting New York to look at samples. The experienced manufacturers and agents, first at Chicago, then at New York, promptly cut prices some 25 per cent. The New England mills followed by a 10 per cent. cut in wages and a 25 to 50 per cent. curtailment of production. When the trade had thus adjusted itself to the new conditions, business began to move forward on safe lines, and consumption at the more attractive level of prices, though naturally not so large as a year ago, proceeded in orderly fashion.

When the volume of the steel trade, between last October and last December, was more than cut in half, people expected similar action. Such a policy had been pursued, as recently as the financial setback of 1903—a much less formidable affair than that of 1907. Steel billets were then reduced, from $30 per ton to $19.50. The average price in the year before the panic of 1893, was $23.63; in the year after, $16.58. Steel rails, in 1873, averaged $120.50 per ton; in 1874, only $94.25; and they went much lower afterward.

It was not believed that prices would now fall so far as in these earlier periods; first, because the great combinations in the trade had placed it under better control and had obviated the necessity of forced sales to protect the credit of manufacturers; second, because the United States Steel Corporation's policy of the past half-dozen years had been to prevent such violent advances, in an "industrial boom," as occurred in the seventies and eighties. Still, some concession to the smaller demand and impaired resources of consumers was looked for. Such concession, however, has been flatly refused, on grounds quite new to political economy. Chairman E. H. Gary of the Steel Corporation's board gave out last Thursday the following statement:

> From all the information at hand, I do not hesitate to say that no reductions in the prevailing prices of steel are contemplated. Certainly that is our position. . . . Prices should at all times be reasonable and fair. The mere fact that the demand is greater than the supply—that the necessities of the purchaser are great—does not justify an increase in price; nor does the fact that the demand is less than the supply furnish an argument for lowering the price. In neither case would the quantity bought and sold be more or less. What the manufacturers and purchasers both, as a rule, desire, is stability of prices—the avoidance of violent and sudden fluctuations. . . .
>
> If the question of reducing or increasing prices shall be raised at any time during the next few months there will be deliberate and orderly consideration.

Judge Gary's doctrine that excess of demand over supply does not justify a rise in prices, nor excess of supply over demand justify a decline, is an interesting novelty. Most people will ask, What, then, will justify reduction of prices? Decline in the cost of raw materials might be accepted as doing so; and as a matter of fact prices of pig iron, the raw material of the steel trade, have declined, within a year, from $23 to $15 per ton. It is true that the Steel Corporation makes its own pig iron and holds title to its own ore fields, and thus is not affected. so far as its own use of raw materials is concerned, by the rise or fall of prices as fixed by independent foundries. But this consideration, so far as the argument against lower steel prices is concerned, involves the assumption that the Corporation is keeping up the price exacted by its own iron foundries from its steel plants, at a time when outside iron foundries are reducing their prices. Raw material which the company can use is to be had at the lower cost. Conceivably, Judge Gary may have meant that appreciation or depreciation of gold would be recognized as a factor in changing prices of steel as of other commodities. But that would be to beg the question, because the only way in which even an unprecedented production of gold could affect the price of commodities would be through increasing the demand for them—which would bring the issue back to the influence which Judge Gary repudiates.

In short, the more the problem is examined, the more baseless Judge Gary's theory must appear. His most solid argument seems to be that the Steel Corporation is so powerful that it will not reduce prices, whatever happens, and that it will not suffer the usual consequences of defying the inherent laws of trade. But the greater probability is, that Judge Gary has confused the maintenance of a conservative and judicious policy in fixing prices—something which can be heartily approved—with the maintenance of a policy that is purely arbitrary. Even a billion-dollar corporation, with an unexampled surplus fund, is not strong enough for that.

NEW YORK, THURSDAY, APRIL 23, 1908.

The Week.

The fate of the demand for four battleships but foreshadows the doom of nearly all the rest of Mr. Roosevelt's programme, despite his numerous special messages. Congress will not adjourn until the middle of May, but until then it will busy itself largely with the appropriation bills. A model child-labor law for the District of Columbia, and perhaps some kind of abbreviated currency bill, may slip through. There will be no legislation concerning injunctions in labor disputes, no amendments to the interstate-commerce law in favor of labor unions, the tariff on wood-pulp will not be touched, or the tax on art removed. The victory of the "stand-patters" is to be complete. And the President consents, of course. That final break with Congress, so long prophesied, is not to take place. There will be no split in the Republican party. The spokesmen of the organization next autumn will dwell on the wisdom displayed by the last Republican Congress, on its glorious demonstration of the truth that Republicans alone can do great constructive work.

If New York Democrats were notorious as heavily respectable statesmen —silkstockings, to use the opprobrious epithet so common a few years since—they might justly feel that a free fight in convention and the election of a Murphy as delegate to Denver are necessary to prove that Democratic hearts still warm toward the plain people. But the Democratic party being what it is in this State, such an extreme course was hardly called for. With Hearst as its last candidate for Governor, with Jackson as its Attorney-General, "Fingy" Conners of Buffalo as State Chairman, Charles F. Murphy boss of New York city, Pat McCarren the leader in Brooklyn, and Senator Tom Grady spokesman at Albany, the Democrats are not likely to be regarded, even in the Bowery dives, as offensively high-toned. A generation ago, in many parts of rural New York, it was a familiar saying that, though all Democrats were not horse-thieves, all horse-thieves were Democrats. But the Administration of Cleveland and the Republican revolt against Blaine brought so many honest Democrats out of hiding that, in these parts, the word almost ceased to be a term of reproach. In recent years, however, the managers of the party have been doing their best to alienate intelligence and character. To that end David B. Hill contributed his generous share. In this city, Croker and then Murphy have been indefatigable. Hearst has helped mightily. Bryan, with his flighty proposals, has perhaps accomplished as much as all the rest put together. Yet in spite of all blunders and iniquities the Democrats had a fair hope of carrying New York in the coming Presidential election. A few weeks ago the outlook seemed uncommonly flattering, especially should President Roosevelt force Taft upon the Republicans; for neither the President nor his policies are just now popular in the great Democratic strongholds of this State. But the proceedings of the Democratic Convention make this chance of success dim and remote. Conners, Murphy, McCarren, and the rest of them have grossly affronted decent sentiment. Murphy is honored by being chosen a delegate-at-large. It would be more exact to say that he chose himself; for he controlled the convention. Evidently, he is bent on making the organization in Brooklyn, and indeed in the whole State, a mere cog in the Tammany machine. In practical politics, we grant, men must sometimes have strong stomachs; but we fancy that a good many citizens of New York will be made queasy by Bryan as candidate for the Presidency and Murphy and Conners as the local chieftains. If this combination does not spell disaster, then the Democracy of New York bears a charmed life.

No marked advance towards the ideal of international peace is to be found in the arbitration treaty between this government and Great Britain, now awaiting ratification in the Senate. But progress to a certain extent it undoubtedly represents when it systematizes the mode of procedure. Probably the most significant change is contained in the provision that the British government reserves the right, "before concluding a special agreement in any matter affecting the interests of a self-governing dominion of the British Empire, to obtain the concurrence therein of the government of that dominion." This is a concession to colonial pride and self-interest which should go far towards avoiding such heartburnings as were aroused in Canada by the outcome of the Alaskan boundary dispute, or more recently in Newfoundland over the fisheries question. That a Liberal government, the party of "Little Englanders. should make so important a contribution to the fortunes of the Empire by reducing the possibilities of strife between the mother country and her colonies, must disturb Conservative complacency in England.

Mr. Gompers, at the great meeting in this city Sunday night, described in plain language the "serious situation" which confronts laboring men and labor unions. It is that they find themselves in the same boat, legally, with millionaires and Trusts. This is appalling. There has been, it is true, a cherished tradition of Anglo-Saxon democracy that the law must be no respecter of persons. From the time of the Judicious Hooker to the day of the not too judicious Roosevelt, we have been accustomed to praises of law as containing equal sanctions and the same penalties for the high and the lowly; baron and villein, magnate and labor leader, alike enjoying its protection and submitting to its sway. But we have been gradually changing all that. The conception has crept in of law as the enshrining of special privilege—in the Dingley Tariff, for example, and in labor legislation—so that Mr. Gompers naturally and innocently steps forward as one entitled to cry aloud because the Supreme Court has held that he is not immune from the law which is binding upon all others. We have, in short, come to the fearful pass when gross injustice consists in even-handed justice. It was not put quite so bluntly by Mr. Gompers, yet that was really the burden of his complaint. To him, long nourished on the idea that organized labor is a favored class, it seems shocking and intolerable that, when a labor union conspires to restrain trade, it should be visited with the penalty laid down by the law for all such restraint; and that. when it erects itself into a tyrannous monopoly, it should be adjudged worthy of the punishment of all monopolists. It is impossible for Mr. Gompers, or any one else, to state the grievances of organized labor without letting it appear that what they desire is exemption from the common operation of the common law. This is what they proclaim their intention of fighting for with their ballots. They propose to "hold strictly accountable" every member of Congress, and every Presidential candidate, who refuses to assent to labor's demand that it be made a privileged class. There is, of course, no objection to laboring men, or any other body of citizens, going into politics to make their wishes known and their power felt. That is the democratic way. But it is consonant neither with democracy nor with elementary fair play, for one set of Americans to try to remove themselves from the scope of laws that are made for the government and peace and well-being of all. Let Mr. Gompers lead his followers into the battle of the ballots by all means, but let him not hope to conceal the fact that he is asserting himself as greater than the law.

In Senator Foraker's speech on the Brownsville affair the eloquence of fact reinforced the eloquence of rhetoric when Mr. Foraker declared that, "the vilest horse-thief, the most dangerous burglar, or the bloodiest murderer would not be required either to prove his innocence or to submit to a trial before a judge who had in even the most casual way expressed the opinion that the defendant was guilty." And the Senator was still stating substantial fact when he declared that it was a question of a judge "who has already prejudged their case, not once, or twice, or three times, and casually, but repeatedly and officially, and each time with a manifestation of the most unqualified conviction that not only some of the men discharged did the shooting, but that many, if not all of them, had knowledge of the perpetrators, which, through a conspiracy of silence, they have refused to divulge." We say substantial fact because we find in the President's words on Brownsville a certain modification of tone which would argue that, if his convictions had not changed, the expediency of milder expression was present to his mind. In December, 1906, he speaks of men "implicated in the raid on Brownsville, Tex." In March of the present year these men became a "class whose discharge was deemed necessary in order to maintain the discipline and morale of the army." At the present moment the "raid" has become an "affray." Whether such milder speech indicates softened wrath or a mind prudential, is hard to tell.

A gentleman who knew all about the "plot" to bring on a panic was before the Banking Committee of the House of Representatives last Thursday. His evidence was, however, very like that of Mr. Cable's Creole: he was absolutely sure of it; he would make oath to it; in fact, he thought so. Some one had told him so; hence it must be so. Indeed, a "prominent financier," whose name he would not give, had predicted the panic, and how could it be doubted that what was thus predicted had been wickedly brought about? This is very much of a piece with Senator La Follette's "proof" that because a certain number of men might have cornered the money supply, and brought loss and misery on themselves with others, therefore they did it. As for predictions of a panic, they were publicly made by the dozen, months before it came. Predictions of a new panic are already made. Chairman Fowler, of the very committee before which this horrid plot was laid bare, predicted in a speech at Chicago that, if the currency were not reformed, the country would have a panic compared with which the crash of 1907 would seem child's play. Consequently, and by the severest canons of this "plot" logic, Mr. Fowler will be the author of the next terrible panic.

The enactment, by the Legislature at Albany, of the bills to reform the trust-company law of this State, has attracted comparatively little comment. These measures, however, embody a more imperative reform, and are a much more practical application of the lessons of the recent panic, than any or all of the proposed currency legislation at Washington. That the national currency system, directly or indirectly, was a cause of last autumn's disturbances and of the portentous phenomena which accompanied them, it would be difficult to prove. But that the very defective laws regulating reserves and investments of the trust companies of New York State did play a great part, there is no doubt whatever. The panic of 1907 might have occurred without the precarious conditions created by this so-called trust-company finance; but it was that which brought it to a head with such amazing violence, which converged on New York city the worst of the shock, and which reproduced, in the financial centre of the nation, a scene of terror and demoralization such as has not been witnessed in this city since 1857. No one who studies the careful analysis, in such treatises as Prof. W. G. Sumner's "American Currency," of the unsound banking, inadequate maintenance of reserves, and rash investment of demand deposits, by the State institutions of half a century ago, will doubt the large responsibility of that system for the financial collapse of the period. But a comparison of those earlier State-bank practices with the recent placing of demand deposit funds, running with some institutions up to $40,000,000, in slow investments not permitted to the banks, and with a cash reserve ranging only from 5 to 10 per cent., will show how closely we had been imitating 1857. Hereafter, 15 per cent. of trust-company demand deposits in the cities must be kept on hand in cash; and in a second bill, careful restrictions on the investment of such deposits, drawn up by the Banking Superintendent, are imposed. These reforms will, we presume, be imitated in other States where trust-company laws suffer from similar defects. Thus at least one result of the highest value for the future may be achieved through the hardships of last autumn.

The most interesting session of the Eleventh Conference for Education in the South, which began at Memphis yesterday, is probably that devoted to discussion of compulsory attendance. Tennessee, where the Conference meets, affords an excellent example of the need of such a compulsory law as is to be found in every Northern State, and in Missouri and Kentucky as well. The enrolment in its public schools in 1905 was 507,000 children, besides 30,000 in private institutions; but as the total population of school age in that year was 762,894, it is evident that some 225,000 children were not even enrolled. This is a bad enough showing in all conscience for an enlightened State in the twentieth century; it becomes much worse when the figures of attendance are examined. The average in 1905 was only 348,000; that is, less than half of the children of Tennessee are getting any schooling whatever. Even those whose parents compel them to report to their teachers receive only 116 days of instruction. More shocking than all is the fact that the number of illiterate white voters in Tennessee has *increased* from 37,173 in 1870 to 52,418 in 1900. If democratic institutions are safe only when they rest upon an informed public sentiment, they are obviously in danger in this State, with its 159,000 white illiterates, to say nothing of the ignorant blacks. These and other data of similar import were published recently in the Sewanee *Review* by George F. Milton, editor of the Knoxville *Sentinel*, who is one of the speakers at the Memphis Conference. If Germany, he asks, with less than one-half of 1 per cent. of her population illiterate, requires a ten months' school course for all children, how can Tennessee ever reduce its appalling illiteracy to the same figure, with only 116 days, and less than one-half its children in school? Unfortunately, a reform in this matter cannot be brought about quickly. The cost must be considered. If the 762,894 children should appear to-morrow demanding instruction, there would not be sitting enough or teachers enough. Tennessee is now spending $3,400,000 a year on its schools, and if this seems a small sum to wealthier States, it is a large sum for a State of Tennessee's resources. Among other obstacles is the attitude of employers of child-labor. Compulsory attendance at school-houses for children would be nearly as effective a way of keeping them out of the mills in the day-time as would a direct law to that effect. Hence the mill men always have grave doubts as to the advisability of education for the masses. And, finally, there is the complication of providing schools for the negro as well as the white. That plan rouses much opposition; yet if the negroes are a menace, if they are lazy, shiftless, and unstable, it is largely because of their ignorance.

Italy's "war" with Turkey has been settled in a way that should please the most pacific. The Turkish government has assured the Italian foreign minister that Italy will be accorded the same treatment with regard to post offices as that enjoyed by other Powers. The

Italian armada, therefore, will not sail. That is the manner in which conflicts between the Porte and a Western Power have been decided of late. The offended Power's fleet occupies an island or custom house in Asia Minor, and the Ottoman government yields. There can be little doubt that Italy's contemplated action in the Levant was with the sanction of her partners in the Triple Alliance. Indeed, Prince von Bülow's arrival in Rome a week ago would preclude any other hypothesis. Italy's activities in the near Orient have shown, in general, a marked increase during the last two years. There are, of course, the old-abiding hopes with regard to Dalmatia and a Greater Italy across the Adriatic, and also with regard to Tripoli. But fresh zeal has come to Italian aspirations as a direct result of the ecclesiastical controversy in France. As a logical outcome of the Separation Law, France has been abandoning her historic rôle of protector of Catholics in the East, and Italy has been stepping into her place. Religious orders, with their affiliated missions, schools, and hospitals, have been transferring their formal adherence from the French to the Italian government, and the latter has thus been acquiring in Turkey's Asiatic and African dominions a degree of authority not at all commensurate with the importance of its material interests in those regions. Tripoli alone is the exception; for that, as we have said, Italy has long regarded as set apart for her own ultimate inheritance. How the nation will rise to its new responsibilities time must show. Up to the present, Italy's colonial adventures have ranged from unmitigated disaster to just ordinary failure. Abyssinia has recently shown, in the raid by the Ogades tribesmen on Lugh, that the hard experience of thirteen years ago must still be borne in mind by a cautious government. Italy peoples, with her vast overflow, the western continent and the colonies of other nations, like those of France in North Africa; but she has not yet shown capacity for managing colonies of her own.

Macedonia is one of the subjects which have taken Chancellor von Bülow on a journey to Vienna, and subsequently to Rome, where he arrived last week. His mission, according to his own statement, is to aid in the selection of a middle course between the proposals brought forward by Great Britain and by Russia for the amelioration of conditions in Macedonia. The British scheme proposes in substance an autonomous Macedonia under a governor appointed for ten years by the Porte and removable only with the consent of the Powers. Russia's proposals are far more moderate. The inspector-general of the three Macedonian vilayets, Hilmi Pasha, who is accused of being an instrument of the Sultan, is to be retained as a concession to that sovereign. The powers at present vested in the Russian and Austrian civil agents, of reporting to their governments on the state of Macedonia and offering suggestions for reform, are to be conferred on the members of al the six great Powers now sitting in the International Financial Commission. These members shall be taken into the Turkish service. The general of the present *gendarmerie* corps shall participate in the deliberations of the Financial Commission, to which is assigned the administration of justice in accordance with a scheme of reform prepared by the Powers. Russia's proposals are tantamount, therefore, to an abandonment of the dual Austro-Russian agency in Macedonia under the Mürzsteg programme, and the erection of some such system as was instituted in Egypt after the revolution of Arabi Pasha. The Porte finds even the Russian scheme objectionable. In the conflict and reconciliation of so many diverse views, Macedonia promises to occupy a foremost position in the coming diplomatic season.

Mr. Redmond's challenge to the new British Ministry, involved in the statement that the reconstruction of the Cabinet has necessitated a change in the attitude of Ireland towards the government, needs to be read in the light of general Nationalist tactics. Before this we have had violent Irish denunciation of ultimate government policy coupled with a readiness to coöperate with the authorities for the attainment of minor ends. Thus the Nationalist leader was consulted in the drafting of last year's Irish Council Bill, which, up to the last moment, was supposed to have his approval. Yet its rejection by the Nationalist convention at Dublin was brought about on his own motion. That performance, again, did not prevent recent coöperation on the Irish University Bill, or the expression of more or less sympathetic opinions in the course of the late debates on Home Rule and the cost of Irish administration. After Mr. Birrell's explicit declarations in favor of Home Rule, and his courageous action in refusing to resort to exceptional police regulations demanded by the Ulster members for the suppression of cattle-driving, it is hard on the genial Irish Secretary that he should be lumped with Mr. Asquith as an object of Mr. Redmond's hostility. And even with regard to the new Premier, there is no apparent reason why the Nationalists should grow suddenly restless. Mr. Asquith, it is true, is not a Home Ruler. Sir Henry Campbell-Bannerman was. But, in practice, both statesmen stand on the same platform—namely, that the present Parliament has no mandate for dealing with the question of Home Rule.

Persia's anxiety with regard to the activity of Russian troops on her northwestern frontier is not altogether without reason. The specific explanation of the entry of Russian troops into Persian territory—the pursuit and punishment of Kurdish raiders—may be valid enough, but it is a matter of recent record that Russia has been searching for some reason or other to justify her throwing troops across the frontier into Azerbaijan. A few months ago it was Turkey's aggression that threatened to turn that corner of Persia into a field for Russian campaigning, and now it is the depredations of the Kurdish tribesmen. The occasion and beginning of Russian activity in the Persian Caucasus are thus much like the opening events of the Manchurian business—an attack on Russian positions by rebel bands, followed by a Russian invasion and occupation. The Persian government, however, is acting more wisely than the Chinese government did. It has sent a force of its own to coöperate with the Russian troops against the Kurds. Under such circumstances, Russia's designs, if they are real, will have to proceed with more boldness than she may care to display.

The growth of alcoholism in France is arousing no more attention than it should, if the figures one finds in the French press do not exaggerate conditions. One such account maintains that the consumption of liquor is increasing faster in France than in either Austria or Belgium—which share with France the doubtful honor of being the only countries where there is increase at all. Russia ought probably to go into this class, but our account does not take it into consideration. In the British Isles the annual consumption of distilled liquors per head of the population was 4.4 litres in 1840 (the litre equals 1.056 quarts), 6 in 1871-80; 5.1 in 1881-90, and 5 in 1891-1900. In Denmark there has been a decline from 18.6 in 1875-80 to 14.2 in 1891-1900; in Norway, from 16 in 1833 to 3.2 in 1881-90 and 3.1 in 1891-1900; in Sweden from 22 in 1850 to 7.3 in 1891-1900. Switzerland has sunk from 9.2 in 1881-85 to 4.9 in 1896-1900. Germany has been standing still for thirty years at about 8.5 litres. But Austria-Hungary has risen from 6.4 in 1865-69 to 9.6 in 1891-1900, Belgium from 6.9 in 1831-40 to 9.3 in 1891-1900, and France from 2.4 in 1831-40 to 8.7 in 1891-1900. The increase in France in seventy years is nearly 400 per cent. It has been pointed out that the three countries in which alcoholism thrives are those in which practically nothing has hitherto been done to combat the evil. Where intelligent effort has been made, there have been corresponding results, as in the striking case of the Scandinavian countries, once the classic home of drunkenness.

THE CONTROVERSY OVER THE BATTLESHIPS.

We cannot credit the report that the President intends to send another special message demanding four battleships, this time to the Senate. According to one dispatch, he is willing to risk an even worse rebuff than he has received, because he believes the "people" are with him. On this point Mr. Roosevelt would, we are convinced, be undeceived if he could but get at the sound moral sentiment of the mass of intelligent and reflecting citizens. The clergy are speaking out more and more clearly, and petitions, important because of the names they bear, have been laid before House and Senate in large numbers.

When the House took action last week, not the combined efforts of Nicholas Longworth, Richmond P. Hobson, and Bourke Cockran, nor even the reported threat of a Presidential veto of the Public Buildings bill, could muster sufficient support for Mr. Roosevelt's plan. Mr. Longworth insisted that, since many members were elected to support Mr. Roosevelt, they were in honor bound to vote for four ships, but this argument overlooked the fact that when these Representatives were chosen the President was heart and soul a one-battleship man. Altogether, the debate was a brilliant one, with Mr. Burton and Mr. Tawney carrying off the honors for sanity, patriotism, and courage. If the President is to-day bitterly disappointed, one explanation must be that he was deceived by promises of many votes that failed him. The outcome of the debate indicates, as we have already said, that the sober part of this nation is not inclined to the reckless policy of building enormous fleets.

One of the unhappiest features of President Roosevelt's sudden demand for four battleships was the circulation of a private letter from him. It was shown to the Speaker. It was read in confidence by leading members of the House. Though it is not yet published—and perhaps it may never be—its drift is nevertheless known. This was to the effect that the President feared complications with some foreign Power, and wished the country to be more strongly armed. The same idea was expressed by many in the House debate. Here was the Commander-in-Chief, responsible for the safety of the nation; and if he said that more ships are imperatively needed, it was not for Congress to reason why. There must be some danger against which the President desired to guard, though the ordinary Congressman knew nothing about it; and the "patriotic" course was to vote the ships in a blind confidence. These hints of foreign machinations to be headed off are rather an old story. At the time of the lawless seizure of Panama, we had the same herring drawn across the trail. The wicked foreigner was also worked hard when the question of intervention in Santo Domingo came up. Gen. Grant had forty years before seen similar visions of being forestalled by Europeans in Samana Bay. It is a familiar device. In the present case, however, it failed of effect. Yet the impression was made, and inevitably, that all is not well in our foreign relations. The President's message was all about peacemaking, but the inference that war was expected, and was being prepared for, could not but be drawn. We may be sure that it was drawn by every Foreign Office, quite without reference to any hints the President may privately have given. His public appeal was bound to create suspicion and uneasiness where none existed before. On this point Mr. Burton bore down hard.

It is generally understood that Japan is the country against whose aggressions the President had it in mind to strengthen himself. This was plainly intimated in the House debate. The farseeing Hobson, who appeared as the spokesman for the President's policy, made out a Japanese armada at sea, more powerful than anything we could bring against it. It was fear of a swift stroke from Japan that made Bourke Cockran gyrate once more. Several other speakers dwelt upon the same peril. Now, we know and Congress knows of no evidence anywhere that Japan contemplates anything but a course of peaceful development. She has burdens at home heavy enough to stagger under, in all conscience. But even granting that the dire imaginings of Hobson have some foundation in fact, and that we must make ready for war with Japan, even that would not be a valid argument for four more battleships. The German military expert, Col. Gädke, has an article in a recent issue of the *Berliner Tageblatt*, in which he makes a detailed comparison of our battleship squadron, now in the Pacific, with the Japanese strength at sea. His summing up is that the American fleet musters 416,000 tons, against 287,000 for Japan; while we have 192 heavy guns, and 396 of smaller calibre, as compared with 117 and 286, respectively, on the Japanese ships. Col. Gädke's conclusion is that, "in homogeneity, armament, modernness, and speed, the American fleet in the Pacific far surpasses the Japanese." It would be hard to twist out of this an argument for four more battleships.

Say what big-navy advocates will about their desire to keep the peace of the world by arming to the teeth, the whole thing is necessarily hollow. They talk of defence, but their thoughts are really of aggression. This crops out inevitably in the President's message. The thing which obviously counts more with him than anything else is the determination to "repel insult." It is really in that spirit that the rival and insensate programmes of battleship-building are entered upon by the great Powers. It is not that each hopes to outstrip the other as a peacemaker, but that each hopes to be in readiness to "smash" the other. The exact truth was stated by Congressman Burton, when he said:

> I have listened oftentimes to the talk of our becoming peacemakers by building a navy. How absurd that is! The increase of navies is to increase the might and the prestige of the countries which build them, and for each enlargement in our naval programme the whole world will look with an added degree of suspicion upon us, thinking that our designs are not for peace, but for empire and for the enlargement of our dominion.

DELIBERATIVE CONVENTIONS.

The movement among sober Democrats to make the Denver Convention something more than a ratification meeting, seems to be gaining force. There will be at least a respectable minority to ask the delegates to reason together, instead of merely hurrahing. Judge Parker's consent to go as a delegate-at-large from New York certainly implies that he expects to work with men from New England, Pennsylvania, and the South, in the hope of inducing the party to face its large opportunity in a large way. This notion of the duty of the Convention is, of course, held by Mr. Bryan to be hostile to him. To deliberate, he is aware, is to oppose his candidacy; hence he is for ironclad instructions, and for making the delegates mere automata. In 1904, at St. Louis, it is true, he appealed for the broader view; and after the defeat in that year he announced that party reorganization should be undertaken with the sole aim of selecting the most available leader. But now, with his grip on the Democratic machine assuring him control of the convention, the plea for a free conference, looking to the best line of policy and the choice of a winning candidate, he rejects with scorn.

The original theory of national conventions was that they should be deliberative. More broadly based than the Congressional caucus which they superseded, they were yet to adhere to the old custom of looking the field over and deciding what was best to be done at the time. The change simply meant that hundreds of delegates sent by the people should act on the same principle that had guided the handful of Congressmen who had before named for the Presidency the most eligible leader of the party. So many recent national conventions have been cut-and-dried affairs as to lead to forgetfulness of their intended functions. Surely, no one can give a good reason why men, met to consult for the party, should not act as reasonable beings.

In the Republican party, too, there is an effort making, as a need undoubtedly exists, for keeping the Chicago Convention free to confer and to decide. This is the avowed purpose of Senator Crane in Massachusetts. With him are associated influential Republicans in other States. They oppose hard-and-fast instructions for any candidate, because they argue that the judgment of February and March and April may not prove to be the wiser judgment of June. This movement in favor of deliberation is taken to be anti-Taft, just as the corresponding attempt in the Democratic party is said to be anti-Bryan; but it is not necessarily so. It may be that a calm survey of all the conditions and all the candidates would lead the delegates at Chicago to decide, irrespective of pledges or instructions, that Secretary Taft is the best man for the party to nominate. If so, no friend of his has any ground for dreading frank discussion and free decision. But if not, then no friend of the Republican party can fail to dread a convention tied up to an inferior candidate.

It is clearly better coolly to face the facts before nomination than to have them thrust forward embarrassingly afterwards. And that there must be grave doubts about Mr. Taft's success, this year, many sagacious Republicans, including good friends of his, freely concede. The circumstances of his being pushed for the nomination, by executive decree, and by a use of Federal officeholders quite unconcealed and unscrupulous, cannot fail to be a handicap. No candidate has ever been under such an enormous personal obligation to another man as Secretary Taft would be under to President Roosevelt. It must be said also, that the Secretary's public addresses have been commonplace; they have set prudent people wondering how he could hold his own in a campaign against the versatile and rhetorical and sensational Bryan. We find in the Portland *Oregonian* of April 11 an article which, while forecasting Mr. Taft's nomination, goes over judicially the arguments against his vote-winning powers, and concludes as follows:

> It may be that Mr. Taft's best hope of compensating the losses which he must expect among the negroes and workingmen lies in a huge secession from the Democratic party which may follow the nomination of Mr. Bryan. But this secession is problematical. The chances are that it will not be very extensive, and it may not take place at all. If it does not, how can Mr. Taft be elected?

The fact that such questions are asked in good faith reinforces the demand that the Chicago Convention look before and after, when nominating a candidate. As Gen. Woodford said in his speech before the Taft Club at Chicago on Monday, what is wanted is a convention which will nominate with its head. We have not yet had a statesman to thank God that the national convention of his party had ceased to be a deliberative body.

SONS OF THE ARGONAUTS.

Two years after the earthquake and fire, San Francisco has been pausing for a moment from the chorus of pneumatic hammers and the dazzle of red-hot rivets to take stock. There has been a little introspection, too. Californians have read President David Starr Jordan's analysis:

> The essential source of Californianism lies in heredity. The Argonauts of '49 were buoyant, self-reliant, adequate, reckless, thoroughly individualistic, capable of all adjustments, careless of conventions.

They have also read:

> Its cosmopolitanism was conspicuous as a cause of bad government, wasted revenues, and vile environment of its children, rather than in its more romantic aspects. The San Francisco we all loved was ours in spite of this, not because of it.

Looking at the city from the other side of the continent, however, it is the iron spirit of the pioneer which gradually fills the eye, for the purely physical achievements of the past twenty months have been wholly admirable.

New buildings have gone up to the value of $100,000,000; and only a small 4 per cent. of this great sum has been borrowed in the East. Insurance paid after the fire amounted to about $180,000,000, but much of it went directly to savings banks which held policies as security for loans, and was applied to the reduction of mortgages. There have been extremely few foreclosures of mortgages since the big fire, and San Francisco to-day claims a lower percentage of debt of this kind than any large city in the country. Savings bank deposits were little less last year than before the disaster, and greater than in 1904. What is more, the city has a lower percentage of municipal debt than any considerable town in the United States.

Turning to the work of reconstruction, we find that nearly 30,000 buildings were destroyed, covering nearly five square miles. Yet the city, at its heart, begins to look like a city again. Further out are blackened tracts, but these, it is believed, will be covered more rapidly, as business demands homes; for a wooden dwelling is not such a complicated undertaking as a steel block when the site of the latter is 3,000 miles west of the blast furnaces. Looking down the streets in a series of photographs presented in the *Sunset Magazine*, one sees still the bare plots and waste spaces, even in the business district, but these are overshadowed by scores of tall buildings and steel skeletons. A new Chinatown has arisen, too, cleaner and loftier, with pagoda roofs here and there—a touch of Oriental persistence. Street cars are plenty, and sidewalks appear busy, for the population, which dropped by almost a quarter after April, 1906, is now back again to its old figure, a little less than that of Baltimore. But in these Western cities the resources of the country are often out of all proportion to population; hence their astonishing development. For instance, from the State last year were shipped fruit and salmon and wine to a value above $70,000,000, the sale of 90 per cent. of which is credited to San Francisco houses and their branches.

The task set for the municipality was enormous. Replacement of streets, sewers, and municipal buildings called for an expenditure of more than $25,000,000, and necessitated a bond issue which is now under way. A system of salt-water hill-top reservoirs is to be ready to flood any future fire. A city hall is to cost $5,000,000; a courthouse another million. Ten new school buildings are now going up, and thirty-five more are projected to replace those burned. Moreover, a new city hospital must not be left to the last.

It may be that, with the upbuilding of the visible city, there will also be a permanent renovation of the inner and invisible San Francisco. Certainly, the sons of the Argonauts have suffered much—earthquake, fire, thieves, both the ordinary kind and the political; Dick Turpins of union labor, famines of material, and, last of all, plague. All these troubles have been fought, some with and others without much outside help. Recently the moral spirit of the city seemed to lag in its struggle with grafters in high places. The motives of prosecutors have been assailed and the issues befogged. There was grumbling in the clubs that "interests" were being injured, that "business" would suffer. New York knows how powerfully this kind of undercurrent may be felt. Possibly, the much-delayed bringing of "Abe" Ruef before a jury will clear the air there and make plainer the target which must be hit. At any rate, there has been a fight, and the people in at least one election have stood pretty solidly on the right side.

So, all in all, after two years, San Francisco is entitled to congratulations. The life of the city seems moving as of old. The plague has been stamped out by means of an expenditure of $150,000 which had been subscribed to exterminate rats. A fund of $60,000 has been raised for the entertainment of the sailors of the fleet. These figures speak for themselves, when one remembers the picture of the homeless and hungry thousands in Golden Gate Park, dazed, and temporarily ruined, staring at the smoke and flames in the distance, and cut off from even the reports of wide-opened hearts and purses in every city of the Union.

THE SLANG OF THE SPECIALIST.

The French government, looking about for something to reform, recently decided that the language of judicial procedure stands in need of renovation.

France is a country where "stamped paper" plays as important a part as anywhere in Europe, which means a part far more important than among us. Among a people where almost every conceivable step, even down to the report of the latest fashionable and innocuous duel, must be attended by the drawing up of an *acte* or the rendering of a *compte rendu*, the notary is almost as exalted a personage as the lawyer. Under such circumstances, the turgidity of the legal rhetoric is felt as one of the considerable vexations of the dismal land of red tape. Most of the legal forms, so at least a writer in the *Figaro* charges, date from the time of Colbert, so that a Parisian of 1908 in suing another Parisian for the recovery of the price of an automobile or an aeroplane, is obliged to indite his plea in the same terms that a coach and harness maker of 1673 might have employed in suing Molière's Trissotin for the price of the beautiful *carrosse* on which so much embossed gold revealed itself to the glory of his lady-love. In England, that would be an argument in favor of sticking to the old forms for a couple of hundred years more. Not so in doctrinaire France under a radical-progressive Ministry.

Any move in the direction attempted by the French government is bound to arouse sympathetic interest everywhere. The professional pedant and his diction have been the subject of immemorial satire; and there can be little doubt that the pedantry of the law has been more often laughed at and denounced than all other forms of technical preciosity taken together. More than the windy philosopher, or even the quack doctor, the man of law traditionally holds the world enmeshed in his network of obscurities, redundancies, and obsolescences. And the bulk of humble opinion throughout the world, and throughout the ages, has been that the lawyer has developed and clings to his dialect solely with a view to his own profit. The common mind fails to see any sufficient reason for saying, "give, cede, deed, bequeath, and assign," when what the client intends is, like the testator in the story, that "Sally shall have it all." We may not all of us be Jack Cades, but to a greater or less extent most of us feel a responsive echo to Cade's complaint:

> Is not this a lamentable thing, that of the skin of an innocent Lambe should be made Parchment; that Parchment being scribeld ore, should undoe a man. Some say the Bee stings, but I say, 'tis the Bees waxe; for I did but seale once to a thing, and I was never my own man since.

And yet, with all the failings of legal jargon, we should deplore a certain loss if the axe should rudely cleave into it and let in the light of every-day speech. There is a poetry of technical speech which is by no means peculiar to the terminology of the law. Medicine, the natural sciences, and even the historical sciences, have their own vocabulary, no less than law or sport. Such scientific vocabularies have been called the "slang of the specialist"; but if they have the limited range of appeal which attaches to slang, they have also much of the savor and color of slang, without its temporary grasp on existence. The acme of the weariness of prose is embodied in the notary's enumeration of "said" William Joneses and Jack Robinsons, and parties of the first and second part. But there is charm in a phrase like "ancient lights" or "innocent conveyance," and there is a fine ring about "chose in action," "cestui que trust," "trover," and even our old friend, "livery of seizin."

One service our specialized terminologies render us is in keeping fresh or suggesting the original etymological meaning of words. The lawyer does this when he speaks of engrossing. The physician does the same when he speaks of essential anæmia, or a superior vein, or the primitive jugular. Examining a patient's chest by the method of palpating, or tapping with the finger, is not only conducive to a sound diagnosis, but should bring delight to any one with a touch of the philologian in him. The common language which is constantly slurring the meaning of words into broad and vague connotations, thus finds a constant corrective in technical usage. At a time when "proposition" may mean a proposal of marriage, or a gold mine, or a difficulty, or a growling customer, or a balky automobile, it is good that we should be occasionally reminded by the geometer of his "proposition" and by the lawyer of his "proponent."

All this is aside from the actual poetic spirit that persists in much of our technical vocabulary. When the zoölogist speaks of a vermin-infested animal as the "host" and of the parasite as his "guest," he almost beautifies the ugly, or at least gives the matter an aspect as broad as the law of evolution itself. "Railroad" is parvenu and undistinguished beside "common carrier." No singer of songs speaks of hotel-keepers and railroads and employees; but when an ordinary person uses the lawyer's terms "innkeeper" or "master and servant," he casts a glow of fancy over his every-day discourse. The language of heraldry contains in itself a whole wealth of poetry. The bird which feeds its young on its own heart's blood and is described as a "pelican in her piety," endows that hackneyed last term with splendid meaning. Surely, such a phrase is as deserving of preservation as the statement that O'Brien, after knocking up a fly, "died on second," or that at the end of the fifth round Casey was "about all in."

THE ROMANS IN ISTRIA AND DALMATIA.*—II.

THE EARLY COLONIES AND THEIR RUINS.

While Augustus was fortifying and enlarging Salona (See the *Nation* of December 5, 1907, p. 511), he was also, during the years just before and after 30 B. C., establishing a continuous line of new colonies along the coast from Tergeste (Trieste) to Narona, near Montenegro, and surrounding them with fortifications. His troops had only recently reconquered Dalmatia, and he was still enthusiastic to carry out Cæsar's scheme for making this region the starting-point for the concerted advance on the valley of the Danube. I shall describe what is left of three of the most important of these colonies, now represented by the modern cities of Trieste, Pola, and Zara.

Ancient Tergeste is now the modern busy seaport of Trieste, main outlet of the Austrian Empire on the Adriatic, seat of the Austrian Lloyd Steamship Company. It is so absolutely modern that it seems almost hopeless to attempt to trace any of its Roman life. And yet what we do find that is ancient is peculiarly precious, because so much of it dates from the time of the foundation by Augustus. It is possible that Tergeste was colonized as early as 41 B. C., when the great distributions of land to veterans after Philippi took place; but the city walls came a few years later. What their date was appears from an inscription, part of which is preserved in the Lapidary Museum, reading: "Imp. Cæsar Cos. desig. tert, III. vir. R. I. C. iter. murum turresque fecit." This statement, on one of the early city gates, shows that the walls, towers, and gates were built by Augustus and completed at the close of his Second Consulship, after he had been nominated for a third term. This gives the date 32 B. C., making it the earliest dated civic Augustan inscription. What has become of these gates and walls? Even the location of the two main gateways—Prætoria and Decumana—is unknown. They were probably pierced with two or three arcades, as in other Augustan cities of medium or small size.

But I believe I have identified one of the minor Augustan gates, one of the outlets of the Cardo, the main cross street, in the so-called Arco di Riccardo, which still stands on the descending slope facing the port. One of its ends is hidden in the wall of a modern house, and its piers are half-buried under the present street pavement, so that its proportions are terribly dwarfed and its effectiveness quite lost; but its pure and simple solidity, the Corinthian order of its façade, the style of its mouldings, and the size of its constructive units, are all indications of its early age. That it was a gate in the city walls, and not a free-standing arch, is evident from the unfinished state of its exposed end; and excavations would doubtless bring to light the base of the city walls on a line with it. Its single arcade is framed by a pair of Corinthian half-columns supporting a frieze and attic, both of which had plain, uninscribed surfaces. Had this been one of the principal gates it would certainly have had a dedicatory inscription. For all

---

*Other articles in this series have appeared in the issues of the *Nation* for May 30, August 8, September 5, and December 5, 1907.

its simplicity, it would repay excavation. I recommend it to the care of the Central Archæological Commission in Vienna. I hardly think that they appreciate its early date or historic importance, for, except by Graef, it has never been ascribed, so far as I am aware, to the time of Augustus.

Are there also possibly in Trieste any traces of the Colony Arch which was the indispensable concomitant of the foundation of a Roman city, or any further records of the city gates? When the cathedral of the converted city was built in the fifth century, and when it was added to in subsequent centuries, the site of the old Capitolium, or main temple of the Roman Tergeste, was used, and its ruins were built into the church. Parts of other ancient monuments came into use as building material when the bell tower was put up, and the main portal of the church was formed out of an antique sepulchral monument. In this farrago, and among the many fragments in the neighboring Museo Lapidario, I was delighted to discover parts of both the main Augustan gates and the Colony Arch. To the Arch I attribute two sections of a narrow frieze with a decoration of arms and armor in low relief above a double architrave. It belongs to the same type as the friezes that still remain in place in the other early Augustan arches of Pola and S. Remy (Southern France), built in the same decade. To the same arch may belong a section of cornice with an early form of egg-and-dart, dentil and anthemion decoration, a bit of frieze with foliated scroll-work, and some slabs with arms and armor and further frieze fragments, built into the campanile. On the other hand, to the gates, which were always of simpler design than the arch, belonged two colossal heads, in very bold projection, of guardian deities of the city, one a form of Jupiter Ammon, with rams' horns, the other a Medusa-like genius with snakes decorating its cheeks. They can be compared to the heads (Jupiter and Juno?) on the keystones of the Augustan arches of Rimini, Fano, and other city gates in Italy, and to the heads on the Augustan gates at Pola and on the recently discovered memorial gate of Trajan at Asseria, in Dalmatia itself, which I shall describe later. These heads have never been identified, but I believe my suggestion is the only tenable explanation.

An interesting and also unrecognized Augustan monument in Trieste (restored between 50 and 60, A. D.) is the principal temple, which was used for the earliest cathedral basilica. It had a double pronaos, with pilaster responds, which formed the primitive portico of this basilica, and which in the Middle Ages was used for the foundations of the campanile which projects beyond one end of the church façade. Hidden within the lower, hollow part of this campanile we can study what still remains of the columns and pilasters of pure early workmanship. It certainly was the Capitolium of the Augustan colony.

But it is in Pola that we find the most spectacular group of Roman monuments. To any one who has stood on the hillside behind the great amphitheatre and watched the golden glint on the bay at sunset through its arcades, or who has seen it at the same hour from the water, rising luminous and ethereal, there is no amphitheatre in the Roman world, even the Coliseum, that gives as keen a thrill of artistic delight. The very barbarous gutting of its interior by the mediæval Venetians, to use its blocks of famous Istrian marble for building material in Venice, has heightened its unique beauty by turning the arcades of the inclosure, which are in perfect preservation, into as many symmetrical picture-frames. One cannot, however, claim an Augustan date for this amphitheatre, as for that of Salona; the attribution to the time of Antoninus Pius is in harmony with its style.

But the rest of the Roman architecture of Pola is almost certainly of the early Augustan era; the city gates, the Colony Arch, and the Capitolium, or Temple of Rome and Augustus, all bear the marks of this time. To me the most interesting was, of course, the Arch, called Porta Aurea, or Arch of the Sergii. It has been more than once referred to in these letters. It fulfilled my ideal of a triumphal arch of the exquisitely simple type, where both figured and decorative sculpture were quite subservient to architectural line and composition. It is as representative of this type as that of Orange is of the rather barbaric luxuriant sculptured type, devoid of linear distinctiveness; as that of Aosta is of the grand, Puritanical, purely architectural type; and as that of Beneventum is of the Hellenic type, where symmetry of line and richness of sculpture are perfectly blended. Certainly no local artist could have designed this arch of Pola, but one of the foremost Hellenic artists in Roman employ. The early Augustan date of this arch is not understood; neither has it been recognized by any critic as a colony arch; but both of these facts are certain, and the first is vouched for by its inscriptions, which prove that it was built out of funds given by Salvia Postuma of the family of the Sergii, and was surmounted by statues of the men of this family, who were the first magistrates of the new colony. In the centre of the attic stood the statue of Sergius Lepidus, who is described as ædile and military tribune of the Twenty-ninth Legion, and on either side were those of the brothers L. Sergius and Cn. Sergius, both ædiles and duumvirs of the city. The mere fact that Sergius Lepidus was tribune of the Twenty-ninth Legion is enough to prove the Augustan date of the arch, because this legion was disbanded about 30 B. C., after the battle of Actium, and went forever out of existence, together with many other legions, which were no longer needed after the close of the civil war with Marc Antony.

From other sources the date of the raising of Pola to the rank of a colony can be fixed as at any rate earlier than 27 B. C., and probably than 29 B. C., because its official name was Colonia Pietas Iulia. It is known that all the Augustan colonies founded during and after 27 B. C. were named Augusta, while the earlier ones, founded under the Triumvirs (43-30 B. C.), were named, as this one is, Julia, in memory of the great Julius. Further, the emphasis given to the memorial character of the foundation by the addition of the prefix *pietas*, might indicate, for the foundation of the city, the earlier part of this period, near to Cæsar's death, perhaps the years just after 42 to 39 B. C., when Asinius Pollio was reconquering the country for Augustus. It may be then, *i. e.*, in the disbanding after Philippi, that Sergius brought here the veterans of the Twenty-ninth Legion rather than after the battle of Actium, and became chief magistrate of the new *colonia deducta*. As for the *exact* date of the arch, it is a well known fact that shortly after 27 B. C., when Augustus had worked out a permanent constitution for the empire, making him absolute ruler, the statecraft of the new régime required the recognition of the divine transcendency of the Emperor, and the dedication to him alone of all public monuments, especially such records of the establishment of Roman civic rule as these arches. After this time no dedications of public buildings to private individuals were permitted by law: such arches as those of the Sergii at Pola, the Gavii at Verona, the Julii at S. Remy, and the Campani at Aix-les-Bains, are therefore all earlier in date. History and politics are the indispensable illuminators of archæology. For these reasons Graef's ascription of this Pola arch to the age of Trajan is a simple impossibility. Even artistically be proved to be wrong, for the exquisite scroll-decoration of the inside pilasters is purely Augustan, as is every other feature.

For some reason which we cannot now understand this arch was placed not outside the walls, on the *pomœrium* line, but inside the main city gate, the triple arched, so-called Porta Minervia. It may have been moved here from outside the walls to preserve it, at the time of some barbarian invasion. It was made to form the inner face of the court of this gateway. Only from old lithographs and prints can we understand this arrangement, for the ignorant "archæologist," who undertook the early restorations at Pola, in 1826, thought the Augustan city gate was mediæval and tore it down. It must have been the Porta Prætoria of the original colony, and its keystone had the bust of the protecting goddess of the city, whom the local archæologists dubbed Minerva. Fortunately, several other primitive city gates remain: the simple, single-arched Porta Herculea, with the youthful, heroic head and greaves on the keystone; the more architectural, double-arched Porta Gemina, and a small gateway leading to the Forum, or Capitolium, of the Augustan city. The Porta Herculea is built with so extraordinary a diagonal archway that it is quite evident the road, the limits, and shape of the city had been determined before its construction, as was the case, for instance, with one of the gates at Pompeii. In the interesting congeries of fragments inside and around the temple of Augustus, which has been transformed into a Roman museum, there are several sections of friezes that belonged to architectural monuments of a triumphal character. One series hints at another arch like that of the Sergii, with its frieze of arms and armor, its vessel's prow and oar, pointing in the same fashion as it does to both naval and military victories, such as were those of Augustus over Antony. Another section of frieze, divided into triglyphs and metopes, has in each metope a group of arms or armor, some of Gallic character.

All this accentuates the military character of the city's founders.

The temple itself, dedicated to Rome and Augustus, is still a splendid specimen of Augustan art. Originally it was a double temple of the type familiar from monuments of a later date, in different colonies of the Roman world. The two stood side by side in a sacred inclosure, with a space between them, and represented the imperial equivalent of the Roman Capitolium, the worship of Dea Roma, and of Augustus, the viceroy of Jupiter Optimus Maximus. Old prints show how much more remained over a century ago. One of the façades is still superbly intact, with four very high Corinthian columns supporting the gable, and two others at the ends, in front of the *antæ*, forming the customary deep Roman portico. If so much still remains of Pola, it is because, when the engineers of Napoleon I. visited it and pronounced it the greatest military harbor of the Adriatic, it was practically an abandoned town, with a few hundred inhabitants, and had been so since the close of the Middle Ages. Whatever devastation has been wrought has been in about a century.

Pola was at the tip end of the Istrian Peninsula. If we pass eastward, we find at the point where Istria melts into the long line of the Dalmatian coast, Fiume, which occupies, at the head of Quarnero Bay, a corresponding place to that taken by Trieste on the other (western) edge of the peninsula. That it was a port and a colony in Augustan times, would appear from the only standing relic of the ancient city, a much mutilated arch facing the bay, which in its lines speaks of an Augustan origin, as the city gate facing the port, though not the colony arch.

Passing southward along the Dalmatian coast, we come to Zara, about half-way between Fiume and Salona. The Roman city here was called Iader. At present the mediæval city, with its unique Byzantine domical church of S. Donato and its florid Romanesque cathedral, rather overpowers the Roman remains, but I was able to find enough data to reconstitute some part of the Augustan Iader. Long before the time of Augustus there had been here a considerable settlement of Italian traders. Augustus gave it city rights and built its walls, with the towers and gates. At each of the main gates was the following inscription: "Imp. Cæsar. Divi. f. Augustus parens. coloniæ murum (et) turres dedit." Several points in this inscription indicate a very early date: the absence of tribunician and consular notations, and the title of *parens coloniæ*, "patron of the city." One of these inscriptions was carried away from Zara some centuries ago; strayed to Venice in 1721, was bought by the famous Maffei, and is now in his collection in the Museum of Verona. A second one is in the museum of S. Donato, in Zara itself. The gates themselves have disappeared, and only false hopes are excited by a so-called Roman arch called Arch of Bassus, a bubble I am forced to prick, for it is a medley of pieces put together in the Renaissance, the old inscription belonging to the entrance of the market-place built out of funds left by Melia Anniana, and in honor of her husband, Sergius Bassus.

I am glad to be able, quite unexpectedly, to resurrect the real Colony Arch of the Augustan City, with the help of information furnished me by Prof. Smirich, who was present when its ruins were excavated in 1884, but who did not realize the significance of the arch. It stood, facing toward the northeast, on the landward side of the city, in a little square near the present Church of S. Simone, close to the ruins of a temple. The excavations were not carried down so far as the original level, which is eight or nine feet below the present street level, but far enough to show the plan and style of the arch, part of which was, however, hidden under the wall of a house. After drawings had been made, and a few architectural fragments removed, the excavation was filled in. The arch was triple, the two central piers being decorated with two engaged shafts, while the two outer piers had but a single shaft in the centre of a very narrow face of masonry. The central piers, with their two shafts so closely spaced as to make any sculpture between them impossible, are almost exactly of the proportions of the arch of the Sergii at Pola. The main central arch was surmounted by a gable, as is so commonly the case in other Augustan arches, and the crowning cornice was both rich and exquisite. All the ear-marks are Augustan; the masonry, of very fine local Meleda stone, is extremely careful and close jointed. In the Constantinian era the fortifications of Zara were renovated, as were those of Salona, with the use of the typical wedge-shaped towers, and the arch was then brought into connection with the fortifications, if not before. It would be interesting to reopen the trench, make a careful survey, and extract more of the architecture. The pieces now in the museum of S. Donato are of excellent workmanship.

This is not the only Augustan work at Zara. The Byzantine church of S. Donato, now the museum, was built on a mass of ruins, probably of the Forum and its Capitolium. Some of them are Augustan in character, including a famous inscription to Livia as Juno, but there is nothing left *in situ* above ground. We can only conjecture that to these buildings belonged a couple of columns still standing in the town squares.

Other sites probably would yield Augustan remains—Narona, Burnum, Andetrium, Corinium, Delminium, Epitaurum, Emona. But there has been no activity on the part of the Austrian Government in uncovering their ruins. Only in one case, I believe, at Asseria, were regular excavations of any importance begun, and of these I shall speak in my next article.

BURGUNDIAN RUNIC INSCRIPTIONS.

TO THE EDITOR OF THE NATION:

SIR: It is a matter of common knowledge that some of the Germanic tribes—the Goths, the Scandinavians, the Frisians, and the English—made use of letters called runes, before they adopted the Roman letters. There have also been found in Germany and the country to the east a number of runic inscriptions, mostly on pieces of jewelry; but the attempts that have been made to read German on them have been anything but successful. As I had reason to disbelieve the usual supposition that the runic alphabet was a common possession of the Germanic race, a possession which had gradually spread northward through the territory of the South German tribes, I found it necessary to explain the so-called German runic inscriptions. These fall into two classes. To the first belong those on a spearhead, a gold ring, and several gold bracteates (ornaments resembling coins) found in North Germany at different points not far from the Baltic. These are all obviously Scandinavian in workmanship and speech, and may be dismissed at once. The remaining objects that concern us consist of a dozen fibulas, or brooches, found at various places in western Hungary, southern Germany, and eastern France.

As most of these fibulas show a remarkable resemblance in form and ornament, reflecting Northern traditions, and as the runes employed have certain peculiarities in common, I concluded that they must have been introduced by one of the Northern tribes during the great migrations. I therefore mapped out the places where the finds were made. Drawing a line through these, I observed that it coincided with the route taken by the Burgundians in their successive migrations from near the Baltic into France. We first come upon the Burgundians settled, roughly speaking, in what is now Posen and eastern Brandenburg, with the Goths and the Vandals to the east and the south of them. By the third century of our era, the Burgundians had migrated to the middle Danube. Toward the end of the century they ascended the stream and settled in the territory northwest of a line drawn through Augsburg and Regensburg. At the opening of the fifth century they passed down the Main and established the famous but short-lived kingdom that had Worms as its capital. After the destruction of Worms by the Huns in 437, some of the Burgundians remained, and were gradually absorbed by their West Germanic neighbors; but portions of the tribe passed west and south into France, where they gradually gave up their Germanic speech, and, as the nucleus of successive Burgundian realms, played an important part in the history of Europe. The objects upon which the runes are inscribed were found in the following localities: (1) Bezenye, near Pressburg, east of Vienna; (2) Nordendorf, north of Augsburg; (3) Osthofen, north of Worms; Freilaubersheim, between Osthofen and Kreuznach; Friedberg, north of Frankfort; Ems, east of Coblenz; Engers, north of Coblenz; (4) Charnay, in Burgundy. There is also an isolated fibula, resembling the one from Osthofen, that was found at Balingen, near the source of the Danube. The fibula found in Burgundy has generally been supposed to be of Burgundian origin. Considering the geographical position of the other finds and the various evidences they betray of common origin, I came to the conclusion that all the inscriptions were Burgundian and were deposited in the graves, in which they were later discovered, when the Burgundians dwelt in these four localities. This fits exactly and makes more specific the results of Salin's recent study of the fibulas from the point of view of form and ornament. For Salin decides that they betray Northern influence, and comes to the conclusion that the same movement that introduced Northern craftsmanship into southern Germany also introduced the runes into those parts.

I confided my theory at the time (five or six years ago) to various scholars, but it was not until recently that I found leisure to test it. It then turned out that the evidence corroborated the theory. While the inscriptions could not be successfully read as German, that idea once abandoned it was comparatively easy to read those that are not severely mutilated. The language in which they are written is Germanic, but it is not any one of the Germanic languages thus far known, as I shall show in detail in philological journals, with the aid of facsimiles provided by the Carnegie Institution of Washington. Here it will suffice for me to point out the value of the inscriptions. Hitherto our ideas of Burgundian speech have been based almost entirely on what could be inferred from Burgundian proper names, which have come down to us in doubtful and misleading spelling, always open to the suspicion of Latin, Gothic, or German influence. We now have a small number of brief inscriptions giving real sentences. From these it has been possible to get such a picture of Burgundian speech as enables us to understand its relation to other Germanic languages. We know that the Burgundians were regarded as closely akin to the Vandals and the Goths. We have therefore classed them all as East Germanic, though we have known the language of the Goths only. It is now clear that this grouping must be abandoned. For, while Burgundian does resemble Gothic, it betrays more decided affinity with North Germanic (or Scandinavian) on the one hand, and with West Germanic (English, Frisian, Dutch, and German) on the other. The details I need not cite here. Moreover, not only in the language itself, but also in the forms of the runes, does Burgundian show affinity with Anglo-Frisian. For example, it harmonizes with the latter group in preserving the old Greek doubly crossed *H*, which those scholars that regard the runes as derived from some Latin or Greek alphabet of the second or third century of our era have tried to explain away as a late modification of the simpler form. The relation of Burgundian to the other Germanic languages seems therefore to have been a central one, which may be represented in some such way as this:

North Germanic.
West Germanic   Burgundian   East Germanic

These facts are best understood if we suppose that the Burgundians, who are reputed to have come to Germany from the island of Bornholm, lying between Sweden and Germany, at one time lived still nearer the Anglo-Frisians, for example, on one or more of the other Danish islands, or in Jutland itself.

The Burgundian inscriptions throw new light on still other questions. Taking as a basis of judgment the character of the other objects found in the graves, it has been customary to date the finds too late. For example, those made at Nordendorf, north of Augsburg, are classed as Merovingian, and so put down as of the sixth to the eighth century, and this in the face of the fact that the latest coins unearthed are those of Valentinianus, Valens, and Gratianus, who died in 375, 378, 383 respectively. While it is true that we must be cautious in using coins as the basis of a latest date, there is here no reason to ignore a remarkable agreement between archæological and historical evidence. The sudden cessation of Roman coins is explained by the fact that the Burgundians left this district a few years later. It is therefore clear that there is an error of some magnitude in the dating of archæological finds of the character involved, which will be corrected now that we know that those made at Nordendorf cannot be later than the very beginning of the fifth century. It is not improbable that the Burgundians were the very agents that introduced into western Europe some of those elements that we later recognize under the name of Merovingian.

Questions of Germanic mythology are also involved. One of the Nordendorf fibulas contains the name of the god *Thonar*, with the dative *Thore*. The latter form was not recognized, as it could not be made into German. But the former was explained as an early form of German *Donner* and this was greeted as proof of the worship of this god by the South Germans, of which we have no other record. The discovery of the Burgundian origin of the fibula invalidates even this supposed evidence. Moreover, as there could be no possibility of ascribing the worship of Loki to the Germans, the form *Loga* was not understood as the dative of *Logo*, Icelandic *Logi*. The spelling with *g*, rather than *k*, is of importance, as it settles in the affirmative the dispute as to whether this god was originally a god of fire, later differentiated into two, Logi and Loki. Here Logo, Thonar, and Wothan, or, with Icelandic forms, Loki, Thonar or Thor, and Othin, appear in their well-known function of gods of the lower world. The inscriptions are mostly on gifts, some made during the lifetime of the recipient, some as offerings to the dead. Taken all in all, they furnish glimpses of the thoughts and feelings of this early Germanic people that appeal to our common human sympathies in an unexpected way. GEORGE HEMPL.

Stanford University, March 20.

MODERN ITALIAN CRITICS.

TO THE EDITOR OF THE NATION:

SIR: With increasing impatience do I observe the attitude of indifference that borders upon contempt on the part of later-day critics who have occasion to speak of modern Italian literature. It is particularly noticeable in academic circles that praise is lavished with greater or less indiscriminate generosity upon the literary work of nearly all contemporary writers save those of Italy. For this reason it gratifies an enthusiastic student of this relatively unexplored, almost despised field, to read in your issue of April 16 your reviewer's comments upon Benedetto Croce's new edition of De Sanctis's work on Petrarch. All that the reviewer says is distinctly apposite. And yet one ought not to be set down as a regionalistic hero-worshipper if he suggests that a word more may profitably be added to your reviewer's summary.

Illuminating and sound as are the pages which De Sanctis devoted to the great humanist, one cannot help calling attention to a few of the other volumes which serve to give Italy a legitimate standing among lovers of modern literature and of pertinent criticism. De Sanctis was, first of all, a man and a patriot, whose good fortune it was to live in an atmosphere so charged with chivalrous efforts and accomplishments that, as the late Prof. F. J. Child once remarked, had the Risorgimento revolutionists lived two thousand years ago their names and deeds would have become no less immortal and proverbial than those of the heroes of Thermopylæ and Marathon. De Sanctis was endowed with the qualities of a true critic. Common sense, an unflinching adherence to lofty ideals, coupled with a rare shrewdness of judgment, the sensitive taste and delicate perceptions instinctive in scholars of Latin countries—these traits are evidenced throughout the large volume of his writings. One grows to overlook his dogmatic tone because of the compelling sincerity of the man and his marked and refreshing freedom from the fetters of technical cant. Chock-full of healthy, robust sentiment, he is a scathing enemy of the sentimentalizing with which some of his fellow critics can justly be charged. Roughshod, he advances without preamble into the very heart of his subject, with a force and intensity and sureness which convince the reader. And the same vigor of mind which we find at work in his voluminous studies of Italian nineteenth century literature we see perpetuated in such of his pupils as Benedetto Croce and the Dante scholar, Prof. Francesco Torraca. Besides the very positive value which his writings possess for us, we ought not to forget that both directly and indirectly his influence has been and will continue to be felt longer and more potently than that of any of the other scholar-patriots, among whom meridional Italy proudly numbers the two Poerios and Settembrini the elder. T. D. B.

"MOUSSE" IN THE OXFORD DICTIONARY.

TO THE EDITOR OF THE NATION:

SIR: We are so accustomed to the plenitude and exactitude of the great Oxford Dictionary that any shortcoming, however slight, disconcerts us. My attention has been called to the article "Mousse," in the part for April, just received. Here we get half-a-dozen quotations, but no definition of the word. Most of us, fortunately, know the thing when we see and taste it. Yet Dr. Bradley should have enlightened the unenlightened. "Mousse" is merely a variety of "ice cream," with this difference: whereas in the ordinary "ice cream" the cream is frozen in its normal liquid state, in "mousse" it is first whipped. J. M. H.

Ithaca, April 11.

GOVERNMENTAL EXTRAVAGANCE.

TO THE EDITOR OF THE NATION:

SIR: The true inwardness of our political, or, at any rate, financial, methods is revealed in a report which comes from Washington. It is that the President has intimated to Congress that unless it gives him the money for four battleships, he will veto the bill for public buildings, twenty millions, about the equivalent amount, thus depriving members of the means of bribing their local constituents. The whole system may be expressed in one word—"trading." It is not based upon the public interest, but upon a combination of private and party interests playing for support into each other's hands.

It follows from this that expenditure is not calculated with reference to income, but independently of it. Thus far the tariff has been so enormously productive that unlimited extravagance, both of Executive and Congress, could hardly keep up with it. In fact, the protected interests are applying the spur in this direction also. Any serious attempt at tariff reform might furnish some fresh illustrations. The result of this reckless method of appropriation may be well shown in a statement written some ten years ago by Henry J. Ford in "Rise and Growth of American Politics":

> In its final development the committee system has completely destroyed the control of the houses over the national finances. Down to the year 1865 something of the nature of a budget existed, from the fact that all revenue and all appropriation bills were referred to the Ways and Means Committee. All the great revenue measures and all the vast appropriations required by the civil war were reported by that committee. But in 1865 the Committee on Appropriations was created, and that branch of legislative business was transferred to it from the Ways and Means Committee. In 1885 the wholesale distribution of the powers of the Appropriations Committee among other committees took place. But six of the fourteen great annual appropriation bills remained in charge of the Committee on Appropriations, the remaining appropriation bills, eight in number, being turned over to seven other committees. Mr. Randall, who was chairman of the Appropriations Committee when its powers were thus mutilated, told the House at the time: "You will enter upon a path of extravagance you cannot foresee the length of or the depth of, until we find the treasury of the country bankrupt." In ten years his prediction was fulfilled. The distribution of the appropriations made just so many additional points upon which local interests could mass their demands. The total appropriations (exclusive of pensions) for the decade 1887-96, as compared with the decade 1877-1886, show an increase of $688,489,376. All sense of proportion between income and expenditure has been lost. The Fifty-third Congress, though well aware that the revenues of the government were inadequate to meet such an expenditure, voted appropriations amounting to $989,239,205. The Fifty-fourth Congress, without having done anything to increase the revenue, increased the appropriations to over one billion of dollars.

It seems probable that the Sixtieth Congress will come very near that amount in a single session.

It is a very striking fact that the same conditions, in effect, prevail in every State and every city in the Union. The uniformity of the symptoms of disease point to a uniformity of remedy. There is one, and one only, adequate to the case: that in each instance the finances, as a whole, shall be placed in the hands of a single head of department, appointed by the Chief Executive, President, Governor, or Mayor; that he shall make up a budget at the beginning of the year, taking account first of revenue, and adjusting to it the different branches of expenditure; that he shall explain it in open session of the Legislature, subject to criticism and discussion, but leaving to that body no power of increasing any appropriations without his formal assent.

It may be said that cannot be done. Then we must be prepared to meet the only other alternative. In private affairs, progressive disorder in finance leads to bankruptcy, in public affairs to revolution. It needs no great foresight to point out that the broad road on which we are now advancing leads, if not to destruction, at least to serious disaster.

G. BRADFORD.

Boston, April 13.

MR. TAFT'S DUTIES.

TO THE EDITOR OF THE NATION:

SIR: Can you kindly inform a matter-of-fact person, who has a Puritan's notion that every man, whether public or private, ought to give an equivalent for his wages, how much time a Cabinet officer may properly devote to his private affairs? I ask the question because I have got the impression, no doubt erroneous, that our present Secretary of War, Mr. Taft, is absent from Washington a great part of the year. Except Buffalo Bill, in the most peripatetic period of the Wild West Show, I doubt whether any American of our generation has trotted the globe so assiduously as Mr. Taft. Occasionally, some government excuse is suggested; as when he went to Manila last autumn, but even that could hardly justify his return through Asia and Europe at an unnecessary increase of expense for travel and of time off from his desk. During the last month or so he has been continually on the go, in pursuit of delegates to vote for him at the Republican Convention.

Do you know, Mr. Editor, whether he returns to the government part of his salary, pro rata, for the weeks and months when he is gadding about on his private business? He was hired, on President Roosevelt's recommendation, to do certain work for Uncle Sam. Plain people, like my neighbors and myself, do not quite see that he is living up to his part of the contract. Nor do we see how, if he skimps and shirks and malingers on this job, he is proving himself fit for the much bigger job of President. The Good Book, which is still read and believed down here, tells us that we should be faithful over a few things if we would be promoted to the management of many things. Of course, every secretary ought to have a vacation, but there must be some limit to its length. If a man's own sense of propriety doesn't suggest to him that he is taking too much, the President or Congress might make some rule. Possibly Mr. Taft quiets his conscience—which, I am told, is a very rare appendage among Ohio office-holders—by reflecting that his services are worth much more than the paltry $12,000 a year which Uncle Sam pays him for them; and that therefore he feels justified in spending three-fourths of his time electioneering for himself. But this is a very dangerous sort of reasoning. Secretary Root, it has been said, could make $300,000 a year as counsel for the predatory corporations in New York; this would be about a thousand dollars a day for working days. Now, if he had the idea that he was hired by Uncle Sam at his New York rates, he need sit at his desk in the State Department only twelve days a year. Mr. Root certainly has done much better than that, even in the season when he undertook his hippodroming junket round Cape Horn.

The voters at Plymouth Rock Crossroads have heard so much about Mr. Taft's virtues that they are puzzled to see him running away from his job most of the time. Last fall, in the cranberry season, Deacon Alden hired a man to pick for a week; but from Monday morning till Saturday noon he didn't turn up. Then he explained he had been away trying to get himself elected hog-reeve; but he claimed a full week's pay. The deacon didn't pay him, but Uncle Sam does pay Mr. Taft, although we old fogeys here can't see any great difference between his case and that of our would-be hog-reeve. Will you please enlighten us?

PEREGRINE MULLINS.

Plymouth Rock Crossroads, April 19.

"THE CAMPAIGN OF SANTIAGO DE CUBA."

TO THE EDITOR OF THE NATION:

SIR: The review of my "Campaign of Santiago de Cuba" in your issue of February 27 has greatly disappointed me, and is, in my opinion, very unfair. Unfair because the reviewer tortures the text of the history into meaning what it does not mean, and what a careful reading will show it was never intended to mean; and because, with reference to certain matters in the text, he makes statements that are erroneous.

The reviewer says:

> The judicial spirit of the historian is lacking. Thus, in his survey of the causes leading up to the struggle, he boldly assumes not only that the blowing up of the Maine necessitated the war, but that "the American people and their representatives in Congress believed that Spanish officials were responsible for the destruction of the Maine, and they were determined that Spain should atone for the act and that her rule in Cuba should end." Even those who think our war in Cuba a holy crusade should protest against this attributing to the bulk of the people that moblike thirst for blood, that low spirit of revenge, which was actually confined to a few yellow journals and hysterical persons.

In the first place, I do not say, nor do I believe, that "the blowing up of the Maine necessitated the war." After describing the unsatisfactory situation in Cuba and the strained relations between the United States and Spain, I follow with this paragraph:

> Such, in brief, was the situation when, on the night of February 15, 1898, the blowing up of the United States battleship Maine in Havana harbor suddenly brought matters to a crisis. This act meant war between the United States and Spain. It meant the destruction of Spanish power in the West India Islands. It meant, for the Cuban people, the dawn of a new era and the realization of hopes long deferred.

Now, in this paragraph, I simply glance into the future; knowing actualities, I state them as a sort of prophecy. I do not mean to state, and do not state, that "the blowing up of the Maine necessitated the war." To substitute the word "necessitate" for "meant," as the reviewer has done, gives an erroneous impression of my opinion.

As to the statement that "the American people and their representatives in Congress believed that Spanish officials were responsible for the destruction of the Maine, and they were determined that Spain should atone for the act and that her rule in Cuba should end," the very course of matters proves that the statement is true. But I submit that to censure the writer for "attributing to the bulk of the people that moblike thirst for blood, that low spirit of revenge, which was actually confined to a few yellow journals and hysterical persons" because of this statement is eminently unfair. I would add that there cannot be found a line or a word in my history which would indicate that I believe that the Spaniards blew up the Maine, nor can there be found a line or a word in it which would indicate that I thought the United States was justified in making war upon Spain. These matters I did not, could not, discuss. Yet to read the review in the *Nation*, ninety-nine men out of a hundred who had not read my book would get the impression that I was one of those who think "our war in Cuba was a holy crusade."

Again, the reviewer says:

> Nevertheless, many of Capt. Sargent's professional comments, which follow each chapter, are admirable, as, for instance, his pointing out the mistakes of the Spanish commanders in their efforts to end the Cuban revolution from 1896 on. But when we find no comment whatever on Gen. Shafter's famous and inexcusable dispatch of July 3, "I am seriously considering withdrawing about five miles," our faith in Capt. Sargent's desire to write in a really non-partisan spirit is much shaken.

Now, I clearly pointed out that Gen. Shafter did not withdraw, even though he stated he was seriously considering withdrawal. In Vol. II., p. 134, I state that Shafter, after receiving the dispatch of the Secretary of War, suggesting that it would be much better to hold his present position, if possible, replied: "I shall hold my present position." Surely an unprejudiced reviewer should not expect an unprejudiced historian to criticise and censure the commander of an army for simply contemplating the doing of a wrong thing, when, after due consideration, he went ahead and did the right thing. It seems to me that it would have been more in accordance with justice, and more to the credit of the reviewer, had he praised Gen. Shafter for doing the right thing, and especially so since he did it against the advice of several very able officers.

In reply to the statement of the reviewer that "we find no comment whatever on Gen. Shafter's famous and inexcusable dispatch of July 3," I cite pp. 160 and 161 of Vol. II., where there will be found more than a page of comment on this very point. It is in part as follows:

> Gen. Shafter, in finally deciding to maintain his position on San Juan Heights, after being strongly urged by a number of high-ranking officers to withdraw his troops to the high ground between San Juan River and Siboney, on account of the thinness of his lines, and the difficulty of sending provisions to the front, showed excellent judgment. First, because it was very improbable that the Spaniards would take the offensive, since from time immemorial they have been wedded to defensive fighting, and have seldom had the enterprise and energy to assume the offensive either tactically or strategically. . . . Secondly, because the American line, though it looked to be weak, could have held its position on the defensive against any force the Spanish commander could have brought against it; for, had he taken the offensive with all the troops at Santiago, and been reinforced by Escario's column, which arrived on July 3, his attacking forces would not even then have outnumbered the defenders.

The reviewer also says:

> In treating the details of the battle before Santiago, Capt. Sargent holds that the raising of the American balloon, and moving it along the road which the American troops were following to San Juan, was a costly blunder. In support of this he cites the opinion of that eminent military critic, Richard Harding Davis, and of the chief of the Signal Corps, Gen. A. W. Greely. To be just to Lieut.-Col. Derby, the able engineer, and officer responsible for the raising of the balloon, a really scientific historian would have presented this side.

The answer to this criticism is that nowhere in my history do I hold Lieut.-Col. Derby responsible for this blunder. On the contrary, I distinctly hold Gen. Shafter resonsible, and so state on pages 152 and 158 of Vol. II., in these plain and unmistakable words:

> It has already been pointed out that Gen. Shafter's faulty plan of battle was the cause of misunderstanding and delay at San Juan, and compelled him to fight the battle with less than two-thirds the number of troops he had originally intended to bring on the battlefield. But this was not the only tactical error that he made at San Juan. It was a serious and costly mistake to move the balloon down the road along which the troops were advancing; for this movement not only revealed the precise line of American advance, but attracted a heavy fire, which caused much loss.

And, furthermore, not only do I not hold Lieut.-Col. Derby responsible, but I clearly point out, on page 113, of Vol. II., the valuable discovery made from the balloon by him of the trail "which, from a point of the main road just opposite the mouth of Las Guamas Creek, leads to the left and crosses the San Juan River, just below the mouth of the Aguadores."

As to my judgment of the efficiency and ability of Gens. Corbin and Shafter, I have given the facts in the text upon which the judgment was based. These facts speak for themselves. I admit that when I began the study of the campaign, some seven years ago, I, too, like the reviewer, had not a high opinion of Gen. Shafter's ability; but the deeper I studied the campaign the more convinced I became that he was deserving of much greater praise than had been accorded him. Being a very large man, and being sick on the day of battle, he could not ride a horse about the battlefield, consequently, he was unable to find out and see for himself many things which he ought to have found out, and seen. But notwithstanding all this, he accomplished, under the most unfavorable conditions, exactly what he was sent to do. Men must be judged largely by the results accomplished, not by the blunders made.

H. H. SARGENT,
Capt. Second Cavalry.

Fort Des Moines, Ia., March 31.

"PARAGUAY ON SHANNON."

TO THE EDITOR OF THE NATION:

SIR: In the notice (*Nation* of March 19) of "Paraguay on Shannon," by F. H. O'Donnell, you refer to "the unparalleled increase of the clerical population" in Ireland, and the monopoly by the priesthood "of every post and profession in public and private life to which an emolument is attached and from which a layman can be excluded." The latter statement is unmeaning, for the Catholic clergy hold no public salaried posts, except as chaplains to workhouses and such institutions, and are not eligible for any.

With regard to the number of Catholic clergy in Ireland it is implied that they are excessive. What standard should be taken as to the number required? We can only compare their numbers with those of the clergy of other denominations. In Ireland—though not in England—the census records the religion of the people as well as their occupations, etc. Taking the Episcopal Church as a standard, there is a parson to every 359 Episcopalians, while the proportion of Catholic clergy, parish priests and curates is 1 to 891. Among the Presbyterians, Methodists, and other denominations the proportion of ministers is 1 to 509. According to the theories of these different religions the Catholics should require a larger proportion of clergy, as they are more dependent on the services of their clergy than others, especially in the matter of "sick calls," which must be strictly attended to by Catholic priests, involving frequent night journeys and travelling long distances in wild and mountainous districts. The comparison made with the numbers of priests and bishops in Belgium is also quite misleading. Belgium is one-third the size of Ireland, and the means of communication are quite three times those available in Ireland. There are 2,350 Catholic churches in Ireland, 5,970 in Belgium.

Your note also refers to the "Ribbon" organization being controlled by the priests. There is no such organization in Ireland. The Ribbon Society was a secret organization now extinct. It was under the severest ban of the Catholic Church, as were all secret societies. Mr. O'Donnell's nickname for the United Irish League, practically the trade union of Irish farmers, seems to be given for the purpose of disparaging a movement about which there is no secrecy whatever, which some bishops and priests support, while others do not. It is entirely a lay managed society.

MURROUGH O'BRIEN.

Killiney, March 27.

[Mr. O'Brien's quarrel is with the author of the book, not with our note. As with many volumes of this kind, we attempted nothing more than the briefest possible statement of the contents of the work and its general aim. The phrase about the monopoly of posts and professions was quoted directly.—ED. NATION.]

Notes.

Prof. Charles W. Colby has prepared a series of lectures on "Canadian Types of the Old Régime," in anticipation of the Chamberlain celebration in July. They will be published in book form by Henry Holt & Co. at an early date.

Henry Holt & Co. will publish immediately a collection of addresses and editorials, called "People and Problems," by Dr. Fabian Franklin. The work marks the termination of Dr. Franklin's editorial control of the Baltimore *News*, which he assumed in 1895.

George W. Jacobs & Co. will soon bring out two sporting books, one, "The Complete Lawn Tennis Player," by A. Wallis Myers, the other, "Advanced Golf," by James Braid.

James Fitzmaurice-Kelly will enlarge his lectures on Spanish literature recently delivered in this country, and publish them in book form.

At last Sir Walter Besant's great work is finished—one wonders how and by whom. This spring the Macmillan Company will issue the sixth volume of his "Survey of London," which deals with the city of Roman, Saxon, and Norman times.

The first two volumes of Frowde's eighteen-pence edition of Dickens's works contain the "Pickwick Papers" and "Barnaby Rudge." The original illustrations are reproduced, and the edition generally will find favor with those who do not object to thin paper.

Volumes VII. and VIII. of the New York Edition of Henry James's "Novels and Tales" (Charles Scribner's Sons) contain "The Tragic Muse." The preface, in which Mr. James criticises his own work, is somewhat less interesting than the earlier prefaces in this edition. The idea of the book, he tells us, was to present "a picture of some of the personal consequences of the art-appetite raised to intensity, swollen to voracity." Stevenson, as Mr. James confesses, wrote to him "precisely on the occasion of 'The Tragic Muse,' that he was at a loss to conceive how one could find an interest in anything so vulgar or pretend to gather fruit in so scrubby an orchard." As for the characterization of Miriam Rooth, Mr. James also confesses that Anatole France "has 'done the actress,' as well as the actor, done above all the mountebank, the mummer, and the *cabotin*, and mixed them up with the queer theatric air, in a manner that practically warns all other hands off the material forever."

Volumes XI. and XII. of Björnson's Novels, edited by Edmund Gosse and published by the Macmillan Company, contain "The Heritage of the Kurts." The translator is Cecil Fairfax.

A second edition of Prof. J. E. Spingarn's "History of Literary Criticism in the Renaissance" is now isued by the Columbia University Press. All specific inaccuracies brought to the author's notice have been corrected, and a concluding chapter is added, taken in part from his "Origins of Modern Criticism" first published in *Modern Philology* for April, 1904.

"Limbo and Other Essays," by Vernon Lee, first issued in 1897, now appears in a new edition by John Lane Co., with the addition of "Ariadne in Mantua." This is a little play in which the forces of Tradition, Discipline, and Civilization "triumph over the mere forces of Nature." It is a closet drama, and the action is improbable; nevertheless it rises to a moving, even pathetic, climax.

Nietzsche's "Human, All Too Human," translated by Alexander Harvey, is issued in the Socialist library of Charles H. Kerr & Co. of Chicago. One wonders what the Superman is doing in that dovecote of brotherly love. Other recent volumes in that library are Arthur M. Lewis's "Evolution, Social and Organic," and a fourth printing of Wilhelm Liebknecht's "Karl Marx, Biographical Memoirs," translated by Ernest Untermann.

"Burdett's Hospitals and Charities" for 1908 comes to us from The Scientific Press, Limited, of London, with its usual lists and its analysis of the ways and fluctuations of charitable giving. Dr. S. S. Goldwater was unable this year to contribute a chapter on hospital affairs in this country.

Dr. Henry Bradley—already responsible for part of the third (D-E), the whole of the fourth (F-G), and the letter L in the sixth volume of the "New English Dictionary"—has contributed punctually on April 1 the penultimate section of M in the same volume (Henry Frowde.) Dr. Bradley's next issue, announced for the first of July, will finish M, and bring to a conclusion the whole sixth volume (L—N), since Dr. Craigie, having finished N six months ago, has long been at work on the eighth volume (Q-S), of which a double section from him is announced for the first of next October. Meanwhile Dr. Murray, the editor-in-chief, is laboring toward the conclusion of volume VII. (O-P.) The present instalment of M, Monopoly to Movement, includes 1,347 main words, under which 500 special combinations and 786 subordinate entries range themselves. Nearly one-fifth of the main words are obsolete and rather more than one-tenth are either alien or not fully naturalized. Dr. Bradley here gives 11,808 illustrative quotations against 710 in the corresponding portion of Richardson. In contrast to the sections of P, recently issued by Dr. Murray, this section of M abounds in words of long standing and very frequent use. Hence their astonishing variety of senses and multitudinous derivatives and combinations. A very large proportion are either English or Romanic words. Greek derivatives are not numerous, being chiefly those beginning with Mono- and Morpho-, while American languages contribute only Moonack and Moose. New etymological evidence abounds especially under Mother sb^{2}, Mope vb., Motley. In the last case several interesting suggestions are made, but no definite derivation is established.

The story of Empress Eugénie, as told by Phil. W. Sergeant in "The Last Empress of the French" (J. B. Lippincott Company), belongs to the class of biographies of which it is customary to say that they read like novels. In the case of the truly romantic career of this woman, no word can be more appropriate. Born in Granada on the day of an earthquake (May 5, 1826), the daughter a Spanish nobleman and of a mother of Scottish extraction, Eugénie de Montijo enjoyed a short and brilliant career as an international beauty, and then married, against all rules and precedents, a full-fledged sovereign, who carried his taste for *coups d'état* into affairs of the heart. For seventeen years she held her own on one of the most conspicuous and difficult thrones of Europe. Then, on a September afternoon, in 1870, she fled from the Tuileries through a back door, and, with the complicity of an American dentist and an English gentleman, went to England, where she has lived ever since, in exile and mourning. This dramatic story, in twenty chapters, with fourteen illustrations and an index, takes the ex-Empress to her eightieth birthday. It is written by a man who, without having a personal acquaintance with his heroine, seems to have read the essential literature on the subject, the Memoirs of Hohenlohe, the Letters of Queen Victoria, as well as the recollections of all the friends of the late Empress, including her reader and her dentist. The tone, while apologetic, is not partisan. With the documents at hand the reader may be, if he pleases, more severe than the biographer. He will recognize that Eugénie, with all her limitations, faults, and responsibilities, had some endearing qualities that have appealed to men and women whose opinion is worth while. At any rate, the biographer seems to us to have disposed of the legend of her personal responsibility in a war for which Bismarck and Grammont ought to share evenly the burden. There are few errors in this sensible and well-informed book. "Nantes" twice printed for "Mantes" is an unfortunate slip on page 376. As to the flippant reference to Mérimée on page 366, it has no excuse from one who has so thoroughly read Filon's work on that perfect gentleman of letters.

"The Battle of Gettysburg," by Frank Aretas Haskell, First Lieutenant of the Sixth Wisconsin Infantry, aide to Brig.-Gen. Gibbon, and colonel of the Thirty-sixth Wisconsin Infantry, U. S. V., has been published in Boston under the auspices of the Commandery of the State of Massachusetts, Military Order of the Loyal Legion. The book is an account written a few days after the battle by one who, though only a staff officer, took so prominent a part that he was promoted from a lieutenancy to a colonelcy for his bravery. On the third day of the conflict he happened to be the only mounted man in the field, and, says Gen. F. A. Walker, "rode between the two lines, then swaying backward and forward under each other's fire, calling upon the men of the Second Division to follow him, and setting an example of valor and self-devotion, never forgotten by any man of the thousands who witnessed it." He is a master of good English, and his pictures of the scenes, tragic and at times humorous, of the three days' conflict and of the leading generals are very graphic. Particularly interesting is the description of the council of war held by Gen. Meade in the bedroom of a little farmhouse; and it would be difficult to find a more thrilling narrative than his account of the repulse of the final assault. Col. Haskell was killed in the battle of Cold Harbor, and about fifteen years later, this story, written for his brother, was printed for private circulation. In 1898 it was reprinted in the history of the class of 1854, Dartmouth, of which he was a member. These editions were so small that they attracted little attention. It is now printed again "as an incentive to patriotic thought." It is a pamphlet of a hundred pages, with a portrait of the author and his plan of the position on the battlefield at noon July 2.

Many interesting glimpses into our past history are given in the fourth volume of the Bostonian Society Publications. In the paper on the New England Guards we have the account of an organization formed in 1812, according to its constitution, "to facilitate the performance of the duty we owe to our country, of adding to our character as citizens some portion of the skill of the soldier." So strong was this sense of duty that the company "died from patriotism," practically all of its active members having enlisted in the civil war. An interesting character who appears in this volume is Robert Orchard, apprenticed to a feltmaker in 1655. A photogravure of his indenture is given, in which he binds himself not to contract matrimony or "play at Cards, Dice, Tables, or any other únlawful games . . . nor haunt Tavernes or Play-houses." The account of his chequered career contains an incident showing the hatred of the Dutch of New Amsterdam for the English.

English historical students are gradually becoming rather deeply indebted to America for monographs on English institutions and phases of economic development. Among recent books of this class is Dr. George Randall Lewis's "The Stannaries: A Study of the English Tin Mines." in the Harvard Economic Studies (Houghton, Mifflin & Co.). Much well-directed research has gone into Dr. Lewis's work, and the subject is worthy of it; for, excepting agriculture and fishing, no British industry is older than tin mining in Devon and Cornwall, and none has a more interesting political, economic, and social history Its political history céntres about the connection of tin mining and tin smelting with the Crown—a connection that resulted near the end of the twelfth century in the appointment of a royal warden of the Stannaries, and a charter for the industry out of which grew the stannary courts and the Tinners' Parliaments. The economic history goes even further back. Dr. Lewis has concerned himself with every phase of the industry, and has carried the history down to the present time. His treatment of economic and social conditions in the tin mining counties is a distinct contribution to the social history of England—in some sections worthy of Green; while his book as a whole must for a long time to come be ranked as the standard work of reference in its field. The bibliography is especially commendable for its inclusiveness.

Prof. Arthur Lloyd of Tokio University reprints from the *Japan Mail*, as a little pamphlet entitled "My Burnt Book," a summary of his manuscript just destroyed by fire at the printer's. It was concerned with the Buddhism of China and Japan, the Mahâ-yâna, or Buddhism of the Greater Vehicle. The split into the Greater and Lesser Vehicle, he declares, began on the very day of the death of Buddha, whose long life (560-480 B. C.) was in part synchronous with the Jewish exile. It was the Northern Buddhists who were under foreign influences, and, from the time of Alexander (say 326), continuously so. Lloyd thinks that even Buddha himself may have drawn some of his ideas from the teachings of Hebrew prophets of the Captivity; and that Hellenistic influences are distinctly traceable in the Mahâ-yâna scriptures of the Hannya (Prajna or Wisdom) class. While so much is being claimed as to the indebtedness of Christianity to Buddhism, it is interesting to see the question attacked from a new point of view. The recent finds in Chinese Turkestan show to what very remote parts of Central Asia Greek influence extended. Lloyd has satisfied himself that Irenæus and Origen and other Greek Fathers were well acquainted with important aspects of Mahâ-yâna thought. It is to be hoped that the author will have the courage and strength to rewrite the essential parts of his burnt book.

We may add a noteworthy instance of accurate knowledge of Mahâ-yâna legend as shown in the patristic literature. In the Mahâ-yâna account of Buddha's birth (in the Lalita-vistara: not in the Southern account), it is said that he issued forth from his mother's right side; and, in entire agreement therewith, the miracle is represented time and again in the Greco-Buddhist sculptures of Gandhâra precisely as the Mahâ-yâna tells it. Now that learned Orientalist, St. Jerome, in his tractate against Jovinian, says that the Gymnosophists of India have a tradition that Buddas, the founder of their doctrine, was born from the side of a virgin. It is to be wished that some scholar who combines a competent knowledge of the Indian and the classical literatures may undertake a systematic study of them with reference to just such questions as the early relations of Buddhism and Christianity.

A second edition of the Gould Prize Essays, "Roman Catholic and Protestant Bibles Compared," edited by Dean M. W. Jacobus of Hartford Theological Seminary (New York: Charles Scribner's Sons), includes elaborate appendices by the authors of the three essays, and also a composite bibliography covering the literature of the various versions and translations of the Old and New Testament and including works of introduction to the subject. The authors of the essays were somewhat overwhelmed by the mass of facts which they were supposed to include in a brief popular presentation of the subject, and their accounts are bewildering to the reader who is not at home in the history of Biblical translation. The large number of notes included in this edition do not serve to make the matter clearer, although they supply a considerable amount of interesting and important information. The bibliography, however, compiled by Dr. William John Chapman of the Case Memorial Library, from material supplied by the authors of the essays, is a valuable piece of work.

The proceedings of the Fourth International Council of Religious Liberals held at Boston last September have been published under the title "Freedom and Fellowship in Religion" (Boston: The International Council). This volume, of over 600 pages, has been edited by Charles W. Wendte. It contains some noteworthy addresses, especially by delegates from European countries, of whom there were a large number. Papers by several distinguished scholars and religious leaders who could not be present, including Dr. Rudolf Eucken, are included, and the volume is a useful source of information as to the progress of religious thought and toleration throughout the world.

"Katholizismus und Protestantismus in Geschichte, Religion, Politik, und Kultur" is a comparative estimate, just published for Prof. Karl Sell of the University of Bonn, by Quelle & Meyer of Leipzig. It is a timely volume, particularly in view of the controversy over Modernism. The work closes with interesting supplements on the psychology of the two confessions, and on the future of Christianity.

Quelle & Meyer, Leipzig, have just issued a critical study by Prof. J. Meinhold of Bonn, entitled "Die Weisheit Israels in Spruch, Sage, und Dichtung." The first part deals with the character, time, and the specific religious thoughts of Proverbs, Job, Ecclesiastes, and Ecclesiasticus; the second half discusses the beginnings and the development of this wisdom literature, particularly in its relation to prophecy and to Christianity.

During the past winter a course of lectures was delivered in Munich to large audiences on the problems of Christianity. These lectures have now been published by Quelle & Meyer, Leipzig, under the title "Das Christentum, 5 Vorträge," by Prof. C. Cornill (Breslau), Prof. E. von Dobschütz (Strassburg), Prof. W. Herrmann (Marburg), Privatdozent W. Staeck (Jena), and Prof. E. Troeltsch (Heidelberg). The special subjects are "Israelitische Volksreligion und die Propheten," "Griechentum und Christentum," "Judentum und Hellenismus," "Luther und die moderne Welt," and "Die Religiöse Frage der Gegenwart."

Alfred Töpelmann, Giessen, announces as soon to be published a "Volkständiges Griechisch-deutsches Handwörterbuch zu den Schriften des Neuen Testaments und der urchristlichen Literatur," by Dr. Erwin Preuschen, one of the ablest pupils of Prof. Adolf Harnack. It is the author's purpose to enlarge the lexicon so as to include also the so-called New Testament Apocrypha, the Apostolic Fathers, and the remnants of the extra-canonical gospels, but not to include references to secular Greek literature or to the Greek of later church fathers; for such data belong rather to a thesaurus of vulgar Greek. The amount of new material in this field has been so much increased in the last decade or two, that not only Grimm's "Clavis" of thirty years ago, but even Thayer's excellent enlargement of his work in English, now leaves very much to be desired. The work of Preuschen will appear in instalments of 70 to 80 pages, large octavo. As the manuscript is practically all ready the publisher promises to complete the undertaking before the close of 1909.

"Das letzte Passamahl Christi und der Tag seines Todes," by Prof. D. A. Chvolson of St. Petersburg, a work which originally appeared in 1892 in defence of the agreement of John and the Synoptic gospels with reference to the day of the death of Christ, has now been issued (Leipzig: H. Haessel) in a new and thoroughly revised edition, with three new appendices.

Prof. Ludwig Ihmels of the theological faculty in Leipzig has added to his former popular pamphlets on Biblical problems a brochure, "Die Auferstehung Jesu Christi." Ihmels's larger work, "Die christliche Wahrheitsgewissheit," written from a conservative point of view, is to appear soon in a revised edition published by A. Deichert, Leipzig.

A new addition to the series published by

C. F. Amelang, Leipzig, Litteraturen des Ostens, is the "Geschichte der indischen Litteratur," by Dr. M. Winternitz of the German University of Prague. The subjects of the first volume are "Der Veda" and "Die volkstümlichen Epen und die Puranas." The second volume is to appear within a twelvemonth. Another recent contribution to the series is the "Geschichte der christlichen Litteraturen des Orients," devoted to Syrian and Christian Arabian literature, by Prof. C. Brockelmann; Armenian literature, by Dr. Franz Nikolaus Finck; Coptic literature, by Dr. Johannes Leipoldt; and Ethiopic literature, by Prof. Enno Littmann.

In Bologna a commission has been organized to prepare a history of the venerable university at that place. The work will begin with a series of pamphlets issued periodically under the title Studi e memorie per la storia dell' università di Bologna. There will also be a volume called "Chartularium Universitatis Boloniensis."

By what has proved good fortune for students of the history of Italian unification, Alessandro Luzio spent several years of exile in Austria during his early career. That experience gave him an acquaintance with Austrian archives such as no other foreign student of this subject has had; and it enabled him to get Austrian records and the Austrian point of view, which he has made excellent use of in subsequent monographs. In old times the Hapsburg government never allowed the private documents concerning its proceedings in Lombardy and Venetia to be made public; and latterly it has destroyed many papers rather than risk having their contents divulged. It is particularly fortunate, therefore, that Signor Luzio in preparing his "I Martiri di Belfiore" (Milan: Cogliati) was able to consult sources which cannot now be recovered. His recent work, which is a *rifacimento* and completion of the first edition issued three years ago, gives what is likely to be the last word on one of the most tragic episodes of the Italian Risorgimento. He has overlooked no detail. He shows us the methods of some six score Mazzinian conspirators, their fortitude in prison, and the heroism of the eleven who died on the gallows; and he describes with convincing testimony the cruelty of Austria to her political prisoners, the mockery of her trials, and the delight in inflicting barbarous suffering which characterized so many of her officials. The Mantua Trials and the executions of 1853 would have roused the sympathy and horror of the world, if any of the prisoners who survived had had the literary skill of Silvio Pellico. But now this history lives in Signor Luzio's work, which is enriched by many letters, journals, and official documents. He has at last succeeded in establishing, apparently beyond all doubt, that Castellazzo betrayed his fellow conspirators. For fifty years Castellazzo's treachery has been hotly debated in Italy. Indeed, the discussion became national, and divided parties and Parliament into two irreconcilable camps; for Castellazzo changed his name, fought under Garibaldi, was elected a deputy, and passed for a radical patriot. In proving his guilt, Signor Luzio has performed a hard but salutary task.

The examination of Carducci's books and papers preliminary to their transfer to the library of Bologna, for which Queen Margherita purchased them, has just been completed. Among them is a large but incomplete collection of his verse. As might have been expected, the unpublished poems are found chiefly among his earlier work. There are differing versions of many of his more famous odes, many prose translations of Horace and Tibullus, and a few renderings of English and German poets. There are also preliminary studies of periods and authors, and entire courses of university lectures. The manuscript of the first lecture, which he gave in the University of Bologna (November 22, 1860) and which bears marks of his severe self-criticism, has peculiar interest. The letters include copies and drafts of his own letters, with autograph notes of biographical importance jotted down here and there, and a large correspondence with many illustrious men.

The Italian Geographical Society, whose headquarters are at Rome, offers a prize of $1,000 for the best original work on economic geography, or the relations between geography and commerce, industry, emigration, colonization, and social economics, especially Italian. Manuscripts must be submitted before the end of March, 1909, to a committee chosen by the Italian government, the Italian Geographical Society, and the Union of Chambers of Commerce.

The Royal Academy of Sciences in Turin has divided the large Vallauri prize for the best critical work in Latin literature that appeared from the beginning of 1903 to the close of 1906 equally between Prof. Martin Schanz of the University of Würzburg and Prof. Paul Monceaux of Paris.

The Conrad Seipp memorial prizes, offered by Mrs. Catherine Seipp of Chicago for the three best monographs upon the subject, "The German Element in the United States, with Special Reference to Its Political, Moral, Social, and Educational Influence," have been awarded as follows: The first prize, $3,000, to Albert Bernhardt Faust, assistant professor of German literature at Cornell University; the second, $2,000, to Rudolph Cronau of New York; and the third, $1,000, to George von Bosse of Philadelphia.

On April 29 and 30 the Anderson Auction Company of this city will sell the library of Henry Loomis Nelson, at one time editor of *Harper's Weekly*, and afterwards professor at Williams. First editions of W. D. Howells, Henry James, "Mark Twain," and other modern authors, some with autograph letters inserted, are the items most likely to interest collectors. The Anderson Company's sale of May 1 includes first editions of Thoreau, John Burroughs, Richard Jefferies, Henry James, Andrew Lang, W. B. Yeats, Oscar Wilde, Lafcadio Hearn, and other modern writers.

A special committee of the California Library Association, appointed about a year ago, reports, from data furnished by fifty-five public libraries, that the librarian is the poorest paid public official. In comparison even with minor city and village officers, such as assessors, collectors, city clerks, or school teachers, both in compensation and hours of service, the librarian is at a disadvantage. In one city the poundmaster was rated above the librarian. As a remedy the committee advocates an official standard for librarianship, a more aggressive claim on the part of the library for proper recognition, and the increasing of a sense of responsibility on the part of library trustees.

Trinity College, Dublin, has acquired a hall of residence for women, who are admitted to all lectures and obtain degrees on the same terms as men.

STUDIES IN BIOGRAPHY.

Thomas Chatterton, the Marvelous Boy. By Charles Edward Russell. New York: Moffat, Yard & Co. $2.50 net.

There is growing up a whole school of ill-digested books about the romantic movement of the eighteenth century, not the least exasperating of which is this life of Chatterton. They follow a regular formula: a swollen self-complacency as if the writer were miraculously bringing to light truths long concealed by some conspiracy of society, a jumble of loose and ignorant statements, a shrill clamor of undistinguishing praise. As for the work of the present biographer, some notion of his method may be obtained from a characteristic passage such as this:

> The truth is that Walpole is the sole authority for the idea that Chatterton was dissolute. You will find it advanced without proof, without reason, by his every biographer, but there is extant not one particle of evidence to support it and through all its reappearances it can be traced back, link by link, in an unfailing chain until we come to Walpole's letter of defence, and there we can put finger upon the source of all the slanders. Walpole asserts them; the first man echoes Walpole, the second man parrots the first, and so on from tome to tome the falsehood flies and gathers bulk. . . . I have patiently searched out every line, etc.

As a matter of simple fact, there is other evidence. Chatterton himself, in a letter to a friend, boasts of being "not a few times victorious," and the niece of Mrs. Walmsley, at whose house he lived in London, told Sir Herbert Croft, as may be read in that author's "Love and Madness," that Chatterton "was a sad rake, and terribly fond of women." We do not repeat these phrases in the desire of blackening Chatterton's character, for, on the contrary, we rather distrust the evidence, but simply to show the looseness of the biographer's method. Again, Mr. Russell's words can only imply that the charge made by Walpole has been repeated without contradiction "by his every biographer," as if the poor poet were the victim of some conspiracy of ignorance or malice. The statement is preposterous. Chatterton has never lacked defenders. To go no further afield, Willcox's Life (1842), as reprinted in the popular edition of Chatterton in this country, denies more than once the story of his dissoluteness, saying explicitly that "he lived purely and virtuously." Mr. Russell boasts of the "fourteen years [that] have passed since this inquiry began"—he has had time to forget much.

Nor is Mr. Russell more trustworthy in matters literary than in those biographical. "The first definite suggestion that poetry is on one side a kind of painting" was Chatterton's, he says. The schoolboy ought to know that *ut pictura poesis* was the acknowledged canon of poetics until Lessing published his "Laokoön" in 1766. Again, "The song to Birtha in 'Aella' . . . is the first attempt after Milton's 'L'Allegro' to make a word melody directly accordant with the sense"; Mr. Russell would no doubt scorn to accept Dryden as a poet at all, yet "Alexander's Feast" has sometimes been regarded as an attempt to make word melody and sense accord; and if Dryden and his school are debarred, at least Mr. Russell should not have forgotten "The Ode to the Passions" and the "Evening" of Collins. But then Mr. Russell has his own notions of rhythm. Melody he seems to think had been unknown in England before Elizabeth; the trochaic measure is for him practically a discovery of Chatterton's, although Philips, Dyer, and who knows how many others in the early eighteenth century had been using the seven-syllable verse which he calls trochaic; and elsewhere he has an extraordinary statement about amphibrachs.

These errors may seem unworthy of attention; they have significance as showing the general extravagance of the book, and of its class. Mr. Russell has gone out to slay his Goliath, and any weapon will suffice. He is not so much seeking the truth about Chatterton as aiming at some phantom vampire of society which ruined Chatterton's life, and then ruined his reputation. As a personification of that society he takes poor Horace Walpole (whom he calls Earl of Orford somewhat prematurely; he must have a Lord!), and utterly perverts the story of his dealings with the poet. As a matter of fact any sensible man would have done as Walpole did when he learned that the Rowley manuscripts came to him from an apprentice lad in Bristol; he sent the papers to Gray and Mason for verification, and, having learnt that they were spurious, he naturally advised the boy to follow his trade and not meddle with letters. To see in this any monstrous social wrong, is merely to rant. But Walpole is not the only scapegoat. The book has been much advertised as a discovery that Chatterton was not really responsible for the Rowley forgeries, but was the innocent tool of another. It turns out that Mr. Russell has nothing but the vaguest surmises that Dr. Barrett, to whom many of the supposititious manuscripts were sold for a history of Bristol, was not entirely ignorant of their character. There is not the slightest proof given of Barrett's complicity. He translated Latin phrases for Chatterton in the false Burgum genealogy, but this would rather imply that he took the document for genuine. He drafted one or two of Chatterton's letters to Walpole, and is therefore a "silent, stealthy figure," and "the cloaked director of the visible moves"; why not suppose he was trying to help the boy in what he regarded as an honest undertaking? At any rate, whether Barrett was ignorant or guilty, what matter? It is only another effort to create some social monster of which this melodious young singer of liberty was the victim. "Mankind," says the biographer sapiently, "provides the conditions that make wrong-doing inevitable, and is then pleased to be much amazed that any one should do wrong." For our part we are inclined to look upon Chatterton as the victim of his own imagination, rather than of any mysterious aristocratic conspiracy. It is doubtful if it ever occurred to him that there was anything wrong in falsifying history and mystifying readers with these Rowley poems; Rowley and Canynge and their works were more real to him than the living people of Bristol, and why should not the world have the profit of them as well as he? It is probable enough, as Byron and others have thought, that an element of something close to insanity entered into his mental composition.

But Mr. Russell has no doubts. Chatterton belongs to the band of radical poets, Marlowe, Milton, Shelley, and Swinburne ("always the poets have been mighty on the side of democracy," he says, ignoring such slight exceptions as Homer and Virgil and Shakespeare); and as such cannot be criticised. His is "the most extraordinary body of verse in our language"; there was nothing comparable to "Aella" between Milton and Shelley; Rowley can far surpass Gray's "Elegy"; and "of all the poets that have sung in English, Shakespeare alone excepted, this had the greatest gifts and surest inspiration"—all which, we submit, is mere madness. As a prodigy Chatterton is unique; one is lost in amazement at the variety and excellence of his achievements. But judging him absolutely, no sane critic can now place him in the front rank of poets. He had his great vogue, due to the same causes that carried Ossian over Europe; he exercised considerable influence on his followers, as Ossian did; he has passages that even now touch the reader with their beauty and harmony; but it is useless to deny that most of his work shows that peculiar lack of experience or bottom which is the mark of the precocious mind. After all Johnson, in his downright way, said the true thing about him: "It is wonderful how the whelp has written such things." To any balanced judgment the extravagances and perversions and the bad taste of the present biography will tend only to obscure for a moment the profound pathos of Chatterton's life and his due reward as one of the inheritors of unfulfilled renown.

Coke of Norfolk and His Friends: The Life of Thomas William Coke, First Earl of Leicester, of Holkham, Containing an Account of His Ancestry, Surroundings, Public Services, and Private Friendships, and Including Many Unpublished Letters from Noted Men of His Day, English and American. By A. M. W. Stirling; 2 Vols. New York: John Lane Co. $10 net.

Many readers upon this side of the water might be pardoned were they frankly to confess that they did not know that such a person as Thomas William Coke ever existed. Yet Thomas William, a descendant of Sir Edward Coke, figures in the "Dictionary of National Biography" to the extent of a column or two. He sat for a long while in the House of Commons, revolutionized agriculture in his part of the country, was a great friend of Charles James Fox, and, dying in 1842, at the age of eighty-eight, was sincerely mourned by a host of devoted friends. He was known and admired as "Coke of Norfolk." His country seat at Holkham (near the ocean) could boast of the finest architecture in England. His library contained many rare volumes, while works of art told of the refined taste of its occupant. Coke rode to the hounds, and lived the life of a country gentleman. Warm-hearted, energetic, a lover of his country, and of his neighbors, a stout Whig, he went somewhat against his will into Parliament, and by repeated elections became at last the "Father of the House." Coke did not talk much in the Commons. He opposed the war that George the Third and Lord North undertook to carry on against America. After the Revolution visitors that managed to cross the Atlantic from the United States had Holkham in mind as a good place to visit, and not a few Americans received a warm welcome there. They found in Coke a sensible, generous host—a fine specimen of the landed gentry, who did his duty to the King without obsequiousness, and saw to it that his tenants paid their rent and kept their families in comfort. The author of this work does well to add to the title the words, "And his friends." You read for a while, and you yourself become a friend of Thomas William Coke. The story of what he was is told in a simple, straightforward way, with no attempt at literary effect. The result, as we view it, is both pleasing and profitable.

Thomas William Coke was not a creative statesman, nor the author of any speech or saying of distinction. He was an active, useful gentleman, who served his country faithfully. Fox, Burke, Lord Nelson, Keppel, Windham, and many others of note came into his life—some of them his intimates—and his biographer has much to say of these eminent personages. Indeed, there is very little text of Coke's own utterances; but there are many letters written to him by friends of note—not remarkable letters at all, but every day epistles that help to "tell the story."

Viewed as a contribution to history, in its lighter aspect, this book is of considerable worth. It will prove very interesting to those who like biography that goes into details. The critic who believes in preserving nothing from the wreck of time that is not valuable on its face, might complain that the material ought to have been cut down at least one-half. But the book was not prepared in order to meet so exacting a standard. The numerous illustrations are excellent, both as to subject and execution. The printing is all that could be wished. Altogether, the book may well engage the attention of him who wants to see English life of a century ago; and he will not fail to enjoy the character here revealed of what we, with a certain touch of fondness, are wont to style "a gentleman of the old school."

CURRENT FICTION.

Princess Nadine. By Christian Reid. New York: G. P. Putnam's Sons.

The princess-heroine continues to be an important figure in news-stand literature. Seemingly there is no kind of lady more eligible as companion for the jaded or jadable traveller. The Princess Nadine is a trifle more robust than her type; she yields less quickly to the appeal, or rather command, of the democratic and Western wooer, who is, in the nature of things, destined to put his royal rival for her hand out of the running. In this case it is a Central American dictator of North American birth, a person with square jaw, keen steady dark eyes, and a "supreme, almost arrogant" composure of bearing.

The princess is three-fourths Russian, but her maternal grandfather was a California miner, so that she is enabled to withstand the tyranny which awards her for political reasons to a certain Prince Maximilian, destined to become titular King of "Serabia," but in effect a mere tool of the higher powers. She is inclined to like him rather better than the dictator, but he turns out to be designing and cold-blooded, while his American rival loves her for herself. The game of intrigue, which brings about her defiance of the Czar's government, is played light-heartedly enough, hero and heroine holding the usual marked cards. The possession of certain compromising revolutionary documents is involved, and brings the princess to her moment of greatest peril. She is threatened with the extreme penalties which Russia reserves for the unfaithful among her elect. The dictator, however, has a joker up his sleeve in the form of a palatial private yacht which snatches the princess from peril, and enables her to become his partner in the building up of a great empire in Latin America. And there you have the whole affair.

A Shepherd of the Stars. By Frances Campbell. New York: E. P. Dutton & Co.

An amiable maiden lady, who is, or is supposed to be, the author of the narrative, with two young and lovely female charges, makes off alone to Morocco, by doctor's orders, and against everybody's advice. On the way they meet several people of interest, notably a red-headed young Irishman to be known as Mac, who plays a chief part in the youthful romance intended to serve as wings, no doubt, for what would otherwise be a pedestrian account of travel and observation. The Oriental scenes and episodes thus presented are painted with a good deal of brilliancy, and one has again to register the regret that the sugar-coating of fiction should have been deemed necessary. The characters are not, however, without interest to the student of British manners, being intensely insular in their attitude. When they do not domineer, they patronize; at best the marvel of the South amuses them, at worst it discommodes them. The author seems to be unaware of the absurdity of her two figures of romance. The boy is simply an Hibernian Hercules, fatuously in love. He is, to be sure, a duke travelling incognito—a fact which, when finally divulged, casts a rosy light over his previous performance. The girl is simply a supremely silly young person of an old-fashioned type, fainting readily at the sight of blood, and driven into hysterics by the presence of a spider on her counterpane. For its unconscious humor, its ingenuous amateurishness, the book has a value not to be ignored in this day of sophisticated accomplishment.

The Man of Yesterday. By Mary Holland Kinkaid. New York: Frederick A. Stokes Company.

This "Romance of a Vanishing Race" deals with conditions in Indian Territory in the last decade of the nineteenth century, "more than half a century too late," says the proud old halfbreed Beaumont to his white visitor, "to behold us of the Five Nations in our barbaric state. The misionaries helped to civilize us Chickasaws and Choctaws long before we left Mississippi." To which his wife adds: "I liked the missionary work here in the Territory so well that I decided to devote my entire life to one Indian." The story goes on to tell of the political and social complications existing in a mixed population; of the complex effects of conflict between races, of land allotments to the Indians continually reduced by tricky means, of syndicates and land-grabbers and elections. "Indians are natural politicians," declares The Man Looking for the Sun—the young hero who half resents the drop of white blood in his veins, and fiercely longs to right his people's wrongs. Interest of another sort is provided in the love passage between the white man and the girl of Indian descent, their marriage, his desertion of her, and the blood vengeance wreaked by her kinsman.

The passionate race pride of the Indian, his fortitude, his scorn of promise-breaking, are strongly pictured. In Pakali, with her Indian blood and her white woman's training, lives a heroine fair and tender and brave as heart of romance reader could wish. A close acquaintance with Indian character and customs is apparent throughout, and with the acquaintance goes an intense sympathy for their passing—a passing whose pathos is heightened in the story by the melancholy acquiescence of the better element.

Santa Lucia: a Common Story. By Mary Austin. New York: Harper & Bros.

The scene is that with which Mrs. Austin has made us familiar in earlier stories—California. Santa Lucia is a place not far from San Francisco, containing a small denominational college. The hero is the new professor of biology, a young man, "not quite thirty," scholarly, reserved, cool. He falls in love with the most beautiful girl in town, and naturally endows her with all the mental and moral qualities which such a woman should possess. She is, as a matter of fact, selfish, shallow, and indifferent to his work; but, taken with the idea of marrying a man of distinction in the learned world, she casts off a more commonplace but passionate lover and accepts the professor. The end of it all, in the last chapter, is substantially what the neighbors feared. Bound up with this tale is that of a young married couple. The wife, a graduate of Wellesley, has a strong intellectual sympathy with the mismated Professor Stairs, but in the end she finds out the worth of her own husband. For good measure, Mrs. Austin gives us the love affair of the village doctor's daughter, who has two lovers, but chooses the right one, and is happily married in the end.

Mrs. Austin is fond of describing California scenery, and she indulges her taste so freely at the beginning that for the first few chapters the story moves slowly; but once we are fairly started, the pace is swift enough. That is not to say, however, that Mrs. Austin conforms to the strict canons which some of our pundits prescribe for the novel. She is not afraid of a little leisure and an occasional stroll from the straight and narrow path. She aims to present a fairly complete picture of life in this set of Santa Lucia society; and to do this she does not hesitate to introduce as many subordinate characters as she pleases. They are all distinct and well drawn—Dr. Caldwell and his assistant, Mrs. Bixby of the W. F. M. S. and the W. C. T. U., and Lew Sing, the Chinese cook. The novel, as a whole, is decidedly above the average.

The Man Who Was Thursday: a Nightmare. By Gilbert K. Chesterton. New York: Dodd, Mead & Co.

For the ancestry of this sprightly tale the reader is respectfully referred to Stevenson's "Dynamiter," and "The Wrong Box." The hero, a Scotland Yard detective, gets himself elected a member of the Central Anarchist Council—seven men named for the days of the week. That is the beginning of a series of fantastic adventures, in the course of which Thursday discovers that each of the other six members, including even Sunday, the leader, is also a detective who is trying to penetrate to the innermost secrets of the anarchist organization. The adventures of the first half of the book are so coherent as to be almost plausible; but through the last half the action becomes wilder and more farcical, till at last it exceeds all bounds, even of burlesque. The closing chapters are allegory, pure and simple; and, what is worse, the point of this allegory is not wholly clear.

Although the work is negligible as a piece of fiction, it has the interest of Mr. Chesterton's essays—a vivacious and clever style that glitters with paradox, sometimes almost silly, and sometimes shrewd and suggestive.

La Trompette de Marengo. Par Samuel Cornut. Lausanne: Payot & Co.

M. Cornut, whose "Trompette de Marengo" is achieving great success, is one of the leading novelists of French Switzerland. This last novel, the ninth that he has written, gives a highly colored and vivid picture of the canton de Vaud during the period of the Revolution and the Empire, when it rid itself of the last vestiges of the feudal régime. The life of these Swiss villages on the shores of Lake Leman, the customs of the nobles and the peasants before the invasion of the cosmopolitan hostelries, are here described with a charm that few French novels of to-day can boast. The students of language will find also many curious examples of obsolete French still preserved outside of France.

FRENCH HISTORY.

Histoire socialiste. Sous la direction de Jean Jaurès. Vol. X. Le Second Empire. Par A. Thomas. Paris: Rouff.

L'Empire libéral. Par E. Ollivier. Vol. XII. Paris: Garnier.

L'Avénement de Bonaparte. Par le Comte Vandal. 2 vols. Paris: Plon-Nourrit.

Quarante-huit. Par Robert Dreyfus. Paris: Cahiers de la Quinzaine.

The "Histoire socialiste" of Jean Jaurès is a sign of the times, not lightly to be dismissed by the historian because of its class appeal and pamphleteering tendency, nor impatiently to be avoided by the general reader alarmed by its socialistic title and revolutionary red cover; it is a work of great importance, emphasizing certain aspects of history with which we are none too well acquainted, and addressed to an audience of great mental and political activity. The scope of the work embraces the history of France from a socialist point of view from the time of the French Revolution to the present day; the volume now under review covers the period of Napoleon III. Attention is concentrated throughout on the working class of France, and especially of Paris, a class under heavy economic pressure, but wonderfully intelligent in its political reasoning and chronically inclined to translate its opinions into revolutionary action. How dangerous that class appeared to the newly established Second Empire is apparent from the statistics here collected. The Coup d'État of December 2 was followed by wholesale proscriptions. In the department of the Hérault alone no fewer than 60,000 persons came under police observation; in France 20,000 were transported or imprisoned. The judicial records cited are amazing, and show that countless individuals, working men and peasants, guiltless and in many cases incapable of political action, were visited with penal condemnations. For a time the Labor party, as well as the Republican party, was completely suppressed.

Then came the fat years of economic expansion, that, ably fostered by Napoleon III., marked the first half of his reign—the period of Haussmann, and Morny, and railway construction. Employment was plentiful and wages rose; but the working man, at first satisfied with improved material conditions, soon found prices rising as fast as his wage, and at the same time became conscious of his growing importance and latent power. At this point it was, say about the year 1857, that the conflict became once more inevitable. The policy of the government towards labor was essentially false. It sought to satisfy labor by a progressive economic policy, by embarking on public works and by attempting to regulate food prices favorably; but alongside of this, being at heart more than distrustful of the laboring class, it attempted to keep it in a state of complete subjection by police regulations and factory laws of the most galling character. Factory regulations, such as those set out in the "Histoire socialiste," could have only one effect. They welded together into one loose secret society the working men of France, keenly alive to the injustice and hostility of the system. It was the struggle for betterment of a great class, that marked the closing years of the empire, a struggle which helped to shape the opportunity which the leaders of the Orleanist and bourgeois parties seized for erecting their Third Republic. Labor found leaders of real ability, but they took little direct part in the political evolution of 1870 because their aim was more social than political.

And the labor leaders of the early sixties—the fact is clear whether in France or in England—showed a political insight and sense of justice not always to be found outside their ranks. Their great cry was for freedom of association and freedom of opinion; while the working men of France, notwithstanding the sufferings they endured from the stoppage of cotton, sympathized with the Northern democracy in its struggle against the Confederacy. From the agitation and economic disturbance of the early sixties sprang the International, the origin of which is here dealt with at length, and with a good deal of added information on the French side; the "Histoire socialiste" makes no attempt to exaggerate the importance of the part played by this famous society. From 1864 to 1870 there is only space to note that, as middle class French liberalism raised its head in press and parliament, fixing its aspirations on a new régime fast rising in the shadow of Napoleon, so the more moderate leaders of labor saw themselves gradually displaced by the more violent; Tolain made way for Blanqui, and the rectification of social disabilities became uninteresting, with revolution looming on the horizon.

The last few months of Napoleon's tottering régime are dramatically told, though *ex-parte*, by Émile Ollivier in his twelfth volume. Conversations, letters, scraps of debate in the Corps Legislatif, not elsewhere to be found, give point and vivacity to the narrative. Towards the close of 1869 freedom of speech had been more than won; in the tribune Rochefort was permitted to hold forth as follows:

> Le ministre a cherché à ridiculiser le projet de loi qui vous a été présenté hier par le citoyen Raspail et moi. Je tiens à constater qu'il ne fait que continuer le système inauguré par le chef de l'État. À l'ouverture de la session le chef de l'État a cru devoir ricaner et m'insulter (c'était faux). Si ridicule que je puisse être, je ne me suis jamais promené sur une plage avec un aigle sur l'épaule et du lard dans mon chapeau.

How the Empire survived into 1870 was little less than miraculous. Ollivier's ministry, as he never realized, and as he will not yet admit, might prolong the agony, but could not avert the catastrophe. Gambetta saw more clearly when he declared "Vous n'êtes qu'un pont entre la République de 1848 et la République à venir, et nous passerons le pont." Two important points that the volume brings out are: the nature of the manœuvres that paved the way for the Hohenzollern candidacy of 1870; the fact that Ollivier was not the master of his own Cabinet, as he had declared he must be, but that he depended absolutely on the support of the Orleanists Buffet and Daru.

No more brilliant book than Count Vandal's has been written on the Napoleonic period. From whatever point of view it is approached, from that of exact erudition, of minuteness of detail, of breadth of intelligence, of felicity of style, of illuminative power, there is nothing but praise. Even the historian who has made a special study of the period will rise from its perusal with a deeper and a clearer view of Bonaparte and his work.

The period covered is short in point of time, less than twelve months, but long by the measure of historical evolution. For in it were crowded the military disasters of the Directoire, Bonaparte's return from Egypt, the revolution of Brumaire, the founding of the Napoleonic institutions, and the coping stone of Marengo. It is through these intense weeks that Count Vandal guides us, following inch by inch the bold footsteps of the extraordinary man who worked out of them results that still dominate the institutions of continental Europe. And although the author rarely relaxes an austerity of method that excludes from his narrative the alluring generalities that other French historians have ventured on in this connection, yet there is always felt behind the closest detail an informed outlook and sense of perspective. If there is a thesis to be discovered in these pages, it is perhaps this: that France in 1789 did not demand democratic liberty, but administrative organization; and that this was the work which Bonaparte actually accomplished in 1800; he did not so much organize the Revolution as organize the ***ancien régime***. On this point one of the most interesting of the unpublished documents here produced is a minute of a meeting of the Council of State whereby it would appear that Bonaparte declared:

> If the ancient administration of France perished—and I do not fear to say it was the most perfect that ever existed—it was on the financial side.

Much space might be taken up giving some impression of the brilliant aspects of the book. The descriptions of the scenes at St. Cloud on the 19th of Brumaire are vivid in their photographic precision; while those of the political and especially social conditions of Paris are frequently marked by delicate literary quality.

In his little book on 1848, Dreyfus offers many good appreciations on the questions of the press of public opinion, of education, and of religion for the years immediately preceding the second Empire.

Lucretius, Epicurean and Poet. By John Masson. New York: E. P. Dutton & Co. $3.50 net.

It would be hard to write a dull book on one who came nearer than any other man of the world to uniting science and poetry and—we dare use the word, however strange it may sound when applied to Lucretius—religion. Certainly Dr. Masson, who by his magazine articles and earlier book on the atomic theory has made the Lucretian field his own, could not well treat the subject without giving much valuable material. The best chapters of the present volume are those in which he discusses the scientific theory of the "De Rerum Natura." Here his method is orderly and his illustrations apt. Particularly interesting to our mind is the analysis of the famous discussion on materialism between Tyndall and Martineau, with its by-play, as throwing light on the same questions which in different form were agitating the old classical world. "The atomic theory of Democritus [and of Lucretius] was a guess, and no more than a guess," said W. K. Clifford, the fighting bigot of science. Dr. Masson has done good work in showing that this principle of the Epicureans was more properly an hypothesis than a guess, although he does not bring out emphatically enough the part played by modern mathematics in extending the hypothesis and lifting it into the sphere of metaphysics.

For his clear exposition of the atomic theory and of the hints of evolution also in Lucretius, full praise must be accorded Dr. Masson. And there are other sections of the book to be commended, notably the pages summing up the philosophy of Epicurus, and some of the paragraphs on the poetical powers of Lucretius. But as a whole, the work is irritating and unsatisfactory. There may be some difference of opinion in regard to his treatment of Jerome's all-too-brief biographical note. Dr. Masson brings together all the latest views on those startling sentences. He believes in the love philtre and supports his belief by evidence showing the wide use of such poisonous decoctions at the time. Our own feeling is that such an argument points the other way. If philtres had not been commonly used, the tradition that Lucretius had been thrown into madness by one would by its very strangeness be more credible. It is just in the ages when poisoning is common that every sudden death is attributed to such means, and that every tradition of murder must be most carefully scrutinized. Thus it seems to us that, while the story of the philtre may be true, it is more likely a popular attempt to explain a state of unbalanced nervous excitement. Opinions here may differ, but at other points Dr. Masson's work is open to more unquestionable censure. His lack of construction is glaring. The same arguments reappear again and again throughout the book in the most haphazard fashion; quotations are needlessly repeated, and the whole book would be more effective if reduced in length by a quarter. When Dr. Masson adds his own reflections, they are naïve to a degree barely escaping the ludicrous; you feel yourself in the presence of a Scotch parson surveying the world from his manse windows. Hearken to these profound reflections on the famous *Suave mari magno:*

> It does, indeed, stir the imagination to behold danger from a place of safety far away; but it is only a cowardly, sentimental soul that can actually enjoy the sight of danger that it would not face itself, etc.

At times this naïveté falls into amusing self-contradictions. Thus on page 419, read: "He had found the world living, if not with One Great Life, yet with many lower lives, and he left it dead, 'utterly dead', and cold." Three pages over it is said: "In short, Lucretius, like the writers of the Psalms, makes us feel that there is a spiritual element in Nature." Where, one asks, is the spiritual element in a Nature left cold and dead? This is not an exception, but a fair example of his confusion of mind.

The fact is, Dr. Masson's work suffers fundamentally from lack of reflection. He possesses, indeed, abundance of reading both in ancient and modern literature, but he has no power of associating his erudition with life, as may be seen whenever he touches on history. Thus, because Cæsar stands for the democratic uprising against the Senate, he is

The noblest man
That ever lived in the tide of times.

The author would appear to have no understanding of the Cæsarian and Napoleonic temperament which is led on by the sheer necessity of acting and dominating. His self-contradictions spring in part from this inability to understand the motives of human nature and in part also from the want of any central controlling idea in his criticism. At one time he dwells on Lucretius's conception of scientific law ruling through all phenomena, at another he speaks of the world as thrown together by chance. As a matter of fact, there is no real contradiction in the poet, however it may appear in Dr. Masson's treatise. Lucretius started from a particular human and moral attitude toward life, from the horror, to use Cæsar's words, of *fortuna cujus libido gentibus moderatur.* From this conception of moral chance and of a wanton individualism in human affairs springs his physical theory of the atoms whirled together fortuitously, each governed by its arbitrary faculty of "declination" representing the final chance and individualism of nature. In the vast course of time these haphazard conglomerations fall together into the form of the present world, beautiful in part, but in general bearing all the marks of a ruthless unmeaning accident. From the intricate play upon one another of these multitudinous atoms arises what seems for a while to be a law of nature; but at bottom this is a mere deception, and chance reigns hideously supreme. Reverence to the gods places them in a region outside of the world; pity for mankind calls upon men to withdraw to the same sphere of calm, even though that sphere, be *mors immortalis mors æterna.* It is this moral and human conception at the base of Lucretius's system that has made him one of the leaders of life; for, as Pascal saw, and stated so clearly, Epicureanism and Stoicism are not of one age, but are marks of an irreconcilable, ever-present division in the temperaments and thoughts of mankind. By slighting this central idea Dr. Masson has failed to make of his essay a vital criticism of life.

And in this failure, as in his strength, he is an illuminating example of the work done by our classical scholars in general. Like him, they often have abundant erudition; they sometimes have the same familiarity with modern literature, enabling them to season their writing with unexpected illustrations. But almost without exception they lack that fundamental thought or philosophy which would convert their learning into living literature. Our classical schools are losing their hold because in them the classics are so seldom brought to bear on the unchangeable problems of life. And there is here an enormous and enticing field. The number of books in English which deal with Greek and Latin, not philologically or even æsthetically, but critically, as criticism was understood by Sainte-Beuve and Brunetière, can almost be counted on the fingers of one hand; the harvest is ripe, but where are the reapers?

Journals of the House of Burgesses of Virginia, Vol. IV., 1761-1765, Edited by John Pendelton Kennedy; Vol. V., 1758-1761, Edited by H. R. McElwaine, Richmond, Va.

The preceding volumes of the "Journals of the House of Burgesses of Virginia" were noticed in the *Nation* of August 17, 1905, and June 6, 1907. A brief bibliography of these Journals, as far as copies are known to the editor, is given in the preface of Vol. IV., dated June, 1907. This bibliography was apparently prepared too early to include certain additions suggested in the *Nation* of June 6, 1907. We note also that, speaking of the Journal of 1764, the editor says: "So far as is known there is not a complete printed copy of this Journal extant," the copies in the Virginia State Library, and in the Library of Congress both being imperfect. As a matter of fact, however, the copy in the library of the Maryland Historical Society is complete, beginning on p. 3 and ending on p. 98, and the pagination is continuous with that of the following session of May 1, 1765, beginning on p. 99. A copy of the original Journal in the British Record Office in London was procured to print from. The Maryland copy also confirms the statement of the editor that there was but one session of the Assembly in 1765, as against the view of Hening and Stanard.

A valuable Introduction of some seventy-five pages notices the most important transactions of this Assembly, in which account the Bancroft Transcripts in the Library of Congress are frequently drawn upon. Among the topics were Indian affairs, the issue of paper money, the question of payment of the clergy, and the resulting "Two-Penny Act" regulating the price of tobacco, the only currency of the colony. The ensuing dispute brought on the celebrated "Parsons' Case," in which the oratory of Patrick Henry made such an impression on the jury. But the most important matters during the latter part of the period covered by the Journals in this volume, were those resulting from the passage of the Stamp Act. An address to his Majesty, and memorials to the Lords and Commons, and to the agent of the Colony, were adopted on December 18, 1764. The ground taken by the Burgesses was that "freedom could not exist where taxes were laid upon a people without their consent." Finally, Patrick Henry, jr., then in his first session, offered his celebrated resolutions. He tells us himself, in his own handwriting on the back of a copy of the resolutions—which serve as a frontispiece in facsimile to this volume:

> Finding the men of weight averse to opposition, and the commencement of the tax at hand, and that no person was likely to step forth, I determined to venture, and alone, unadvised and unassisted, on a blank leaf of an old law-book, wrote the within.*

The Assembly treated in the fifth volume, 1758-1761, held seven sessions. The Journals for the first, second, third, fifth, and seventh sessions follow transcripts of the originals in the Public Record Office, London; for the fourth session, a printed copy in the Library of Congress; and for the seventh session, a printed copy in private hands in Williamsburg, Va., the only copy known. Valuable illustrative extracts have been made from the Draper manuscripts owned by the State Historical Society of Wisconsin, and from the Bancroft Transcripts. These are printed in the appendix, but the former method of printing such extracts in the Preface, in their chronological order near the matter illustrated, seems to be more convenient. A list of the names of the Burgesses for the whole Assembly is prefixed, with notes showing changes during the several sessions, and this seems preferable to repeating the names for each session.

In his message to the Assembly at the opening of the session of March 4, 1760, Gov. Fanquier urged the renewal of the appropriation for the support of the Virginia regiment, reminding the Assembly of what Great Britain was doing, and adding:

> As a further motive to induce you to pursue this salutary measure, consider the present declining state of France; her trade ruined, her navy destroyed, her treasury

---

*See William Wirt Henry's "Life of Henry," Vol. I., p. 80.

> bankrupt, and the spirits of her people so entirely broke that she is become rather an object of pity than of resentment. From these circumstances, it is most probable that the blessings of peace will soon attend us; will you not then persevere to the last? Will you tarnish the honor and reputation you have justly acquired by withdrawing yourselves at the close of the day? I cannot suppose it.

The eloquence of the Governor so wrought upon the feelings of the Assembly that it continued the regiment in the service of the Colony until the first day of November next, and three hundred men of it to the first day of April following, "if it shall be thought necessary by the Governor or Commander-in-Chief of this Colony."

These volumes are handsomely printed by the Colonial Press of the Everett Waddey Company in Richmond, in a limited edition of five hundred copies. The proofreading is better, but it is not yet perfect.

Science.

"The Tree Doctor: the Care of Trees and Plants," by John Davey (Akron, O.: The Saalfield Publishing Co.), is an extremely entertaining volume. It purports to give the results of long and devoted study of the diseases of our cultivated trees, and of methods of treatment. From first to last, the author presents the whole matter just as an enthusiastic tree-doctor might talk to a sympathetic audience. When he wishes to impart his information in verse, he does so, and it is not very bad verse, either; and when he gives his views about those whom he regards as unwise advisers, he expresses himself without reserve in words which hit hard, and hurt. At the outset, one might think that the volume is composed of odds and ends thrown together in a hap-hazard manner, but on careful reading it is seen to be the work of some one who knows how to get at his hearers in homely speech. Of editing, strictly speaking, there is none; but there is a telling management of blunt phrases. For the most part the advice is judicious, and in not a few instances the phraseology is felicitous. The trifling errors are not likely to mislead any one who makes use of the book in an earnest attempt to improve the condition of trees in orchard, park, or forest. But we must express regret that so good a book should be without index or even table of contents. Even the two hundred photographic reproductions, most of them good and well-chosen, cannot make up for this unnecessary defect.

Dr. Étienne Burnet of the Institut Pasteur, and head of the vaccination service of the city of Paris, explains the present state of "La Lutte contre les microbes" (Colin), particularly in cancer, tuberculosis, sleeping sickness, tetanus, enteritis, smallpox, and vaccine, and the entire work of Jenner up to date.

The Imperial Academy of Sciences in Vienna, in coöperation with the University, the Royal Museum of Natural Sciences, and the Society for the Scientific Investigation of the Orient, will unite in sending an expedition to Mesopotamia in the autumn. The field to be covered includes archæology, geography, botany, zoölogy, and kindred lines of research. Among the chief participants are Dr. Ernst Blaschke of the Royal Museum, Othmar Reiser of the Museum in Seràjevo, and Dr. Friedrich Vierhapper of the Botanical Institute in Vienna.

The American Association of Pathologists and Bacteriologists began its eighth annual meeting at Ann Arbor April 17. The following officers were chosen: President, Dr. H. E. Ernst, Harvard; vice-president, Dr. T. H. Hiss, Columbia; secretary, Dr. F. B. Mallory, Harvard; treasurer, Dr. E. H. Williams, University of Buffalo. A committee was appointed to raise a relief fund for the widow of Major Carroll, the United States army surgeon, who died from the effects of his experiments while studying the theory that yellow fever is spread by mosquitos; and also for the widow of Dr. Lazear, who was connected with Major Carroll in these experiments.

The death is announced of Dr. William Edward Wilson at the age of fifty-six. In 1871 Dr. Wilson established a private observatory and laboratory at Daramona, County Westmeath, Ireland, where excellent work on light and heat was carried out.

Drama.

In his representation of François Coppée's fine play, "Pour la couronne," a number of years ago, Edward Vroom showed himself a romantic actor of uncommon skill and power. This impression he confirmed by his performance in his own play, "The Luck of Macgregor," which was presented in the Garden Theatre on Monday evening. Unfortunately, the play itself is a poor patchwork—military, patriotic, sensational, comic, pathetic, and wholly theatrical—which has no claim upon serious consideration. But Mr. Vroom's impersonation of the central character, an adventurous young Irishman, of the Harry Lorrequer type, was one that could be matched by very few living actors. Exuberant in spirit and charged with audacious vivacity, it was yet perfectly simple and natural. Constantly picturesque in pose and gesture, it was also entirely free from theatrical affectation. Its temperament was delightfully Hibernian, merry, ardent, and tender by turns, with occasional outbursts of genuine passion and touches of manly pathos. Mr. Vroom's artistic proficiency was displayed in the rapidity, lightness, and certainty of his execution, in the significance and grace of his movement, and in the refinement, variety, and melody of his vocal tones. Such good elocution as his is seldom heard upon the stage nowadays. That he is an artist of high and varied accomplishment is certain. His full powers as an actor can only be tested in a play of higher intellectual and imaginative quality.

The success of Eugene Walters's "Paid in Full"—attributable to certain audacities of realism rather than to actual literary or dramatic merit—attracted attention to a new play by the same author, "The Wolf," presented in the Bijou Theatre. This proved to be a melodrama of the Canadian backwoods, with a sensational scene showing, for chief attraction, a duel in the forest, by night, between the villain and the virtuous lover. It is a crude piece, in which youthful exaggeration, imitativeness, and inexperience are all manifest; but which exhibits occasional flashes of vigor and fancy, and a sense of picturesque contrast which contain promise of future achievement. The best thing in it is the character of the hero—a French Canadian—which, in its combination of vivacious good-humor, simple courtesy, and essential virility, is fresh and exceedingly effective, especially as it is interpreted by William Courtenay, who has never done anything better, or so good.

Next month Putnams will have ready Prof. Curtis Hidden Page's translation of Molière in the series of French Classics for English Readers. The work will be in two volumes and will include seven of the best plays, those in verse being rendered here for the first time into English verse.

Bernard Shaw's new play, "Marriage," will be produced in the London Haymarket Theatre, probably in two or three months, under the management of Messrs. Vedrenne and Barker.

The committee in charge of the Bauernfeld endowment funds in Vienna has awarded to Karl Schoenherr of Vienna the *Ehrengabe* of 4,000 kronen, in recognition of his drama "Erde."

Music.

The Commonplaces of Vocal Art. By Louis Arthur Russell. Boston: Oliver Ditson Co.

Songs from the Operas. Edited by H. E. Krehbiel. Boston: Oliver Ditson Co. $1.50.

There are teachers of singing in New York who make over $25,000 a year. Naturally, a vocation which offers such prizes has many followers throughout the country, and the majority of them, one comes to think, write books, most of which set forth a personal method "possessed and known only by the author." The theories and practices of these teachers, which often remind one of the occult arts of the Indian medicine man, doubtless confer an oracular power over students. There are exceptions, and Mr. Russell is one of them; he does not assert that he has discovered the only true method of teaching the art of singing, but he simply attempts, in his little volume of seventy-four pages, to bring together a number of useful hints regarding breath management, effort in singing, distinctness of utterance, head voice, the legato style, lip shaping, phrasing, and so on. Some of the admonitions, like "Power must never be sought at the cost of purity of tone," seem superfluous, but as a matter of fact there are very few singers, especially on the operatic stage, who do not need to have such elementary truths impressed on them.

Carl Armbruster edited collections of lyric numbers from the Wagner operas for The Musicians' Library, and now Mr. Krehbiel follows with a volume of songs from other operas, mostly preceding Wagner's. He goes back as far as Caccini, one of the originators of Italian opera, and his list includes Campra, Bononcini, Rameau, Pergolesi, Gluck, Mozart, Beethoven, Weber, Meyerbeer, Rossini, Donizetti, Bellini, David, Thomas, Verdi, Gounod, Delibes, Bizet; these names being arranged in the order of the composer's birth. The editor provides a brief sketch of the career of each of these nineteen masters with remarks on the opera from which the selection is taken, and this work is well done, although one may object, in view of "Aïda," to the assertion that the culmination of Verdi's creative powers is marked by "Il Trovatore," "La Traviata," and "Rigoletto"; or to the statement that Bizet "lived to enjoy his triumphs only three months," for the success of "Carmen" did not come till after his death. A valuable feature of this edition is the printing of the old arias exactly as they were sung when they were written, the appoggiaturas, mordents, and other antique signs being translated into the modern notes which represent the original manner. Mr. Krehbiel has also added variants in the embellishments as introduced by certain singers; for instance, Mme. Sembrich's version of "Ah! non credea mirarti" from "La Sonnambula."

In "Kling, Klang, Gloria, Deutsche Volks- und Kinderlieder," W. Lahler has published (Leipzig: G. Freytag) forty-six of the popular juvenile songs of the Germans and has set them to music. The book is beautifully illustrated, in part in colors.

When the new German Theatre, at Fifty-ninth Street and Madison Avenue, is opened next autumn, the manager, Hermann Klein, will begin a series of thirty Sunday afternoon popular concerts. The programmes will be drawn from the masterpieces of the classical composers, beautiful chamber works undeservedly neglected here, and brilliant instrumental solos, intermingled with famous *Lieder* and modern lyric compositions by the best European and American writers. A special feature is to be made of songs in English.

Sir Frederick Bridge, organist of Westminster Abbey, sailed on Saturday for Canada, where he will deliver lectures on the cathedral music of England, from the days of Tallis and Orlando Gibbons to the present time. His tour opens on April 27, at Montreal.

Art.

MR. ABBEY'S DECORATIONS FOR HARRISBURG.

LONDON, April 7.

Edwin A. Abbey is showing at the University of London his series of decorations for the Harrisburg Capitol. The series consists of four lunettes to go under the collar of the dome, and four circular designs for the pendentives between. The State of Pennsylvania, its history and industries, have given Mr. Abbey his principal themes. The first in order chronologically, if not in the order of their exhibition, is The Spirit of Religious Liberty, Accompanied by Faith and Hope, Guiding the Ships of the Early Settlers to the New World. The other three, Science, The Spirit of Light, and The Spirit of Vulcan, preside over the mines and oil wells and iron works that to-day make Pennsylvania more famous than the spiritual prosperity Penn hoped and planned for it. The allegorical figures of Law, Religion, Science, and Art, each with an appropriate quotation, are to fill the four pendentives.

In treating the subjects in the lunettes, Mr. Abbey has profited by the opportunity to present on a large scale modern life and modern scenes. The workmen of the present generation, without the glamour of mediæval trappings, descend into the mines to which Science points; spirits, bringing light to the world, float upward across an arrangement of very real derricks; Vulcan is enthroned over a blast furnace that, in its modernity, must come as a surprise to the pagan god. And Mr. Abbey has made the most, realistically, of these themes, finding as much in them for his purpose as in the old songs and the Shakespeare plays he has been more used to illustrate. It is true that he has mingled allegory with realism; into each of the huge lunettes he has introduced one or more allegorical figures, with what success I hesitate for the moment to say. Certainly, as the decorations are now seen, the most successful is the one in which there is none of this realism, The Spirit of Religious Liberty, who, with Faith and Hope, in rose-flushed draperies, guides the early settlers across the sea. Here the ships, with red sails unfurled, are the ships of other days. Mr. Abbey has carried them out even more conventionally than the conventional figures, and the result is more decorative than in the lunettes where realism and allegory meet and clash.

There is nothing more difficult than to reconcile realism and allegory to convention in decoration. Mr. Furze made for Liverpool some arrangements of navvies at work that, in line and the spacing of his masses, were most decorative. John Lavery never did anything of any kind finer than his big decoration representing modern industrial Glasgow. He and Mr. Furze both relied on actual life, without dragging in allegory as Mr. Abbey has done. Even so fine an artist as Saint-Gaudens came perilously near failure in the attempt, as you may see in one of the most beautiful of all his statues, his General Sherman; for, though the conditions may differ, the same holds true of sculpture as of painting. There is no question, therefore, of the difficulty Mr. Abbey has so bravely accepted and met.

The first chance to see the series has been given to London, but, really, the first chance to judge will not come until every lunette is in its proper place at Harrisburg. The one thing certain is that Mr. Abbey has made an interesting and new departure in his subjects; that these are more powerful in their appeal than the Sir Galahad series at Boston—the present generation being much more immediately concerned with oil and iron and coal than with the Holy Grail; and that he has shown ingenuity in carrying out his modern themes.

N. N.

The transformation which has doubled the attractiveness and almost the area of the Naples Museum has worked very slowly in the department of painting. For the best part of eight years the galleries have been frequently closed or accessible only by special permission. But the picture galleries are again open; even if such conveniences as catalogues and labels are for the future. We understand that all the attributions, many of them glaringly bad, are to be carefully revised. The effort, in the overhauling of the Museum, has been to gain space. Originally the pictures were crowded several files deep in a suite of small galleries, toplighted and facing the court. Only the rooms named after Raphael and Titian were tolerably hung. The galleries were well adapted for the purpose, the crowding was the real evil. Accordingly reform could be got either by adding galleries or by withdrawing many of the bigger and poorer pictures. In a collection rarely high in quality and rather ill assorted there were many good reasons for preferring the latter course. What induced the management to stand by the many seventeenth-century "machines" it possesses was presumably, first, that many of these were produced by Neapolitans; next that they perfectly represent the taste of the town; and, finally, that there was available a series of galleries almost ideally adapted for the exhibition of the eclectics and realists. Outside the small galleries runs a suite of palatial halls, rather dimly lighted from windows, and decorated ornately in sombre tones. Theoretically worse galleries could hardly be imagined, yet the Romans, Bolognese, and Neapolitans of the decline painted with an aggressiveness to defy bad lighting and trying backgrounds, and they are really seen to advantage in these halls built in their times, and decorated when the baroque was still living and admired. And since these painters, many of them masters of composition, have generally been sent wholesale to museum storerooms, we feel that the Naples management did well to follow rather a liberal than a puristic course. By using the big, dim galleries for late painting, it has been possible to display that of the fifteenth and sixteenth centuries under generous conditions of space and light. On the whole, Prof. Del Buono and his colleagues have made a very satisfactory redistribution of the difficult material at their disposal. The Naples picture gallery can probably never be one of the great shrines of æsthetic resort in Italy; at least it has ceased to be negligible. It is still unfortunate in possessing few ensembles of an attractive kind, but its fine examples of Titian, Sebastiano del Piombo, Giambellino, Masaccio, Masolino, Correggio, and Raphael, and Claude (now all well hung) give it a strong claim upon the serious lover of art.

For two years past the work of Giotto has been vigorously discussed. With Sirèn's iconoclastic revision of the traditional list, appeared Venturi's circumstantial redistribution of many of the frescoes of Assisi and Padua to supposititious helpers. Now it is understood that Venturi finds practically nothing of the master at Assisi. Into this debate Bernhard Berenson, in the *Rassegna d'Arte* for March, enters as a kind of moderator. He has greatly modified the view expressed in the handbook of Florentine paintings, which was based on the acceptance of the Stefaneschi altarpiece. Now he regards that picture as not earlier than 1320, and, perhaps, as a product of Bernardo Daddi's youth. To a similar date are relegated the four allegories in the central vaults of the Lower Church at Assisi. By the same unknown artist as these are the frescoes concerning St. Francis as well as the Annunciation and Crucifixion in the adjoining right transept; and to him, it is suggested, we may owe the Baroncelli altarpiece of Sta. Croce. Yet another hand must be held responsible for the frescoes of the Childhood of Christ in the same transept. Mr. Berenson characterizes this painter "as one of the most fascinating story tellers that ever held brush," and thinks that this charming ignoto may have painted the Paradise with the Dante portrait in the Bargello. Constructively, Mr. Berenson admits as Giotto's authentic list the St. Francis stories in the Upper Church, Nos. ii-xix, and the general schemes of Nos. i. and xx.-xxv. These were executed by the "Cecily Master," who did Nos. xxvi.-xxviii. from his own designs. Of the much discussed frescoes in the Maddalena chapel, in the Lower Church, the Resurrection of Lazarus, the Feast in the House of Simon, and the portrait of the Donor with the Magdalen (in part) seem surely to be by Giotto himself. None of the various panels ascribed to Giotto, except the great Virgin of the Florence Academy and the Crucifixion in the Arena Chapel, Padua, now strike Mr. Berenson as beyond cavil, though he still entertains a tenderness for the Circumcision in the Gardner Collection, Boston, and believes that the Last Supper at Munich is in part from the master's brush. Naturally no doubt attaches to the frescoes in Sta. Croce, and, in view of recent mystifications, it is heartening to read:

> The most important source for the study of Giotto remains the Arena Chapel where, excepting the paintings in the little tribune which no serious critic has attributed to him, everything is his, saving merely some of the small heads in the decorative strips, and a few small passages in the upper part of the Last Judgment.

For numerous details we must refer the reader to the *Rassegna*, only quoting a passage which suggests the import of Mr. Berenson's change of front. He writes of Giotto's earliest works, the St. Francis series, Nos. ii.-xix.:

> These reveal everywhere the faithful follower of Cavallini, not yet as advanced as his predecessors on these walls, but endowed with extraordinary dramatic qualities and with a great capacity for expressing substance and reality.

If we must believe, with Venturi, that Cimabue also developed under the influence of Cavallini, that Roman painter must be regarded as the real founder of the modern manner in Italy.

J. T. Evans's new volume, "Church-Plate of Carmarthenshire" (London: Henry Gray), does not yield in point of interest to either of those which preceded it. The introduction offers the student results of the later research into the history of church vessels, not in this region only, but in the rest of England and Wales. In comparison with some other districts, the county of Carmarthen is found to come off badly in respect of the number of its specimens. It possesses only one pre-Reformation example, and an indifferent one at that, the plain silver plate at Llanddeusant, which T. M. Fallows dates about 1525. Of Elizabethan pieces, excluding the Llanstephan cocoanut cup and the doubtful Egremont chalice, it has thirty-three; of seventeenth century examples, it owns twenty-nine; and of eighteenth century, twenty-one. If, however, its specimens do not bulk large, they show considerable variety and artistic interest. Special store is set by the Llanstephan cup of 1569, already mentioned, which is believed to be the only hall-marked cocoanut vessel in existence used for the celebration of the Eucharist.

In "Edwin Davis French: a Memorial," Ira H. Brainerd has done an admirable piece of work. Mr. French was easily the best book-plate engraver we have had in America, and all collectors of these "unconsidered trifles" cherish everything that came from his hands. A book that deals so authoritatively with his life and work is certain, therefore, of an enthusiastic reception. The selection of biographical material has been painstaking and discriminating; the plates used as illustrations cover a wide range. The check list of the French plates, as published by Paul Lemperly in 1899, has been continued, and the series brought to a finish. A supplementary list of designs and engravings other than book-plates has been included. The edition is limited to 475 copies, of which 425 are on handmade paper and 50 are on imperial Japanese vellum; the printing was done by the De Vinne Press.

"Karten von Leukas, Beiträge zur Frage Leukas-Ithaka," by Walther von Marées (Berlin: Berliner lithographisches Institut Julius Moser), contains forty pages of text, seven illustrations, and six charts dealing with Ithacan problems. In 1904 Emperor William sent Capt. von Marées and Lieut. Nonne to make detailed topographical measurements on the island of Leucas. The results of their investigation are here given; in general their findings confirm Professor Dörpfeld's views.

The latest issue of the official Jahreshefte contains a report of research in Ephesus by Austrian scholars under leadership of Prof. Rudolf Heberdey. He is assisted by the archæologists W. Wilberg and J. Klein and the geologist A. Grund. These excavations, east of the ruins of the library, have laid bare an eight-cornered building, erected between 54 and 59 A. D., and ornamented with beautiful relief plates. Next to this is a long hall, one end of which connects with the theatre. This hall, it appears from the inscriptions, was used down to the Byzantine period. Remnants of the old and beautiful Hellenistic rotunda belonging to the time of King Lysimachus have been exposed by removal of a superstructure dating from the period of the Roman empire. Adjoining the remains of St. Mary's Church, the largest Christian structure unearthed in Ephesus, is found a smaller church planned in the same style.

At the auction at Christie's, London, on April 4, the following prices were paid for drawings by Turner: Bodiham Castle, £504; Pevensey Castle, £420; The Vale of Ashburnham, an open landscape, £441; Hurstmonceaux Castle, £451; Beauport, near Bexhill, £220; Battle Abbey, £357; The Vale of Ashburnham, wooded foreground, £640; The Vale of Heathfield, £735; The Vale of Pevensey from Rose Hill Park, £682; Rose Hill Park, £577; Pevensey Bay from Crowhurst Park, £546; and Rose Hill, £357. Among the other drawings sold were these: D. Cox, Cross-Roads, £262; C. Fielding, Snowdon, £241. The paintings included: Turner, Beach at Hastings, £6,300; J. Israëls, La Fête de Jeanne, £1,680; J. Linnell, sen., A Forest Road, £1,344; Millais, The Sound of Many Waters, £1,155; The Fringe of the Moor, £1,155; Murthly Water, £366; Wilkie, The Cotter's Saturday Night, £1,155; Vicat Cole, Cookham-on-Thames, £220; Summer Showers, £294; P. Graham, Highland Landscape, £262; A Highland Ford, £294; J. C. Hook, Yo, Heave, Ho! £294; J. Pettie, At Bay, £336; Briton Rivière, Comala, £252; Hoppner, Portrait of a Young Girl, £420; Opie, Mrs. Macdonald, £441; Reynolds, Edwin, from Beattie's "Minstrel," £262; Heads of Angels, £399; Keeley Halswelle, An Essex Lock, £210; J. Holland, The Piazzetta of St. Mark's, Venice, £262; Alma Tadema, At the Close of a Joyful Day, £966; C. Fielding, Pembroke Castle, £325.

An exhibition of the complete etched work of D. Y. Cameron will be held at the Grolier Club in this city April 25 to May 16.

The death is announced from Versailles of Prince Bojidar Karageorgevich, the brother of King Peter of Servia, in his forty-seventh year. He was not only a distinguished patron of art, but was himself a sculptor of note, exhibiting frequently at the Salon and the Société Nationale des Beaux-Arts, of which he was an associate.

Charles Busson, a pupil of Rémond and Français, and a landscape painter of long-established reputation, has died at the age of eighty-five. He obtained a medal at the Universal Exhibition of 1855, and had from that time on been a regular exhibitor at the Salon. Two of his works are in the Luxembourg.

Finance.

Money and Credit Instruments in Their Relation to General Prices. Vol. I. of Cornell Studies in History and Political Science. By Edwin Walter Kemmerer. New York: Henry Holt & Co. $1.25.

This little volume is in many ways the best thing that has appeared in monetary investigation for some years past, and quite puts to the blush several rather pretentious works which have recently undertaken to read the burial service over the so-called quantity theory of money. Begun as a college thesis and eventually serving as the basis of a doctoral dissertation, it serves as a model both of close-knit *à priori* argument and effective statistical verification. The author's experience in the Philippines as a monetary expert enlarged his vision and strengthened his grip of fact, without shaking his faith in the carefully sifted deductive theory of money as it came from the hands of the abler classical economists. The book is divided into two parts: The first, theoretical; and the second, statistical. In the first part the quantity theory is presented in a series of frankly hypothetical societies, reminiscent of Nicholson's treatment of the same problem. Misconceptions and misrepresentations of the quantity theory are duly exposed and set aside; and, as the complexities of credit are finally superposed on the simpler hypothetical monetary society, the author emerges triumphant with the well-fortified conclusion:

> The quantity theory, in spite of all the complexities of the modern industrial régime, still holds true as a general principle; and general prices, *other things being equal*, vary proportionately and in the same direction with variations in the money supply (p. 87).

If Professor Kemmerer had stopped here we should have been his debtors, but to nothing the same extent as we are in view of his brilliant supplement. Prof. J. Laurence Laughlin has contended that "taking the available data at hand for the United States, one would have no hesitation in saying that in no single case examined has there been any proportion whatever between the movements of prices and the quantity of the circulation." If "circulation" includes deposit currency, this dictum certainly will need revision in the light of Professor Kemmerer's demonstration of the close correspondence between the relative circulation and general prices between 1879 and 1904.

A minor criticism may be suggested regarding an infelicity in presentation, not substance of doctrine. Chart II. (p. 142), based on index numbers, seems at first glance to represent the bank reserves as constantly greater than the money in circulation *inclusive of the bank reserves.*

READY THIS WEEK

People and Problems

By FABIAN FRANKLIN, Editor of *The Baltimore News* and Sometime Professor in Johns Hopkins University.

Dr. Franklin marks his retirement from the editorial control of *The Baltimore News*, which he has held since 1895, by a collection of his ripest work. This includes comprehensive discussion of "Newspapers and Exact Thinking," "James Joseph Sylvester," "The Intellectual Powers of Woman," and "A Defect of Public Discussions in America," and some three-score editorials. The range of subjects is very wide, and reflects the resources of a writer of remarkable grasp of public questions, both American and foreign. Soon after Dr. Franklin became editor of *The Baltimore News* that paper acquired a national reputation for independence, fair-mindedness, and soundness of information.

The Nation.

NEW YORK, THURSDAY, APRIL 30, 1908.

The Week.

Considerably more than half of the delegates to the Chicago Convention have now been chosen. The full roll, as fixed by the National Committee, will be 980—491 to nominate. Secretary Taft has a far larger number than any other candidate. His total is variously stated; but a reasonable estimate would be that he has now at least 280 upon whom he can absolutely depend. With so great an acquired momentum, it is not surprising that his nomination is regarded as highly probable. Yet it has often happened that the leading candidate has been beaten by a combination of his rivals. This was so in the Republican Conventions of 1860, 1876, 1880, and 1888. The question now chiefly in debate is whether Taft will be able to pick up enough votes to secure the nomination on the first ballot. Where will he get the 220 additional delegates that he needs? New England has distinctly disappointed his managers. They confidently predicted that Taft would have at least 52 out of the 82 New England delegates; but it will apparently stand at about 34 for Taft to 48 against him. Turning to the other Republican or doubtful States, we find that Secretary Taft is likely to fall considerably short of a nomination on the first ballot, without support from the Southern States. To succeed, he will have to secure and hold the delegations from States like Arkansas, Mississippi, and Alabama, where there is no Republican vote, and no Republican party except office-holders.

The fact that the Illinois Democratic Convention has voted instructions for Bryan is not so important as the way in which that result was brought about. Roger Sullivan dominated the convention, and himself heads the list of Bryan delegates at large. Now, he is the man whom Bryan denounced at St. Louis in 1904 as no better than a highwayman. Nor can people have forgotten Bryan's attack on Sullivan two years ago, when he tried to read the Illinois boss out of the party, and declared that no self-respecting and honest Democrat could have anything to do with so corrupt a politician. To-day, however, this same political highwayman and corruptionist is holding his State for Bryan. The spectacle cannot fail to disturb those who have believed that Mr. Bryan, with all his vagaries, was morally sound and sincere and would not stoop to a sacrifice of principle in order to profit personally. He, of course, will have his retort ready. He will point to Boss Cox, now a Taft delegate, after being excoriated by Taft. He may even point to "Lou" Payn as a district delegate for Hughes. In the latter case, however, nobody can allege that there was anything approaching conference or agreement. Gov. Hughes has kept his hands off wholly; and if district conventions chose disreputable men, that was their affair. But in Illinois, Bryan came to an understanding with Sullivan, put his interests in the hands of the boss, and, on the plea of "harmony," urged his friends to acquiesce in a coalition with a man whom he had affirmed to be an unmitigated scoundrel. This can but imperil one of Mr. Bryan's best assets. People have thought him a fanatic, but have believed him straight. Can they believe him so after his striking hands with Sullivan?

The President's friends are just now introducing us to a new conception of his character. After long holding him up as the most simple and direct of men, they to-day picture him as a statesman who goes to his goal by the most circuitous of routes. He urgently asked Congress for four battleships, and set all his faithful servants to working for them night and day; but he did not really want them. He was actually after only two, which Congress was all along prepared to give him. Hence, his apparent rebuff is truly a triumph. He is fairly "exuberant" with joy, the New York *Tribune's* Washington correspondent tells us, at having been voted down in the House by 199 to 83, and in the Senate by 50 to 23. This is exactly what he was working for. A similar explanation is made of Mr. Roosevelt's latest special message to Congress, enumerating again the things he wishes done before adjournment. In sober fact, we are told, he has not the slightest expectation that they will be done; indeed, he does not really want them done. He is not thinking of Congress. His thoughts are as far away from the present scene as those of the dying gladiator. This "special-extra" message is designed for some veiled and distant purpose—perhaps for the Republican platform; possibly, for a Roosevelt campaign in 1912. This is uncertain; the only certain thing is that the message has not the aim that it pretends to have. The hunter is not shooting where he looks. One part of this new theory of the President as a man who gains his ends by indirection, it is, of course, easy to understand. He never loses. That is a fixed point. It is inconceivable that he should not have his way. Therefore, if he appears not to get it, this only shows that his real objective has not been understood. His bullet always goes home. Foolish people may think that he was intending to bring down four battleships, but the result shows that he never had a thought of bagging more than two. This we can readily understand. It is a necessary part of that logic about Roosevelt, which, like that celebrated by old Thomas Fuller, whatever the premises, always brings out praise and glory in the conclusion.

We must say, however, that it involves something of a wrench to break away from our fond idea of the President as one all spontaneity and straightforwardness. Americans have taken deep satisfaction in his bluntness, his openness, his advertising of his purposes, his whole-hearted fashion of seeing what he wants and going after it without qualm or hesitation. The thought of slyness is absolutely contradictory to current thought of Mr. Roosevelt. That he should ever come to think that a zig-zag is the shortest line between two points, one would have said to be incredible. But since his closest friends now insist upon clothing him in craft as with a garment, we must do our best to adjust ourselves to the new version of his nature. Evidently, this makes it hard to comment intelligently upon what he says or demands, because, according to this latter-day theory of President Roosevelt, he means and desires something quite different. His special message crying aloud for four battleships was thus all a blind. When he wrote to Congressman Humphrey "I am unable to understand objection to building these four battleships by any good American," he did it with a wink. Then, too, if special messages are not what they seem, it is rather futile to try either to criticise or to commend them. When the President leaves out, in his list of the measures which he desired to see "enacted into law," the removal of the duty on wood pulp, and the reduction of the rates on printing paper, that may be only his way of laying fresh emphasis upon that subject. When once you accept the view that the President is roundabout and furtive, as his friends proudly assert, troubles of interpretation thicken upon you. For our part even though it be taken as an unfriendly attitude, we cannot go over to this notion of a "devilish sly" Roosevelt. We must go on thinking of him as one who talks straight and hits out from the shoulder. This implies, of course, that he sometimes makes mistakes, and sometimes gets beaten. This is hard for flatterers to admit, but better that than to set up the doctrine that the frank and forthright Roosevelt is two-faced and two-tongued. It ought not to be considered praise of anybody but a Turkish statesman, that the only safe inference to make from his words is that they do not mean what they say.

> When you consider for a moment that this $500,000 which was contributed by a single corporation in this city was more than we were able to raise in either of the campaigns in which I was a candidate from more than 6,000,000 voters, you get a fair idea of the tremendous influence, one way or another, that the corporations can exert if they want to.

In these words Mr. Bryan comments on the revelation that the street railways of New York city had contributed within a few years a half-million or more to politics. This fact, brought out by Thomas F. Ryan's testimony before the grand jury, is, as Mr. Bryan says, not exactly news; "it merely gives us some details we did not know before." Since the last Presidential election the evidence has poured upon us in a torrent. The echoes of Mr. Roosevelt's impassioned denial of Judge Parker's charge as to campaign contributions from the corporations had hardly died away, when the flood-gates were opened. First came the admission that each of the three large life insurance companies had paid $50,000 to help elect Mr. Roosevelt; and behind this display of patriotism loomed the whole vast system, managed by Andrew Hamilton, for accelerating or stopping the passage of laws. Then the letters between E. H. Harriman and President Roosevelt were published—"You and I are practical men"—showing that the President had persuaded Mr. Harriman to raise $260,000 late in October, 1904, for the obvious purpose of buying votes in this State. "The result," said Mr. Harriman, was "that at least 50,000 votes were turned in the city of New York alone." And now comes this last addition to the list—the Metropolitan Street Railway. It backed any party from which it could secure a *quid pro quo*. The managers of this traction company robbed their stockholders in order to oppose Mr. Bryan; robbed them in order to purchase support of Democrats and Republicans at Albany; robbed them in order to fatten Tammany under Charles F. Murphy. It was an orgy of political debauchery. But people are stirred as never before about the relations between corporations and politics In the coming election it will go hard with any party which is believed to draw support from the treasuries of railways, lighting companies, protected manufacturers, and Trusts. If Mr. Bryan runs for President, that adroit speaker will make terrible onslaughts upon the Republicans, against whom the evidence relating to the use of corporation money in former elections is already overwhelming. Then, should Congress refuse to pass Representative McCall's bill providing for publicity of campaign contributions, the argument can be used with double force. Fervent protests of injured innocence, either from Mr. Roosevelt or Mr. Taft, will fall on dull ears.

When party leaders frantically urge Congress to "do something," in an intricate matter like currency legislation, there is danger ahead. The burden of the news from Washington is that the President, the Speaker, and Senator Aldrich are convinced that "something" must be done. What it is, they do not know and cannot agree; but they assert that the country was promised a law of some kind, and that at all hazards, some kind of hugger-mugger bill must be whipped through. The present plan appears to be to get the whole matter into conference between the House and Senate. Speaker Cannon is to drive a mutilated measure through the House; when it gets to the Senate, Aldrich is to amend it by substituting his own bill; and then everything will be left to a conference committee. Tariffs have been made in that way, so why not currency laws? It is expected that Congress will be jaded in the flurry of the closing session, and that the Aldrich bill can thus be snatched from defeat at the last moment. Not only is such procedure highly objectionable, but the results, if the plan succeeds, will be not at all what is predicted. Instead of Republicans being able to point to a currency bill which keeps the party's promise and satisfies the country, they will be on the defensive. The party will be charged with passing a law which the banking opinion and expert economists of the country almost unanimously condemned. Another charge, difficult of denial, will be that the Aldrich bill was forced through by a speculative clique, with its own ends to serve. The West would resound with the cry of a Wall Street job behind Aldrich. Furthermore, a makeshift measure would distract attention from the need of thorough reform. From every point of view, therefore, the scheme to pass a vicious currency bill on the plea of political exigency ought to be fought without truce by all clear-headed and patriotic members of Congress. The Aldrich bill has been fairly beaten by open argument. It should not now be allowed to succeed by a deal in conference committee or a parliamentary trick.

The representatives of 774 newspapers assembled in this city at their annual convention unanimously asked that Congress and President grant them "immediate relief from the exactions of combinations of paper-makers." At the same time, in Washington, one man was thwarting all prospects of aid at this session of Congress. Speaker Cannon was bringing about the adoption of a resolution for a special committee to investigate conditions in the paper trade. The obedient Republican majority voted as he wished, thereby putting an end to all hopes of change in the tariff at this session. The "stand-patters" have won all along the line; the President, the great body of revisionists, the newspapers of the country have appealed in vain. The press may as well acknowledge its defeat cheerfully. It is mightier than the sword, but less powerful than the Speaker of the House —and those interests whose will he obeys.

The decision of the Judiciary Committee of the House of Representatives that the bills for the purchase of the Appalachian and White Mountain forests are unconstitutional is accompanied by an important opinion. The committee held that the Federal government has no power to acquire lands within a State solely for forest reserves, but that under its Constitutional power over navigation Congress may purchase lands and forest reserves in a State, provided it is clear that such reserves have a "direct and substantial connection with the conservation and improvement of the navigability of a river, actually navigable either in whole or in part, and any appropriation made therefor is limited to that purpose." While this is, on its face, a defeat for those who have been backing the existing bills, it really means that a road to certain success has been pointed out. A new bill complying with the requirements of the committee will be before Congress in a day or two, and if it does not pass at this session, it will be pushed with greater energy at the next, with the question of Constitutionality wholly out of the way. More than this, the committee's decision is of vast importance as opening the way to that most desirable end —the preservation of the headwaters of all our great rivers. Hence, the forest enthusiasts and the Bureau of Forestry are reported to be in high spirits over the prospects of the immediate and the distant future.

Why did the Legislature of the State of New York adjourn with open insults to the Governor? Had any member a grievance against him which could be publicly stated? The most embittered Assemblyman could not allege that Gov. Hughes has not been absolutely honest. The most drunken Tammany Senator could not assert that he has not been unusually laborious, conscientious to a degree, patient and courteous; nor that he has brought to his work great ability and lofty personal standards. He has not attempted to cheat the Legislature. He has neither bargained nor logrolled; has not used his veto power, or the threat of it, to terrorize legislators, nor has he trafficked in patronage to buy their votes. Furthermore, it is admitted by all impartial observers, outside the State as well as in it, that Gov. Hughes has won a reputation and conquered an admiration not equalled any Governor of New York since Tilden and Cleveland. What, then, is the explanation of the strong dislike? Putting minor reasons one side, the chief one is that the Governor has endeavored to hold the Legislature to its duty. He has sought to make it in fact, what it is in theory, truly representative of the whole people. What he had to face was a set of men too many of whom were "owned" by bosses like Barnes of Albany. To such legislators broad and sound public policy meant little compared with the exigent demands of politicians whom they feared, or powerful men whom they courted. And the secret of their rage at the Governor is that he has not only stood for the people in general, but has gone out into the districts and proved that many legislators were misrepresenting their particular constituencies. Wherever you find any kind of association of God-fearing and right-living citizens, there you find cordial and admiring support of Gov. Hughes. In flouting him, the Legislature is but flouting the most respectable and weighty sentiment of the State. Now, we would ask if the Republican party in New York can afford to see a man like this thwarted by crawling politicians? Can New York Republicans sit by unmoved and see this Governor frustrated by such creatures as Barnes and Woodruff, in alliance with McCarren and Grady? Above all, can they contemplate without dismay the spectacle of the plain mandate of the people, as written in the Constitution, nullified by politicians making themselves tools of men who would coin money out of public vice? If Gov. Hughes's sincere and determined effort to get the people's will against licensed gambling enacted into law be defeated by partisan schemers and underground intriguers, what is going to be the effect on the political party responsible for the grievous failure?

The celebration of the centenary of the Catholic diocese of New York this week is an event to appeal strongly even to those not of the Catholic faith. Note, for example, how much the steady ongoing of Catholic activity has done to extinguish, or at least silence, ancient prejudices. Remembering the old and bitter anti-Catholic feeling, we mark a great transformation in saying that today the Protestant churches would look upon the extinction or withdrawal of the Catholic churches as a great calamity. This does not imply that religious or even theological conviction has broken down; but that tolerance has broadened and that eyes have been opened to see the facts. We are certain that Protestant denominations would be appalled if they were asked to take over the work of the Catholic Church in New York. They could not begin to do it. Even if they had the physical resources—the men and money and buildings—they would have neither the mental nor moral ability. For long years now, the Catholic Church in this great port has been receiving and controlling and assimilating one influx of foreign peoples after another. It has held them for religion, and it has held them for citizenship. No one can soberly reflect upon this vast labor of education and restraint without becoming convinced that it has been an indispensable force in our public life. The Protestant churches have been and are now more than ever unfitted, whether by temperament or methods, to attack so gigantic a problem. They lack the authority—the compelling force of supernatural fears, if one insists. Nothing but a venerable and universal institution, always the same yet always changing, could have taken her incoming children—the raw material of Americans—and done for them what the Catholic Church in this city has done during the memorable century now rolled past. Even those who cannot pretend to speak of Catholic dogma with entire sympathy, must confess that some of its moral results have been admirable. The firm stand of the Church in the matter of marriage and divorce, for example, seems more and more a blessing as the laxness of law and of custom, in that respect, goes on increasing. The testimony which the Church has borne to the ideal of the Christian family is something which cannot be overlooked when those who are not sons of the Church are reckoning up their debt to her. We may be grateful for every steady and powerful teacher of goodness, like the Catholic Church. More and more is the world coming over to the position of George Eliot's dear woman who said that if there was any good to be got in this world, mercy knew we were in need of it.

As Winston Churchill himself admits, his defeat for reëlection in the northwest division of Manchester is a serious blow to the new Ministry. And yet it must not be overlooked that this is normally a Conservative constituency consistently held by the Conservatives by large majorities until 1906. It was, therefore, known that the contest would be a serious one for the Liberals. Mr. Churchill showed himself an excellent campaigner, keen, vigorous, and energetic besides being quite imperturbable when under fire. At one of his meetings, a man in the gallery called out "Rot." "The gentleman who says rot," responded Mr. Churchill instantly, "no doubt expresses very well what is in his head." When the speaker said that he felt confident of success, the gallery disturber replied: "I don't." "Well," said Churchill, "I have fought four elections, which is more than the gentleman in the gallery has." When Churchill asked what would be the consequence of his defeat, the gallery hecklers responded: "Beer." "That," answered Churchill, "might be the cause. I am talking of the consequences." But his readiness and good temper have now availed him not at all, and though, as he has declared, his defeat will not cause the resignation of the government, it is plain that this fresh blow to the Liberals is to be made much of by the Conservatives as a victory for protection. Free trade in England is fortunately not dependent upon one bye-election or ten; and it is open to much question whether the old-age pension policy of the government and other acts are not as much responsible for Mr. Churchill's defeat as any desire for protective duties. At any rate, it is a plain warning to the new Prime Minister to set his house in order.

Political discussion in Europe turns for the moment from Macedonia and the Baltic to the North Sea and the succession to the Dutch throne. Queen Wilhelmina's narrow escape from a carriage accident a few weeks ago has helped to bring forward in the public mind the possibility of a sudden change of dynasty, if not of régime. The old German spectre has loomed up again. The nearest legal heir, in case of the Queen's dying without issue, is a Prince Henry of Reuss, and it is assumed that the succession of a German prince would mean the hastening of the absorption of Holland by the German Empire. The way out is by a change in the Constitution which should vest in the Dutch Parliament, sitting as a convention, the power of selecting a successor to Queen Wilhelmina or of transforming the monarchy into a republic. A revision of the Constitution was first broached in 1905, but two years later, when the Queen outlined the scope of the commission's work, the articles dealing with the succession to the throne were omitted. The powerful conservative element headed by ex-Premier Kuijper is sharply opposed to the suggestion of a republic, and the chances are that nothing radical will be done in the way of Constitutional changes. Why it should be taken for granted that a German prince, when placed on the Dutch throne, would lend himself to Pan-Germanic ambitions, is not quite apparent. Human nature and experience would argue that such a ruler would give his first care to retaining for himself and his successors an independent throne that is well worth occupying.

THE ARBITRATION TREATIES.

Too little attention has been given by press or public to the ratification by the Senate of the arbitration treaties with Great Britain, Spain, Italy, Switzerland, Portugal, and France. Only two weeks ago it was thought that the convention with England would fail because of Irish opposition; yet it went through with no trouble whatever, to the great credit of the Senate. Indeed, those who are inclined to find fault with that body for its sins of omission, ought to write this action large on the credit side. The ratification of these treaties is not only in itself a reason for national pride, but is another long step in the direction of international peace.

In 1905 general treaties of arbitration with the same countries were signed and laid before the Senate. Those treaties undertook to specify the main classes of international differences to be submitted to arbitration after a special agreement between the two nations. The Senate then held that there could not be a general agreement, but that there must be a treaty to cover each specific case, the treaty to be laid, of course, before the Senate. When the Senate enforced this view by its amendments, the State Department declined to accept the treaties, and they perished. So far as the British treaty of 1905 was concerned, the Senate really set out to destroy it because of the Irish agitation against it. In all fairness to the Senate, it should, however, be added that Mr. Roosevelt, by his sweeping proposal that he should have complete discretion as to an agreement with San Domingo, gave the Senate the very excuse it was looking for to put an end to the arbitration treaties.

The Senate's kindlier disposition towards the treaties of 1908 is due primarily to the recession of the Executive from its previous position. In the English treaty, for instance, it is now expressly stipulated that special agreements for arbitration are to be made by the President "by and with the advice and consent of the Senate"; while Ambassador Bryce obtained for England the right to refer to any self-governing dominion of the British Empire for its concurrence a special agreement affecting its interests in any manner. In so far as this admission of the Senate as a party to the procedure weakens the arbitration, it is to be regretted. On the other hand, if reference of an arbitration agreement to the Senate for approval introduces, beyond dispute, some clumsy machinery and causes delay, it nevertheless gives another opportunity to bring to public attention the facts in each particular case and to build up a sound opinion. It is evident that both Secretary Root and Mr. Roosevelt have come to recognize that even with this reference of each case to the Senate, the treaties are of such great value that the point may properly be conceded. The general public will, we think, concur. After the failure of the Hay-Pauncefote treaty of 1897, as well as that of 1905, it marks distinct progress, not only to have the treaty go through, but to have it ratified without the usual accompaniment of threats and insinuations that behind the treaty lies an intention to steal Cuba or the Philippines, or what not. We may add that a similar treaty with Germany is now being drafted. Japan, also, we hope, will not be overlooked.

Since all questions adopted for arbitration are to go to the permanent court of arbitration at The Hague, the importance of that body is demonstrated anew; and it is therefore particularly fitting that the Senate should deal generously with the conventions signed by the American delegation to the last Hague Conference. Of the ten signed, all but one have been favorably reported by the Committee on Foreign Relations; and also one of the three not signed by our representatives.

Of course, the new treaties do not mean that each nation binds itself to submit every question to arbitration and to abide by the result. The subjects to be arbitrated do not affect the "vital interests, independence, or the honor of the contracting states"—and the last term may cover anything in the eyes of a jingo. None the less, the habit of arbitrating disputes is what lovers of peace wish their governments to acquire, and the more questions are arbitrated the easier will it be to submit others to the decision of a third person or of an international tribunal; the more difficult it will be to stir up a feeling that this country is going to be forever humiliated by a failure to win its point in a fisheries or a boundary dispute. Eighteen years ago international arbitration was little more than a hope; to-day it is an accepted policy; and since this country has already made twelve specific special agreements for arbitration, there is every ground to believe that as time passes the Senate will view this policy more and more broadly.

"SPANKING" CASTRO.

Only last week flaring headlines announced: "Roosevelt Will Humble Castro." Now we read that the Administration has practically abandoned hope that Congress will at this session authorize the President to take punitive measures against Venezuela. It looks, therefore, as if Castro would once more escape that "spanking" to which the Administration and some gray-haired Senators believe him thoroughly entitled. Our ungrateful South American protégé is to go his own way once more; nothing is to prevent Castro from making faces at us, writing sarcastic editorials in his pet newspaper, and saying that Americans are "vain with the thought that they are standard-bearers of justice and the paladins of liberty." President Roosevelt may rage if he pleases; Secretary Root may continue to feel that the dignity of the United States has been flouted and the decencies of diplomatic intercourse violated. Castro will hold to his course, cheered by the thought of having once more balked an adversary many times bigger than himself.

The Senate is well advised in not commissioning the President to do as he sees fit along the coast of Venezuela this summer. This is not merely because of Mr. Roosevelt's impulsiveness and love of military glory. Such an enterprise should not be undertaken without careful consideration of consequences. One reason for the sudden cessation of the clamor for reprisals is that many persons doing business with Venezuela "have urged that nothing be done." Their trade would be ruined, perhaps for years to come, since other foreigners would quickly seize the opportunity to step in. Another result would be to intensify the existing dislike of Americans, and to solidify the entire Venezuelan people under Castro's leadership. When the allies, Germany, Italy, and England, undertook to blockade the Venezuelan ports and to bombard Puerto Cabello, in 1902, men whom Castro was said to have ruined, the political exiles in Caracas, even those who had been thrown into jail for opposing the will of the dictator, offered him their swords and begged to be allowed to fight against the foreigners. From this point of view, the United States could do Castro no greater favor than to resort to belligerent or quasi-belligerent measures. We should thus relieve him of all fear of a revolution for some time to come.

Even if the United States should blockade the ports of La Guayra and Puerto Cabello, Castro would remain unmoved. We might indeed take possession of the customs houses, although we have no money claims against Venezuela. Were we prepared to land an army of 25,000 men, we might even capture Caracas. But with the capital in our hands, we should neither lay hands on the government that is said to have ill-treated us, nor win the submission of the people. It is well to remember that when President Roosevelt succeeded in inducing Germany and England and their ally to submit their claims to arbitration in 1902, Castro was quite ready to fight on, even with Puerto Cabello at the mercy of the foreign vessels.

What is more, the Venezuelans are warlike by nature. Castro's army of 10,000 men suggests comic opera in its appearance; but they are remarkably ready to die for their country or cause. In one of their recent revolutions, at the battle of Victoria, 6,000 out of the 24,000 men engaged were killed in almost hand-to-hand conflict. Not only are they fighters, but in repelling an invasion they would have the help of great natural advantages. Caracas itself lies 3,000 feet high, and, although less than seven miles from the coast as the bird flies, is separated from it by mountain peaks rising 6,000 feet above the city's streets. The defiles through which any invaders must pass afford abundant opportunity for vigorous defence by small bodies of men. Indeed, Caracas is held to be impregnable from the Puerto Cabello side. The Venezuelans would be further assisted by their climate, which is more deadly than that of Cuba, or, as some think, than that of the Philippines. Caracas is damp and malarious, and its inhabitants suffer from mountain fevers, catarrh, liver troubles, and severe rheumatic complaints. During the summer it is visited by *la fiebre perniciosa*—a kind of yellow fever. At La Guayra the port has just now had to be closed because of the appearance of a mysterious plague. Obviously, should Mr. Roosevelt ever seriously take in hand the spanking of Castro, he would be forced either to keep his forces on his ships, or to pay a heavy price for his temerity.

The reasons, then, for going slow in this business of spanking Castro are strong enough to appeal even to one who despises a weakling and craven. But behind all this is the question whether we ought to take up arms at all against a weaker nation because we do not like the decision of its courts, or the manners and actions of its officials. Those citizens and investors who went to Venezuela knowing just how badly it is governed and precisely how despotic, arbitrary, and probably corrupt Castro is, took chances of loss with their eyes open. Moreover, the United States could ill afford to take up the case of an asphalt company which has been proved guilty of fomenting one revolution. To go behind court decisions is what this country asks of Venezuela; yet plenty of foreigners residing there believe in the honesty of the courts. Refusal to arbitrate individual claims is Castro's chief offence. Shall the United States for that cause reverse an historic policy, risk a long and bloody campaign, destroy a valuable trade, and spread fear and hatred throughout South America? The sober common sense of the Senate has said no.

STRATIFIED HISTORY.

Recent disclosures of the practices of public service corporations will compel the scientific historian to add another important source to the recognized material from which history is now painfully educed. We refer, of course, to books of account, where they have not been prudentially committed to the flames like their Sibylline predecessors. And in the same rank must be placed the checkbook stub and the tell-tale vouchers—where they remain to challenge the scrutiny of the investigator or the grand jury. To the importance of these sources historians have been strangely blind. They have unearthed and ransacked almost all other material which promised disclosure of the acts or motives of important personages. Correspondence, public and private, diaries which trickle with gossip and tittle-tattle, public documents by the carload lot, and the innumerable mass of monuments—coins, armor, weapons, tapestries, flags, and trophies—have been cross-examined with unflagging toil and energy. But the ledger and the counterfoil await their question. Had they always yielded up their secrets, we might have escaped the well-known damnatory dictum—"Anything but history; for history must be false."

The peculiar advantage derived from these new-found sources is the chronological light which they shed upon events. The geological strata are hardly more inerrant in their disclosure of the sequence of events in the earth's past history. "The Testimony of the Rocks" can hardly be discredited in recreating the past of corporate management. How striking is the analogy will appear both in the domain of individual biography and in the ampler field of corporate manipulation.

Any executor or administrator whose sombre duty it has been to canvass the returned vouchers covering the lifetime of an individual deceased, knows how easy it would be to construct a biography from such data alone. Checks in profusion payable to the florist, to the confectioner, and to the fashionable tailor are the economic counterpart of "love's young dream." To these succeed the orders payable to the house-furnisher, the paperhanger, and the painter. Then the more commonplace signatures of the butcher and the grocer figure in the sheaf of receipts. Shakespeare's seven ages are not more unmistakable than the chronological succession of these silent records. They allow us to track their authors at home and abroad, in sickness and in health, in prosperity and in despair. They disclose his frailties, reveal his benevolence, unbosom his investments, mirror his hopes, and follow him to the very shadow of the grave. Every man who keeps a bank account is perforce his own Boswell, and no library contains such autobiographic material as reposes in the banker's pigeonhole. The leaves of the Judgment Book could be posted from their entries, and sentence itself could almost be passed unerringly upon their silent testimony.

When we turn to paint the broader canvas of corporation history, the same material is present, or should be, in abundance. Acts of the Legislature will have to be re-read in the light of the corporation treasurer's checkbook. By the same token permits to open streets for transit lines become luminous. The historiographer must add to his equipment the art of the expert accountant, and his identification of the actors in the game of frenzied finance will be as indisputable as that of the Bertillon measurements or registered thumbprints. In the superposed strata of returned bank checks, the evolution of corporate practices will stand self-revealed. We may well anticipate the discovery of remnants of "simple faith," perhaps even of fair dealing, in the palæozoic age of business enterprise. Then the diluvian age of Gould and Fiske and Drew will doubtless become clear, and possibly the glacial drift of Harriman. The more recent strata may be depended on to disclose the fossil remains of many species "of whom the earth was not worthy"—the *cerberus croceus*, or yellow dog, of the insurance era, and the *accelerator* or *Quiggotherium* of a more recent transitional epoch.

Of paramount importance, clearly, is the preservation of the precious archives of such moment. The law has already done well to inhibit the destruction of corporate books of account, but clearly the scope of the law should be extended. The movement making for the preservation of our national resources might well be made to embrace this object, and the American Historical Society ought to memorialize Congress in the premises. A new "Mirror for Magistrates" can be compiled only by the aid of this material, which stands every hour in jeopardy. The significance of this new source of economic illumination goes far to answer the almost despairing cry of a recent economic writer. Astounded at the pertinacity with which the historical economists seek accumulate "all the facts," he asks:

> How is the world to contain the writings, statistical, historical, critical, which must be accumulated ere this enormous diagnosis of trade and manufacture shall be completed in its details?

The reply is simple. The short cut to the truth is found in the preservation of the ledger and the checkbook.

CAMPBELL-BANNERMAN'S POPULARITY.

Sir Henry Campbell-Bannerman's death has called forth tributes more personal and feeling than were the expressions at the time of his resignation as Prime Minister. For Sir Henry's personality had become endeared to great multitudes. He might have been truthfully described, at any time within the past two years, as the most popular man in England. Yet eight years ago, during the Boer war, he was one of the most unpopular. The causes of the change make up an instructive study in statesmanship.

Much of the late Premier's hold on the public was due to his gifts at the hand of nature. With a certain rugged directness and bluff heartiness, which his countrymen have traditionally admired, he had also a great personal kindness and a good-nature which no strain could break. These traits in combination made him, as Mr. Asquith declared in the House, both "revered and beloved"; and this characterization was handsomely and heartily subscribed to by Mr. Balfour. The latter, indeed, said of Sir Henry before he became Prime Minister, that he was "happily endowed by nature and education with all the qualities which will enable him to shine in this or any other position in which the fortune of political war may place him." Geniality and courtesy ever marked Campbell-Bannerman's public as well as private conduct. Political opponents could not but be fond of him and proud of him even when they attacked his measures. And in his contact with the great world outside the House, Sir Henry was able to win friends and conquer enemies by his transparent honesty and by a "pawky" kind of Scotch humor and imperturbability which served him well. Not long after he became Prime Minister, he addressed an out-doors meeting in Liverpool, which a few people tried to disturb by making unearthly noises. Sir Henry merely took off his hat to them with a smile, and said: "A pinch of mustard makes the beef appetizing."

But there was much more than jolly humor in Sir Henry Campbell-Bannerman. Great force and tenacity lay beneath his smiling exterior. A sort of dour obstinacy in sticking to his point and clinging to his convictions marked his entire political career. This was foreshadowed in the first address which he made to the electors of Stirling in 1868. The son of a stanch Tory, he came forward as a Liberal—a fact which might make some think that he ought to apologize for being the son of his father. That he would not do, but he went on:

> If you wish to draw any augury from my close connection with Sir James Campbell, this I would have you believe—that possibly the stanchness may run in the blood, that I may inherit his tenacity without inheriting his principles, and that, as my father, through a long public life, through good report, and through evil report, in fair weather and foul, has stuck to his party and his principles, so his son in like manner will stick to his.

In that forecast, so remarkably fulfilled during the subsequent forty years, sounds one true note of the real public man—steadiness. There was nothing flighty about Campbell-Bannerman. He was not always running after the latest political whimsies. With a clear body of convictions, he was ever ready to make varying applications of them to the differing needs of the age, but from the principles themselves he would not budge. His ideal of statesmanship was thus not that of a weathercock, pointing to the shifting wind, but of a compass, with needle showing the north by which to steer the ship of state.

Still higher was the merit of Campbell-Bannerman in having the courage to tell his countrymen unpalatable truths, and in having the patience and inextinguishable hope to wait for them to see and vindicate the right. He was able, like John Bright, to withstand even an overwhelming popular sentiment when he believed it in his heart to be wrong. He could do this, as in the melancholy days of war mania, without bitterness and without exaggeration, yet in the clear strength of a man who had his own conscience to satisfy. He was not content, with others, to sit one side till the storm had blown itself out, but manfully lifted up his voice against the prevailing fury, even though he knew that it would beat pitilessly upon his own head. Hence his popularity, when it came, was of the deeper kind which can be won only by those who do not try to win it. People saw him stanch and true and unruffled, and, when the revulsion occurred, were moved to put their trust in the steady man whom in their passion they had execrated.

The success of such a man as Sir Henry Campbell-Bannerman helps one's faith in the soundness of democratic instincts. He rose by compelling appreciation of the stuff that goes to the making of useful public servants. Never brilliant, not even clever; no skilled dialectician; no juggler with the hearts of the people; he won by his rare and sincere humaneness, his indomitable courage, his unwearied patience, his political consistency and plain dealing and speaking. The people honored and trusted him because they came to believe implicitly in his desire to serve his country, not for what he could get out of it, nor for personal glory, but for what he could do to advance the common weal.

"THAT HORRIBLE TENNYSON."

Jules Lemaître's lectures on Racine, soon to be published in book form, have provoked the question, "Who reads Racine?" "In France," writes the correspondent of an English paper, "nobody!" The writer adds:

> As an old *Polytechnicien* and distinguished soldier once said to me: "We have so much *rabaché* (gabbled) Racine at school that we are sick to death of him by the time we are grown up." It is a case of—"Then farewell Horace, whom I hated so!"

All this recalls Tennyson's lament: "They use *me* as a lesson-book at school, and they will call me 'that horrible Tennyson.'" Indeed, the steady development of the teaching of English in recent years—a development which has produced many admirable results—threatens to make Shakespeare, Milton, and Coleridge as nauseous to the children of to-day as Cæsar and Virgil, Xenophon and Homer were to their fathers. Something may be urged for the former practice of omitting English literature from the list of studies. When literature was not a part of the curriculum, students in school and college would frequently turn to it for refreshment and recreation. It presented such a sharp contrast to the rigidities and aridities of mathematics and the classics that boys and girls, when they took to literature at all, often found it a source of sheer delight. "The Merchant of Venice" was not a lesson to be learned; on the contrary, it was something to be read half surreptitiously, perhaps between the covers of a geometry. It had the delicious flavor of forbidden fruit. "When the master tormented me," says Leigh Hunt in his "Autobiography," "when I used to hate and loathe the sight of Homer and Demosthenes and Cicero, I would comfort myself with thinking of the sixpence in my pocket, with which I should go out to Paternoster-row when the school was over, and buy another number of an English poet." And Tennyson, when he was only twelve, wrote in one of his letters: "Going into the library this morning, I picked up 'Sampson Agonistes.'" Neither of these sentences could come from a modern American schoolboy. However much he loathes Demosthenes and Cicero, he finds little comfort in the English poet, who is thrust upon him at the next recitation; and he fights shy of "Samson Agonistes" as of some monster that will soon pick him up and make his life miserable.

To say this, however, is not to say that the study of literature in secondary school and college may not be useful and stimulating. If all our boys and girls came from cultivated families, where they had, like the Tennysons, "the run of their father's excellent library," the books required for admission to college would be a superfluity, and most of the college courses in modern literature would be a throwing of pearls before Sindbad the Sailor. But with the vast foreign element in our population and with the thousands of natives who inherit no tradition of culture, we cannot assume that the rising generation knows any literature beyond that of the penny newspaper and the ten-cent magazine. The college prescription in English is, then, for a lamentably large number of children, a necessity, if they are ever to read any books worthy of the name.

The problem of the teacher is to bring the boy and the book together, but to do it so tactfully that the boy shall not abhor the book. Such tact, such skill, is all too rare. It implies, on the part of the teacher, taste, judgment, and enthusiasm, but at the same time a full appreciation of the boy's shortcomings and his point of view. These are qualities seldom to be had for a thousand dollars a year, or even two thousand. really competent teacher of literature is hard to get at any price. Probably not one in fifty of our active practitioners is fairly qualified for the work. And the task is rendered still more difficult by character of the college examinations. The questions have too often implied a minute knowledge of the book, to be attained only by the painful process of grinding. In an article in the *Nation* of February 20 Miss Agnes F. Perkins of Wellesley pointed out that these required books—both those in the list for mere reading as well as those for "careful study"—are read "two, three, and even four times," and that the luckless pupil is asked to make abstracts, outlines, and topic sentences, and to write themes about the characters, the plots, the diction, and a dozen other similar subjects. This repetition is, as Miss Perkins observes, "deadening. The bloom is soon gone from the handled peach; the zest of discovery is lacking in the forced return to the familiar." "The Idylls of the King" becomes literally "that horrible Tennyson."

Yet, despite this possibility of alienating pupils from literature instead of attracting them to it, the high school must try to form in them the habit of reading with intelligence and precision. "The common slovenliness in reading" is one of the things of which Prof. W. A. Neilson of Harvard complained in an address last November before the New England Association of Teachers of English. He has found that in a college class in Bacon's Essays the chief difficulty lies "in leading the students to realize when they have not understood." He therefore urges "the training of the mind to concentrate upon the sense of what is written, and to refuse to pass on until the sense has been grasped"—a bit of discipline that is prerequisite to real enjoyment of literature. This discipline it is that students are expected to get from the books for "careful study." The allusions, for example, where they are not clear, must be followed up and explained. Professor Neilson continues:

> The two great sources of allusion in our literature are the Bible and the classics. Neither of these is known to our generation of students as they were known to readers contemporary with the authors of the chief masterpieces of English literature; and matters are becoming worse rather than better. Clearly then, so far from giving up the laborious explanation of these things, teachers of English have to face the task of making up for this lack of literary background by supplying generously whatever is called for to insure complete intelligibility of the texts read in school.

It is a cruel alternative which the teacher has to face. If he allows pupils to glide insensibly over such phrases as "Memorize another Golgotha," and "Sisters of the sacred well," he can be sure that much of the meaning of play or poem is lost; if he insists on thoroughness, he can be almost sure that the play or poem is detested. Various remedies have been proposed. Some would add the Bible and the classical dictionary to the already crowded curriculum. Professor Neilson would frankly pick out one or two pieces of literature—say, a play of Shakespeare and Milton's minor poems—as a *corpus vile* for dissection. On this material the student shall be exercised in the art of reading with understanding. It is on this theory of "spoiling" as little literature as possible that Harvard has recently reduced to the lowest terms its list of books for "careful study." The discipline is too valuable to be wholly neglected, too dangerous to be pursued very far.

All these difficulties arise because school and college are virtually compelled to do by formal, direct instruction what can be much more successfully accomplished by informal and indirect methods. The right way to acquire a literary background is to live where good books are an integral part of daily life—to take them in with the mother's milk. In many cases teacher and school are, perhaps, the best substitute to be had; but even at their best they are a wretched makeshift.

ROUSSEAU AND EDUCATION.

We are perhaps hearing too much of Rousseau these days, and he threatens to become a kind of fetich of criticism. To the French he is, more than any other one man, the author of the Revolution with all the subsequent good or evil implied in that movement. And now the Germans have discovered in him the father of their romanticism. "In reality his influence is accomplished on German soil," says Paul Hensel in the latest monograph on the subject; "here Rousseau was not the basis of a guillotine, but of a new culture. . . . Kant and Herder, Goethe and Schiller are not to be conceived without Rousseau, and through them is formed the new science, the new philosophy, the new poetry of German idealism." One has an impulse to avoid a theme that has grown cheap from too much writing of this sort; but how escape the writer who gathered up in himself the floating ideas of his age, and, by simplifying them to a portable creed and infusing into them the carrying power of his own great personality, made them the chief formative influence down to our own times?

I.

One thing becomes clear as we study the ideas of the eighteenth century—liberty and progress and innate goodness and natural Deism—that they all, until the appearance of this man, imply a denial of that dualism of good and evil tendencies within the heart, which hitherto had lain at the base of religion and philosophy, and that lacking this sense they seem always to be shirking certain of the more troublesome problems of life. The artificiality of that literature has become a proverb. This is not to say that the eighteenth century did not have its own theories of dualism. There was in Germany, for instance, that amusing doctrine of the *harmonia præstabilita*, spun by perhaps the shallowest wit that ever imposed on the world as a profound philosopher. "The soul," says Leibnitz, "follows its proper laws, and the body likewise follows those which are proper to it, and they meet in virtue of the preëstablished harmony which exists between all substances, as representations of one and the same universe." According to which system, "bodies act as if there were no souls, and souls act as if there were no bodies; and yet both act as though the one influenced the other," etc. But these vagaries of a mechanical parallelism are, so to speak, a bye-product of the age, developed from the metaphysics of Descartes, aside from the naturalistic influences of England. The dominating line of thought runs from Newton and Locke, who formulated the laws of nature in the physical world and in the human intellect, through the French *philosophes*, to Condillac, who banishes dualism so far as to derive the whole man, including Locke's reflective faculty, the moral sense, and consciousness, from the effect of physical impact.

One thing was wanting to all these theories—to the dead parallelism of Leibnitz, to the moral rationalism of Toland and Chubb, to Shaftesbury's florid Deism of the imagination, to the cynical or boisterous philosophy of Voltaire and Diderot—they all excluded the sense of that deep cleft within the human soul itself, which springs from the bitter consciousness of evil. This, in a way, Rousseau supplied, and through him what was a theme of speculation for the few was vivified into a new gospel.

How thoroughly Rousseau was a child of his age is proved by the continual recurrence of English names in his works. Intellectually, he has little that is original; his Deism, his passion for liberty, his doctrine of instinctive goodness, are all avowedly from over the sea, and even his minor ideas can, for the most part, be traced to his predecessors. It was because he made all these subservient to a passionate proclamation of a dualism between the individual and society, between nature and art, that he became so powerfully provocative of change. In a way, even this dogma—for it is as arbitrary a dogma as any set up by St. Augustine—was not his own. It may be found implicit in English Deism, in the discrepancy between Pope's praise of the savage, to whom "full instinct is the unerring guide," and his satire of a malignant society; it could even, in a later day, temper the rigid orthodoxy of Cowper:

> God made the country, and man made the town.

In his "Fable of the Bees" Mandeville had given it an odd twist by vindicating the old notion of inherent evil and making the progress of society depend on this corruption of the individual. But these were unfruitful hints and thoughtless inconsistencies; they became a social force through the temperament of one man who, as Madame de Staël said, discovered perhaps nothing, but set everything ablaze.

II.

From lonely brooding on his own divided self, Rousseau was led to erect the dualism implicit in the philosophy of his day into a formula with all the popular persuasiveness of a religion. The Pelagian doctrine of man's innate faculty of goodness united with his intense egotism to create the idea of the individual, conceived in himself and unmodified by others, as a pure uncontaminated product of nature. He, Rousseau, was, he felt, by his instincts good, yet he was painfully aware of his actual lapses into turpitude and shame; he could only shift the responsibility of this corruption upon outside influences. Here was no room for the Augustinian idealization of the good in man as an infinite God set over against the finite and hence erring natural man; on the contrary, he was driven to the conception of his own personality, and of every personality in so far as he projected himself into another, as good, and of other personalities, in so far as they are hostile to him and limit or pervert his native proclivities, as evil. Hence the dualism of the individual in the state of nature and of society, of the one and the many without the old accompaniment of the infinite and the finite.* And evil to him was not a thing of jest and satire, but, by the whole weight of his emotional being, a power to be feared and spurned. As embodied in society it looms up in his writings like some living and malign monster, lying in wait to corrupt and destroy the unwary individual. It is the Devil of the mediæval monks reborn in the height of the boastful age of reason to trouble the consciences of men, for who can say how long a time.

In 1755, at the age of forty-three, he published his "Discourse on Inequality," in which this theory is found fully developed. Here we have the picture of primitive man, living in solitude, mating by chance, and following undisturbed his healthy animal instincts. The first law of nature is love of self, and in this paradise of primeval isolation there is nothing to distort that innocent impulse. When by chance man meets with man he is kept from wrongdoing by the feeling of sympathy and pity which is, after the instinct of self-preservation, the second law of nature. But—"The first man who, having enclosed some land, thought of saying this is mine, and found people simple enough to believe him, was the real founder of civilized society. How many crimes, wars, murders, how many miseries and horrors would have been spared human nature had some one snatched away the stakes, or filled in the ditch, calling out to his neighbors: 'Beware of listening to this impostor!' "† With the acknowledgment of property comes the division of more and less out of which springs all the brood of ambitions, crimes, penalties. Sympathy is stifled in envy, and harmless *amour de soi-même* is converted into that social disease *amour-propre;* in a word, property means society. There is nothing fanciful in comparing this marvellous change from the individual in a state of natural innocence to the same individual as corrupted by society with the theological doctrine of the Fall. They are both an attempt to transfer the inexplicable dualism within the heart of man to some ancient mythological event; nor does Rousseau denounce the evil introduced by property with less unctuous and priestly fervor than was used by a Bossuet in laying bare the depths of total depravity. For the rest of his life he merely developed in various ways the thesis of his "Discourse on Inequality." As he said himself at the end of his career, speaking of his own works:

> Following as best I could the thread of his meditations, I saw everywhere the development of his main principle, that nature has made man happy and good, but that society depraves him and renders him miserable. And particularly "Émile," that book so much read, so little understood, and so ill appreciated, is nothing but a treatise on the original goodness of man, with the aim of showing how vice and error, strangers to his constitution, are introduced from without and imperceptibly work a change.

III.

In reality "Émile" is something more than a treatise on original goodness; it is an elaborate plea for a form of education by which the individual may be rescued from the perverting influences of society and restored to his primitive state of innocence. It is thus in a manner to the "Discourse" what "Paradise Regained" is to "Paradise Lost." The instincts implanted in the child by nature are right; therefore the aim of education is to place the child in such a position that these instincts may develop freely without any thwarting control from master or society. To this end he separates his typical child Émile from family and comrades, and gives him a home in the country with a guardian, whose duty is, not to instruct, but to preserve him from physical accidents, and to act as a kind of concealed Providence. Books during his early years are eschewed; all information is brought to the boy through the pleasure of observing natural processes and through play cunningly directed to manual training. Such a plan is, as Rousseau willingly acknowledged, impossible except for a favored few, if not for all; but as an ideal toward which education might tend, it has exercised through the theories of Pestalozzi, Froebel, and other German pedagogues an enormous influence, and is still to-day the inspiration of most writers on education. In part the book is admirably wise; in its provision for training the body, in many other details, even, one gladly admits, in its opposition to an unreasoning system of compression, it was not only a wholesome reaction from the practice of the day, but is full of suggestions of permanent value. But there is a growing belief among a certain class that the fundamental thesis of the book has worked, and is still working, like a poison in the blood of society.* To make instinct instead of experienced judgment the basis of education, impulse instead of control, unbridled liberty instead of obedience, nature instead of discipline, to foster the emotions as if the uniting bond of mankind were sentiment rather than reason, might seem of itself so monstrous a perversion of the truth as to awaken abhorrence in any considerate reader. And, indeed, these notions were slow in making their way against long-established traditions. Yet so honorable is the name of liberty, even when it is a masque for license, so flattering is the appeal to the individual's desire of unchecked autonomy, that Rousseau's "education of nature" has deeply modified, if it has not entirely transformed, the practice of our schools. It is seen at work in the vagaries of the elective system, in the advocating of manual training as an equivalent for books, in the unbounded enthusiasm for nature-study, in the encroachment of science on the character-discipline of the humanities, in the general substitution of persuasion for authority. To some observers certain traits of irresponsibility in the individual and certain symptoms of disintegration in society are the direct fruit of this teaching.

From this reverence for nature within man it is but a step to the religion of Nature. Everybody is familiar with the scene in "Émile" where the Savoyard Vicar leads his young friend at sunrise to a hill rising above the fair valley of the Po and looking off afar to the chain of the Alps, and there in language of melting charm expounds his profession of faith. There is much that is discordant in the ideas of that document. The retention of the old belief in a heaven and hell has no justification in Rousseau's theory of man's essential goodness, and in fact might without injury be removed from his profession. The gist of his faith is a pure Deism, a trustful reliance on some beneficent God who is united with Nature by a mutual sympathy corresponding to that which he himself feels, and who is in fact no more than a magnified projection of his own brooding personality into the infinite void—himself and Nature, God and Nature. Beyond this is no need of dogma or revelation or faith. Rousseau felt the instability of such a religion, and recommended a conformity to the popular forms of worship in whatever land a man might be, as a guide and stay, so to speak, to this vague emotionalism. It is a pretty theory, not without its advantages, and warmed the fancy of more than one poet to noble utterance. But it has one insurmountable element of weakness. It depends for its strength, for its very vitality, on the more precise faith of those whose worship it adopts. So long as these believe energetically in the virtue of forms and creeds, your Deist may prey upon their emotions; but a lasting church made up of Deists is inconceivable. Rousseau's Deism in fact came toward the end and not at the beginning of a movement; it flashed out into a grotesque worship of the *Être Suprême* at the Revolution, but it has had no permanent and fruitful results. He has, more than any other one man, given us our religion of to-day; but it is a religion of the state, as we shall see, and not of God.

---

*Gustave Lanson, in his "Histoire de la littérature française," has with great shrewdness developed this antinomy of the individual and the state running through all Rousseau's works, but he has not analyzed its philosophic causes and consequences.

†Taken from "Jean Jacques Rousseau," by Jules Lemaître, translated by Jeanne Mairet. New York: The McClure Co. M. Lemaître's lectures have all the bitterness of a converted Rousselian. He displays extreme cleverness in deriving all Rousseau's theories from personal weaknesses and vanities, showing in this perhaps a little too much of the romanticist *à rebours*. As a philosophical treatise the work is not significant, except in so far as it is a sign that the best-instructed minds of France are turning away from the romanticism of Rousseau in which they were schooled. The version by Jeanne Mairet (Mme. Charles Bigot) follows the original faithfully and is fairly successful in avoiding the usual awkwardness of translations.

*The latest book on "Emile" available in English is Gabriel Compayré's "Jean Jacques Rousseau and Education from Nature," translated by R. P. Jago (New York: Thomas Y. Crowell & Co.). This belongs to a series of Pioneers in Education, of which volumes on Pestalozzi, Herbart, Horace Mann, Spencer, and Montaigne have already appeared, besides the Rousseau. M. Campayré, like most professional students of pedagogics, is a convinced Rousseauist. He finds much that is impracticable or perverted in the details of "Emile," but regards its total inspiration as wholesome. "We cannot, indeed," he says, "hope to derive from Rousseau's pedagogics a definite and final system of methods and procedure. But what is perhaps better, he handed on to his successors and still imparts to all who read him a spark, at least, of the flame which burned in him." To the critics, on the contrary, who look more deeply and dispassionately into human nature than is common with the specialist in pedagogics, it is just this *flame* which is beginning to be regarded as dangerous.

IV.

That change from theology to sociology is announced in the most radical of his works. "There is then," he says, "a profession of faith purely civil of which it pertains to the sovereign [people] to fix the principles, not exactly as dogmas of religion, but as sentiments of sociability without which it is impossible to be a good citizen or a faithful subject." The determining principle of this creed is the sanctity of the *Social Contract* as he has developed it in his treatise of that name. Man, he declares in his opening sentence, with that precision and vehemence that have made his words the battle cry of revolution—"man is born free, and everywhere he is in chains." Property has introduced a harsh inequality among men, and established those conventions of society upon which rests the right of the stronger. There is but one way in which liberty can be restored: society itself must be transformed into a composite individual equivalent so far as possible to the isolated individual in the state of nature. That is the work of the Social Contract. His theories reduce themselves to this single proposition:

> The complete alienation of each associate with all his rights to the whole community; for, in the first place, each man giving himself entirely, the condition is equal for all; and, the condition being equal for all, no one has any interest in rendering it burdensome to the others [oh, most holy innocence!]. . . . Each of us places his person and all his power in common under the supreme direction of the general will, and we receive back each member as an indivisible part of the whole.

At bottom his proposal comes to this: by some persuasion of a divine legislator [he has an eye on himself] or some incalculable interference of Providence that sense of sympathy, which we found in the natural man along with an innocuous self-love, shall suddenly take possession of mankind as corrupted by society into a conglomeration of warring egotisms and transform that society itself into a quasi individual with a single purpose and a single will; and so the antinomy of the one and the many shall be finally solved. It is a vain utopia or a prophesy of terrible despotism, as you will; but you cannot doubt that this ideal of social sympathy has wrought enormously in the civilization of the present day.

V.

In part, Rousseau's influence was gained by his pure literary talent. His was the faculty of creating phrases which remain in the memory after all the inconsistencies and chimerical follies of his writings have been forgotten, and which ring like trumpet calls to action. But beneath it all lies the dæmonic personality of the writer, the inexplicable force that imposed the experience of this man Rousseau—vagabond as he was, a foe of convention, betrayer of sacred trust, morbid self-analyst ending with fixed hallucination of a conspiracy of society against him—the magic glamour that imposed the private emotions of this man upon the world. As the creed of Christianity came to the Middle Ages colored by the intense self-absorption of St. Augustine's "Confessions," so the new faith has flamed up from the "Confessions" of Rousseau. The Roman had set an example for the pride of the saints; our modern confessor proclaimed a similar pride for all the weak and downtrodden. In the audacity of his self-justification as of one who dares say, I am that I am, in his boastful admission that it was always impossible for him to act contrary to his inclination, in his defiant cry against a Providence that caused him to be born among men yet made him of a different species from them, in all this itching to exhibit himself, he was the father of romanticism and of a morbid individualism that seeks to hide itself under the cloak of a collective ideal.

For in reality his double motive of self-love and sympathy was one thing, and not two. The full development of the notion of sympathy will be found in Adam Smith's "Theory of Moral Sentiments," where either independently or through the influence of Rousseau's "Discourse" morality is based systematically on that sense. Both the Scot and the Frenchman would perhaps admit that, to a certain extent, sympathy, as the faculty of putting one's self in the place of another, is a phase of *amour-propre*, in so far as we are led thereby to convert the pain of others into fear for ourselves and the joy of others into hope for ourselves. But neither of them recognizes the cognate truth that when the condition of others is conceived in a causal relation to ourselves this order is reversed. That is to say, if the pain or loss of another in any way contributes to our own advantage, we rejoice in it even when the feeling of uneasiness remains more or less consciously present; and contrariwise with the joy or gain of another which effects our own disadvantage. Thus a son must harbor some satisfaction in the death of a father whereby he comes into an estate; while at the same time he may feel a sorrow derived both from the severance of long ties and from the uneasy foreboding of his own future fate as brought home to him by the present example. It is because of this ambiguous character of sympathy that it can never take the place of discipline and justice in regulating the affairs of men; as it is at best an extension of self-love, so it is always, when interests clash, in peril of unmasking as downright selfishness. A little honest observation of the actual working of Rousseauism in modern society would confirm this opinion only too cruelly.

VI.

It will have been remarked that one dominant idea of the eighteenth century finds no place in Rousseau's system; the idea of progress he even repudiated. Yet, by a paradox, the believers in progress have found in him weapons ready-forged to their hands, for that doctrine, it is clear, derives its strength from a trust in the essential and natural rightness of human instincts which need only freedom to develop into right institutions. In practice, however, this faith in evolution has assumed seemingly diverse forms as it has attached itself to the principle of self-love or sympathy. On the one hand we have the unabashed acceptance of egotism as worked out in the philosophy of Nietzsche, and as shown in the unconscious acts of the dominant controllers of the material world. Nietzsche's theory is beautifully simple. Society as he sees it now existent is a conspiracy against the individual. The religious creeds, with their preaching of sympathy and renunciation, the curbing laws of the state, are merely an organized hypocrisy by which the few strong are held in subjection to the many weak. In time the Will to Power (*der Wille zur Macht*) will become conscious and assert itself; then the instincts of the strong will break from pusillanimous control, and we shall have an harmonious civilization in which the few, following their unhampered desires, will rise on the labors of the submissive many, as now man makes use of a beast of burden. On the other side stands the whole group of theories known as Socialism. To Marx and his followers mankind is divided between the great mass of workers and the few capitalists who by the iron law of wages exploit them ruthlessly. Such a condition is the result of economic evolution; it will be cured when the workers, through the growth of class-consciousness, learn their sovereign power, and take full possession of the sources of production and wealth. Competition and all its consequent suffering will thus cease when the people are welded into a unit by sympathy. The workers are in the solidarity of their interests a kind of individual oppressed and corrupted by the privileged class who represent the traditional institutions of the state.

It might seem fanciful to derive systems so contrary in tendency from the same origin, yet both are alike in that they regard the evils of civilization as caused by that dualism of the individual and society, which was imposed upon the world as a new religion by one who sought in this way to escape the burden of personal responsibility. Both look to relief in the solution of that antinomy through the application of natural science to human affairs and through the resulting free development of man's natural instincts, one in the direction of egotism, the other of sympathy. Nor is this difference of direction so real as may appear. It is like a bad jest to suppose that under the Nietzschean régime, when the liberated superman has thrown off all sense of responsibility and self-control, the masses would not be driven by unity of interests to combine for retaliation. To many it will seem an equally bad jest to pretend that a social sympathy based avowedly on class hatred would not, if relieved from the constraint of that opposition, fly into an anarchy of egotisms. One wonders curiously, or sadly sometimes, that the preachers who abdicate the fear of God for humanitarianism, and the teachers who surrender the higher discipline for subservience to individual choice, do not see, or, seeing, do not dread, the goal toward which they are facing. P. E. M.

NEWS FOR BIBLIOPHILES.

In 1886 there was published at Plymouth, England, a Bibliography of Sir Walter Raleigh by T. N. Brushfield—a pamphlet of only thirty-six pages. Now, in his eightieth year, Mr. Brushfield has published a second and much enlarged edition, forming a quarto volume of 181 pages, recording 330 titles, with 20 reproductions of title-pages, 16 half-tones, and a reproduction of Raleigh's map of the Amazon and the Orinoco. The first 115 numbers record biographies of Raleigh and sketches of his life in books and periodicals. While Mr. Brushfield mentions that there were three distinct impressions of "The Discoveries of the Large, Rich, and Bewtiful Empire of Guiana," in 1596, he does not distinguish between them. As a matter of fact, as noted by Mr. Eames, there is a variation in the title of one of the editions, making four forms of the title-page.

The Trustees and Guardians of the Shakespeare's Birthplace have, as we noted in our issue of March 19, published a pamphlet by Sidney Lee, "Four Quarto Editions of Plays by Shakespeare," dealing with recent acquisitions by the Birthplace Museum. These four plays are "The Merchant of Venice," 1600; "A Midsummer Night's Dream, 1600; "King Lear," 1608; and "The Merry Wives of Windsor," 1619. The first and third of these were from a volume of plays belonging to Edward Windsor Hussey, which was broken up and sold at Sotheby's in May, 1906. The other two were from the Van Antwerp collection, dispersed at Sotheby's in March, 1907. Mr. Lee is mistaken in saying that these were both from the Rowfant Library. One, "The Midsummer Night's Dream," was the Rowfant copy, as has been pointed out before in this column; but the Rowfant copy of "The Merry Wives of Windsor" is still in New York. Mr. Lee's pamphlet contains much interesting matter about the four quartos and their printers. Though editors have been divided in opinion which of the two 1600 editions of "The Merchant of Venice" was the earlier, Mr. Lee seems to have proved that the edition "Printed by J. Roberts" is actually the first, and that the other, the rarer and more valuable one, "Printed by I. R. for Thomas Heyes," was the second.

Dr. Oscar Jennings of Paris, the possessor of a notable collection of engraved initial letters, publishes a large folio volume on a part of his material, "Early Initial Letters." The book is fully and richly illustrated with 1,300 good reproductions of ornamented letters of the fifteenth and sixteenth centuries. There is an introduction on the ornamentation of the primitive manuscript book by rubricators and illuminators. There are sixteen chapters of text, from block books at the invention of printing through all the evolution of the art in connection with engraving. The instances are taken from all the earliest printers, with names of artists like Holbein and Albert Dürer, and examples of many others. The author says:

> With very few exceptions the decorative and pictorial initials reproduced from foreign books have been chosen from works printed before 1525, and in most cases before 1500. In Germany, Italy, France, and the Netherlands, schools of cutters and engravers in wood and soft metal, with strongly marked local characteristics, came into existence before 1490—in Germany some twenty years earlier—and during the last decade of the century numerous finely illustrated books were issued from the chief continental presses.

Correspondence.

AN ARTISTIC INTERCHANGE BETWEEN AMERICA AND GERMANY.

To the Editor of The Nation:

Sir: The interchange of professors between America and Germany has now had a fair trial. Although some of the difficulties attending this experiment—notably the difficulty of arousing the American student mind to the unusual opportunities of an intimate contact with representative men of learning from another country—have become more apparent through experiences of our German visitors at Harvard and Columbia, yet there can be no doubt that, on the whole, this interchange has been highly stimulating and enlightening to the academic world, both of Berlin and of the American institutions of learning engaged in it.

Having contributed to some extent to the bringing about of this academic interchange, I may, perhaps, be permitted to suggest an enlargement and further development of it in the sphere of art. It is high time that Germany should know more of what is going on in contemporary American art, and that America should be introduced into the new life stirring in contemporary German painting and sculpture. No one even slightly familiar with American art of to-day can fail to be convinced that America now possesses painters and sculptors who need not fear comparison with those of any other nation. Even so small a group of artists as the Ten American Painters—Tarbell, Benson, De Camp, Childe Hassam, and their associates—who, at the present moment, are exhibiting in Philadelphia the harvest of their work of the last decade, offers something to the world which, in its delicacy and refinement of feeling, its subtle poetry and measure, its purity of imagination, is distinctly above the mass of Continental work with its fatal tendency to exaggeration and eccentricity. Add to these men other names of international fame, such as Abbey, Sargent, Melchers, and there can be no question that a judiciously selected exhibition in Berlin and other German cities of the works of living American painters would be nothing less than epoch-making for Germany.

On the other hand, how can one be blind to the fact that German art of to-day, with all its eccentricity and capriciousness, is a most striking and effective expression of the well-nigh boundless vitality, vigor, and intensity of modern German life? Germany to-day is reaching out into the realm of great art. Men like Klinger, Stuck, Ludwig von Hofmann, Lederer, Tuaillon—to mention only a few of the greatest—belong in the front rank of those who, of whatever nationality and in whatever form, are trying to give an artistic expression to the ideal aspirations of modern life. To bring these men and their compeers in a truly representative exhibition before the eyes of the American public, would mean indeed a heightening and quickening of the national imagination. For a number of years, a devoted friend of German art in this country, Mr. Hugo Reisinger of New York, has been making arrangements for such a representative exhibition; and it is devoutly to be hoped that his efforts be at last crowned with success.

I would suggest that the leading art institutes and artists' organizations of the country appoint a committee, to arrange, in conjunction with Mr. Reisinger's plans, for two simultaneous exhibitions, of American art in Germany and of German art in America; and I venture to predict that such a committee would find in Germany, both officially and among the artists themselves, a most ready welcome.

INFANT CRITICISM ONCE MORE.

To the Editor of The Evening Post:

Sir: I have been much interested in the views on "infant criticism"—as you happily term it—set forth in your editorial of February 27, and in the letters of Prof. J. H. Gardiner, March 19, and Mr. W. S. Hinchman, April 2. That there are two sides to the question seems clear. In some of its aspects, "infant criticism" is certainly ludicrous enough. Still, this hardly proves that schoolboy criticism is *per se* ridiculous. It is, of course, absurd to expect a boy of thirteen or fourteen to write intelligently on abstract subjects about which he neither knows nor can know anything. For that matter, it would be equally absurd to expect anybody to write intelligently on such subjects under such circumstances. It may, perhaps, be somewhat like demanding bricks without furnishing the straw to ask a mere schoolboy to set forth the true inwardness of Sir Roger de Coverley's "peculiar humor." But is it any more absurd to ask him, after he has read the Sir Roger de Coverley Papers, to give his opinion of Sir Roger than to ask him to give his opinion about any other matter of fact that has come under his notice? I fail to see that it is.

If "infant criticism" were confined to subjects well within the grasp of the "infant" mind, there would, I think, not only be no harm, but positive benefit in it when practised in moderation. That it would not be good criticism may be admitted. But then, does it follow that what a boy cannot do well, he should not try to do at all? If so, our "infants" must eschew not only criticism, but many other kinds of intellectual discipline usually regarded as fit and proper for them. The truth is, as Mr. Hinchman points out, it matters very little whether a boy can write good criticism or not. Whether he can even be taught to write good criticism, matters just as little. The important thing is that he should get the right kind of discipline to develop a taste for literature and a power of expressing himself with at least an approximation towards fluency and ease. To accustom a boy to the atmosphere of books and to discussions about books, ought not, therefore, to be regarded as impertinent to the business of teaching him how to produce effects like those he sees produced on the written page. It is, of course, conceivable that the art of writing can be taught without requiring the pupil so much as to look at a book. It is also conceivable, perhaps, that the art of swimming can be taught wholly on dry land; but for most people it would seem advisable to provide for at least an occasional contact with the water.

It is worth noting how teachers of other countries regard this question. French teachers, for example, seem to have no horror of "infant criticism" in itself, at least to judge from the interesting account of the methods employed in teaching composition in a number of the schools of Paris given by Mr. P. J. Hartog (see "The Writing of English," Henry Frowde, 1907), as the result of an investigation made by him recently. Making proper allowance for differences in the age of the pupils and for the peculiarities of the teachers, there is he says, substantial uniformity in the methods employed in all schools. In the elementary schools, the subjects assigned are chiefly moral. In the compositions, however, "every general statement must be either illustrated by facts, or the summary of facts already quoted." In the higher primary schools, to which the pupils are admitted at the age of twelve or thirteen, moral subjects give place largely to narration and description. The plan of a simple story is given to the pupil, and he is obliged to fill in the details, "keeping the whole story in the same proportion as the outline." As he progresses, the outline is reduced and he is thrown more and more on his own resources. In time, he is able, on his own plan, to build up fairly good little stories or descriptions. But—and this is the point to be noted—this ability does not come to him solely because of practice in writing. There is a second element in the teaching of style which is regarded by the French as no less essential: the systematic study and analysis of the French classics. The pupils are taught to read great French authors and constantly to analyze what they read, to pass backward from the developed composition to the plan. In the secondary schools, the teaching differs from that in the higher primary schools rather in the results obtained than in the method. "The pupils live in a more literary atmosphere, and home training has done more for them." As illustrations of the kind of subject assigned to the pupils here, Mr. Hartog cites, among others, the following from actual lists at the Lycée Henri IV., and the Lycée Louis le Grand:

> Give an account of the Bourgeois Gentilhomme of Molière, on the model of La Bruyère.
>
> Compare the account of the affair of the Allobroges in Sallust's Catilina and Cicero's third Catiline Oration.
>
> The childhood of the Cid (purely imaginary).
>
> An imaginary conversation between Flavius and Arminius (a plan founded on chapters 9 and 10 of Book II. of the Annals of Tacitus being given).
>
> In what does the originality of Voltaire's work in history consist?
>
> French types in the sixteenth century.

These subjects would seem to be quite beyond the range of our "infant critics"; yet Mr. Hartog implies that the French boys to whom they were assigned acquitted themselves creditably.

THE TEACHING OF THOUGHT AND EXPRESSION.

TO THE EDITOR OF THE NATION:

SIR: In your issue of March 19 you say: "The truth is that if all the teachers did their duty towards English, the special teacher of English composition would be a superfluity." This truth will appear still more important when we consider the relationship existing between thought and expression. So close is the intimacy that Prof. Max Muller affirmed the practical identity of thought and linguistic expression in his seemingly extreme dictum, "No language without thought, no thought without language." This dictum we need not accept in its entirety, but we can no more conceive of language existing without thought than we can conceive of the skin of an animal coming into existence without an animal inside of it. It is perfectly obvious therefore that the very first essential of expression is to have something to express; that the first essential of clear expression is clear thought; and that the most effective way of gaining clearness of thought is to labor for clear expression.

That the teaching of expression must suffer from being separated from the teaching of thought is therefore evident. But it does not suffer alone. The teaching of thought also must suffer, perhaps even more, from such separation, because the power to express the imparted thought is an essential element in the pupil's mastery of the thought itself. The effective teaching of thought is not merely a process of pouring in, but is also one of drawing out, and the latter, which is no less essential than the former, can evidently be best applied contemporaneously with the former, and by the same teacher. In short, the best way to teach either thought or expression is to teach thought in such a way as to at once arouse and stimulate the pupil's own powers of expression.

In view of these considerations, the practice of having various teachers on various subjects apply, by lecture or otherwise, the pouring in process exclusively for days and weeks together, until the pupil has become more or less water-logged mentally, and then sending him to another teacher to learn how to pump himself out, seems a peculiarly abortive one. By fixing the attention upon form, to the neglect, if not the exclusion, of subject matter, this practice involves a separation between the teaching of thought and the teaching of expression, which is equally hostile to both. Hence your assertion, "that the formal exercises in English composition are likely to become artificial and wholly detached from the pupil's interests, either in play or study, and in so far forth almost useless," is not only true, but is putting the case very mildly—perhaps too mildly. In my judgment it is not only "almost useless," but, in so far as it displaces the conjoint teaching of thought and expression, it is a positive detriment.

It is to be hoped that the agitation of this subject will be continued and be instrumental in inaugurating methods whereby the teaching of thought and expression will go hand in hand to their mutual advantage, instead of disjointedly, as now.

HERBERT L. BAKER.

Detroit, April 20.

Notes.

Frederick Moore's "Passing of Morocco," is about to appear from the press of Houghton, Mifflin & Co.

Harper & Bros. will have a new volume of stories by Mrs. Deland ready within a fortnight.

Early next month we are to have from L. C. Page & Co., a volume of interest to sportsmen, entitled, "In the Woods and on the Shore," by Richard D. Ware.

The Hon. Arthur Elliot requests the loan of any letters from the late Lord Goschen, whose life he is preparing to write. His address is No. 27 Rutland Gate, London, S. W.

The last two volumes of Col. Dodge's military history of "Napoleon" have recently been published (Houghton, Mifflin & Co.), and their perusal confirms the opinion of Vols. I. and II., already expressed in our columns. The book constitutes the most extensive treatment of the whole of Napoleon's military career to be found in English; it is well supplied with maps and illustrations; and the author has diligence, enthusiasm, and a military point of view. But the method is somewhat slipshod, and the scale is not equal to that on which skilled military historians have dealt with Napoleon's campaigns singly. The author, too, lacks the balanced judgment, wide information, and sense of preciseness in language, without which the attempt at framing historical generalities becomes a snare. As an example of this we may pick the dictum that "history narrates but one brilliant victory gained by an army fighting with a river at its back—Cannæ"; yet only a few pages previously may be read an account of Napoleon's victory at Dresden, won under precisely such conditions. It is further the case that Col. Dodge is decidedly inclined to become the victim of a pet thesis; thus one may complain of a military historian who, when dealing with the campaign of 1813, constantly explains French reverses on the basis of a passing intellectual inferiority on the part of the Emperor, but completely fails to bring out the technical point that dominated the whole campaign, which was that in 1813, and only in 1813, superior mobility had passed from the French armies to those of her enemies.

The well-known Antiquariat of Jacques Rosenthal of Munich has just published in three parts, under the title, "Bibliotheca Pædagogica," one of the most comprehensive catalogues of educational works ever issued; it covers 590 pages and describes 8,241 numbers. It is particularly rich in the bibliography of educational publications of the fifteenth and sixteenth centuries. The first part contains chiefly works down to the close of the eighteenth century, including a large list of incunabula and manuscripts. Erasmus alone is represented in 171 separate numbers. The second part contains editions of Latin and Greek classics and commentaries on them;

here again incunabula and manuscripts are well represented. The third division deals chiefly with university and higher school publications, including also modern educational works. The appendix includes several manuscripts dating back to the twelfth and thirteenth centuries. The price is five marks.

The recent work of Ferdinand Jakob Schmidt, "Zur Wiedergeburt des Idealismus: Philosophische Studien" (Leipzig: Dürrsche Buchhandlung), is another effort to revive German idealism, especially along the lines of Hegel's philosophy. The author confidently predicts such a regeneration, and contends against the idols of our days, namely *Psychologism, Historism*, and *Positivism*.

Prof. Julius Wellhausen of Göttingen, whose literary reconstruction of the Pentateuch was epoch-making, has not been able to resist the temptation to apply his methods to the Apocalypse of John also. In his "Analyse der Offenbarung Johannis," originally an *Abhandlung* in the Reports of the Royal Academy of Sciences in Göttingen, and now published by Weidmann, Berlin, Wellhausen discriminates sharply between the primary and secondary sources, both chiefly Jewish, that have entered into the composition of the Apocalypse. He concludes that this enigmatical work is not a drama but a *Bilderbuch* in which, however, the pictures are not all historically arranged.

Under the title Beiträge zur Wissenschaft vom Alten Testament, Prof. Rudolf Kittel of the University of Leipzig has begun the publication (Leipzig: Hinrichs) of a series on Old Testament problems. The first *Heft* contains four papers by the editor himself, with the special title "Studien zur Hebräischen Archæologie und Religionsgeschichte." The bulk of the matter is the result of Kittel's investigations in Palestine in 1907; and the purpose is to bring the facts of archæology to bear on the interpretation of the Old Testament. The first and the last two studies are largely topographical; the first is "Der heilige Fels auf dem Moria und seine Altäre"; and the second deals with the stone of Zoheleth (I. Kings, i. 9.) where Adonijah met his followers; and the last gives a reconstruction of Solomon's laver chariot (I. Kings, vii. 27-39). A leading thought is the difference between the religious ideals of the Israelites and those of the Canaanites who preceded them.

Max Kielmann, Stuttgart, publishes a popular series of more or less apologetic discussions of philosophical and Biblical problems under the general title Christentum und Zeitgeist. Of the second series, lately begun, four brochures have appeared; two by Dr. E. Dennert, "Der Darwinismus und sein Einfluss auf die heutige Volksbewegung" and "Moses oder Darwin?" a third by Dr. Adolf Moyer, "Nietzsche als Denker, Dichter und Verderber"; and a fourth by Pastor J. Strehle, "Der metaphysische Monismus."

Partly because the author is the present occupant of the chair of apologetics in the Catholic faculty of Würzburg formerly occupied by Hermann Schell, sometimes called the father of the whole Modernistic movement, the booklet of Prof. Philipp Kneib, "Wesen und Bedeutung der Encyklika gegen den Modernismus" (Mainz: Kirchheim) demands attention in passing. The work offers no evidence of that independent scholarship that distinguished Schell.

"Sokrates und das alte Christentum" is the title of an address recently delivered at the University of Rostock by J. Geffcken and now published by Winter of Heidelberg. It contains an abundance of material showing estimates of Socrates in the Christian Church, from the early fathers down to Harnack, and then seeks to answer more particularly the question, "What do the teachings of Socrates mean for our generation?" The work is an appeal to revive the Socratic ethical ideals, but not in the anti-Christian spirit that influenced Nietzsche's similar appeal.

The one hundred and twentieth meeting of the American Oriental Society was held on April 23 and 24, at Cambridge, Mass. The annual presidential address, by Prof. Charles R. Lanman of Harvard, was a discussion of the aims, work, and needs of the society. He pointed out the imperative need of sustaining in its ever-widening scope this, the only society in America devoted to the publication of strictly scientific papers on the Orient. Some forty-five papers were presented; several, however, were read by title only. Among those actually read should be mentioned that of Dr. J. E. Abbott of Bombay, on Indian inscriptions at Baku, especially since the author's modesty did not make it sufficiently clear that the interesting inscription first deciphered was one that had previously baffled the ingenuity of several foreign scholars of note. Sanskrit subjects formed the contents of a large number of papers. Prof. Maurice Bloomfield of Johns Hopkins gave an account of work to be done in continuance of his Vedic concordance, and offered some ingenious if daring etymologies of Vedic words. Prof. George M. Bolling of the Catholic University of America, and Dr. Julius von Negelein, presented their completed edition of Parishishtas of the Atharva Veda, a valuable work, which the society hopes to publish in due time. Papers on some aspects of the physical soul and on the office of the Vedic Fire-god were offered by Prof. E. Washburn Hopkins of Yale; and his colleague, Prof. Hanns Oertel, spoke on the mechanical adaptation of words in Sanskrit, in accordance with which one form through mere juxtaposition is made similar to another form. Prof. A. V. W. Jackson of Columbia gave a popular account of the home of Omar Khayyam (with photographs); and Dr. Truman Michelson a study of the Puranas. Prof. George A. Barton of Bryn Mawr discussed Plato's "mystic number" (its Babylonian origin), and also the troublesome Lushtamar letter. Prof. Paul Haupt of Johns Hopkins treated Assyrian etymologies, explained the Biblical phrase "upon whom my name was called," and supported the view that Christ was not a Jew. Prof. D. G. Lyon of Harvard (who was on the eve of departure for the Orient) lectured on excavations in Samaria; Prof. C. C. Torrey of Yale, in an explanation of "Huram-abi, the Phœnician craftsman," contended that Huram or Hiram was not a proper name; Prof. W. Max Mueller of Philadelphia presented an instructive series of Egyptian illustrations of manners and costumes of Western Asia in the third millennium B. C.; and Mrs. S. B. Scott set forth the theory that the harvest festivals of the Land Dyaks are economically conditioned. Count Okuma, ex-Premier of Japan, has given the society a complete font of Chinese and Japanese movable type, of which the society had long stood in need. The new officers are: President, Professor Hopkins (who has been secretary for twelve years); corresponding secretary, Professor Jackson. Professor Hopkins and Professor Torrey, who have served together for eight years, resigned as editors of the journal of the society, and Professor Oertel and Prof. J. R. Jewett of Chicago succeed them. The next meeting will be in New York, April 15, 1909.

At the sixteenth annual meeting of the American Jewish Historical Society, to be held at the Hotel Astor in this city May 17, the following papers will be read: Albert M. Friedenberg, New York city, "The Jews of New Jersey from the Earliest Times to 1850" and "West Indian Jewish Cemeteries: a Proposal"; Dr. Herbert Friedenwald, New York city, "Why This Is Not a Christian Country"; the Rev. P. A. Hilfman, Paramaribo, Surinam, "Additional Notes on the History of the Jews in Surinam"; Leon Huhner, New York city, "Some Additional Notes on the History of the Jews of Georgia in Colonial Times" and "Some Jewish Associates of John Brown"; Max J. Kohler, New York city, "Roderigo Lopez, Queen Elizabeth's Physician, and his Relations to America" and "Phases of Jewish Life in New York before 1800—III."; Walter H. Liebmann, New York city, "Correspondence between Henry Clay and Solomon Etting, and Notes Thereon"; Isaac Markens, New York city, "Lincoln and the Jews." President Cyrus Adler will deliver the annual address.

In connection with the celebration of the semi-centennial of the liberation of Italy, an important educational exposition, similar to that held in Vienna in 1873, will be opened in Rome. It is expected that the collections thus brought together will form the nucleus for a national pedagogic museum.

Jacob Voorsanger, rabbi of Temple Emanuel, San Francisco, since 1896, and professor of Semitics in the University of California since 1895, died April 27. He was born in Amsterdam, Holland, in 1852, and was a graduate of the university there. He had been rabbi in Philadelphia, Providence, and Houston. Among his books are "Life and Works of Moses Mendelssohn" and "The Chronicles of Emmanuel." He was consulting editor of the "Jewish Encyclopædia."

Prof. Nicolas-Émile Gebhart, a member of the French Academy and member of the Faculty of Letters at Paris, died April 21. He was born in 1839, and he had been professor in the lycée at Nice and in the Faculty of Letters at Nancy. His books are "Praxitèle," "La Peinture de genre dans l'antiquité," "Rabelais," "L'Italie mystique," "Origines de la renaissance en Italie," "Moines et papes," and "Autour d'un tiare." He was a contributor to the *Revue Hebdomadaire, Revue Bleue,* and *Revue des Deux-Mondes*.

Carl Gustaf Styffe, the historian, and

former university librarian of Upsala, died in Stockholm last month, nearly ninety-one years old. His *magnum opus* is the collection of documents published in five large volumes, from 1859 to 1884, under the title "Bidrag till Skandinaviens historia ur utländska arkiv." Better known, perhaps, is his study in historical geography. "Skandinavien under Unionstiden," first published in 1867, and issued in a new edition in 1880. Lately he was one of the editors of the writings of Axel Oxenstjerna.

NOTES ON TEXT BOOKS.

Among recent books relating to both the philosophy and the practice of education perhaps the most ambitious is "A Theory of Motives, Ideals, and Values in Education," by William E. Chancellor (Houghton, Mifflin & Co.). The author endeavors to formulate not merely a philosophy of education, but a philosophy of life. In spite of the title, however, he does not offer any coherent theory upon which the science or the art of education may build. Frequently, his meaning is not clear, and his conclusions are not warranted. The book shows wide knowledge of history, science, and philosophy, and discusses a great variety of topics; but while it is stimulating and will doubtless be read by many teachers, it will have little influence upon the course of education. That the kindergarten movement in America has been one of the most significant phases of the revolution in the ideals of education in this country is the central thought of "The Kindergarten in American Education," by Miss Nina C. Vandewalker (The Macmillan Co.). The book gives a history of a half-century of kindergarten development, exhibits its relation to other movements that have been significant in American life and education, and shows how its practice is being gradually modified by the new educational psychology. The interest in this volume is not for the teacher alone, but is for all students of social and educational problems. "The Management of a City School," by Arthur C. Perry, jr. (The Macmillan Co.), discusses public school administration from the point of view of the principal as distinguished from that of the superintendent, who deals with the broader questions of policy and of organization, and that of the teacher, whose problems relate to the individual child and to the presentation of the subjects in the curriculum. The principal is in many respects the most important person in the school system. His relation to his superior officers, to the community, to the parents, to the teachers, to the pupils, and to his profession are treated by Mr. Perry in a thoughtful and rational manner. The book should be helpful to young principals and to those who are fitting themselves for such work; and it can be read with profit by all who are concerned in the work of the public schools. A citizen of California recently offered two prizes for the best essays on "Moral Training in the Public Schools." The two essays to which prizes were awarded and three others of special merit are published by Ginn & Co. under the above title. The writers are clergymen and teachers, whose joint product is a fairly complete statement of prevailing thought and practice. The book deserves attention from parents as well as teachers. Many experiments in self-government by pupils of all grades have been tried with varying degrees of success. Dr. Bernard Cronson in "Pupil Self-Government" (The Macmillan Co.) gives an account of one of these experiments which has resulted in valuable ethical as well as civic training. The principal who is interested in the subject will find in this book a very definite statement as to methods and as to conditions essential for success. Whether he can obtain such results as are here described will depend largely upon himself, for a principal endowed with the requisite tact and wisdom is the chief condition which makes real pupil self-government possible.

The most important place among English texts prepared for school and home use must be given to "The Essays of Francis Bacon" (Scribners), edited by Prof. Mary Augusta Scott. The Introduction is full, dealing with the life and literary work of Bacon, and the notes let nothing pass. We cannot always follow the judgment of Miss Scott, cannot, for example, see that "the 'Essays' are as surely the expression of a genuinely religious spirit, as of a worldly-wise one." We think the editor, in the desire to be complete, has loaded her annotations with a good deal of dead matter. Thus, glancing over the pages, one finds brief and perfunctory definitions of such words as Alcoran, discontentment, unguent, etc., with statements of such obvious facts as that Cicero was a "Roman orator, philosopher, and statesman." The student who needs such notes had better leave Bacon alone; they only serve to increase the pedagogical tone of the book without adding to its value. Yet withal the editing shows considerable learning, and it is a pleasure to find an editor pleading valiantly for Latin as the basis of English instruction.

Among the recent aids to work in writing we should name "Specimens of Prose Composition" (Ginn), edited by C. R. Nutter, F. W. C. Hersey, and Prof. C. N. Greenough, which gives as examples to be followed a selection of extracts about the length of daily or weekly themes; a "Handbook of Composition" (Heath), by Edwin C. Woolley, being a compendium of rules in grammar, sentence structure, paragraphing, and the other elements of good writing; "Grammar and Its Reasons" (A. S. Barnes & Co.), by Mary Hall Leonard, a thoroughly sensible treatise in which definition, history, and example go hand in hand together; and Frances M. Perry's "Introductory Course in Exposition" (American Book Co.), a good third of which is given up to a study of the various forms of literary criticism with numerous examples. As a companion volume to the last-named Prof William T. Brewster's "Specimens of Modern English Literary Criticism" (Macmillan) might be taken up. Here whole chapters and essays are given, ranging from Johnson's "Metaphysical Poets," to Henry James's "Art of Fiction," and including Matthew Arnold's "Study of Poetry," Coleridge's chapter "On Poetry and Poetic Power," and Shelley's "Defence of Poetry." Most important, at least most significant, among the books of select readings, is "A Collection of Eighteenth Century Verse" (Macmillan), by Prof. Margaret Lynn. It presents chiefly the earlier poets of the century, including besides the greater names such minor writers as Pomfret, Somerville, Philips, Tickell, and Dyer, and omitting Cowper and Blake. It seems to us eminently wise to call the attention of young students to these sane, if not always inspired, writers. Other good volumes of selections are: "John Henry Newman" (Houghton), edited by Prof. Maurice Francis Egan; "Dryden" (Frowde), by G. E. Hadow; "Byron" (Ginn), by Prof. S. M. Tucker; "Poe" (Ginn), by J. Montgomery Gambrill; "Shelley" (Houghton), by Prof. G. H. Clarke; and "Chaucer" (Scott, Foresman & Co.), by Prof. Edwin A. Greenlaw.

Among recent editions of German texts for school and college use there may be singled out as particularly useful the following: Lessing's "Minna von Barnhelm," by Prof. Philip S. Allen (C. E. Merrill Co.); Goethe's Sesenheim episode from "Dichtung und Wahrheit," by Prof. A. B. Nichols (Henry Holt & Co.); Goethe's "Torquato Tasso," by Prof. J. F. Coar (Ginn & Co.); Grillparzer's "Ahnfrau," by Profs. G. H. Danton and F. W. Heuser (Holt); Hoffmann's "Meister Martin," by Prof. R. H. Fife (Holt); and Keller's "Das Fähnlein der sieben Aufrechten," by W. G. Howard and A. M. Sturtevant (D. C. Heath & Co.). All these editions are carefully and judiciously done and bear evidence of the marked improvement, which the academic study of German literature in this country has undergone during recent years in seriousness, solidity, and comprehensiveness. Of especial merit and interest is Professor Coar's introduction to "Tasso" with its skilful unravelling of the manifold threads which constitute the somewhat perplexing fabric of Goethe's drama. The "Ahnfrau" is preceded by a good account of Grillparzer's life and by a critical discussion of the relation of the play to its sources and to the Fate Tragedy. The value of the Sesenheim extracts from "Dichtung und Wahrheit" is increased by an appendix containing those of Goethe's poems that were inspired by Friederike and other contemporary accounts of Goethe's Strassburg days. Hoffmann's position in the history of German literature and his influence on European literature are well brought out in the introduction to "Meister Martin."

The volumes added during the past twelve months to the Oxford Higher French Series (Henry Frowde) have been numerous, and the authors represented are drawn from a wide field, upon which an American publisher would probably often hesitate to venture, if anxious for profit. For instance, Michelet's "La Mer" appears in an edition of two hundred and fifty pages, accompanied by "L'Oiseau" in another briefer volume. Editions of Barbier's "Iambes," of Chénier's Poems, and of Daniel Stern's "Les Journées de juin, 1848," are also unfamiliar to the ordinary catalogues of textbooks, but should prove useful to venturesome students or advanced teachers. More familiar titles are Balzac's "Eugénie Grandet" and selections from Mérimée and from Coppée. The introductions and notes of these volumes are nearly always above the average, and contain many an interesting parallel passage and useful reference. The Oxford Modern French Series, issued by the same publishers and under the same general editor, Léon Delbos, contains more elementary texts, less elaborately annotated. Alfred de Vigny's "Servitude et grandeur militaires" and Feuillet's "Jeune homme pauvre" are accompanied by stories and descriptions of travel such as Marmier's "Fiancés du Spitzberg" and René Bellot's "Journal d'un voyage aux mers polaires." D. C. Heath & Co. issue two volumes of selections from Daudet, edited by C. Fontaine, and from René Bazin, edited by Victor E. François. Daudet has been long in use in schools, but the present volume contains a rather new and unhackneyed, though no less characteristic, selection. Bazin is also destined, in all probability, to supply the demand for brief, interesting, and well-written stories for beginners in French. Messrs. Shippee and Greene's "Stories from French Realists," Maupassant and Zola (American Book Co.), may also meet the craving of many teachers for modernity. "Selections from Boileau," edited by Prof. Oscar Kuhns of Wesleyan University, appears in Heath's Modern Language Series. The "Art poétique" and the dialogue of the "Héros de roman" are given in full, with selections from the satires, epistles, and miscellaneous verse. The edition is carefully annotated, though the plan of extracts makes the work of rather transient value to the student. If he is capable of appreciating Boileau at all, he has reached a stage in the study of French literature which will make him need to consult more than this brief volume contains.

Livy, Book I., and Selections from Books II.-X., by Prof. W. Dennison, and Three Tragedies of Seneca ("Hercules Fureus," "Troades," "Medea") by Prof. H. M. Kingery, have recently been published by the Macmillan Company, as the initial volumes of a new series of Latin texts for college use. The impression has been growing that college texts have been annotated more in the interest of teachers than of students. This series is intended to contain nothing that is not of immediate use to the student. To accomplish this object is hard, as these editions show. Livy is difficult only in spots, and should be read by freshmen; while Seneca's tragedies are never easy, and should be read by seniors. Yet both these books seem to have been prepared for the same grade of students, namely, freshmen. They both contain short introductions, in which the important facts in regard to the lives and works of the authors are summarized; and the text is followed by brief commentaries, in which a student seeking light on difficult passages would probably be disappointed. This is the more regrettable in the case of Seneca, because there is no edition of his plays with English commentary. In the commentary on Livy we find little as to Latin idiom and nothing as to Livy's style. We look in vain for any indication that the first book is almost epic in character or that the student is reading the work of a great literary artist. One feature of the commentary is, however, valuable; at appropriate places are inserted references to various handbooks for parallel reading, which, if done, would make the course of importance for the study of Roman history. In the commentary on Seneca we are struck by the large amount of translation, often where there seems to be no occasion for it, if the author is to be read by seniors. The quality, too, of this translation, is often inferior. The various metres are treated somewhat elaborately in the introduction, but their effect is not discussed. The position of Seneca in the development of the Latin literature and language is dismissed with half a page. Despite these defects the edition is useful, for it makes accessible to students what has been thus far barred. Prof. F. H. Potter's "New Method for Cæsar," published by B. H. Sanborn & Co., is likely to prove useful. A real difficulty in high school teaching has been the change from the disconnected reading of the beginner's book to the continuous narrative of Cæsar. The various selections used to bridge the gap are not entirely successful; while the use of Cæsar itself as a beginner's book is open to grave objections. Professor Potter treats the Helvetian war in a new way. Dividing the narrative into reading lessons of convenient length, he prefixes to every reading lesson a preliminary study, in which he gives the vocabulary, discusses the idioms, and the chief syntactical principles illustrated in the text, and provides a reading exercise consisting of the substance of the Cæsarian passage in the form of detached sentences. After this preliminary study, the student reads the passage from Cæsar as a review, in which all the elements are known. The book is well worked out. The chief objection is that no effort is made to estimate the value of individual words. Exercises for translation into English, embodying the vocabulary, not the syntax, of the various lessons, would add to the value of the work.

The appearance of two new elementary Greek books within a year shows that teachers of Greek are alive to the critical position of that subject in our educational system. These are the "Beginner's Greek Book," by A. R. Benner and H. W. Smyth (American Book Co.), and the more recent "Elementary Greek" by T. C. Burgess, and R. J. Bonner (Scott, Foresman & Co.). Both books are similar in general arrangement, albeit with innumerable divergences in detail. Both seek to arouse interest by inserting English derivatives in the vocabularies, even when the English words are remote from common use. Both base their choice of material on Xenophon's "Anabasis," for which they form an immediate preparation. Finally, both are lavishly as well as carefully illustrated, and in this respect might serve as an introduction to the study of Greek art. But here the resemblance ceases. In the "Beginner's Greek Book" we are at once impressed by the small space given to exercises from English into Greek. The authors justify this by insisting that the best exercises of this kind consist in turning the English rendering of the Greek text back into Greek without using the book. For most schools, however, this is a counsel of perfection. "Elementary Greek" is much more conservative, making the English-Greek exercises of equal size with the Greek-English. The reading material differs greatly in the two books. In the former the translation is of detached sentences throughout, many of them taken bodily or with slight changes from the "Anabasis." Supplementary reading is added at the end, consisting of a few selections from the "Anabasis," some of them simplified; the object of the authors is to preserve Xenophon practically undefiled for later study. In "Elementary Greek," on the other hand, the reading, beginning with the eighth lesson, is the "Anabasis" itself, with some slight modifications in the first few lessons. This plan enables the student to cover during the study of this book the first two chapters of the "Anabasis," and makes the completion of the first book no difficult matter for the year.

The most notable of recent American text-books of mathematics are Bôcher and Duval's "Introduction to Higher Algebra" (The Macmillan Co.), Townsend and Goodenough's "First Course in Calculus" (Henry Holt & Co.), Osgood's "Differential and Integral Calculus" (The Macmillan Co.), and Woods and Bailey's "Course in Mathematics" (Ginn & Co.). These works are all outgrowths of courses of instruction. Prof. Maxime Bôcher's book, being strictly an introduction to, and not a compendium of, higher algebra, is far less comprehensive than the classic works it most resembles in spirit and grasp, namely, Serret's celebrated "Cours d'algèbre supérieure" and Weber's "Lehrbuch der Algebra." For example, the great doctrines of invariants and groups are treated only briefly, and the Galois theory of algebraic equations not at all. Nevertheless, the volume is rich in content, including such cardinal matters as polynomials, linear dependence, transformations and combinations of matrices, bilinear and quadratic forms, the theory of elementary divisors, and related topics. The minutely critical spirit of modern mathematics is here manifest in the emphasis rightly placed on the consideration of exceptions to the "general" validity of sweeping propositions. The most conspicuous merit of Townsend and Goodenough's "Course" is due to its being a joint product of a professional mathematician, who is responsible for the theory, and a professional teacher of mechanical engineering, who is mainly responsible for the practical aspects of the work. The authors deserve hearty commendation for thus attempting to meet the demand, coming from technological schools, that those who are charged with the teaching of fundamental mathematical subjects shall be less indifferent than hitherto to their instrumental as distinguished from their purely scientific significance. In Prof. W. F. Osgood's book culminate the efforts of a generation of mathematicians to produce a beginner's calculus that shall be both rigorous and understandable, theoretic enough to be scientific, and sufficiently practical for the needs of the engineering student. For directness and simplicity of presentation, clearness and correctness of statement, judicious accentuation, and happy mingling of the concrete and particular with the abstract and general, this work both makes and marks an epoch in the history of its subject. In view of such merit one hesitates to note so minor an infelicity as the recurring phrase, tangent *in* a point; or to query why the basal notion of limit is not defined, instead of being taken for granted. Woods and Bailey's book is the first volume of a work which aims to present together—in a single course—the algebra, analytic geometry, calculus, and differential equations usually required of engineering students in the first two years of their professional study. The attempt represents a wholesome reaction against the long prevailing practice of presenting these subjects in as many separate courses, and of thus incidentally giving the student the impression that the several doctrines are essentially insulated and independent, instead of being, as in fact they are, but different parts of one complicate instrument or different organs of a single body of doctrine. The danger of the reaction lies in the opposite extreme namely, of so presenting a group of interpenetrating disciplines that they shall have the effect of a mere *mélange*.

Among books on electricity we may note "Elementary Principles of Continuous-Current Dynamo Design," by H. M. Hobart (The Macmillan Co.). The several chapters, excepting the last, "The Application of Reversing Poles to Continuous-Current Dynamos and the Design of Continuous-Current Dynamos for High Speeds and Voltages," deal in an excellent manner with the various items which must be considered in the design of direct current machinery. The final chapter, however, is extremely weak, and does not do credit to the well-known ability of the author. This book may be regarded as a modification of the direct current section of the excellent volume on "Electrical Generators," written by Mr. Hobart in collaboration with Mr. Parshall. The work is now brought within such dimensions as to be available for the "pocket" of the student, for whom it is undoubtedly an excellent text-book. "Continuous Current Engineering," by Alfred Hay (D. Van Nostrand Co.), deals with the elementary electrical and magnetic phenomena, and with their various applications to practice. The matter is well presented, and the work forms a fine companion volume to the author's excellent treatise on "Alternating Currents." The book should be of considerable value to the student in engineering, since it combines within the same covers the fundamental phenomena and their applications. "The Construction of Dynamos," by Tyson Sewell, lecturer at The Polytechnic, London (D. Van Nostrand Co.), may be criticised upon the ground that certain matter is introduced which is foreign to the design of dynamos. The work is an ambitious attempt to produce a book in a field already well covered; and, while forming, perhaps, an excellent lot of lecture notes, it is not on a par with other works in its field. "Electric Railways," Vol. II., by Sydney W. Ashe of the Polytechnic Institute, Brooklyn (D. Van Nostrand Co.), contains some excellent articles, such as "Cost Data" and Mailloux's treatment of "Car Distribution"; but the author has not always shown sound judgment in the selection of his illustrations or specific examples. Taken as a whole, however, the work should be useful to the student in showing the various factors which must be considered in the simple layout of an electrical railroad system. "Manual of Wireless Telegraphy," by James Erskine Murray (D. Van Nostrand Co.), discusses the phenomena and pieces of apparatus employed in wireless telegraphy. The final chapter is an excellent treatment of all the problems to be considered in the design and calculations of a specific wireless telegraph station. The book is well arranged, and is a valuable addition to the literature of wireless telegraphy. "Wireless Telephony," by Ernst Ruhmer, translated by James Erskine Murray (D. Van Nostrand Co.), discusses the problems of the wireless telephone as developed by light or heat, radiation, and electrical forces. The subject in itself is not far advanced, the theory not definitely settled; and this fact the author recognizes by giving a semi-popular treatment. The matter is well presented, and it should prove interesting reading to all who take an interest in the advances of electrical engineering.

"Practical Physics," by C. M. Crawford and Barry Macnutt (3 vols., the Macmillan Co), is an attempt to make the laboratory course in physics more than a succession of measurements. By the assignment of problems, the solution of which requires experimental data to be found by the student, the course becomes, as it should be, a means of obtaining clear conceptions of the subject, and thereby extending knowledge of physics by future research. The work is well done, though an elementary study of physics is a prerequisite to the use of the book. "Principles of Physics," by Alfred Page, revised by Arthur W. Goodspeed of the University of Pennsylvania (Ginn & Co.), is a modern edition of an older book, covering the subject as required for college entrance and for the first year of some colleges. The treatment is consistent and clear; the problems are numerous and modern. "A Text Book in Physics," by William N. Mumper, professor of physics in the State Normal and Model Schools of Trenton, N. J. (American Book Co.), is an elementary text from the school point of view, but not intended for a laboratory manual. It is easy reading; too easy, if anything. Moreover, the attempt to introduce into an extremely elementary text any ideas concerning the operation of steam engines and steam turbines, both of which are illustrated and briefly described, follows an unhappy tendency in much of the present elementary instruction throughout the country. This superficial treatment in elementary schools leads students to think they know a subject when they have learned scarcely more than its technical words.

CURRENT FICTION.

The Weight of the Name. By Paul Bourget; translated from the French by George Burnham Ives. Boston: Little, Brown & Co.

In the hands of so skilful a translator as Mr. Ives, there was no need to fear a serious loss of that delicate precision which counts for so much in M. Bourget. This touching story keeps in its English dress much of the peculiar charm, the quivering intensity of emotion never verging upon mawkishness, of the original. The theme is that very ancient one most recently, perhaps, treated by Mrs. Wharton in her "Madame de Treymes"—the struggle of the new régime and the old, of the ambitious modern against the tyranny of race. In this case the issue is decided by fate, but the conflict is none the less sharp because the decision is in the hands of the gods. It is hard to say which of the protagonists arouses the greater sympathy—the young malcontents or the guardian of tradition.

Count Landri de Claviers-Grandchamp, son of the Marquis of that ancient name, has reached his thirtieth year before his reaction against the restraint of caste comes to the point of open revolt. Naturally active and ambitious, he has early been made to feel the barrier of his nobility, to experience "that paralysis of the youthful being, quivering with life, hungry for action, because of a past which was not his own, suffocation by prejudices which he does not even share." The situation has been made but the more difficult from the lofty character of the old marquis, who adores the past without being a fool. The son has taken advantage of the only semblance of career offering itself by entering the army, and has become devotedly attached to the widow of a fellow-officer, bourgeoise by birth, but of a sensibility and refinement equal to his own. Such a marriage will be a criminal mésalliance in the eyes of the father, and the young man finds himself, when the narrative begins, confronting the necessity of announcing his betrothal with the certainty of alienation from his family. It is probable also that unless he leaves the army he will have to conduct a forced inventory of church property, which will seem to the father an act of treason and sacrilege combined. Suddenly the fact is revealed to the count that he is not a Claviers-Grandchamp, but the son of a liaison between his mother and a friend of the marquis. The real father dies, leaving his fortune to the marquis, who is badly in need of it, but who is informed anonymously of the fact of the former relation between his benefactor and his wife, and of the real parentage of the count. Meanwhile the unfortunate has judged it his duty to conceal the fact from his supposed father, and to submit himself finally to the tyranny of the name. He refuses to make the church inventory, and is retired from the army just before the marquis's discovery makes the sacrifice vain. But the name is still to be protected. It is arranged that the marriage with the bourgeoise, no longer really a mésalliance, shall take place, to be made the pretext of a breach between the marquis and his supposed son. The plan is carried out; and the young pair determine to leave France, so that the name to which they have no right may be dropped without scandal. The stern old marquis determines that the race shall die with him, and sells all his property in order to repay the accursed legacy of his wife's lover. The final scene, in which, vanquished by the love which his rich nature cannot unlearn, he hastens to the dingy Liverpool hotel to give his final farewell and blessing to the self-exiled pair, sets its benign signature upon a portrait noble in many senses.

The Daughter. By Constance Smedley. New York: Moffat, Yard & Co.

This workmanlike and readable novel is an English story, having for its heroine Delia Willett, the daughter of rich people who could not dissuade her from plunging into active socialistic work in London. A millionaire whom she does not know, hears her addressing a meeting, falls in love with her, and contrives that she, in order to raise a large sum for the "Cause," shall marry a young mechanic—himself in thin disguise. The trick wins her, and though she vows he's a wretch for a season, it is chiefly because of her former hate for the millionaire and snob. The author bas turned out a good tale—a sane mixture of the socialistic, purposeful, and often hectic novel, with the healthy story of an admirable love match. There are crudities by the way, such as the poor bluster of the father, and conventional turns of phrases. But "The Daughter" has interest, the interest not of a great or a literary product, but of a faithfully planned and well told story.

Seeing England with Uncle John. By Anne Warner. New York: The Century Co.

Uncle John, an American and proud of it, is showing a silent and unseen gentleman called Dilly about England. Uncle John's niece, married to an Englishman, pursues him throughout the book with ready hospitality and no success till the last few pages. The volume consists of the independent comment of uncle and niece on sights of guide-book interest. In antiphonal chapters the uncle discourses to his dumb companion, and the girl rivals Clarissa Harlowe in the length of her letters. The following is typical of Uncle John's wit:

> Curious—very curious! I never saw the place a king lived in before. Look at the soldiers with muffs on their heads: it must be handy to pull down over their ears cold days in winter!

As the author states, the method is stenographic; it is therefore inartistic. And consequently, as the native humor has little savor, one prefers the twenty odd pages of index. Yvonne's letters, it should be said, are fairly pleasant feminine reading.

The Supreme Gift. By Grace Denio Litchfield. Boston: Little, Brown & Co.

A careless philanthropist, who ruins himself and his dependents, and whose daughter shows her willingness to marry a detestable man in order to pay off all money debts—such is the skeleton of this novel. In it "Society" is nonchalant, superbly dressed, toys with its priceless fan, and either adores or ignores the poor. The characters who are manœuvred through "The Supreme Gift" wear such definite outlines as: he is good but weak; she is a noble soul; he is a cad. Hallam, the villain who can quote French at will, is meant for a puppy, but acts like a puppet. The erring parent worries the reader with his continued hysteric appeals to the Deity. As for the heroine, Joan, the sentimental reviewer would love her readily for the dangers she has passed, could he convince himself that the dangers are real. One searching earnestly for the novel "as she is advertised to be," must be bitterly disappointed in this volume.

The Nun. By René Bazin. New York: Charles Scribner's Sons.

This is the story of a weaver's daughter, Pascale, who, with her companion nuns, is expelled from her congregation of St. Hildegarde by order of government. The others find comparative safety and peace in employments ranging from railway gate-keeping to nursing, while she falls into the care of her criminal cousin, Adolphe Mouvand. Her rescue is planned by the sisters who have maintained a constant watch over her, but while escaping she is shot by Adolphe. The book is typically French in its clear construction and dramatic curtness. The indicative mood prevails—things are explained, demonstrated, or reasoned out rather than acted; and the characterization is clever, but compressed for each individual into a page or so of initial biography. The translation suffers but little from those frequent *un*translations or settings over from the original, so often lamentably present. It is probable that the large success of "The Nun" abroad is due to a sympathy for the plight of the Church, impossible for many American readers to share.

Marcia Schuyler. By Grace Livingston Hill Lutz. Philadelphia: J. B. Lippincott Co.

What starts the series of conventional incidents in this romance is the readiness with which David Spafford marries Marcia, the younger sister of Kate Schuyler, to whom he has long been engaged. Kate has just eloped with a military man, and the guests must be given a wedding. In order not to make the family disgrace too apparent, the father suggests that Marcia make amends for her sister's misconduct. She agrees, and her bridegroom instantly remarks:

> Child, you are good to me, and I thank you. I will try to make you happy if you will go with me, and I am sure your going will be a comfort in many ways, but I would not have you go unwillingly.

After this beginning the story tells of David's terrible sorrow and gradual love for Marcia, a would-be lover's stereotyped villany, Kate's jealous machinations, and the acid tiresomeness of maiden aunts. The date of the action is fixed by the popularity in its pages of "Home, Sweet Home," and a description of the first steam railway. Girlishness is the key-note. Little new, brilliant, or finished in the way of narrative writing can be discovered. The book needs a very hot day and a hammock.

In the Potter's House. By George Dyre Eldridge. New York: Doubleday, Page & Co.

This exhibition of shapes of clay includes the wide extremes that may be met in a Maine village untouched by modern thought. It embraces the minister who is of the oldest theological type, and the particularly unpleasant and explicit primitive man. Between these are to be found every shade of the godless and the hell-fearing; deacons and Dogberries with varyingly elastic views of theology and conduct; the young girl who confesses; the woman for whom Christianity was "a theory of salvation which, once accepted, marked no really distinctive attitude toward the affairs of practical life," with wbom "two and a half centuries of New England ethics outweighed nineteen centuries of the Christian Church." The exposition is of sin, intolerance, dogma, and salvation. While certain incidents may be classed as "powerful" the really strong is outweighed by the repellant. The writer offers here and there an epigram, but too often recalls Disraeli's criticism of Gladstone that he was "intoxicated by the exuberance of his own verbosity."

Concerning Lafcadio Hearn. By George M. Gould, M.D. With a Bibliography by Laura Stedman: Philadelphia: George W. Jacobs & Co.

So much of the best material has already been printed in "The Life and Letters of Lafcadio Hearn," by Elizabeth Bisland, that Dr. Gould's volume, as he himself would no doubt gladly admit, must be regarded as a complement and, to a certain extent, a corrective of that work. For psychological value, it is not likely that any documents will be discovered equal to the autobiographical notes on Hearn's early life and the letters to H. E. Krehbiel published by Mrs. Bisland. Yet there is much that is interesting in Dr. Gould's book. To begin with, he approaches the subject from a novel point of view. He is an eye specialist, well known for a series of studies in which he has derived the eccentricities of various geniuses from faulty vision. In this respect Hearn, with his one eye intensely myopic, offered a tempting field which the oculist could not avoid. We confess to have entered with some misgivings upon the chapter called "The Poet of Myopia," for these pbysical derivations may be so easily exaggerated and are at bottom so dangerously elusive. It is tempting to explain the almost complete substitution of color for form in Hearn's descriptive writing by the fact that he actually saw the world as a flat plane, and to hold that his ghostly imagination was due largely to the vague and sudden appearance of physical objects as they passed into his vision. But such a theory to have any real value must be constant. Now, Samuel Johnson was also extremely short-sighted, and by the same token he should have written in the vein of Lafcadio Hearn. The truth is that the substitution of color for form and the delight in the vague and the ghostly and the grewsome are a recognized feature of the whole romantic movement of which Hearn is a late and exaggerated example. Hearn's defective vision may have strengthened this romantic tendency, but to look upon it as a cause is to ignore history.

And indeed, Dr. Gould does not deny the validity of character, or lack of character, in shaping this artistic impressionism, although he subordinates it to the effects of morbid vision. Hearn, he says in the Preface, was "deprived by nature, by the necessities of his life, or by conscious intuition, of religion, morality, scholarship, magnanimity, loyalty, character, benevolence." And again, to defend him against the charge of disloyalty to friends:

> There was nothing behind the physical and neurologic machine to be loyal or disloyal. He had no mind, or character, to be possessed of loyalty or disloyalty. For the most part, he simply dropped his friends, and rarely spoke ill of them or of his enemies. There was nothing whatever in him, except perhaps for the short time when he said his friends had given him a soul, to take the cast and function of loyalty or disloyalty, gratitude or ingratitude. One does not ask originality or even great consistency of an echo, and, of all men that have ever lived, Hearn, mentally and spiritually, was most perfectly an echo. The sole quality, the only originality, he brought to the fact, or to the echo, was color—a peculiar derivation of a maimed sense. He created or invented nothing; his stories were always told him by others.

It is an ambiguous form of defence, and, in truth, there is something too much of it in the book. Dr. Gould returns again and again to this essential lack of will and character in Hearn, and his testimony is the more disquieting because he knew Hearn intimately, was Hearn's host in Philadelphia, and, as he says, inspired the poor outcast with the only notions of morality and faith that ever came to him

In the actual details of Hearn's life Dr. Gould presents not much that is new. He brings evidence to show that the commonly accepted story of Hearn's birth and family is highly doubtful; he has some words about an unnamed gentleman in Cincinnati to whom Lafcadio was, as it were, consigned by a brother-in-law in Ireland, and who is curiously non-committal about his charge: "I know nothing, nobody knows anything true of Hearn's life. He may have been related to my wife's family, but I never knew." We learn also from Dr. Gould that Hearn was discharged from the Cincinnati *Commercial* because he sought a license for an open marriage with a colored woman; we get rather more precise glimpses of the reckless immorality of the man's ways in New Orleans and elsewhere (of which we already knew quite enough), but on the whole, the picture of the strange exotic wanderer is the same as what we had, only with the shadows darkened.

By far the most valuable parts of the book are those in which Hearn's literary activities are traced. Dr. Gould gives an altogether preciser account of the newspaper work in Cincinnati and New Orleans. He quotes fully in a note the story of the Tan-Yard Murder case in the *Enquirer*, which first brought the young reporter into notice—one of the most hideously repulsive things ever written. He reproduces one or two of the editorials in the New Orleans *Times-Democrat*, including an exposition of Hearn's theory of translation suggested by "a number of interesting and severe criticisms upon translations from foreign authors" in the *Nation;* and he gives also a list of these editorials, with the welcome promise that a large amount of Hearn's work for the *Times-Democrat* is to be reprinted in book form. And there are other extracts and quotations given by Dr. Gould—bits of strange confession and extraordinary description from letters and fugitive publications, a group of charming Japanese fairy tales, and the like. It is worth while to get this bit of characteristic revery:

> So that when the long, burning summer comes, and the city roars dustily around you, and your ears are filled with the droning hum of machinery, and your heart full of the bitterness of the struggle for life, there comes to you at long intervals in the dingy office or the crowded street some memory of white breakers and vast stretches of wrinkled sand and far-fluttering breezes that seem to whisper, "Come!"
>
> So that when the silent night comes,—you find yourself revisiting in dreams those ocean-shores thousands of miles away. The wrinkled sand, ever shifting yet ever the same, has the same old familiar patches of vari-colored weeds and shining rocks along its level expanse; and the thunder-chant of the sea which echoes round the world, eternal yet ever new, is rolling up to heaven. The glad waves leap up to embrace you; the free winds shout welcome in your ears; white sails are shining in the west; white sea-birds are flying over the gleaming swells. And from the infinite expanse of eternal sky and everlasting sea, there comes to you, with the heavenly ocean-breeze, a thrilling sense of unbounded freedom, a delicious feeling as of life renewed, an ecstasy as of life restored. And so you start into wakefulness with the thunder of that sea-dream in your ears and tears of regret in your eyes to find about you only heat and dust and toil; the awakening rumble of traffic, and "the city sickening on its own thick breath."

Besides Dr. Gould's long and complete analysis of all Hearn's published works, with extracts from reviews of the time, there is a full bibliography added by Miss Laura Stedman, which includes even the manuscripts left by Hearn. These two sections will prove perhaps the most valuable part of the book for future writers and publishers. One is surprised at the large amount of writing he has already called out, and the high praise he has elicited; one has thought of him rather as the delight of the few, and finds on the contrary that he is in a fair way to rival the international reputation of Poe.

Literature and the American College. By Irving Babbitt. Boston: Houghton, Mifflin & Co. $1.25 net.

Professor Babbitt's readable and admirably written little volume is made up of four or five essays already printed in the *Nation*, the *Atlantic Monthly* and the *Harvard Graduates' Magazine*, and an equal amount of new introductory matter and connective tissue—*aliter non fit, Avite, liber.* The occasional repetitions and slight defects in unity of composition that result from this economy are more than redeemed by the greater wealth of ideas and illustrations that deposit themselves in chapters written at different times and revised in altered moods. The central thought of the book is that the old-fashioned culture and discipline of the American College (somewhat idealized perhaps in the retrospect) are being crowded out of modern life and education by the encroachment of the sentimental license of the kindergarten from below, and the pressure from above of specialized pedantry in the graduate school. The remedy is to be found in a return to humanism, as Professor Babbitt would define it—the severe selective and assimilative study of great literature in a spirit of high seriousness, equally removed from the philology of the graduate school at one extreme and the impressionism of the extension lecturer at the other. The entire first chapter is given to the working out of this definition with the aid of Gaston Boissier's study of *humanitas*. The word in order to serve our purpose must be reclaimed from the pragmatists who have annexed its gracious associations to the latest philosophical fad; it must be generalized from its accidental historical connotation of the undiscriminating enthusiasm of renaissance erudition, or the rigid pedantry of seventeenth century pseudo-classicism; and it must be sharply distinguished from humanitarianism with which it is commonly confused. Terence's "Humani nihil a me alienum puto" and Schiller's "Seid umschlungen, Millionen" are ejaculations of humanitarianism not formulas of humanism, which "is more selective in its caresses."

With Professor Babbitt's main ideas we are in cordial sympathy. In the chapters on "Literature and the College," "The Doctor's Degree," and "The Rational Study of the Classics," for example, we heartily concur with the essential purport and spirit of Mr. Babbitt's admonitions, yet with some reserves as to the impression that they are likely to make upon hasty readers. He brilliantly satirizes the aping of scientific methods in literary studies, the "hard literalness of mind" which deprives even the humanities of all humane quality, the fetich worship of the doctor's degree, the source hunter who never asks himself whether either model or copy possesses any significance for the human spirit, the student of comparative literature whose comparisons have no reference to any absolute standards of literary values, the mediævalist who is deeply versed in worthless *chansons de geste* but ignorant of Dante, Petrarch, and Chaucer, the philologist who strains to be "literary" and achieves only dilettanteism. And if at any time his vivacity betrays his ideal of a judicially poised humanism,

> Turning to scorn with lips divine
> The falsehood of extremes,

he disarms criticism by the deft interposition by the side of every epigram or hyperbole of its appropriate qualification. Nevertheless, we may retort upon him his own treatment of the "Chicago professors," specimens of whose discoveries he cites from the cheap newspapers. He is aware that the men quoted are generally not professors, and that the discoveries are largely due to the originality of the reporters. But he is only "giving the general impression." Similarly, our general impression is that Professor Babbitt is not quite fair or generous in his treatment of American classical scholarship. It is not necessary to dwell on the taunt that "we do not get from our teachers of the classics any equivalent of such writing as that of Professor Butcher in England or of Gaston Boissier in France." There may be many reasons besides a perverse and narrow scholarship why we have no one man who writes with the charm and abundance of the French Academician. The type of pedant and Dryasdust that provokes Mr. Babbitt's satire—unread in the literature which he professes to teach, incapable of general ideas—is only too common. But the "philological syndicate" that reserves promotion for men of this stamp is surely an exaggeration; and the young philologist who said of one of his colleagues: "He is almost a dilettante—he reads Dante and Shakespeare"—was evidently jesting. The literary pose of the philologist who has arrived is doubtless very funny. But it is unfair to announce that the literary velleities of the philologist are always merely a pose of a mood of dilettanteism, and never the revelation of an indwelling humanistic spirit. It is impossible to mention names. But many of the foremost American philologists have certainly been lifelong enthusiastic and intelligently appreciative readers of the classics. If some of them are inclined to reserve this humanism for their own inner life and emphasize linguistic and the technique of scholarship in their teaching and writing, they have some excuse in the quality of the students sent up to them from the secondary schools, and the lack of an appreciative public. They do not care to vie in eloquence with the department of "Literature in English," and they find the class-room hour too short for interpreting literature and life to students who have not learned to construe.

In his assault upon the doctoral dissertation Mr. Babbitt sometimes seems to forget his own distinction between the college and the university. The composition of the dissertation occupies one year at the close of eight or more years of classical study. The writing of dissertations by students to whom these years have brought neither scholarship nor culture is to be deprecated. The habitual choice of narrow and trivial themes is a legitimate topic of satire. Premature specialization, even in the graduate school, that incapacitates the student for any other choice is a deplorable error. But for the dissertation itself as an instrument of graduate instruction something may still be said. The very experience of producing, seeing through the press, and submitting to the judgment of the competent one piece of exact scholarly worth may be a valuable preparation for future work. If the candidate for a degree has not acquired scholarship and assimilated culture at this stage of his career, he will not gain these precious possessions in the one year given up to his dissertation. And the attempt to write a dissertation which the university is willing to publish is an easily available test of both student and teacher. In practice it is doubtless true that men of inferior capacity are, in the competition for numbers, too often encouraged to take the degree; and that, partly for this reason, partly from the limitations of the teacher, petty and mechanical subjects are too often chosen or imposed. The remedy is to be sought, not in the complete abandonment of the dissertation, but in the limiting of it to the proper students, as also in the courageous maintenance of high standards and the gradual broadening of our scholarship.

Old and New Japan. By Clive Holland; with 50 colored pictures by Montagu Smyth. New York: E. P. Dutton & Co. $5.00.

The Unveiled East. By F. A. McKenzie. New York: E. P. Dutton & Co. $3.50.

The Japanese Nation in Evolution. By W. E. Griffis. New York: Thomas Y. Crowell & Co. $1.25 net.

The tide of books on Japan still flows. Every reader may have a land to his choice —*quot homines tot sententiæ*—and the three volumes on our list represent three different worlds. Does one love sentiment and a land where every prospect pleases and never man is vile, let him purchase "Old and New Japan"; if he despises, yet fears, the Asiatics, he can satisfy his soul with "The Unveiled East"; while if he wishes studies in history, politics, and religion, there is "The Japanese Nation in Evolution." But if one will read the three works together, he may perhaps repeat the old question, What is truth? For example, from "Old and New Japan" we quote:

> Owing to the absence of any considerable number of great manufactories, the polluting smoke, which is the ban of large Western cities, is never seen hovering like a heavy pall over the Mikado's Empire. And with the absence of these there is a corresponding absence of the terrible, soul-destroying, and unhealthy conditions of factory life, which afflicts the more progressive of Western nations—p. 140.

And then from "The Unveiled East":

> I stood in the main street of Osaka and gazed around. Was this Japan? A murky river with muddy and malodorous water and carrying many ugly lighters bordered one side of the road. The sky-line was marked by giant factory chimneys, each belching forth its thick, black smoke. The air, heavy, damp, and gloomy, might have been that of Manchester on an unfavorable day. A party of women passed by. Where were now the dainty daughters of Japan? These were tired, for factory hours are long in Osaka. Their clothes, shabby and sad-colored, matched their prematurely aged faces. There were children among them, little girls of nine and ten, who had been all day at work in the mills, like their elders—p. 140.

"Old and New Japan" is a beautiful piece of book-making—almost none of the many beautiful books upon Japan excels it. It has thick paper, beautiful type, broad margins, an artistic cover, and charming pictures. Its author loves the scenes he describes and he has sought to understand sympathetically the people with whom he has sojourned. Pictures and text go well together, but, after all, the pictures are the chief attraction. They are delightful. not to be mistaken for photographs or for realistic reproductions of things as they are. It is Japan arranged, posed, colored, made artistic. In the text, too, we never quite touch reality. Indeed, why should we? Let Japan remain soft, peaceful, polite, happy, picturesque, to please us in a brief visit when we desire a picnic. Here and there the author goes beyond his province, and one must not take his learning too seriously. He transcribes parts of Chamberlain's translation of the "Kojiki," but evidently he did not read the preface, for he still takes the official chronology at its face value. He has heard of the "Nihongi," and tells his readers that it has not been completely translated, though Mr. Aston admirably performed that feat years ago. We are informed that Shinto is the true religion of Japan, and that it consists in nature worship and reverence for dead ancestors; that patriotism is its offspring and that Buddhism and Confucianism, while modified by Shinto, left the earlier faith intact. None of these statements is exact. Original Shinto had nothing to do with reverence for dead ancestors, this element in Japanese religion being the offspring of Chinese religion. A cursory study of Mr. Satow's "Revival of Pure Shinto" in comparison with the "Kojiki" and the "Nihongi" would have shown that it is Shinto which has been modified throughout. One notes inaccuracies even in the few and superficial criticisms of the Japanese: "A different price for the foreigners is the recognized rule." A different price for the rich, the noble, the distinguished Japanese is the recognized rule; for, with the traditions of the feudal system still remaining, price is based on the ability of the purchaser to pay, as indeed it still is among us with lawyers and doctors. Nevertheless the book is a charming description of a charming land and people.

But how different it all looks to the author of "The Unveiled East"! He discloses an awful reality—the Yellow Peril. He sums up his thesis in the second sentence in the book: "Japan has entered fully upon a campaign of aggressive imperialism." Again,

> Men four years ago feared a Russian Colossus, but that which men yesterday believed Russia to be in the Far East, Japan now is. . . . The policy is forced upon Japan by two causes, national pride and commercial interest.

Mr. McKenzie assures us that Japan, in seeking to dominate the Pacific, advances along three lines: territorial expansion, increased fighting power, and an aggressive commercial campaign. Japan is building up an immense navy, of course for purposes of further aggression. The volume is intensely British in its prejudices, fervently anti-Japanese, and journalistic in style. It makes serious statements, but without naming authorities. The Japanese are shown, as indeed all confess, brutally to have mistreated the Koreans after the war, when a swarm of the lowest representatives of the race poured into the country. Yet similar indictments have been framed against the Americans in the Philippines, the British in South Africa, the British and the Germans in Africa, and the French in Southern China. We would not mitigate censure by such comparisons, but would point out that a people is always seen at its worst after conquest. For the rest, the increase of Japan's navy represents a policy of aggression precisely as much as does the increase of the navy of the United States. It is in other directions that Japan turns its energies, in the direction of peace and commerce. That certain industries of the West will find Japan a serious competitor is plain; but that Japan when rich will be a less important customer of the United States than is Japan poor it is hard to believe. The book, with all its earnestness, is not so true to essential facts as is "Old and New Japan," for the true East has not unveiled itself to the author's eyes or mind.

Dr. Griffis is our veteran authority upon Japan. He gave us "The Mikado's Empire" in 1876, and it still remains, in many respects, one of our best books upon the subject. For the thirty years succeeding he has faithfully studied the available material, and it is interesting to compare his last book with his earliest. The volume contains no novelties for those who are familiar with the recognized authorities; and Dr. Griffis makes ample acknowledgments of his indebtedness. But he has brought together, in convenient though somewhat ill-ordered shape, the results of his reading. The main purpose of the work seems to be to disprove the Mongolian origin of the nation. He begins by attempting to prove that the Japanese are Aryan; but our older terms for races have lost their significance. Years ago we knew what Aryan meant, but who knows now? The theory is gone and no new one replaces it. If only Dr. Griffis would prove that the Ainu are Aryan, we should rejoice; for then once more the word would have a meaning.

Histoire de la Maison de Baglion: Les Baglioni de Pérouse, d'après les chroniqueurs, les historiens, les archives. Par Comte de La Dufferie. Pp. 571. Poitiers: Société Française d'imprimerie et de librairie.

This enormous volume is published in two editions; one embellished by 46 full-page illustrations, the other consisting of the text alone. As a work to be placed among the family archives of the French branch of the House of Baglioni it has, no doubt, an excellent *raison d'être;* but we believe that it will have but scant attractions for the general reader and still fewer for the serious student.

To most tourists the Baglioni are known only through an eminently picturesque chapter in the late John Addington Symonds's "Sketches in Italy"; and though some, perhaps, have also profited by Edward Strachan Morgan's translation of the Chronicle of Matarazzo, there are few who realize what a prominent part that great house played in the history of Perugia from the days of Frederick Barbarossa to the death of Giovan Paolo in 1520 (see the two monographs of Count Vincenzo Ansidei on "La storia delle famiglie perugine Baglioni e Degli Oddi" 1901 and 1902). Unfortunately, however, the Count L. de Baglion de La Dufferie fails to perceive that the history of which the wars and violences of the Baglioni formed a part is of infinitely more importance than are the Baglioni themselves. His genealogical tables may be unimpeachable, but his historical knowledge is neither accurate nor profound. We will content ourselves with a single typical instance.

In 1358, the Perugians defeated the Sienese at Torrita in the Valdichiana, and advanced to the walls of Siena, whence (in the words of one of their own chroniclers) they carried away as a trophy "le catene de la iustizia de Siena," *i. e.*, the chains of the gallows which stood outside the Porta Nuova. In this matter all the chroniclers, whether Sienese or Perugian, are in agreement; but Count L. de Baglion de La Dufferie will have it otherwise. On page 15, he says:

> Pérouse connut cependant de beaux succès; celui de 1358 marque un point culminant dans sa gloire. Les siennois sont écrasés à Turrita. 42 de leurs bannières, prises en trophées, sont traînées à la queue des chevaux dans la capitale ombrienne, alors que sous les pattes du griffon communal les vainqueurs accrochent *les chaînes du Palais de Justice de Sienne.*

We will not discuss the absurdity of the statement that the war of 1358 "marked a culminating point in the glory of Perugia" (that misconception has been fully exposed in a recent article in the *Bollettino Senese di Storia Patria* anno xiv., Fasc. iii.) and will confine ourselves to the startling assertion that the Perugians "accrochent les chaînes du Palais de Justice de Sienne." Where did our author get his facts? His authority is not the chronicles and archives of his title-page, but none other than "The Story of Perugia," by Miss Symonds and Miss Duff Gordon. The originator of the fable is, of course, the always inaccurate Bonazzi, who on page 447 of his "Storia di Perugia" informs us: "Si portavano in trionfo le catene del palazzo di giustizia di Siena." Following in his footsteps, the authors of "The Story of Perugia" assure us, on page 22:

> Perugia's culminating success seems to have been at Torrita in 1358, when the Sienese were defeated, and forty-nine banners brought back tied to the horses' tails, and the chains of the Palace of Justice torn away and hung in triumph at the feet of the Perugian griffin.

Elsewhere (p. 118) they convert the chains into keys, and quote the late Adamo Rossi as the authority for their preposterous assertion. What Professor Rossi really wrote is this ("Il Palazzo del Popolo in Perugia," 1864, p. 19):

> Ai piedi di questi animali (*i. e.*, the bronze griffin and lion above the northern door of the Palazzo) si appesero . . . nel 1321 i ferramenti e chiavi delle porte di Assisi, e nel 1358 le catene della giustizia di Siena.

It is, of course, possible that the Count was misled by this misuse of an honored name; but apparently he preferred to trust to a statement in a modern work by foreign authors rather than to the contemporary chronicles of Siena and of Perugia. Nor does the blunder stand alone. Did space permit, we could adduce plenty more to bear it company.

Memoirs of the Comtesse de Boigne. Edited by Charles Nicoullaud. Vol. II., 1815-1819; Vol. III., 1820-1830. New York: Charles Scribner's Sons. $2.50 net, each.

The second volume of the Comtesse de Boigne's "Memoirs" is of greater interest than the previous volume (reviewed in the *Nation* September 12, 1907, p. 237), although the writer's strong temperamental prejudices invalidate the work as a contribution, not to say to history, but even to the interpretation of character. Her editor has to confess:

> There is always a substratum of truth in her stories, but she often uses it, though always with wit, to subserve her own inclinations to what she believes to be the welfare of her party.

This very worldly countess had above all an aversion to devout and religious spirits. The Queen of Etruria, Marie-Louise de Bourbon, afterwards canonized by Pius IX., was "untidy," a "vulgar personage," and "her conversation no better than her appearance." Louise de Condé, abbess of Remiremont, was "low, vulgar, and ignorant," the "caricature of the stage-nun," and "one was inclined to sympathize with the Deity, whom she was continually besieging with her prayers."

Mme. de Boigne relates her experiences at Turin and in England where her father was successively the French representative. One gets a vivid impression of life, or rather its absence, at the beginning of the nineteenth century in the capital of a third-rate kingdom like Piedmont, under a narrow-minded king, in a gossiping and scandal-mongering court, whose only diversion was the opera; and of society in England under the Prince Regent, among its match-making women. It is of her own sex that Mme. de Boigne gives the most lifelike portraits, and the descriptions are very striking of the mystical Mme. de Krüdener, whose strange influence over the Emperor Alexander is thought to have contributed to the Holy Alliance and the destinies of Europe; of Princess Caroline, wife of the Regent, chasing Murat over Europe and riding through Genoa in attire as suited for the circus as the street; or of Princess Charlotte, whimsical and quick-tempered, but the darling of the English people, whose queen she would have been but for her early death.

Mme. de Boigne's witty cynicism concerning her friends inclines the reader to that sympathy towards her husband, with whom she could not live, which she herself felt for the Deity in the case of the Princesse de Condé. But she is an amusing companion from a safe distance beyond the grave, where she has perhaps learned to appreciate the old precept which she did not practise, of only good concerning the dead.

The third volume, completing the work, deserves less consideration. The most vivid pages are those describing the circumstances connected with the death of the Duc de Berry, but for the larger part the volume is made up of small talk.

To the Top of the Continent: Discovery, Exploration, and Adventure in Sub-arctic Alaska; the first Ascent of Mt. McKinley, 1903-1906. By Frederick A. Cook. Illustrated. New York: Doubleday, Page & Co. $2.50 net.

The conquest of Mt. McKinley, the highest peak in North America, by Dr. F. A. Cook was a notable feat in mountaineering. For, to the perils and hardships of high Alpine or Himalayan ascents were added most of the difficulties of Arctic exploration. The foot of the mountain could be reached only by passing through immense swamps and fording numberless icy streams amid constant and drenching rains. Then the climb was over glaciers and up almost perpendicular slopes of crusted snow down which avalanches were continually thundering. Torrid heat and polar cold were at times combined; for the bright burning sunbeams caused to fall "from our faces big beads of perspiration which froze in icy pinnacles on our garments." Significant also is the fact that the summit was reached after an eight days' climb by Dr. Cook and a single companion, who carried on their backs not only food and fuel for a fortnight, but a tent and sleeping bag. A remarkable experience was the immunity from disease in both expeditions:

> For two months we travelled with wet feet. In rain or sunshine, in wind or calm we went without coats. We slept in dripping jungles, on floating marshes, in windswept clouds, on wet snow, and in perennial frost, . . . but we never enjoyed better health. No colds, no rheumatism, and no sickness of any consequence was reported.

This uniqueness of adventure constitutes the special interest of this account of the two expeditions: the one in 1903, which failed; and the successful one three years later, the story of both of which, it should be added, is an amplification of articles in *Harper's Magazine.* As a mere record of travel the book is rather dull, for the task of crossing the wilderness between the coast and the Alaskan range was very monotonous, and months at times elapsed without the party seeing a "speck of human life." After the first ascent of a rapid and the fording of a mountain torrent, the tale lacks variety, though a few bears were encountered. The explorers saw much big game, and they make an urgent appeal for the establishment of a preserve. Its need is shown by the fact that "near the head waters of the Skwentna River there are thousands of square feet covered with moose hair to the depth of three feet. Here Indians have massacred hundreds of moose in the deep snows, taking only the skins for souvenir moccasins, leaving heaps of heads and tons of meat to rot." Occasional gleams of humor illumine the narrative and throw light on life in Alaska. For example:

> We saw a big dory drifting down the stream. A corpulent miner with all kinds of things was in the boat. To our question: "How far to Youngstown?" he answered: "It used to be twenty miles above, but it just moved. I have the town in the dory, and am taking it down the stream"

The scientific work of the expeditions seems to have been limited to tracing several rivers to their glacial sources, and the exploration of an extensive tract along the foothills of the range. The results are given in a sketch of the geology of the Mt. McKinley region, by Alfred H. Brooks, in an appendix. The make-up of the volume is excellent—the sixty-nine full-page illustrations being portraits, reproductions of photographs of the mountain scenery, and pictures of camp life. One of peculiar interest is of a camp just below the top of McKinley, on a slope so steep that "we wrapped ourselves in a bundle with all of our belongings, then lashed the bundle to the axes, which were securely driven into the ice, and in this way we held on for the night." It is to be regretted that there is no index, and that the routes of the expeditions are not marked on the map, as it is difficult from the narrative alone to trace them.

Science.

Attention. By W. B. Pillsbury. Pp. xii, 346. New York: The Macmillan Co. $2.75 net.

This volume is the English edition of Professor Pillsbury's "L'Attention," which was published in 1906 in the Bibliothèque internationale de psychologie expérimentale. It is not simply an English version of the French edition, but is revised and enlarged, and contains several new chapters. It is a clear, conservative, and comprehensive presentation of the psychology of attention from a particular point of view. The chief business of psychology is regarded as the analysis of mind into sensations as its structural elements, and the determination of the ways in which these elementary states function in combination in higher mental processes. From this point of view Professor Pillsbury leaves little to be desired. Defining attention as "an increased clearness and prominence of some one idea, sensation, or object, whether remembered or directly given from the external world, so that for the time it is made to constitute the most important feature of consciousness," he finds it to depend not upon some original conative effort, but upon two general factors, "the present environment on the one side, and the entire past history of the individual on the other." To these two factors is due whatever prominence any fact in consciousness may possess. A loud noise, for instance, will force its way into consciousness of any person, and compel attention. On the other hand, a savage, on account of his habits, will notice a footprint where a civilized man will see no disturbance of the ground. The relations between attention thus conceived, and interest, ideas, association, memory, will, reason, emotion, and the self are set forth with abundant detail. The methods of measuring attention, its motor concomitants, its anatomical basis, its physiology and pathology, prevailing theories regarding it, and certain applications of the author's results to education are considered with similar completeness. The work is marked throughout by accuracy of statement, wide familiarity with the literature of the subject, and fairness and discrimination in criticism.

But in spite of the undoubted excellence of the book, we have read it with a sense of profound disappointment. The disappointment is not with Professor Pillsbury's exposition or scholarship. It is with the results which psychology, as he conceives it, has to offer. That psychology undoubtedly clarifies mental life at many points, but it raises serious doubts regarding the validity and fruitfulness of its basal conceptions. To regard mind as a structure of elementary sensations woven together into complex mental processes impresses us as a decidedly artificial procedure. The conclusions to which this procedure leads appear deficient in explanatory value; and the ultimate problems to which it gives rise are of a kind which has been discussed without much profit or illumination. In support of this opinion two illustrations from Professor Pillsbury's book may be cited.

As already stated, he finds attention to depend upon the present environment, and the entire past history of the individual. With regard to these factors he says:

> These two together are, of course, coextensive with the known universe in the case of the ideal man. Man's experience is not alone composed of the comparatively few events which have brought him into direct contact with nature, but through tradition and books he has summed up within himself the entire experience of the human race as a whole in all times and places. On the other side, too, through heredity, it would be possible to trace some small number of the conditions which have to be taken into consideration in explaining any act of attention back to the acts and surroundings of his predecessors in the course of evolution. While no single man reaches this ideal condition, it is yet true for every man that the elements which may be said to determine his attention are not to be found in any chance movement of the body at the moment, in any feeling of pleasure or of effort that may accompany or precede the attending, but are to be found in the entirety of the preceding life of the individual and indirectly in the race history of mankind in general. (P. 308.)

Does this mean that what psychology has finally to say about the attention we have given to Professor Pillsbury's book—or to anything else, for that matter—is that it is due to our entire preceding life and the race history of mankind in general? If so, we do not dispute the statement, but we emphatically claim that it is eminently lacking in explanatory value. For the explanation, being generally adequate for all cases, is specifically adequate for none. What we desire to know is how the attention of a person of defined mental traits is affected by specified conditions. Take the average freshman in college to-day. What subjects attract his attention and under what conditions?

So much psychology of this type evaporates into comprehensive generalities. The reason for such a disappointing and inadequate result, we believe, resides in the psychological point of view adopted. For, when the mind is conceived as a structure of elementary sensations, it becomes necessary to determine the particular efficiency of any one of these sensations in the process in which it occurs. Since, however, this efficiency is determined by the relation of the element in question to all other possible elements, and the structure of mind is modified by environment and heredity, we seem at last driven to "the entire experience of the human race as a whole in all times and places." Were it possible, as some psychologists once hoped, actually to discover genuinely elementary sensations and assign to them definite and stable values for any process in which they might occur, we might be spared such comprehensive, but inadequate, explanations. Or if the hypothesis of "mental states" were discarded and psychology concerned itself, not with the "structure of mind," but with the measurement and coördination of individual reactions, the results reached would probably be marked by greater precision and fruitfulness.

Mental traits can be correlated and their correlation measured statistically with marked success. What relation exists between quickness of perception and a ready memory? How far is rapidity in acquiring manual skill coupled with logical ability? How far does mastering one task help in the mastering of a different one? Such questions indicate a psychology of a different kind from that which has aroused our suspicion, and promises, we believe, more different results. It is when such results are brought out by Professor Pillsbury that his discussion is most illuminating.

As an illustration of the unprofitable problems to which the notion of sensations as the structural elements of mind may lead, we may cite Professor Pillsbury's statement that "psychologists have very generally adopted the doctrine of psychophysical parallelism." They have adopted this doctrine because when they consider the problem of the connection between "physical states" and "mental processes," they "seem compelled either to give up the doctrine of the conservation of energy, to abandon all distinction between the bodily and mental processes, or to deny that there is a causal relation between body and mind. Of these possible solutions, modern psychology has chosen the last" (p. 222). But we fail to see how psycho-physical parallelism is a solution of anything. Not only does it signally fail to explain the connection on which it is invoked to throw light, but it is also inherently unintelligible. "It depends," and as we read we recall volumes of discussion of the subject, "in the last analysis upon the fact that no man has ever seen a bodily process pass over into a mental process, and in all probability never will see such a passage" (p. 223). We heartily agree that he probably never will. But did any man ever see a "bodily process" or a "mental process"? It is assumed that we are perfectly familiar with these two kinds of processes, and that they are so clearly distinguished from each other and so contrasted that passage from one to the other is not discoverable. Now it is just this familiarity which is crucially necessary to make the doctrine of psycho-physical parallelism intelligible, but it is also just this familiarity which we do not possess. In the light of this fact we do not hesitate to reaffirm that psycho-physical parallelism is not a solution of any problem. It is rather a statement of the perplexity which may attend psychological theory. The terms "body" and "mind" undoubtedly express a distinction, but the theory of psycho-physical parallelism gives ample warrant for the suspicion that it is unprofitable to interpret this distinction in terms of physiological states and processes on the one hand and sensations as structural elements of mind on the other. So interpreted, the distinction may eventually confront us with the alternatives suggested by Professor Pillsbury, but we are unwilling to admit that there is any valid necessity for such an interpretation.

It is the excellence of Professor Pillsbury's book which has emphasized for us the difficulties on which we have commented. It is a valuable contribution to psychological literature, but it warrants, in our estimation, the opinion that fruitful advance in the science is not accelerated by attempts to construct a system of mental states or processes or by conceiving sensations to be the structural elements of mind.

"Strength of Materials: A Manual for Students of Engineering," by William Charles Popplewell, lecturer at Manchester Municipal School of Technical Engineering (Oliver & Boyd), is a book which, though prepared for English students, will prove of equal value to Americans who wish a short, correct, and rigorous treatment of the subject. It is not, however, by any means complete. "Handbook of American Gas Engineering Practice," by M. Nisbet Latta (D. Van Nostrand Co.), is on a subject which has hitherto received inadequate treatment in America. In this country, indeed, no book equal to this one has appeared. It is a compilation, and a rather good one, of modern papers on the topic, together with such explanatory and connecting material as is necessary to make them intelligible.

In "Immuno-Chemistry: The Application of the Principles of Physical Chemistry to the Study of the Biological Antibodies," by Svante Arrhenius (The Macmillan Co.), is described the pioneer work of Arrhenius and others in that new and promising branch of science, immuno-chemistry—the application of the laws of chemical mechanics to the reactions taking place in the blood in consequence of the injection of foreign substances. Although the subject of toxins and antitoxins, or of antibodies in general, has always been fascinating, it becomes, now that it is shown that the laws governing chemical reactions in general also govern these, even more fascinating than before. The book is to be recommended to all who have an elementary knowledge of physical chemistry. "Solubilities of Inorganic and Organic Substances: A Handbook of the Most Reliable Quantitative Solubility Determinations," recalculated and compiled by Atherton Seidell, is published by D. Van Nostrand Co. In preparing this admirable set of solubility tables Dr. Seidell has earned the gratitude of all chemists. The book should be in every laboratory and chemical library.

The irrigation works of our Reclamation Service are described in detail by its statistician, C. J. Blanchard, in a recent address now published in the *National Geographic Magazine* for April. He says that in the summer of 1904 he camped in a vast sage-brush plain in Idaho, thirty miles from any human habitation. Last year a school-house was opened on the site of the camp with 74 pupils; 1400 families are living on farms, and three towns with a thousand inhabitants have sprung up where "a trifle over three years ago the eye met nothing but dust, and desolation." The service has spent more than $120,000,000, "and 70,000 miles of canals now carry the life-giving waters to 10,000,000 acres, which each year produce crops valued at more than $250,000,000." The numerous illustrations emphasize the wonderful character and results of the work.

Lack of funds has temporarily checked the further preparation and publication of the large trilingual "Wörterbuch der technischen Wissenschaften," begun about five years ago by the National-Verein deutscher Ingenieure; but the French government through the Minister of Agriculture has decided to publish a Technological Repertorium of the Industrial Arts and the Technical Sciences. This is to be not only a philological lexicon of these branches, but also an account of the different technological callings, together with an interpretation of technical terms in French, English, and German. The German and the English parts of the work are to be in the hands of native scholars.

"Von der Adria, zum Schwarzen Drin" is a further instalment of 78 pages in the series Zur Kunde der Balkanhalbinsel: Reisen und Beobachtungen, edited by Dr. Carl Patsch of the National Museum in Serajewo, and published by Daniel A. Kajon of that city. The author, Karl Steinmetz, gives a scientific account of travels in portions of Albania, starting from Kalmeti, south of Scutari. He considers geography, topography, ethnology, and related topics.

The Naples Table Association for Promoting Laboratory Research by Women offers a fourth prize of $1,000 for the best thesis written by a woman on a scientific subject, embodying new observations and new conclusions based on an independent laboratory research in biological, chemical, or physical science. The theses must be in the hands of the chairman of the committee on the prize, Mrs. Ellen H. Richards, Massachusetts Institute of Technology, Boston, Mass., before February 25, 1909. The prize will be awarded at the annual meeting in April, 1909. Application blanks and circulars giving the conditions of the award of the prize will be furnished by the secretary, Mrs. Ada Wing Mead, No. 283 Wayland Avenue, Providence, R. I.

Leopold Schrötter, Ritter von Kristelli, professor in the University of Vienna, died April 21 at the age of seventy-one. Dr. Schrötter had made a specialty of laryngology, and is best known popularly for his diagnosis of Frederick of Germany's trouble as cancer and his attendance on the emperor at San Remo. He has a large number of scientific books to his credit, including: "Endolaryngeole Operation der Kehlkopfpolypen," "Laryngologische Mitteilungen," "Arbeiten auf dem Gebiet der Tuberkulose," etc.

The death in his eighty-ninth year is announced from Vienna of Ludwig Schmarda, traveller and naturalist. He was professor of zoölogy at the University of Vienna from 1862 to 1883. Among his works are "Reise um die Erde in den Jahren 1853-7," "Zur Naturgeschichte Aegyptens," and "Neue wirbellose Tiere."

Carl Agardh Westerlund, malacologist and ornithologist, has died at the age of seventy-seven years, in Ronneby, Sweden, where for many years he had been teacher in the grammar school. Besides the large "Fauna der in der Paläarktischen Region lebenden Binnenconchylien" (7 volumes, 1884-1890), and "Skandinaviska foglarnas fortplantningshistoria," 1878-1904, he contributed numerous papers to Swedish and foreign scientific periodicals, and was collaborator in many collections of fauna.

Drama.

J. B. Lippincott Co. announces that the publication of the Variorum "Richard the Third," edited by H. H. Furness, jr., has been postponed until the early autumn.

The printed edition of Charles Rann Kennedy's "The Servant in the House," just published by Harper & Brothers, is a solid and attractive volume, with bold type and choice paper worthy of this notable work. A deliberate study of the text amply confirms the opinion set forth in these columns, after the first stage performance, that it is one of the most notable of recent plays, not only on account of its high moral and social purpose, but in its sustained interest, its swift, compact, and logical action and its compliance with the classic laws of dramatic construction. All the unities are faithfully observed. The dialogue is of striking quality. It contains but one passage of descriptive and imaginative eloquence—Manson's picture of the ideal church—but is composed of idiomatic English, simple, pregnant, and thoroughly characteristic of the person speaking. Often it is charged with a significance which might easily be less apparent to the spectator in a theatre than to the reader, differing vastly in this respect from the flippant chatter of most current shows. Almost every phrase in Mr. Kennedy's play is vital to the scene, the main theme, or the development of character. It is not necessary at this time to repeat the story of the piece with its practical application of the law of universal brotherhood, but it should be said that the power and appeal of it, and the ingenuity with which the interaction of contrasted and vital human types is made to bring about the desired solution of the dramatic problem, are just as apparent upon the printed page as when they are backed by the glamour of the theatre.

"Yolanda of Cyprus" (The McClure Co.), by Cale Young Rice, is a passionate melodrama in verse, of the sixteenth century, and exhibits both literary facility and poetic imagination. It contains, indeed, many melodious and some striking passages, but its general conception is so extravagant, its construction so crude, and its semi-miraculous happy ending so conventionally theatrical in its futility, that as drama it is inconsiderable. Moreover, the theme is unpleasant, profitless, and unnatural. It is a pity that the ability displayed in the elaboration of it should not be employed to better purpose. The style is modern though the tale is antique.

Stephen Phillips's dramatization of "The Bride of Lammermoor" will be called "The Lost Heir" when it is produced at the London Adelphi by Martin Harvey.

The appearance in the Bijou Theatre on Tuesday evening of Henry E. Dixey, in the central character of Jean Aicard's "Le Père Lebonnard," attracted considerable attention as an ambitious effort on the part of a veteran farcical comedian to make an upward step in his profession and prove his capacity in the more serious drama. His own individual performance was a distinctly creditable, though never brilliant, achievement. It was simple, natural, and sympathetic, but neither the humor nor the pathos of it had much depth, while the passion showed more of external than internal convulsion. Nevertheless, considering the antecedents of the actor, it was a respectable achievement. Unfortunately, the adapters had divested the play of nearly all its finer qualities, leaving nothing but the skeleton of the story, while the supporting cast was wholly unequal to the task assigned to it. The representation of the play given here by Signor Novelli was vastly superior in every respect.

One of the current theatrical successes in Paris is a Russian revolutionary melodrama, "Le Grand soir," translated from the German of Leopold Kampf by Robert d' Humières, and played at the Théâtre des Arts. It reproduces in realistic fashion police raids upon the secret resorts of conspirators, and the ruthless dispersal of mobs of strikers by volleys from cavalry carbines. The piece apparently is one succession of thrills from beginning to end.

Music.

One of the best compliments ever paid to an American author by the Germans was their acceptance of Alexander Thayer's as the standard biography of Beethoven. Thayer devoted most of the leisure hours of his long life to this task, yet he died (1897) before he had completed much more than half. The third volume of his biography appeared in 1879; the fourth has just been issued by Breitkopf & Härtel, and the fifth is to follow next year. The whole work, however, is no longer Thayer's alone. The first volume has been revised and brought up to date, and the second and third are being edited now and may be expected within two years. The fourth and fifth are largely from the pen of Herman Deiters, who built on the foundations left by Thayer two volumes which take cognizance of everything of value in regard to Beethoven brought forth since Thayer's death. When completed, the Thayer-Deiters Beethoven will be a monumental work, to be classed with Spitta's "Bach," Jahn's "Mozart," Chrysander's "Handel," Pohl's "Haydn," Glasenapp's "Wagner," and Ramann's "Liszt." It should be added that Hugo Riemann has provided the new Volume IV. with a preface, corrections, and additions, as well as an index.

In a search for material for a biography of Nicolo Paganini, Aristide Manassero, the music critic, has found at Chiavari four unpublished nocturnes for violin and piano, twenty-five autograph letters, and a Steiner violin which belonged to that composer. Hitherto only a fragment of a movement for violin and piano had been known. Similar discoveries and the fact that much valuable musical material lies neglected in public and private libraries in Italy has led Guido Gasparini, the librarian of the Conservatory of Music at Parma, to form an association for the double purpose of making an inventory of the autograph music, written before the nineteenth century, existing in Italy, and of taking steps for its preservation. The convention of musicians to be held in Ferrara in May is expected to support this movement.

The death is announced of Joseph Sucher, who was appointed conductor of the Royal Opera at Berlin in 1888 and retained that post for a decade. He was born in 1843, studied law in Vienna, but soon took up music as a profession. In 1876 he was appointed conductor of the Leipzig opera, and married the famous dramatic soprano, Rosa Hasselbeck. In 1878 both were engaged by Pollini for Hamburg. Ten years later they became members of the Royal Opera in Berlin.

Art.

Athenian Lekythoi with Outline Drawing in Glaze Varnish on a White Ground. By Arthur Fairbanks. With 15 Plates and 57 Illustrations in the Text. New York: The Macmillan Co.

The white Athenian lekythoi, or oil-jugs, form a distinct class in the history of Greek vase-painting. The delicate drawing on them and the varied scheme of their coloring have long made them one of the most interesting subjects of study for the archæologist. Several books and many articles have been written about them, notably Pottier's "Étude sur les lécythes blancs attiques à représentations funéraires"; but the subject has by no means been exhausted. The present monograph supplies a much-felt need. It gives us a systematic classification of white lekythoi into well-defined groups, which are, in the main, chronological, so that each series can be dated within ten or twenty years.

The two large classes into which the author divides his material are lekythoi in which the lines of the drawing are in glaze, and lekythoi in which the lines are in dull color. The present volume deals with the glaze-outline lekythoi; the second class is reserved for another occasion. The purpose of the author is not to make a thesaurus, but to study white lekythoi in their relation to each other and to vases in a different technique. The result of this minute research is to fix approximately the time of lekythoi with glaze outline drawing between 475 and 430, B. C. Within this period the writer places four distinct groups, subdivided into eight smaller classes. Under each class is given a list of vases, described in detail, which show the required characteristics. The number of vases described is large; many are published for the first time, and as the book is well illustrated, we gain a clear survey of the field. The concluding chapter deals with the scenes depicted on white lekythoi. In Athenian vases of the fifth century we can generally judge of the purpose which they served by the scenes depicted on them. The exact uses for which white lekythoi were employed is an interesting problem. Some time after the middle of the fifth century they seem to have been used only in connection with burials, since scenes connected with death and the grave occur to the exclusion of others. But before that domestic scenes are prevalent and during that time these white lekythoi were doubtless used by the women as simple toilet vases. Scenes connected with mythology and religion are also of common occurrence. In connection with these the author makes an interesting observation. He points out that while on black-figured vases "the gods are depicted as engaged in some form of distinctly human activity," the painter of the white lekythos selects rather "the human act of worship" and treats the gods almost always from this standpoint. This leads the author to surmise that some of these lekythoi were intended for use in a religious ceremony. Just what use there would be for small perfume jars in connection with worship cannot be determined from the data at our command. But, as the author says, it is by no means unlikely that perfumes as well as incense were used in the ceremony of burnt offerings.

As regards the much-discussed problem of the place of manufacture of the white lekythoi found outside Attica, the writer is in favor of an Attic origin for the Sicilian lekythoi, since "the slight differences between them and the lekythoi found in Attica are just such as might be expected between products for export and products for the local market." For the Eretrian vases also an Athenian origin is claimed; unless, indeed, Athenian workmen went over and worked in Eretria itself. The only white lekythoi which are undoubtedly of non-Attic manufacture are those from Corinth. They form a class by themselves in that they are rude in shape and rudely decorated; moreover, they seem to be made of Corinthian clay, and thus are certainly a local product.

It is to be hoped that the author will soon bring out the second part of his book, treated in the same thorough and scholarly manner.

The most important articles in the *Burlington Magazine* for April are devoted to Puvis de Chavannes, and to the American, Albert P. Ryder. In the former, which is described as "A Chapter from Modern Painters," Charles Ricketts treats Puvis, mainly, as a great inventor in landscape—with Millet almost the only innovator in the essential pattern of landscape design. The study of light he dismisses in a paragraph worthy of quotation:

> This new study is in itself hardly more valuable than the conquest of relief which was the aim of the Tenebrosi. If this fashion in the painting of the seventeenth century stifled painting, and poisoned the color sense of a whole period, the landscape painters' rendering of the glitter of sunlight and sunset has disintegrated the plastic sense, narrowed the outlook, and established a convention in the conduct of pigment which is unsuited to the expression of form, and so affected the standard of figure painting. At any rate it has be-

come a common fashion hardly more valuable than the light, animated manner affected by Ricci and Piazetta, who reacted against the cellar light of the Tenebrosi. If this is not all the truth, it yet contains an element of truth worth considering by our modern figure painters. Roger Fry writes of Ryder with much sympathy, and illustrates his article with five reproductions, which succeed in conveying more of that painter's strange impressiveness than one would have thought translatable into black and white.

In the *Rassegna d'Arte* for April Nelly Erichsen reports the discovery of a series of damaged frescoes by Benozzo Gozzoli in the Church of S. Francesco Lucca. Of these the Presentation and the Marriage of the Virgin, in a single composition, are fairly preserved, and seem a distinct addition to the work of this prolific master. V. Fazio Allmayer continues his concise but meaty articles on "The Arabs and Art in Sicily." He makes a good case for the originality of Saracenic art—the Byzantine origin of which has frequently been assumed—and for its enduring influence in Sicily, particularly in textile design.

"The Architecture of Greece and Rome: a Sketch of its Historic Development," by William J. Anderson and R. Phené Spiers, has been issued in a second edition, revised and enlarged by Mr. Spiers (imported by Charles Scribner's Sons). The first edition was reviewed at length in these columns March 12, 1903. We then noted that the book contained excellent material; that the contribution of William J. Anderson was valuable, and that the work of Mr. Spiers was the most trustworthy and suggestive to be found anywhere; but that the work was not well arranged, and in spite of valuable illustrations and sound teaching was inadequate. The present issue is improved in every important respect. The contents have been carefully rearranged. There are nearly eighty new illustrations (255 in all), and but few of those of the first edition have been dropped. Among the new are the plan of the palace at Cnossus and several details of sculpture from the same building, a valuable set of plans of the Selinus temples, and a plan of the famous temple-group at Baalbek. There is also much new text; and there are useful tables, such as the chronological list of Greek temples and other buildings, and chronological lists of historical events. The work is now an excellent book of reference, and if it is hardly interesting to read, that defect is the almost inevitable result of the compact presentation of so much and such varied material.

The posthumous book of J. K. Huysmans—"Trois églises et trois primitifs"—is in the best style of his later years. The three churches are of Paris, with their art full of the symbolism of the ages of faith, and with all sorts of human incrustations from their centuries of growth; and the three artists are Primitives of like kind. The prose of this writer, and perhaps his incisive, original thought, seem likely to have more influence after his death than during his life in its disconcerting course.

"Benvenuto Cellini à Paris sous François Ier," by Gailly de Taurines, is a book dealing lightly with the love and gallantries of the great artist who took pains to document posterity for his history; the volume belongs to the collection Bibliothèque du vieux Paris.

Paul Klincksieck and Th. Vallette, chemists at the Gobelins, publish a "Code des couleurs," with 720 color types, as a practical means by which naturalists, artists, merchants, and manufacturers may understand "with certainty" the designations made of distinct shades of color. It is a simplification of the Chevreul method.

Among the exhibitions at the dealers' galleries in this city are paintings by women at Knoedler's, till May 2; paintings by Matilda Browne at George A. Glaenzer & Co.'s, May 5; and mezzzotints, W. K. O'Brien & Co.'s, May 30.

Finance.

THE OUTFLOW OF GOLD.

During the last fortnight there has been exported, from New York to Europe, $9,000,000 in gold, and by all indications, a much larger export is to follow. Exactly what does this mean? When our bankers, at the time of panic, went into Europe's markets, and, through the bid of 5 per cent. premium, drew $85,000,000 gold from Europe, and some $15,000,000 more from other parts of the world, the question whether that gold would stay in the United States was much discussed. Something was to be said on both sides. The most obvious contention was that, in theory, at all events, this $100,000,000 foreign gold was borrowed for an emergency, and should normally be returned when the emergency was over.

True, this gold was not obtained through the placing of "finance bills" by our bankers, like those put out in London, Paris, and Berlin, when they drew on Europe for the great Wall Street speculation of 1906. The gold imports of last November and December were largely financed through drafts, in advance of shipment, on European merchants' purchases of our grain and cotton. Nevertheless, the fact was that we procured this gold, not on an ordinary basis of exchange, and not to provide for expanding trade, but simply and solely because some $200,000,000 in cash had been taken by hoarders out of the channels of circulation. So long as this hoarding continued, there was an economic need for the new gold; had our inland trade expanded further after the $100,000,000 import, the gold might have been required as a basis for this larger volume of business. But in point of fact, commercial activity, at the opening of April, as measured by exchange of checks at the country's clearing-houses, was less by 33 per cent. than a year before; and, in the face of this diminished need for circulating medium, the currency in circulation, outside the Treasury, was $174,000,000 more than on April 1, 1907. For it must be remembered that, quite aside from the gold imports, the Treasury during the panic threw $79,000,000 of its cash surplus into the banks, and national bank note circulation was increased by $85,000,000.

In the period which provides the nearest parallel—that which followed the panic of 1893—a similar movement ensued. In the panic months we imported, through payment of a premium, $61,000,000 of gold, and put out $26,000,000 new bank currency. In 1893 a heavy Treasury deficit reduced the public surplus (in 1907 it was released through deposit in banks); the net result was an increase of $144,000,000 in the circulating medium, between midsummer, 1893, and the end of January, 1894. Yet, at the last-named date, the country's clearing-house exchanges, and hence, inferentially its volume of trade, were running less by 32 per cent. than a year before. The sequel to these conditions, during 1894, was a decided movement of international exchange rates against this country, and, in the end, export of $80,000,000 gold.

The force of this precedent was conceded, three or four months ago, but the reply was that we were paying for last autumn's imported gold by export of commodities, if indeed we had not already paid for it. Our exports had increased since the panic to a magnitude quite unparalleled—which was natural when producers were anxious to raise cash on goods for which the domestic sale was slow. Our imports fell to the lowest point in four years—which was also easy to explain, when the buying craze of a few months earlier had suddenly vanished. Consequently, not only did the excess of merchandise exports over imports surpass the highest previous monthly records, but it ran, during December, $58,000,000 beyond the excess of December, 1906, and in January $57,000,000 beyond that of January, 1907.

Here, it was contended, was visible evidence that at least the $100,000,000 gold imports of the panic period had been paid for, and therefore need not be returned. The argument was plausible; but it was offset by two considerations. First, the course of merchandise trade, after 1893, was precisely similar. In the twelve months before that panic outbreak, imports exceeded exports by $18,700,000; in the next twelve months the export excess was no less than $237,000,000. Yet, as we have seen, even more gold went back to Europe during 1894 than we had imported in the preceding panic.

But there is yet a second point. Every one who has studied the bewildering problem of international trade and international gold movements knows that export and import of merchandise is only one factor in the case. What is commonly called the "invisible trade balance" plays an important and at times a leading part. By that term is meant, either export and import of securities, or the movement of capital to be loaned outright, in the open markets of one country or another. Europe may have bought our securities at the low prices of the panic; but if it did, it probably sold them back when our prices had gone up 20 or 25 points in the recovery of January and March.

As for uninvested capital, it must be recalled that for several years our rates for loans, in the Wall Street market, have been far above those obtainable in Europe. At times, long before the panic, an actually extravagant rate was bid by New York for European capital, and that capital was certainly taken in quantity from Europe. But with the panic shock, the bursting of the bubble of speculation, and the reduction of one-third to one-half in trade activity, this condition of the money market changed. Instead of bidding higher rates than Europe's, our borrowers bid as people do when there is no demand for money. This week, when loans for two months, on Wall Street collateral, brought 2¼ per cent., and when three months' loans commanded only 2½, similar loans for the same maturities have gone at 4⅛ per cent. in Berlin and Vienna, at 3 to 3¼ in Amsterdam and Brussels, and at 2¾ even in Paris and London. In other words, New York to-day bids less for money than any European market. This is most unusual; the inevitable sequel is that capital invested here will go home to Europe. But its transfer cannot fail to move exchange rates heavily against us and start the eastward flow of gold.

How large the outflow will be, depends on other considerations—on our foreign trade, for one thing, and therefore on our harvests, and on the question whether revival of our internal trade will once more stimulate home demand for money. But in the meantime, with the New York surplus bank reserves already at the highest level reached since 1898, the gold sent back will not be missed by domestic markets.

BOOKS OF THE WEEK.

A Noteworthy New Book
BLISS CARMAN'S
THE MAKING OF PERSONALITY

The Nation.

NEW YORK, THURSDAY, MAY 7, 1908.

The Week.

Secretary Taft has sailed for Panama with the comfortable assurance that, barring accidents, his nomination for the Presidency is assured. It is evident that his campaign has now gained such impetus that all timid politicians who wish to be on the winning side will hasten to attach themselves to his cause. The latest conventions show how strong is the drift his way. Though Maine did not instruct for him, the delegates favor him, and a resolution of "preference" was passed. Powerful politicians in Maryland had been against the Secretary, but the convention in that State instructed for Taft. The same was the case in North Carolina, as previously in Colorado. It still remains true that the Taft vote on the first ballot will not be great enough to nominate, unless the contests in the Southern States are decided in his favor. The chances are, however, that this will be done, and that the President will have scored a new and unprecedented triumph in forcing his personal choice upon his party. Not the least element in his success has been his astute threatening to run again himself if Taft were not nominated. That has had a magic effect in reconciling people to Taft.

A distinct check to Mr. Bryan is marked by the New Jersey and Connecticut conventions, which his followers were wholly unable to control. They furnish a pretty sure indication that the East will remain hostile to Bryan. If the Southern States which really have a pronounced aversion to him were to send their delegates to Denver uninstructed, his nomination might yet be prevented. One great difficulty in nominating another candidate lies in Mr. Bryan's temper and attitude. He would not heartily and loyally support another man. Any other nomination, he would regard as having been made over his dead body; and the signal for revolt and revenge would be instantly given to his friends. All the stories from his entourage are that he would bitterly oppose Gov. Johnson, would not for a moment assent to Judge Gray, and would never agree to Judson Harmon. Bryan is assured of a majority in the convention (though he may not be able to get two-thirds), and is apparently determined to prevent the success of any one who dares openly dispute the nomination with him. For the large interests or electoral prospects of his party, he seemingly does not care a straw. At least, he would not dream of giving up his personal ambition for their sake.

Gov. Johnson is showing a good deal of aggressive vigor in his Western speeches. On the tariff, he speaks out with a directness and force which Mr. Bryan has never displayed on that subject. Bryan has, in fact, taken only a perfunctory interest in tariff revision; it bores him, and is, besides, too difficult to master; it is much easier to exclaim about the money power and corporations. But Gov. Johnson is fully abreast of the sentiment for tariff reduction in the Northwest, and along the Canadian border, and makes his good points before receptive audiences. He also uses a refreshing boldness in speaking of the Democratic party as if it were not tied to the chariot-wheels of Mr. Bryan. Gov. Johnson is a friend of Bryan's, but will not kow-tow to him, and scoffs at the idea that the party is absolutely in the hands of one man. Such resolution and energy as the Minnesota Governor is displaying would well become a nominee for the Presidency.

Chairman Tawney of the House Committee on Appropriations is recklessly piling up Democratic campaign ammunition. He pointed out Monday that this Republican Congress is heading straight towards the exhaustion of the great Treasury surplus. The deficit this year will be $65,000,000; next year, Mr. Tawney stated, it is "almost certain" to be $150,000,000. That means that money will have to be borrowed, or certificates of indebtedness issued, to pay the daily bills of the government. Now if, by any chance, a Democratic President should be elected in November, and find his Administration, as Mr. Cleveland did in 1893, beggared by the blundering finance of a Republican predecessor, Mr. Tawney's advance prediction would shut some Republican mouths. He, of course, was speaking in the hope of enforcing some present economies. But the House rode over his protests and disregarded his warnings. With a wanton fatuity, it goes upon the theory that the way to meet falling revenues is to push up expenditures. Retrenchment is necessary and even praiseworthy in individuals, but in the government it has come to be regarded as evidence of a mean spirit. President Roosevelt, with all his urging, has never urged economy, so why should Congress curtail? There was a famous saying by President Harrison's Commissioner of Pensions, with his lavish policy, "God help the surplus!" In the light of Mr. Tawney's discouraging statement, that would appear to be a fitting campaign cry for the Republicans this year.

"Let us alone," as a political "slogan," would be a novelty in American politics, yet that is the cry which the Traffic Club of St. Louis expects to set echoing over the country. It was chiefly railroad men who spoke at the club's meeting last week. They were naturally eloquent against "hostile legislation," which was the cause of the panic and of the continuing depression, and came out strong for a complete divorce of business from politics. This may be a perfectly sound conclusion, but its discovery by the great railroads is a trifle belated. They have been in politics all their lives. To "control" Governors and Senators has been an essential part of their plans, lo! these many years. If they are going to quit the game now, nobody will object, but they ought never to have begun it. That an era of hostile legislation has set in, is mainly due to the fact that there had previously been so much legislative favoritism shown to railroads, so many privileges and immunities suspiciously granted to them. Much the same is the case with the great manufacturing interests which are now groaning about meddling politicians and an interfering Congress. The habit of meddling was established by the manufacturers themselves, with their demands for special tariff favors. The appeal to be let alone comes with bad grace from men who have never been willing to let the great consuming public alone. If our government, or our President, has become too meddlesome, the cause may be directly traced to the protective system. It is that which has led to the theory of government described by Macaulay:

> The business of the magistrate is not merely to see that the persons and property of the people are secure from attack, but he ought to be a jack-of-all-trades—architect, engineer, schoolmaster, merchant, theologian, a Lady Bountiful in every parish, a Paul Pry in every house, spying, eavesdropping, relieving, admonishing, spending our money for us, and choosing our opinions for us. . . . No man can do anything so well for himself as his rulers, be they who they may, can do it for him, and a government approaches nearer and nearer to perfection in proportion as it interferes more and more with the habits and notions of individuals.

Gov. Hughes is attended, in his anti-gambling campaign, by every sign of popular favor. The sort of people who make up the strength of parties are rising all over the State to applaud his course, and to hold up his hands. Only the party bosses are aloof and sulking. But what a light this casts upon their sincerity! They profess to be eager to interpret the people's will, and serve it. It is also one of their cardinal principles to seek out and support candidates for office who have the great political gift of popularity. Yet here they are antagonizing a man who is demonstrating that he is, in the best sense of the word, the most popular man in the State. The inference is clear. What the bosses want is not a really strong and popular Governor, but a man whom they can use. Gov. Hughes was elected without their help, and has run his office without taking orders from them. That is enough for them. They have no patience with such a Governor, and will do their best to thwart and undermine him. But Mr. Hughes himself, in his successive speeches, is showing a clearer and stronger grasp of this fact, and is plainly depicting the situation to his audiences. The issue of boss-rule versus the desires of the people is coming out more sharply every day; and the evidence is growing that in this fight it is not Gov. Hughes or the people who will be whipped.

The report of the United States Steel Corporation's earnings for the three months ending with March, was a clear reflection of after-panic conditions of trade. The figures for the December quarter, published in January, had already given an idea of the suddenness and violence of the autumn's industrial reverse; they showed that, whereas net earnings for October ran a million dollars beyond any other month in the history of the corporation, December saw earnings more than cut in two, the actual decrease from the same month a year before being 62½ per cent. During the three ensuing months it was currently said that earnings were increasing rather rapidly from the low December level, and the report for the quarter shows the statement to have been correct. The increase was progressive, net receipts in March being $2,432,000 above those of December—a gain of 48 per cent. This increase, however, must be taken in the light of several offsetting facts—one, that even with all the improvement, the net earnings for March were only a little more than one-half those of March, 1907; the other, that the orders for future delivery on the corporation's books March 31, despite the better earnings of the period, were 18 per cent. under the total reported December 31, and 53 per cent. less than at the close of March last year. This confirms the general trend of testimony from industrial circles, to the effect that the industrial revival slackened four or five weeks ago, probably because immediate requirements, postponed and accumulated from the period of utter trade paralysis in December, have now been fairly well met.

From Washington comes the report that a society for the regulation of vivisection in the District of Columbia has been formed, with three members of the United States Supreme Court and a number of Senators and Congressmen among its vice-presidents. It calls for the registration of all persons engaged in experimentation on living animals, for publicity, and for the employment of "sufficient anæsthetizing." It is rather unfortunate, therefore, that one of the speakers should have gone to the extreme of declaiming that "even should measurable advantages to the human race apparently come from such experimentation, the cost would be too great to be compensated for by any purely physical benefit received." It is such immoderate declarations that tend to arouse suspicion among those interested in the progress of medical science, lest the object of the anti-vivisection movement be the ultimate repression of all experiments on animals. It is the attacks of extremists that have led, in England, to the formation of a Research Defence Society, headed by Lord Cromer and having among its members the presidents of thirteen leading hospitals, and such men as Lord Avebury, Sir James Dewar, Sir William Huggins, Sir E. Ray Lankester, and Professor Osler. The society's declarations insist on the point that the use of antiseptics, the modern treatment of wounds, our facilities for dealing with tuberculosis, diphtheria, plague, cholera, typhoid, Mediterranean fever, and sleeping sickness have profited by animal experimentation. Yet England has a regulating law as severe as the one which was advocated in Albany last winter, but which failed to pass. It is only the unreasonable in either camp that prevent compromise.

One of the most constructive addresses at the Memphis Conference for Southern Education was by Miss Lillian D. Johnson, who, in behalf of the Collegiate Alumnæ of the South, spoke on "The Higher Education of Women in the South." Having first shown that, numerically, the South has more than three times as many institutions for the higher education of women as the North, Miss Johnson proceeded to ask: "Why is it that we feel that, if our daughters are to have the best education, they must be sent north of Mason and Dixon's line?" Of the fifteen women's colleges listed in Class A in the report of the Commissioner of Education, only three are in the South. Miss Johnson answered her own question by the following figures, which, for brevity, we tabulate:

COMPARATIVE RESOURCES.

	The 99 Southern colleges.	The 30 Northern colleges.
Libraries	$200,000	$600,000
Scientific equipment	270,000	840,000
Grounds and buildings	9,750,000	15,500,000
Income	1,500,000	2,500,000

Of the three women's colleges founded in the North since 1900, two began with a half-million apiece, and one with $3,000,000. An equal number of schools were founded in the South, but one had $20,000 to begin with, one $122,000, and the third, while it had grounds and buildings valued at $500,000, was absolutely without endowment. Miss Johnson put the question:

> When we call an institution with $20,000 worth of property a college, are we deliberately dishonest with ourselves? No, I think not. I think that we are merely ignorant of their equipment. Most of our "colleges" do not offer courses that would properly prepare one for the freshman classes of good Eastern universities. How can we honestly call them "colleges"?

Miss Johnson naturally suggested reaching out after greater endowments as one solution of the problem. But her second suggestion was the more forcible. "Must we not begin consolidation?" she asked. "Must we not reduce the number of those 99 'colleges' to 20?" This is precisely what is being done with the rural primary schools in States which have quantity, but not quality. In one county alone in Tennessee, the number of common schools has been cut down from 130 to 100 by consolidation. With such institutions as the Women's College in Baltimore, the Tulane University annex in New Orleans, and Randolph-Macon College in Lynchburg, Va., as standards, unquestionably some great changes may be expected in the South in its "colleges" for women.

The Opposition pressed Premier Asquith hard last Thursday on the subject of Home Rule. Asked whether he had authorized Mr. Churchill's recent pledge, issued in the course of the Manchester election, that the Liberal party would at the next general election demand authority to deal with Home Rule for Ireland, the Premier replied that he found in Mr. Churchill's promise nothing inconsistent with his own declarations in the course of the Irish debate in the Commons on March 30. Then Mr. Asquith had said that the present Parliament had no mandate from the country to deal with Home Rule, and that no such important constitutional change could be brought forward without previously appealing to the electorate. This statement the Nationalists had interpreted as a rejection of Home Rule, and had declared war on Mr. Churchill in consequence. The latter's pledge won Mr. Redmond back. Why the Nationalists should have rejected Mr. Asquith's declaration and accepted Mr. Churchill's is not at first apparent. Yet the distinction may be drawn between the statement that one Parliament is not competent to deal with a question, and a promise that the next one would be. Now, it would appear as though Mr. Asquith has been forced from the first position into the second. Against his will, probably, he has accepted Home Rule as a plank in the next Liberal platform.

Afghanistan, Persia, and Tibet were the three regions which were to be removed from the arena of possible strife by the recently concluded Anglo-Russian agreement. Yet Russia at the present moment is engaged in something like war on the Persian frontier, while Great Britain is facing a serious situation on her northwest boundary in India. With the formidable fighting qualities of the Ameer's subjects, a force of some fifteen or twenty thousand Afghans, attacking the British positions in the Chitral, makes a war-cloud of no mean dimensions. The Ameer is reported to have made no effort to restrain the invaders, part of whom are his own soldiers. Probably it would be difficult to prove him actually guilty of hostile manœuvring against the British, but of his dissatisfied attitude there can be little doubt; and that would mean for the Indian authorities, after fighting is over, the necessity of reconstructing diplomatic relations which have been regarded as the basis of British policy for half a century. Indubitably, the Ameer's dissatisfaction has been aroused by the conclusion of the Anglo-Russian agreement without his being consulted. Indeed, he has not yet signified his adherence to it. The omission to obtain his previous consent was criticised by Lord Curzon in Parliament as a grave error—a criticism which the event has apparently justified.

The Afghan disturbance follows a recent hostile movement of the Mohmand tribesmen, which in turn followed the uprising of the Zakka Khel. Why do the tribesmen on the Indian frontier persist in challenging British authority after the repeated costly lessons they have received? Because they are quarrelsome, of course; but partly, too, because it would appear that, when you put a gun into a man's hands, he is likely to use it. And that shrewd and daring European altruists have been busy in supplying the Afghan tribesmen with guns has lately been reported in the British press. "Smuggling into Persian Baluchistan," says the London *Times*, "is being carried on on an unprecedented scale. The gun-runners land their cargoes at a spot somewhere to the west of Gwadar, and from there the goods are conveyed towards the Afghan frontier, in the Seistan region. When Afghanistan is reached, the smugglers have a choice of markets." Nor is Asia alone. In the course of the recent fighting in Italian Somaliland, the dervishes have been found armed with rifles of French manufacture. Italy has protested to France, though she has been compelled to admit that she herself has been a serious offender in the same way in the past. Japan's cargo of rifles in the Tatsu Maru, seized by the Chinese government because it was consigned to revolutionaries in the South, shows that the Mikado's subjects have grasped one of the ultra-modern ideas of European ethics, the "right of man to arms," as it has been put by Bernard Shaw and applied by the gun-makers of all Christian nations.

Young King Manuel of Portugal met his first Parliament last week not under very auspicious circumstances. The fate of Dom Carlos is feared for his son, though the danger can be imagined as coming only from some irresponsible fanatic or group of fanatics. For the Republican party it would evidently be an error to direct any attempt against the life of an inexperienced boy under whose necessarily hesitating rule the cl[illegible] corrupt political elements are doing their best to hasten the utter discrediting and downfall of the monarchy. That is the sombre aspect of present conditions. The Cortes has assembled, not under the sobering influence of the violent deed of February 1, which would seem to be enough to have stirred the toughest political conscience to self-examination, but under the influence of rumors of an ugly financial scandal that involves alike the late King, those who supported Franco and the dictatorial régime, and the Conservative and Progressive members of the present government. Corruption had permeated practically the entire Parliamentary régime. The King received illegal subsidies, the ministers got their "rake-off," the Deputies came in for their share of the graft. And there is no present inclination to change. Only the ignorance and supineness of the majority of the Portuguese population make such a condition of affairs possible.

A London court decision of Monday may have the effect of imparting new life to the Zionist agitation, which of late has fallen into something like stagnation. The question involved was whether the Jewish Colonial Trust, a $10,000,000 British corporation, having for its object the establishment of an autonomous Jewish state as a home and refuge for the oppressed of that race, should be allowed so to alter its statutes as to restrict its operations to Palestine and Asia Minor. This recommendation had been put forward by the last Zionist congress. Out of 130,000 stockholders in the Trust, 16,000 voted in favor of the change and only 2,400 against it. But inasmuch as the majority constituted in itself but a small minority of the whole number of shareholders, the court decided against the proposed change. The decision is a victory for Israel Zangwill, who led the small body of the opposition and pleaded in person before the court. It means that Zangwill may proceed with his plans for Jewish colonization in East Africa, in Argentina, or in our own W[illegible]out incurring the charge that he has departed from the original intent of the founders of the Trust. Yet the fact remains that the attitude of Mr Zangwill and his party, even if technically in conformity with the original intention of the founders of the Jewish Colonial Trust, is in reality a wide departure from the aspirations that shaped the earlier progress of the Zionist movement. Undoubtedly, it was to a national scheme with Palestine for its centre that the great mass of shareholders contributed their money. The fact that the ten million dollars of shares are held by no less than 130,000 owners, shows that the average contribution was very small; subscriptions came from the poverty-stricken Jewish masses in Russia, who were attracted almost solely by the notion of a return to Palestine. Zionism without Zion, in East Africa, or in South America, would have made comparatively little appeal to them. It is only realization of the magnitude of the task of establishing "a legally-secured home" for the Jewish race in Palestine that has turned attention elsewhere.

A statue of Heinrich Heine in the grounds of the German Imperial villa Achilleion, on the island of Corfu, is to be removed, by order of Wilhelm II., who has taken possession of the former estate of Empress Elisabeth of Austria. The animosity which present-day Germany continues to cherish against one of the country's, and the world's, greatest lyric poets, must be something of a puzzle to less inflexible nations where time is held to wipe out all transgressions, especially the transgressions of genius, and the positive worth of a man's work is counted to his own and his country's credit. It is hard, perhaps, that the man who wrote so exquisitely in German verse and prose should have made such a bitter mock of much that is now dear to the Germany of the mailed fist and the *junker*. But a ruler less given to worship of his army and of his battleships might have stopped to think of the services which Heine, by the limpid witchery of his style, has been rendering to the study of the German language abroad, and will continue to render when the heavy roll of involved and broken-backed professional German prose, tramping along like so many Prussian heavy regiments, will have begun to tire the foreign ear. It is only fair, however, not to ascribe the act solely to the Emperor's sometimes mediæval views. In his prejudices against Heine he has with him the backing of a large number of his countrymen.

THE REPUBLICANS AT WAR.

If all the dire reports in the newspapers were to be implicitly believed, an outbreak of internecine war in the Republican party would seem imminent. Alarums are heard in every quarter. Gen. Woodford declares that never in the course of his long political experience has he known Republicans to be so torn asunder as they are to-day. From Washington come the most startling reports of threatened hostilities between the President and Congress. Mr. Roosevelt is, variously, "indignant," "angry," "determined," and "in a decidedly bellicose mood"; while members of Congress are either "enraged" or "terrified." They are going to fight to the death, or else to surrender at discretion; neither they nor the correspondents seem to know which. But that there is to be a tremendous struggle, with the war-drums rolling and sabres flashing, all the stories agree. It would seem incredible that the one party which is "fit to rule" should thus fall into strife; but we know that there was once war in Heaven, so we cannot deny that there may be war in the Republican Paradise.

So far as this State is concerned, and to this State Gen. Woodford's remark chiefly refers, it must be admitted that we do not behold Republican brethren dwelling together in unity. If Gen. Woodford meant to imply that the old animosities of the Stalwart and Half Breed factions are exceeded now, it would be difficult to follow him. The conditions of that ferocious contest hardly exist to-day. Yet it would be in vain to deny that jealousies, misunderstandings, and antagonisms are dividing Republicans and marring their party's prospects. The great source of mischief is the stolid opposition of the party machine to the reforming Governor. He is powerfully appealing to the people on moral issues, and the response which he is everywhere getting bodes no good to the party organization unless it reverses itself on the gambling question. There can be no peace among New York Republicans until the conscience of the party gets the better of the mechanism—until educated and religious and fair dealing Republicans are satisfied that the party leaders mean to carry out the expressed will of the people.

It is, then, something like a real battle which confronts the party in New York; but at Washington the cruel war bears an aspect suspiciously theatrical. We have seen this stage battle before. Two years ago, there was the same arraying of the hosts, the same beating of desks and doubling of fists and tense setting of the teeth; threats alternated with demands, and a large amount of warlike "copy" was furnished to the press. But in a few days the dove of peace perched conspicuously on the White House. The President issued a handsome certificate to the Congress which he had been denouncing and trying to intimidate. It had not, to be sure, done all that he asked, but the Republican members were such good fellows, good patriots, and good friends of his that there was really nothing for it but to reëlect them all. A similar amnesty, it may reasonably be expected, will be proclaimed soon after the present Congress adjourns. For a time, the thunder of the captains and the shouting will be kept up. Emissaries of the President, with "the cheap numerosity of a stage army," will charge up and down the front of the scene; there will be heavy volleying from the Treasury end of Pennsylvania Avenue; at the Capitol, the fighting in the cloak-rooms will be bloody in the extreme; but when it comes time to count the dead and wounded, there will be none to count. As a grand finale, a smiling President will come out to say that this Congress has been a *leetle* the most industrious and useful that he remembers, and that the Republican party never deserved so well of the country.

The chief reason why such a peaceful outcome is to be expected, despite all the clamors and alarms of to-day, is that President Roosevelt is, before all things, a party man. He is a Republican from skin to centre. When the pinch comes, he will be found with his party. It has always been so in the past and there is no reason to expect anything different in the future. Hence we would warn those Democrats in Congress who are said to be so "happy" over the terrible conflict now going on between the President and his party, that they are building upon false hopes. It is a bouffe war. Mr. Roosevelt is throwing himself into the acting with his customary abandon and skill. He knows that if he simulates fury and makes vehement threats, he will probably get something for his pains; but when the *dénouement* comes, his wrinkled front will be smoothed, and he will be swearing eternal friendship with his late enemies within the party. And all his unexpended ammunition he will then devote to the Democrats, who are just too patriotic for anything when they vote for him on the Brownsville issue, or work to get him battleships, but who, the moment Congress adjourns and the election comes on, become incapable and untrustworthy men, to whose hands the country would be crazy to entrust power.

DEPRESSION THEN AND NOW

No one who clearly recalls the political years 1893-96, and the way in which business depression was then made use of as a partisan weapon, can fail to notice a marked difference now. During the past six months there has been a singular lack of that outcry, abuse, and appeal which characterized the earlier period. In those years, the Opposition press called heaven and earth to witness the imbecility of the party in power. Every feature of the hard times was seized upon and gloated over, because each one was turned into an argument for removing the Democratic party from office. There has been something of this, following our recent panic. A few speeches in Congress have rung the changes on the demonstration of Republican incapacity; a certain amount of newspaper attack along the well-known lines has been noted; an occasional party platform has arraigned the Republican rulers for not continuing to give every workingman a pullet in the pot; but, by comparison, there has been a wonderful falling off from the eagerness and ruthlessness with which the panic of fifteen years ago was employed in a political way against President Cleveland.

The reasons for the change are many. One of them is that the Republicans have better-drilled and more remorseless newspapers than the Democrats. At the word of command, they all with one accord took up the cry in 1893, and lost no occasion to set the political woods echoing with it. By constant reiteration and artful insinuation, they got it into the heads of the people that the bad times were a final proof of the unfitness of Democrats to administer the country. The whole culminated in the bitter indictment of the Democratic Administration, by the Republican platform of 1896, which directly charged upon the party in power the distress of the country. It is not, perhaps, superior virtue, so much as inferior skill, which has prevented Democratic newspapers and orators this year from indulging in such tirades. The fact, at least, is clear that they have not done it.

One cause of this restraint seems to lie in a new attitude which most Americans have now assumed towards national prosperity. It has been so praised and worshipped all these years that we have come to think of it as a sort of sacred and indispensable thing, a form of virtue, which we must assume if we have it not. That prosperity should actually vanish, seems too terrible. Hence the reproach of disloyalty, or something akin to it, levelled at every one who ventures to remark that prosperity has flown. People have hated to admit it, or even to talk about it. The press has glossed over the fatal evidence of waning trade. There have even been "prosperity conventions," almost angrily to declare that we must insist that good times are still with us, whereupon they will be. As for the gloomy statistics of falling exchanges, closed mills, men out of work, crippled railroads, and enforced economies—why, we will resolutely not mention them. Now, since Democrats as well as Republicans share in this public temper, it is difficult for them to take up with vigor the old rôle of denouncing the Administration for every failure of crops and time of business reaction.

But there is a special reason which disables them from going the whole partisan figure, as the Republicans did under President Cleveland. This lies in the fact that the entire line of attack, adopted by Democrats during the past two years, has been to charge President Roosevelt with stealing their policies. What color of truth there is in the charge, we will not now discuss. Suffice it that it has been made repeatedly and clamorously. Whatever of good there might be in this Administration, whatever of benefit it might have conferred upon the country, was due to the fact that it had stolen the clothes of the Democracy. Now, when that sort of thing has been sedulously dinned into the ears of people, by Bryan and other Democratic leaders, it is not easy for the latter to turn square about and assert that it is a blind and incompetent party in power which is ruining business and forcing men to walk the streets looking for work. The typical "calamity" argument is this: "Look at the sad consequences of putting such a party in office; turn them out and put *us* in, and you will see all this changed." But, of course, if the outs propose to do only what the ins have done, if they have all along accused the ins of filching from them their principles, the argument loses all its force, and merely recoils upon the heads of those who make use of it. After praising Roosevelt as really a Democrat, you cannot, with grace, assert that an actual Democratic President would cure the evils which have befallen the land under his rule.

It is not strange, in view of these considerations, that many light-hearted Republicans are saying that their electoral prospects this year are not going to be affected by the bad times. Tell them that all political precedents are against them, and they stoutly declare that this is an Administration which breaks all precedents. Tell them that human nature itself will work against them in the coming campaign, and they reply that President Roosevelt has changed human nature, in that respect. In other years, the public soup-house has been a deadly argument against the party in power; but its appearance this year, so the President's friends gleefully assert, will simply lead Americans to say: "Then we'll take soup for ours." In other words, though Roosevelt slay them, yet will they trust in him, and vote for the man whom he kindly indicates as his successor. This is very pretty, and we will not be so rash as to predict that it will not turn out to be true. Still, we cannot forget that it was another Republican President who said: "I have observed that majorities rise and fall with prosperity"; and we think it just as well for the Republican party to make up its mind that it has before it a campaign that will be dubious even if hard-fought.

ANOTHER WEARY TITAN.

"The Disillusionment of Germany" is the title under which the London *Spectator* has been discussing "the growth in the sense of disappointment among the educated classes" of the Fatherland. For a while the people were "proud of the new position of their great country in external affairs, and of the reputation attained by their Emperor among sovereigns and statesmen.' They seem to have expected that the splendor of empire, the glory of colonial expansion, and the magnificance of army and navy would result in "more domestic prosperity"; but colonies and a huge military and naval establishment must be paid for, and the Germans who are dependent on salaries find themselves "distinctly poorer men." The deficit in the Imperial exchequer is alarming: only last Thursday a dispatch from Berlin announced that the government must borrow $250,000,000 in the next five years. The taxes levied in order to bear this crushing burden mean higher rent and a rise in the cost of food and clothing. Thus those persons who depend upon the universities, the state services, and the army, and even those persons who are employed by industrial enterprises, "doubt angrily whether affairs in general are well managed." In other words, the policy of the drum-and-trumpet statesmen has produced its inevitable consequences: another nation is enrolled among the weary Titans.

The experience of Germany is not without interest to us. For a decade now the brass band has been playing vigorously at Washington, and people are beginning to grow a little tired of the noise. It is just ten years ago last Friday that Dewey sailed into Manila Bay; and our old men began to dream dreams and our young men to see visions of Oriental conquest. Politicians who find it easier to talk than to think have been saying a great deal about duty, destiny, the stars and stripes, the guns of God, the floating fortresses of freedom, our colonial empire, and world power. These are sonorous words, just the thing for a peroration in Congress and on the stump. They will always provoke wild applause among those people who worship gilt buttons and regard a military parade as the finest spectacle on earth. And what is much more to the point, this spread-eagle and Jingo oratory helps to get generous appropriations for army and navy. Encouragement of genuine patriotism is good so far as it goes; but encouragement of military display is far better, for that means money for army contractors and builders of battleships. Every well-informed man is aware that this hurrahing over the navy is largely factitious, worked up in Congress and in the press by a lobby of manufacturers. All this fine writing and speaking about the Hand of God and the Heart of the Republic is a calculated assault on the Treasury. In 1897 the combined expenditures of the War and the Navy Departments were $85,787,101; in 1907 the total was $222,614,309. That increase of $136,827,208 has gone into somebody's pockets, and that somebody is naturally enthusiastic for the old flag and an appropriation.

But what do the rank and file of our citizens, who foot these bills, get in return? The workman pays higher prices for his woollen coat, for his hat, for his tools, for his tea and coffee, for his children's toys—for a thousand and one things that are now reckoned among the necessities of life. The clerk, the small shopkeeper, the teacher and the clergyman, the average doctor and lawyer, all of them living on narrow incomes, pay their share, and the rich man pays his. But where is their profit in the transaction? If we were devoting a surplus of $135,000,000 a year to education, in order to increase the efficiency and intelligence of our citizens; if we were putting this sum into the improvement of the health of the community, by campaigns against tuberculosis, typhoid, diphtheria, and other diseases—if we were embarking on such beneficent undertakings, the result would be palpable, though not so showy as brass bands, gilt buttons, and glittering warships But as it is, each of us, from wage-earner to millionaire, has less to spend on himself and his family. Evidently, then, we are investing our money in intellectual and moral satisfactions. But we ask again: What are they? Who can lay his finger on them and say. "This is worth $135,000,000"?

We have, in the first place, the pleasure of an occasional military or naval parade. California is at this moment much excited and delighted by the appearance of the fleet. But no sane man contends that as a mere show that fleet is worth the money. Indeed, the only serious argument for a big navy advanced by the chief advocate of that policy, President Roosevelt, is that it will enable us to "repel insult." That would be a deep comfort if any one were likely to insult us. But we pulled through from the close of the Civil War to the outbreak of trouble with Spain without suffering much from contumely. The truth is that if this nation, with its enormous resources, behaves itself, nobody will insult us. No one can have any object in doing so; indeed, the manifest tendency of our neighbors is to be flattering and obsequious. Men who mind their own business get into no quarrels; it is the boy who swaggers down the street with a soldier-cap on his head and wooden gun over his shoulder, and who dares the other boys to fight—it is the boy who is always ready to "repel insult" who attracts the brickbats.

We are driven, then, to the conclusion that this Imperial strut is assumed not at all for the benefit of ourselves, but for our "wards" in Porto Rico, Cuba, and the Philippines. We lay this grievous yoke upon our necks for the sake of (after the shipbuilders and army contractors) the down-trodden and oppressed in other lands. But granted that we are ameliorating the condition of Porto Rico and Cuba, that is no pretext for such an expansion of army and navy. Nobody wants to steal Porto Rico and Cuba. And as for the Philippines, no one can say that they are surely better off to-day than if we had left them to set up their own government, and, under some kind of friendly oversight, work out their own salvation. We have poured treasure and blood into those unhappy islands. Our reward has been the empty title to a territory whose inhabitants hate us; and their reward, too, seems to have been quite as undesired and as bitter.

Then, to crown all, we are, like Germany, facing a deficit. In the fiscal year thus far our receipts are $53,300,000 less than our expenditures, as compared with a surplus of $58,900,000 for the corresponding date of 1907—a difference of over $112,000,000. And little or nothing to show for it except the cocked hat and the toy gun.

HOSPITALS AND THEIR LABORATORIES.

So rapid has been the development of the modern hospital that few people realize to-day how essential to it is a well-conducted pathological laboratory. The physical growth of the hospital from an unsanitary barracks into the elaborate and costly structure of to-day has not passed unnoted. So, too, the advance in nursing has come to be understood and valued, even though it has been hard to eradicate the old prejudice against the hospital among the poor, because of their belief that vivisection for scientific purposes was not always confined to dogs and cats. But it has not been so generally understood that a laboratory is not only of value for educational purposes, but is an important factor in the care of the patients. That is its first object; a secondary one is the training of attending physicians, internes, and medical students—the physicians of the future—and also the advancement of medical science.

So far as the sick are concerned, it is in diagnosis that the laboratory is chiefly and immediately useful. The physician will often remain in the dark in his effort to read the outward signs of an inward trouble, say, typhoid, unless the laboratory is there to tell him the character of it, as by a blood-test, and to inform him whether a tumor is benign or malignant. Again, it is in the laboratory that the infectious character of some maladies is often first discovered, and that certain special antitoxins are manufactured. In fact, the laboratory more than any other one thing differentiates the hospital of today from that of our civil-war period, when it was merely a place where the doctor hacked off limbs and was just beginning to understand that in some illnesses nature herself is the best physician. And even when the laboratory came, its importance was not at first realized; indeed, there are still plenty of hospitals where the pathologist outranks but little the head nurse or the engineer. In this city, indeed, the failure to appreciate the exact and delicate position of the pathologist, and to pay him adequately, has made it extremely difficult for hospitals, except Bellevue, to get the right kind of men for their laboratories.

That there should be a career in every hospital for a skilled pathologist is the contention of Dr. Francis Carter Wood in a paper recently published by the *Columbia University Quarterly*. He was prompted to utterance by a bequest to St. Luke's Hospital that has made it possible to afford its scientific staff an equipment and facilities equal to those now offered to independent surgeons and physicians. Dr. Wood points out that because few of our hospitals are related to medical schools, as is the case in England, Germany, and France, the problem of the laboratory must be solved in a different way. On the other side of the Atlantic the close connection between hospitals and universities has resulted in the setting up of high standards of achievement in the field of research as a prerequisite to appointment to the attending staff in a hospital or the teaching staff in a university. In this country, the appointment of an "attending" physician has little or nothing to do with a record for laboratory work or research. Occasionally, it has been said, an attending physician is chosen because he was favored by a generous patron, or because he was well-known to the lay board of trustees, or in touch with the medical staff. There has been no fixed standard or policy, although the man appointed might for years put his stamp upon the methods of a hospital and become the teacher of numerous internes. The latter have been compelled to pass examinations for appointment; their elders and preceptors have not.

What Dr. Wood and many others desire is, primarily, that a man may have the opportunity to rise through the laboratory to a position as an "attending," and thus have the best training in modern scientific medicine. In this way young doctors of promise would be tempted into the laboratory work they now shun, or find insufficiently remunerative. Again, by more generous recognition of the importance of pathological hospital work we should raise our standards to the level of those of Europe. As Dr. Wood puts it:

> If clinical teaching positions in the medical schools were open only to those who had a full knowledge of the causes of disease as obtained in the autopsy room, or who had done good research in medicine or surgery, there would spring up a body of men working in this line who could afford to spend their early years, when laboratory work can best be done, in fitting themselves for the best type of teachers. That this is not merely a theory is seen in the Johns Hopkins Hospital in this country. Its effect is beginning to be felt in Mt. Sinai Hospital, where satisfactory research is being regarded as a condition for appointment to the subordinate positions on the staff, both surgical and medical; and this qualification has long existed in Germany as a necessary preliminary for ward service. All of the great consultants and teachers there have passed through the laboratory. We have only to run over the list of recent appointments in Germany; that to the first medical clinic in Vienna of Von Noorden, whose work has been chiefly on the chemical aspects of gout, diabetes, and nephritis, and who stands in some ways at the head of his profession, with a large consulting practice and one of the finest clinical services in Europe.

Dr. Wood also assures us that for one patient who has been injured by being used as a lesson, fifty are injured by slipshod diagnoses and careless methods of examination "into which any man may fall who is not constantly kept awake by the stimulus of new knowledge and new points of view which must be always present to the teacher."

Thus the hospital laboratory of the future—if Dr. Wood and his sympathizers have their way—will not only be of enormous direct benefit to the hospital itself, but indirectly to the whole profession as an agency for the training of accomplished teachers, and efficient administrators of our great medical institutions.

MATTHEW ARNOLD TWENTY YEARS AFTER.

It is twenty years this spring, as the English papers have been reminding us, since Matthew Arnold died. The very fact that this anniversary has provoked so much comment indicates that Arnold's hold upon the new generation is as strong, perhaps, as on his own. This is not, however, to say that those books of his which were most often read and quoted in his lifetime are still popular. While Arnold was alive, his poetry was much overshadowed by that of Tennyson and Browning. His output was much smaller than theirs; it made relatively little impression on the public. It lacked the pictorial quality, the verbal felicity, the agreeable sentiment, the happy restatement of current commonplaces which gave Tennyson such wide vogue; on the other hand, it was not obscure and intricate, and therefore offered no excuse for the formation of Arnold clubs. But the lapse of time has only established more firmly the position of Arnold as a poet. Without the factitious aid of special pleaders, his verse has slowly but steadily gained ground. Browning died a year after Arnold, but already it is evident that of the seventeen volumes in the standard edition of Browning's poems, two would contain all that seems destined to immortality. Tennyson is just appearing in a new edition, but a re-reading of the old favorites leaves one rather cold. The brilliant phrasing, the dexterity in metres, the nice observation, the appropriate sentiment are all there, but the matter seems rather thin and insubstantial. Indeed, in a comparison of Tennyson, Browning, and himself, Arnold came astonishingly near the mark in a letter to his mother nearly forty years ago (June 5, 1869):

> It might be fairly urged that I have less poetical sentiment than Tennyson, and less intellectual vigor and abundance than Browning; yet, because I have, perhaps, more of a fusion of the two than either of them, and have more regularly applied that fusion to the main line of modern development, I am likely enough to have had my turn, as they have had theirs.

And his poetry is, in truth, having its turn. There are but three volumes of it, but how good it all is! "Sohrab and Rustum" and "Tristram and Iseult" are taking their place beside the "Idylls of the King"; and "Requiescat," the "Forsaken Merman," "Dover Beach," "The Scholar Gipsy," "The Last Word," and "Rugby Chapel" are finding their way into the school-books, and thus into the common consciousness of English-speaking peoples. George Eliot's experience —that of all modern poetry Arnold's is that which keeps constantly growing upon her—is becoming true for the larger world.

Of Arnold's prose, his literary criticism—particularly the two volumes of "Essays in Criticism"—probably leads all the rest, with "Culture and Anarchy" not far behind. Arnold, as we now see clearly enough, was the most competent English critic of the latter nineteenth century. His strength lay in the fact that he did not deal in mere casual and shallow impressionism: he tried to go back to first principles and build up from fundamentals. Thus in his "Study of Poetry" he warns against the fallacy of a judgment based on "our personal affinities, likings, and circumstances"; and in the Essay on Wordsworth he urges his famous definition: "that poetry is at bottom a criticism of life; that the greatness of a poet lies in his powerful and beautiful application of ideas to life." In minting, or at least putting into circulation, phrases like this and like "sweetness and light," "Philistinism," and "culture" as the "pursuit of our total perfection" by means of getting to know "the best which has been thought and said in the world"—in doing this Arnold actually succeeded in increasing the stock of ideas among a people who were "peculiarly stiff-necked and perverse in their resistance to light and its children." He persuaded many men that their traditional notions on art, literature, and religion were not necessarily right. But, important as were his services as a critic, his writings on this subject are likely to be less and less heeded. Each new generation needs its own critics to reinterpret the masters in terms of contemporary thought. Dryden was a distinguished critic in his day; but now he is read only by scholars; Joseph and Thomas Warton are, for most of us, shadows of a name; and recent reprints of Coleridge, perhaps the profoundest of English critics, only serve to recall that there is no general interest in the "Biographia Literaria" and the "Notes and Lectures Upon Shakespeare."

If Arnold's literary criticism shall finally go the way of Coleridge's and Dryden's, it will simply follow the bulk of his religious and political writings, which have already lost their vitality. Some of the political essays, indeed, were still-born. But "Literature and Dogma" and "God and the Bible" made a sensation in their hour. If they attract little attention now, if no bishop thunders at them from the pulpit, it is because they have done their work. The thesis for which Arnold contended, that the Bible is literature and not a scientific statement of dogma, is so fully accepted that it scarcely needs an advocate. In 1870 the Bishop of Manchester told Arnold that this view was "startlingly new to him, but, the more he thought of it, the more he thought it was true"; but the startlingly new has becoming exceedingly trite. Four years later Arnold wrote in a private letter: "The common anthropomorphic ideas of God and the reliance on miracles must and will inevitably pass away." That prophecy is fulfilling itself more rapidly, perhaps, than he had even hoped; but the very fulfilment means that the usefulness of "Literature and Dogma" is at an end. As has been said of Coleridge, "like the general whose victories destroy his own importance by restoring peace to his country," Arnold "suffers from his very success." It is no marvel that Tennyson, with his sure perception of the ephemeral nature of most controversial books, sent this message: "Tell Mat not to write any more of those prose things, like 'Literature and Dogma,' but to give us something like his 'Thyrsis,' 'Scholar Gipsy,' or 'Forsaken Merman.' "

For most of our prose, except works of the imagination, is but glorified journalism. No one looks at yesterday's newspaper, last month's magazine, or the epoch-making book of the last decade. It is somewhat melancholy to run over the shelves of even a well-chosen library and see how little of the prose written before 1860 finds eager readers. Aside from novels and essays like Lamb's—are there any like his?—the roll is pitifully small. Darwin's "Origin of Species" shook the world; but its scientific details need revision. John Stuart Mill, Carlyle, and Newman can never move us as they moved our fathers; the early volumes of Ruskin's "Modern Painters" and the "Seven Lamps of Architecture" begin to gather dust; the "Tracts for the Times" are not for our times; and Cobbett, Godwin, Whately, Christopher North, Jeffrey, Brougham, Sydney Smith, Malthus, Bentham, Paley—how faint and far away the names sound! Yet within a century they were all ranked among the mighty immortals. "Apparitions of a day," cried Arnold, "what is our puny warfare against the Philistines?" It was valiant fighting; but that day's sun has set, and new champions enter the lists. Yet Arnold's own poetry, that serious and lofty criticism of life, will, we may hope, survive as a striking illustration of his splendid generalization regarding all fine poetry. "There is not a creed," he declares, "which is not shaken, not an accredited dogma which is not shown to be questionable, not a received tradition which does not threaten to dissolve." But "in poetry, where it is worthy of its hign destinies, our race, as time goes on, will find an ever surer and surer stay."

PARIS BOOK NOTES.

PARIS, April 18.

The Paris season has given a few careful studies, not too theoretical, to American conditions of the present day. The Vicomte Georges d'Avenel, in "Aux États-Unis" (Armand Colin), adds our country to his series of works on the economic side of the modern world. He writes, after a long visit to the United States, which he treats, with much statistical research, in agriculture, business, and ideas. The chapter on our financial methods drew attention when first published in the *Revue des Deux Mondes* during the recent crisis. Louis Aubert, in "Américains et Japonais" (Colin), handles Japanese emigration into the United States, the rival economic interests of the two peoples, and the attitudes of other Powers toward them. "L'Expansion allemande hors d'Europe," by E. Tonnelat (Colin), concerns the Americans chiefly, since the prevalent trend of German emigration has always been toward the United States or Brazil; but the book also investigates the German colonies in North China and South Africa. Henry Bargy, who published a book on religion in the United States after his sojourn among us, now utters the plaintive thought of a French emigrant amid Acadian forests, which speak to him of the past, under the form of a romance "France d'exil" (Colin). A Spanish work by Luis Morote, "Sagasta—Melilla—Cuba," elucidates that statesman's colonial policy, in the outcome of which the United States had so large a part. "Le Pérou économique," by P. Walle, surveys commercial and industrial Peru, with suitable maps and even engravings.

An intellectual movement, whose results in Young France it is impossible to foresee, finds expression in Louis Dimier's "Les Préjugés ennemis de l'histoire de la France." It is a fairly complete handbook of the counter-revolution in its effect on national feeling toward the historic past. The movement issues directly from the work of Le Play and Taine. The author attacks resolutely the democratic prejudice despising the kingly office; the economic prejudice which equally contemns the work of military power; and the feudal prejudice scorning administrative order. The succession of revolutionary religious sects—Albigenses, Protestants, Jansenists—follow in order, with a final examination of the modern criticism of such ancient things as taxation and the people's want, *lettres de cachet* and English liberties, and the trial of absolutism. It cannot be denied that this movement of minds, spontaneous and simultaneous rather than a conscious conspiracy, is growing sufficiently to preoccupy those republican leaders who look beyond their own holding of office. Its exponents, it is common justice to acknowledge, do not dream of an impossible reversion to the past, but rather of taking up again certain vital traditions of the French people which the present new régime officially treats as dead. In profane literature the movement profits by the thought of writers like Paul Bourget, Maurice Barrès, and Jules Lemaître; and, in spite of the lack of sympathy and understanding shown by such a leader as Brunetière, the younger generation who retain the slightest traces of Catholic feeling are inevitably driven to join the movement by the government policy of recent years.

The vital nature of this movement unconsciously inspired the closing words of Jules Lemaître's lectures on Racine, which have now appeared in book form—the chief book of the year from the point of view of literature:

> I am tempted to believe that a part of Racine is for ever inaccessible to foreigners, and, who knows? perhaps to all those who belong too much to the South or to the North. It is that by which Racine expresses what we will call the genius of our race—order, reason, measured feeling, and force underlying grace. Racine's tragedies suppose a very old country. In his poetry, at once so full of order and of emotion, it is ourselves we love; it is—as with La Fontaine and Molière, but in a nobler exemplar—our sensibility and mind at their happiest moment. . . . One of the bas-reliefs of the tumultuous and torn monument raised to Victor Hugo represents him received by the other poets in the Elysian Fields. There they have placed Homer, Shakespeare, Dante. There they have put Corneille in spite of his "Polyeucte," Molière, Rabelais, Voltaire, I know not whom else. And this was very well. There they have not placed Racine. This, too, was well—for he is apart.

With these almost sinister words the lecturer left his seat. Those who recalled Michelet's lectures which resulted in 1848, and perhaps in 1870, asked themselves whether the advent of the working class, which thinks only in terms of matter, and the riches of young *bourgeois*, who think not at all, can stifle this national self-consciousness surviving so many revolutions. Jules Lemaître, whom five years of fruitless politics have cloyed with mere distractions of the passing day, comes easily first as an intelligent voice of the French race in its literary sensitiveness and delights. His "Jean Racine" is not a mere eloquent exposition of the classic ideal that persists in French letters after all revolutions, romantic, naturalist, symbolist, and the rest. Nor is it limited to the keen, disabused vision of the Golden Age of French literature, with Jesuit and Jansenist religion variegating the splendors of the Court of the Grand Monarque, while stage people carry on a drama of their own. In two years Jules Lemaître has given to the world two books—Rousseau and Racine—which bring their subjects adequately within the sweep of our latest thought, and in a way which the greatest masters of French prose would consider worthy. Another book of his—his second "En Marge des vieux livres"—shows in lighter mood the mental gymnastics which enable him to live over again ages that are past. It is a series of stories and essays completing thoughts stirred in him by Homer's Odssey and books that open to us other days.

Remy de Gourmont's fourth series of Epilogues from his "Dialogues des amateurs sur les choses du temps" is the work of an exasperating writer whose interminable musings without method excite curiosity much oftener than they satisfy it. This time he gathers together what he thought about the events of 1906 and 1907, mainly in the *Mercure de France*, organ of Frenchmen who were young *intellectuels* ten years ago; they seem unaware that a newer generation is crowding them back where they, too, shall not be up with the time. Meanwhile Remy de Gourmont has been a name of power to many on everything, from science and philosophy to such questions as he treats in a second new book of his "Le Problème du style," new versification and spelling reform. Gustave Geffroy, who began as one of M. Clemenceau's young men, and has just been named by him head of the Gobelins Art Tapestry, should have been a great writer. Meanwhile he gives us a volume "Notre temps," in which are bound up scenes from the latest history of Paris—the specialty of this advanced, but open-minded observer. Paul Gaultier, in "L'Idéal moderne," writes literature rather than philosophy on such things as moral, social, and religious questions, "The Renaissance of the Antique Ideal," individualism, true justice, and the modern spirit.

Of writers long since known, Pierre Loti's "Ramuntcho" in its shape of a five-act play is chiefly valuable for the music adapted to the twelve scenes by Gabriel Pierné. Henri de Regnier, in "Les Scrupules de Sganarelle," presents a romance of types of the old French theatre, without getting beyond his usual circle of sex and seduction. Charles Baudelaire, unforgotten after forty years, has his work enlarged by a volume of "Œuvres posthumes," which should interest Americans from its series of notes on Poe. It is due to Baudelaire that Poe, the only one among American writers so far, entered into the classical literature of Latin Europe. There is also a volume of Baudelaire's letters, from 1841 to 1866, the year of his death. Léon Bazalgette makes another American known at last in a good volume on "Walt Whitman," the man and his work. And he announces as in press a French translation of the complete poems, under the title "Feuilles d'herbes."

A book which is literature, but which is also an urgent comment on timely crises, is the second portion of Paul Margueritte's remembrances of his youth, published under the title "Les Jours s'allongent." It is his life in the old-fashioned military boarding school at La Flèche, with all the dangers of crowding growing youth into educational barracks, a world to themselves, separated by discipline from the real world without; and then the unprepared flight into that outer world, with such gods as Dumas and Victor Hugo and Baudelaire and Verlaine! The other brother, Victor Margueritte, introduces a volume of more poignant interest, "Mémoires et correspondance de Louis Rossel (1844-1871)." Let no one, not even him who lived through the bloody months of the Paris Commune, imagine he knows what then brewed in the minds of many, until he has read these frank outpourings of a young Protestant who took up ardently with the movement and was duly shot by the troops of law and order when all was over. His was a revolt against the government of Gambetta and the rest, who had submitted to the German invader, just as Gambetta's own revolt against what was left of the empire was because it had been subjected to the German invasion. There is something touching in the latest letters where patriotism that erred and failed seeks final consolation in the religion of childhood. "La Vie tragique des travailleurs" is another book whose literature, rather than its facts, tends to keep open the raw sore of Labor—wants of the soul, often newly created and doomed to be left unfulfilled, in addition to mere misery of the body. The preface is by Lucien Descaves of the Goncourt Academy, whose own work, like that too, of Steinlen, the artist of the cover, is impregnated with this inevitable anarchy.

Another book by the ex-abbé Alfred Loisy—"Quelques lettres"—brings up to the date of the Pope's excommunicating him by name the acts of his intellectual, rather than moral, drama. To the outsider it seems incredible that such a man, no longer believing in either Mass or Church, should have fought so long for the privilege of saying the mass in Roman Catholic churches. In 1906 he wrote in a letter which he now publishes:

> It is sufficient that they should endure me so that I can in conscience keep within the Church and need not begin a secession which would lead me nowhere, since I do not conceive the possibility of founding anything outside of Catholicism, and do not acknowledge in any other Christain communion any title to my adhering to them.

His reason for believing himself bound to remain in the Church was that he might "work more usefully, in the weak measure of my power, for a transformation which is no less necessary to the good of my country and the general interest of human progress than to the future of the Catholic Church itself." The conclusion of the book—and perhaps of the whole story, so little is the French world interested in the substance of the controversy— is in these melancholy words:

> Happy are they who have no need, after making their way in life and working for what they believed to be true, to ask themselves whether they have not taken a wrong direction and to acknowledge that their career directed otherwise would have been surer, less troubled, more fruitful.

A few books of history remain to be gleaned from the publications of the closing season; and there will doubtless be others later. Henri de Genouillac, who cannot be of the secularized University of France, since he is a doctor of theology, publishes a book having all the air of a modern university thesis, and therefore likely to be of some use for its research, if not for its conclusions—"L'Église chrétienne au temps de Saint Ignace d'Antioche." Charles Diehl of the Sorbonne and Institut, whose previous Byzantine studies have been "crowned" by the French Academy and the Académie des Inscriptions et Belles-Lettres, gives another series of "Figures byzantines" (Colin), taken from the captivating epoch of the Crusades—court ladies of Constantinople, like Anna Comnena, in contrast with the slower civilization of princesses of the Occident. The second volume of Anatole France's "Jeanne d'Arc" leaves the completed work to the not over-tender mercies of historical criticism. It is already certain that, in an uncertain field open only to hypotheses, he has evolved an hypothesis of his own—the suggestion, *cherchez le prêtre!* He is also reproached for an attitude diametrically opposite to that which he adopted in the Dreyfus case, since he now relies solely on evidence which condemns, and rules out that which rehabilitates; and it is complained that many of his *Tendenz* details are not found where referred to in the original documents—all of which promises more pleasant days of controversy. Albert Waddington, professor of modern history in the Lyons University faculty, and not to be confounded with other members of his family, publishes the second and last volume of "Le Grand Électeur"—Frederick William of Brandenburg; it is devoted to the Great Elector's foreign policy (1640 to 1688). The Vicomte de Bonald gives a volume to "François Chabot (1756-1794)." the ex-Capuchin, who showed himself so bloodthirsty in the Convention, and pronounced the formula, still in use: "The citizen Jesus Christ was the first *sans-culotte* of the whole world." M. Thénard and R. Guyot give a similar volume to "Le Conventionnel Goujon (1766-1795)," who escaped the guillotine of the Thermidorian reaction by turning the knife against himself. From unpublished documents Raoul Arnaud tells the story of the Egeria of Louis Philippe—"Adélaïde d'Orléans (1777-1847)."

A work of unusual importance, on account of its bearing on property questions in the present French state, is "La Vente des biens nationaux pendant la Révolution française"—the national property which was sold being largely church properties; the author is Amédée Vialay, who treats his subject from the legislative, economic, and social points of view.

In the realm of mind, Émile Boutroux diagnoses the relative validity of "Science et religion dans la philosophie contemporaine," ranging from William James to the writings of Henri Poincaré, which have given so great a turn to the most recent scientific philosophy. S. D.

NEWS FOR BIBLIOPHILES.

From the point of view of the collector of first editions, no recent bibliographical work ranks in interest with Thomas J. Wise's "Bibliography of Tennyson," the first volume of which has just reached us. Mr. Wise, whose collection of first editions of nineteenth century English authors is perhaps the finest extant, has been busy at this task for more than ten years, has circulated proofsheets among English and American collectors, and has made many important discoveries. The book is now as nearly perfect as such a work can be. This first volume, which describes only first editions, and contributions to periodical literature, is an octavo of 363 pages, with a large number of inserts (facsimiles of manuscripts and rare title-pages) and a portrait of Tennyson, from a hitherto unpublished photograph. Only 100 copies have been made, and the title-page reads "printed for private circulation.

Tennyson's reputation was so firmly established after the publication of the two volumes of 1842, that the first published editions of almost all his later books were large. He was in no hurry to rush into print, and was fond of having his poems put into type to be kept by him for consideration and revision; for, as he wrote himself, "poetry looks better, more convincing, in print." This custom accounts for some of those exceedingly scarce little pamphlets which all collectors desire, but which most of them must get along without. Other private issues were printed for distribution among a few friends or for the purpose of securing copyright. When William Harris Arnold sold his books in 1901, he retained his Tennyson collection, and he has since added to it. J. Pierpont Morgan's library contains a superb set, including many rare pamphlets and some interesting manuscripts. In the West, John A. Spoor and John H. Wrenn of Chicago both have fine collections, and W. K. Bixby of St. Louis undoubtedly owns more Tennyson manuscripts than any one else in America.

"The Lover's Tale," 1833, is, as Mr. Wise notes, the most interesting and valuable first edition of English nineteenth century literature, with the possible exception or one or two Shelley pamphlets. When the poem was put into type, the plan was to print it at the end of the "Poems Chiefly Lyrical," but on November 20, 1832, Tennyson wrote Moxon:

> After mature consideration, I have come to a resolution of not publishing the last poem in my little volume, entitled "Lover's Tale"; it is too full of faults, and tho' I think it might conduce towards making me popular, yet to my eye, it spoils the completeness of the book, and is better away.

But before those types were distributed, six copies were struck off and delivered by the printer to Arthur Henry Hallam to be distributed among friends. One was cut up when the poem, revised and rewritten, was again put into type in 1868. Only two copies are now known. One, given to Dr. W. H. Thompson, containing numerous alterations by the author, now belongs to Mr. Wise. The second, formerly Frederick Locker's, now belongs to Mr. Spoor of Chicago. He paid, as Mr. Wise states, $3,000 for it. The three other copies have disappeared. In 1868 the poem, revised and enlarged, was once more put into type and again recalled. This edition is as rare as the original. One copy, given by Tennyson to Frederick Locker, is still in the possession of his son, Godfrey Locker, having been retained by him when the Rowfant Library was sold. The other, formerly the copy of Strahan, the printer, belongs to Mr. Wise. Fifty pages in Mr. Wise's book (besides four reproductions) are given to descriptions of the three editions of 1833, 1868, and 1879, and variations of their texts.

"In Memoriam," under the title of "Fragments of an Elegy," was circulated in the form of printed proofs among a few friends in advance of publication. In sending a copy to Aubrey de Vere, Tennyson wrote:

> I believe I am going to print them, and then I need not tell you that you will be perfectly welcome to a copy, on the condition that when the book is published, this avant courier of it shall be either sent back to me or die the death by fire in Curragh Chace.

Of that proof-sheet issue (which contained 192 instead of 210 pages) only one copy is known, the property of Hallam Lord Tennyson. A similar proof-sheet of "Maud" once existed, but was burned by Coventry Patmore. Variations between its text and that of the published edition were taken down by R. H. Sheperd, and are now printed by Mr. Wise.

From the Rowfant Librray Mr. Wise acquired several interesting proof-sheet or trial issues, which had, apparently, been given by Tennyson to Locker. Among these are "Property," 1864, an early form of "The Northern Farmer," not published until 1870; "The Last Tournament," 1868, not published until 1871; "The Birth of Arthur," 1868, published in the "Holy Grail" volume in 1870; "Gareth and Lineth," 1872, published later in the same year as "Gareth and Lynette."

Among the rare or private issues not heretofore described we notice the following: "Wedding Verses" on the marriage of the Princess Royal, 1858, sung at a concert given at Buckingham Palace and printed as a leaflet for that occasion; "England and America in 1872," 1872, a pamphlet of six pages, issued apparently for copyright, published first in the New York *Ledger*; "To the Queen," 1873, an eight-page pamphlet, printed from the types of the Library Edition of the "Works," Vol. VI., where it was first published; "The Foresters," 1881, not published until 1892 (Mr. Wise says that the Souvenir edition of the play distributed in New York by Augustin Daly was actually the first published edition); "Early Spring," 1883, a four-page leaflet printed for English copyright, published first in the *Youth's Companion*; "The Death of the Duke of Clarence and Avondale," 1892, a leaflet, published in the *Nineteenth Century*.

The Graphische Gesellschaft in Berlin announces as a special publication a facsimile reproduction of Boner's "Edelstein," provided enough subscribers are secured to keep the price within 30 marks. This book has a double interest to the student of the graphic arts: it is one of the books printed with the types of the 36-line Bible, and it is the first printed book having illustrations, beside being the first large work printed in the German language. (Berlin: B. Cassier.)

At an auction at Hodgson's, London, last month, a copy of Suckling's "Fragmenta Aurea," 1646, sold for £23; a Fourth Folio of Shakespeare, soiled, £23; and Peters's "History of Connecticut," 1781, original boards, £31.

On May 11 to 13 Sotheby, Wilkinson & Hodge, London, offer 848 lots consigned by various owners. Among the more notable books are Donne's "Poems," 1633; Quarles's "Emblemes," 1635; Drummond's "Flowers of Sion," 1630; "Paradise Lost," 1669; the Duchess of Newcastle's "Playes," 1662-1668; Swift's "Tale of a Tub" 1704, with manuscript annotations said to be by the author; Cavendish's "Negotiations of Thomas Wolsey," 1641; Goldsmith's "The Traveller," 1765, with the half-title; Johnson's "Vanity of Human Wishes," 1749; and Lamb's "Tales from Shakespeare," 1807.

Correspondence.

INTERCOLLEGIATE DEBATING.

To the Editor of The Nation:

Sir: In view of the opposition to intercollegiate athletics, on the ground that they seriously conflict with the primary purposes of higher education, it might be supposed that college authorities would welcome debating without question as the one form of intercollegiate rivalry contributing directly and highly to the intellectual interests of the college. On the contrary, it is said that debates, as they are now conducted, "impress the hearer with a waning sense of reality," because they are too formal, too rigid in their rules, artificial in their aims, in short, quite unlike the kind of contests in which students will find themselves engaged in the life beyond commencement. One result of this formalism is said to be a noticeable lack of sincerity and earnestness on the part of the speakers. Then again the question for debate is often so cleverly phrased, so vague, and so complicated, that the time which should be spent on vital issues is wasted in quibbling over the meaning of terms. The petty and academic discussion which results seems more like a controversy of the Middle Ages than an attempt to get at the truth of a contemporary practical problem. Still further to preclude the possibility of real debating are the memorized speeches which render impossible that effective adaptation to opposing speakers, that running rebuttal, that one feature which distinguishes the real debater from the elocutionist. And when, after an hour or two of such lifeless discussion, a team of undergraduates arrives with remarkable ease at sweeping conclusions, and proves "beyond the shadow of a doubt" a proposition which is still puzzling statesmen, the whole affair seems to some people little short of ridiculous. These appear to be the main charges brought against intercollegiate debating.

Meantime, the spread of interest in debating is remarkable. There is scarcely a college without its contests. The attitude of undergraduates is indicated by a recent editorial in the *Tripod* of Trinity College, Conn., which deplores as "an almost inexplainable mystery" the fact that Trinity has nothing in the line of debates. A generation ago it would have been equally surprising to find a college offering a systematic course in argumentation and debating as the equivalent of a course in Latin or in mathematics. To-day most of the leading institutions offer such courses. Of late our universities have been unable to supply the demand for competent instructors in argumentation and debating. Yet, in spite of all this, or because of it, the charges brought against intercollegiate debating are not without foundation.

What shall we do about it? Prof. R. M. Alden of Stanford University once said in a letter to the *Nation*, "it is far easier to point out defects than to suggest remedies," and his remedy was the heroic one of abolishing all debates between colleges. That is too easy. If we were to do away with all college activities which fall short of the ideal, we should have nothing left, not even a Christian Association. For debating, there is still hope.

In the first place, we should lead up to such work by a more sensible kind of instruction in speaking. "Elocution," a small boy wrote, "is something they kill folks with in the United States"—a definition which recalls the fantastic tricks and absurd gymnastics which have been performed under that now discredited name. In one of the largest colleges in New England, a course is still laboring under the title of "Gesture and Pantomime," though among the students it is known as "Jest and Pant." The old training in "speaking pieces"—memorizing and reciting the words of other people—is about as barren as any of the traditional subjects to which we still cling; and we may as well stop blaming the boys for thinking so. The formalism, the unreality, the difficulty of producing a head-on collision, which are complained of in present debating, are due in part to this traditional elocution which nine-tenths of our institutions regard as training for debate. Yet none of the essentials of refutation, which is the life of debate, is possessed by those who regard debating as the recitation of memorized speeches, consisting for the most part of strings of quotations delivered in supreme disregard of the equally automatic declamations of the "opposing" speakers. Such performances should not parade under the name of debating. They are not even preparation for debating. Indeed, it is an open question whether they do not hinder more than they help; and it is altogether true that they contribute nothing to the power of adapting refutation to the needs of the moment. Any training which develops the power of independent and sound thinking and the faculty of phrasing and presenting thought before an audience prepares a man for the work of refutation; and when to this general training he has added an accurate and wide knowledge of the subject for debate, quite regardless of what material he may expect to use for a given speech, he has acquired the essentials of effective refutation. To these essentials declamation contributes almost nothing. That kind of school and college speaking which prepares for real debating resembles effective speaking in the affairs of grown-up men, rather than the parlor performances of children.

Another condition which tends to produce academic and unprofitable discussions is the prevailing practice by which one institution submits the question and leaves the choice of sides to the other. This prompts students, who are looking for victory rather than a profitable debate, to phrase a question cunningly and ambiguously, so that it shall appear to be evenly balanced until the choice of sides has been announced. The resulting contest is usually a mere quibble over the meaning of the proposition. One remedy for this evil is the round-robin league. Each of the three institutions in such a league puts two teams into the field, one to debate on the affirmative of the question at home, the other on the same evening to debate elsewhere on the negative. This plan removes the chief motive for submitting unbalanced and tricky propositions. Another remedy lies in the exchange of briefs similar in content and purpose to those required by courts of law and by college courses in debating. And finally—it must be admitted—the only sure remedy is the insistence on higher ideals than the "win-at-any-cost" motives, which have often brought debating into ill-repute.

The lack of sincerity and earnestness on the part of the speakers is due not only to the lifeless practices of elocution, but as well to the almost universal custom of ignoring the interests and beliefs of the individual speakers. Chatterton observed that a man must be a fool who cannot write on both sides of a question. A man is a fool, we may add, who *will* write on both sides of a question. And a speaker who, even in a formal contest, endeavors to convince an audience of the truth of what he believes to be false, engages in an undertaking of doubtful morality. Here is the dilemma. If he simulates sincerity and earnestness, he is deceiving his hearers, emulating the most contemptible speakers in public life, preparing to swell their ranks. If he does not even appear to be sincere and earnest, he lacks the primary requisites of a persuasive speaker, and becomes the lifeless kind of debater of which we hear complaint. At once the objection arises that it is good training for a person to study both sides of a question. Certainly it is. The broadening influence of real debating is due partly to the fact that the very conditions of the contest force the debaters to study the other side of the question. But speaking on the other side is wholly unnecessary. It is said further that the methods of conducting courses and contests render it impossible to allow men always to defend the side in which they believe. Now, it is this very insistence on rigid rules and methods which many people are condemning. If the means defeat the end, in the name of common sense, let the means go! Any one who cares more for the real good of the work than for the formalism and the verdicts of judges will not find it necessary to encourage young men, in an institution which stands above all for the pursuit of truth, to speak against their convictions.

Institutions which have honest and intelligent regard for the essentials of debating, and are unhampered by the notion that the non-essentials must forever conform to tradition, will make all their studies aid in the development of able debaters, will have no special interest in the preparation for a particular contest, and no concern with the charges against "unreal" debating. WILLIAM T. FOSTER.

Bowdoin College, Brunswick, Me., April 23.

ROGER WILLIAMS AND THE PILGRIMS.

TO THE EDITOR OF THE NATION:

SIR: The reading public cordially welcomed last December a new volume from the pen of Dr. Frederick A. Noble, pastor emeritus of the Union Park Congregational Church in Chicago. His previous volumes had been theological and exegetical; his latest work is historical, and treats of "The Pilgrims." In it he has given an admirable account of the causes which led to the Pilgrim movement, its leaders, its migration to the Continent, and then to this new world, the principles for which it stood, and its influence upon our American civilization. He has certainly accomplished his double purpose, as stated in his preface, "to combine the leading facts in the story of this remarkable group of men, presenting them in a form to be easily grasped and held in memory," and "to set forth the movement in an interpretative way."

Yet the reading of the volume, which contains three or four brief references to Roger Williams, raises the question whether the author in his desire to do full honor to this noble band of immigrants, has not failed to do justice to him, whom Oscar S. Straus calls "the pioneer of religious liberty." Because Roger Williams had clear and strong convictions which not only differed from those of his neighbors, but were in advance of theirs, and frankly gave expression to them in Boston and Salem and Plymouth, Dr. Noble applies to him the opprobrious epithets "illiberal," "intolerant," etc., as if Williams had not learned the first lessons in religious liberty. Dr. Noble declares that Roger Williams was wrong and illiberal in insisting that the Boston church should completely separate from the Church of England, which had become corrupt and was filled with the spirit of cruel persecution, and that the Boston church was right in refusing to do so. Dr. Noble further maintains that for Williams to call in question the validity of the Massachusetts Bay charter was also evidence of illiberality, and made him the author of an unnecessary controversy; yet as a matter of fact Williams withdrew from Boston, and then from Salem, in order to avoid controversy, expecting to find among the Pilgrims in Plymouth a more sympathetic environment. The strange implication is that if Williams had held his peace in the presence of what he believed to be error, and had abstained from "disseminating and venting any of his different opinions in matters of religion" [the condition on which the act of banishment was revoked, March 31, 1676], that would have been evidence of a genuine liberality and a commendable spirit of toleration. To speak was to be illiberal and intolerant. His good name could be maintained only at the price of silence.

As is well known, Roger Williams spent nearly two years at Plymouth. Dr. Noble says:

> He held extreme opinions on three points, the need of absolute separation from the Church of England, the renunciation of the authority of magistrates in church matters, and baptism by immersion as the only scriptural mode of administering the rite.

As to the last point, Dr. Noble is probably in error. There is no evidence that at that time Williams had become a believer in immersion. Brewster "feared that he would like John Smith of Amsterdam, run the same course of rigid separation and Anabaptistry." He "feared that he *would*." But the Anabaptists were then greatly maligned and misunderstood, and were believed to be a dangerous element in society. It should be remembered, however, that the great majority of them were peaceable citizens, and that many of them never practised immersion. But even if Roger Williams had then come to believe in immersion as the primitive Christian rite, that belief would not necessarily have broken his fellowship with the Pilgrims; for his successor in the office of assistant pastor of the church, Charles Chauncy, did believe in immersion, and would have been allowed to remain in office, and practise as he believed, if he had been willing to do so. Notwithstanding his belief, he became the second president of Harvard College, succeeding Henry Dunster, who also was a Baptist. The difference of opinion between Roger Williams and the colonists at Plymouth must have been, therefore, on the first two points, viz., complete separation from the Church of England, and the non-interference of the civil magistrates in matters of religion. Which were right, the Pilgrims or Roger Williams? Which was teacher and which was pupil? Which was the more advanced in the conception of religious liberty, and the desire to see it put in practice?

Dr. Noble strangely accuses Roger Williams of immaturity and uncertainty of view. He says: "The simple fact is that it took Roger Williams a good while to get his bearings." Dr. Noble adds:

> The Pilgrims were a great deal more tolerant towards him than he was towards them. While he was still struggling with the alphabet of toleration, these simple people at Plymouth appear to have been well schooled in the subject. It is not improbable that he got his first lesson in toleration at the feet of the Pilgrims.

Such statements come with a shock of surprise to students of colonial history. Roger Williams was as pronounced in his views of religious liberty when he was in Boston as he was in his conscientious demands as a Separatist. He acknowledges in his writings his intimate acquaintance with the Anabaptists of London before he sailed for New England. They were there, as every where since their first great Confession of Faith was promulgated in Switzerland in 1527, the open and courageous advocates of religious liberty, and from them, if from any human teachers, Roger Williams took his first lessons in soul-liberty. He had long since graduated from the alphabet, and thoroughly mastered its great principles. Irving B. Richman in his "History of Rhode Island," speaking of Williams on his arrival in Boston, says:

> He apprehended the principle of Toleration [Liberty] as clearly as he ever did. . . . Thus we find him, a few weeks after his arrival, contending that the civil magistrate ought not to inflict punishment for sins as such—that is, for acts such as idolatry, Sabbath-breaking, blasphemy, etc., which are forbidden in the first table of the Decalogue, and which, though offences against God, are not at the same time in themselves offences against man—a position involving the whole idea of Freedom of Conscience.

Mr. Straus, discussing Williams's ministry in Plymouth, writes:

> He doubtless proclaimed and inculcated those principles of soul-liberty, which had already aroused the enmity and opposition of the Boston Court. He also attracted to him and to his principles, from which he never separated himself, a number of the Plymouth flock.

And Dr. Palfrey makes the following statement:

> Roger Williams in England had had some acquaintance with the Baptists, who for many years before his departure had stated and maintained the doctrine (*i. e.*, liberty in religion) in the most unqualified terms.

In view of the utterances of these authorities, any suggestion that Williams went to school at Plymouth and learned there his great doctrine of soul-liberty is contrary to fact and universal belief. Indeed, upon the last page of his volume Dr. Noble modifies his assertion that Roger Williams received his first lessons in religious liberty from the Pilgrims. Dr. Noble says: "If he did not learn his principles of toleration from the Pilgrims, he might have done it."

But Dr. Noble unfortunately repeats his charge of Williams's greater intolerance in these words:

> He left Plymouth because he was not able at that time to mount to the high table-land of appreciation and forbearance which they occupied.

The truth is, that Williams returned to Salem because he found among his former parishioners a greater tolerance and a more pronounced sympathy with his advanced views than he had found or was likely to find in Plymouth. When the decree of banishment against him was published throughout the colony, it is said "the whole town of Salem was in an uproar."

Dr. Noble, though depreciating, because entirely misunderstanding, the attitude of Roger Williams during his first years in New England, pays a worthy tribute to his character and influence in his later years, as "a man of eminent ability and worth," and as "having surpassed all of his contemporaries in the hold which he has taken upon the world."

All honor to the Pilgrims! Their leaders were more advanced by many a league in their conception of civil and religious liberty than their Puritan neighbors. No one would detract from their glory. But it is possible that even they had some things to learn, that they were still "struggling with the alphabet of toleration," and may not have always been consistent with their avowed principles. Some things need to be remembered as facts of history, which Dr. Noble has failed to recall. When Roger Williams was banished from Massachusetts, he found his way, after fourteen weeks in the wilderness, to a place called Seekonk, where he hoped to be unmolested; and here he built his home and planted his crops. But he was reminded by Gov. Bradford that he was on land which belonged to the Plymouth colony, and that he must vacate. This he did at once at great personal loss, going across the river and founding Providence. Recording this experience he said he was "as good as banished from Plymouth as from Massachusetts." To be sure Bradford expressed his personal esteem for the exile, and confessed that he acted under compulsion, being "afraid of displeasing the Bay"; and Winslow subsequently visited him in Providence and put a piece of gold in his wife's hand for the support of the family out of genuine sympathy. Nevertheless, the Plymouth territory was no land of freedom to Roger Williams.

Again, thirteen years afterward, in 1649, several members of the Rev. Samuel Newman's church, in Rehoboth, withdrew because of a change of views, and organized a new communion, in which they might peaceably worship God according to the dictates of their own consciences. They were cited to appear before the Plymouth Court, four papers of accusations being lodged against them, three of them from local sources, and the fourth from "the *meddling* Court in Boston," as the historian, Benedict, calls it. They were bound over in the sum of ten pounds each to appear for trial at a later date, and commanded to hold no more services. The next year the grand jury found a bill against nine persons, charged with holding meetings in private houses on the Lord's day, against the command of the Court, the very crime for which the Pilgrims were hunted down in the mother country, and sentenced to pay fines, and again prohibited from meeting for worship. The leaders fled to the neighboring town of Newport to escape further annoyance and persecution. And all this was done under Plymouth jurisdiction. Very likely the Massachusetts authorities instigated the proceedings in both instances. But the conduct of the Plymouth rulers does not speak very convincingly for their courage or the strength of their convictions as to the rights of conscience. If they taught Roger Williams toleration and the first principles of religious liberty, their example was a painful commentary on their precepts.

Dr. Noble does not omit to recite the severe laws enacted by the Pilgrims against the offending Quakers. But he says in mitigation of their conduct that they were "put up" to it by the Bay people. "It was the godly care and zeal of the gentlemen from Massachusetts which led to these enactments." Moreover, he adds, they stopped short of the extreme penalty of hanging. "They whipped and tortured and ostracized them, but they did not take life." In this respect they were more lenient than the Puritans. But their treatment of the Quakers stands in striking contrast with that of the Rhode Island colonists, who, under the leadership of Roger Williams, gave them shelter and indignantly refused to follow the dictation of their Puritan neighbors, and exterminate or molest these early religious enthusiasts. Roger Williams could engage with them in a battle of words, but refused to wield against them the penalty of law. Arnold says: "He would have laid down his life rather than have a hair of their heads injured on account of their doctrinal views."

HENRY M. KING.

Providence, April 23.

PRESIDENT OR GOVERNOR AS LOBBYIST.

TO THE EDITOR OF THE NATION:

SIR: It is instructive, as well as interesting, to follow the regular and logical operation of government methods at Washington. A fortnight ago (as I noted in a letter in your issue of April 23), we were told that the President had said, that unless Congress made an appropriation for four battleships, he would veto that for local public buildings. That shot having failed to take effect, we read in the papers of April 21:

> While the President has not relinquished efforts with Congress in this direction [four more battleships], it was stated yesterday that he will confine his endeavors to personal interviews with Senators and members of the House, and will not send another message on this subject.

In other words, a wholesale proposal to trade having missed fire, he proposes to resort to the process known as "lobbying." The word may be offensive, but is it not in accordance with fact? What is the difference between the action of agents of corporate or tariff-protected interests, interviewing members and Senators in the halls of the Capitol or the purlieus of hotels, and the President sending for them to come to the White House, unless it is that the latter has immensely more powerful means of persuasion at his command. Is it not the high road to secret intrigue and corruption? Is it not exactly the method pursued by George the Third and Lord North in their dealings with the British Parliament before and during our War of Independence?

Not less striking is the fact that the same method in principle prevails in every State and city government in the Union. The uniformity of the symptoms points to a common cause of the disease, and that again to a common remedy, the same which has purified the English government in a hundred years, and concentrated public individual responsibility. Our governments are all based in theory upon the doctrine of Montesquieu as to the separation of executive and legislature. But unfortunately it is applied to physical separation and not merely to that of power—an interpretation highly acceptable to the Legislature, as it throws all power into the hands of that branch. Some communication between the branches there must be, and if it is not provided for publicly, it will take the form of secret trading and lobbying, with corruption as the inevitable result. The true and only effective remedy is to provide for the presence of executive officials in the Legislature with the initiative of legislation, the right of taking part in debate, and the duty of answering questions as to effect and requirements of existing legislation and administration.

On February 4, 1881, a committee of eight Senators reported unanimously a bill to establish exactly this thing, showing its feasibility and its practice in nearly if not all representative governments in the world outside of the United States. Neither then nor since has the plan received the slightest attention either from executive or legislature; nor does it seem probable that in the Federal government it ever will. That is work for the forty-five States in their eager competition to perform. In the States, further, it can only come from the Governor, because the Legislatures, clinging desperately to their illegitimate power, will not listen to it except upon popular compulsion. If any Governor, putting aside reform of details and resolutely taking a stand upon this general principle, will appeal with a full explanation of it to the people, we may see the dawn of a new era in the whole political organization of the United States.

G. BRADFORD.

Boston, April 23.

MORE ABOUT "MOUSSE."

TO THE EDITOR OF THE NATION:

SIR: Permit me to take exception to the definition of "Mousse" given by J. M. H. in the *Nation* of April 23. In American cookery, as in French, the word means froth or foam, and does not imply a frozen condition. A "mousse" may be hot, cold (but not frozen), or frozen. "Mousse," therefore, is far from being "merely a variety of ice cream."

Urbana, Ill., April 25.

PORTOLA'S VALLEY.

TO THE EDITOR OF THE NATION:

SIR: In regard to Don Gaspar de Portolá, first governor of California, concerning whom Mr. Alfred Webb inquires in your issue of April 9, your readers may be interested to know that a valley, where his men encamped (partly contained in the grounds of Stanford University), is still called Portolá Valley. The best account of Portolá's expedition is that of Prof. George Davidson, "The Discovery of San Francisco Bay"; translation of the Geographical Society of the Pacific, Vol. IV., series ii., San Francisco, May, 1907.

DAVID S. JORDAN.

Stanford University, Cal., April 14.

Notes.

This week Houghton, Mifflin & Co. publish "Tragedy," by Prof. Ashley H. Thorndike, a new volume in the Types of English Literature Series; "The Influence of Montaigne," and "The Spirit of Montaigne," by Grace Norton; "The Bibliography of R. W. Emerson," by George Willis Cooke; and "Trees and Shrubs," Vol. II., Part ii., edited by Prof. Charles S. Sargent. The same house announces an arrangement with Mrs. Humphry Ward to issue the first complete and uniform edition of her works.

Putnams have in press a volume of "Literary Reviews and Criticisms," by Prof. P. H. Frye. Half the essays are concerned with French writers—Balzac, George Sand, Zola, Maupassant, Corneille, Anatole France, Sainte-Beuve—and the book might be characterized as a study in comparative literature.

Methuen is about to publish for G. G. Coulton a book on "Chaucer and His England," which deals not only with the poet, but with the whole society of his day.

Harper & Bros. have issued a new edition of Lafcadio Hearn's "Chita, A memory of Last Island."

The fifth series of the "Shelburne Essays," by Paul E. More, has just been issued by G. P. Putnam's Sons. It contains studies of the Greek Anthology, Dickens, Gissing, Mrs. Gaskell, Freneau, Thoreau, Longfellow, Donald G. Mitchell, James Thomson ("B. V."), Chesterfield, and Sir Henry Wotton. As parts of all these essays appeared originally in the *Nation*, no comment need be made upon them here.

The "Seventeenth Century Men of Latitude" (Scribners), by Edward Augustus George, takes up one of the most interesting and profitable and one of the most strangely neglected fields of English literature. To dwell for a few hours in the world of John Hales, Chillingworth, Whichcote, John Smith (the Cambridge preacher), Henry More, Bishop Taylor, Sir Thomas Browne, and Richard Baxter (whose manner and tone, however, scarcely entitle him to a seat in that company), is to receive a lesson in breadth of mind, purity of sentiment, and elasticity of speech. As an attempt to deal seriously with this subject, in a way, that is, comparable with Principal Tulloch's masterly treatise, the present work is entitled to little respect. It shows no philosophical grasp and makes little or no pretense to connect these English writers with the great currents of European thought. It has, too, certain annoying faults of a more positive nature; for example:

> These writings of Hales are as crowded with interest as his life is barren in incident. He lived within. His meditation was the deeper for his inaction. All his force was free to expend itself within. it was a life of the soul. His history is a history of mind, etc.

It is only fair to say that the whole book is not written so irritatingly, but even an occasional passage in this thin ejaculatory manner, throws the reader out of harmony with that "life of the soul" of which these men were the great exemplars, and makes him suspect that the author's emotions are pitched in a different key from those of the men he describes. We confess to have little sympathy with this cheapening of a great theme. But taken frankly as a volume intended for easy reading, Mr. George's work has the advantage, so far as we recollect, of standing alone in the field. It is made clear and light to follow by elimination of thorny matters. It is written with enthusiasm, has a flattering optimistic trick of lauding the present in the past, contains abundant quotation's from beautiful, little-read books, and altogether it ought to have great refreshment for those to whom Tulloch's work is too long and too solid.

The nineteenth century may have produced greater investigators than Jebb. It had no scholar who combined in the same measure breadth and accuracy of learning with grace of style and the gift of lucid exposition, none whose utterances on whatever subject he chose to adorn were so uniformly sane and true. By editing in one volume a choice of his published *parerga,* together with a selection from unpublished manuscripts ("Essays and Addresses," G. P. Putnam's Sons), Lady Jebb has rendered accessible or preserved from oblivion much that neither the professional scholar nor the intelligent amateur would willingly let die. Here republished from the *Journal of Hellenic Studies* and written with the unrivalled fulness of knowledge and insight of one who could himself indite a real Pindaric ode is the great essay on Pindar to which Professor Gildersleeve has recently paid such ungrudging tribute. Here are the admirable monograph on Delos, the masterly study of the Speeches of Thucydides reprinted from *Hellenica*, and the suggestive Harvard Φ. Β. Κ. oration on "Ancient Organs of Public Opinion." Somewhat slighter, yet well worth reading, are the lectures on "The Genius of Sophocles," "The Age of Pericles," and "Lucian." The review of Froude's "Cæsar" is a good example of the fairness and balance of Jebb's judgment. He corrects Froude's inaccuracies and qualifies his extravagances with no trace of the petty exultation of the scholiast and minor critic animadverting on the errors of genius. The "Erasmus" and the "Dr. Johnson" are models of sound criticism and entertaining narration, and interesting illustrations of the trained classicist's method applied to modern themes. The four or five addresses on such topics as "Humanism in Education" and "Recent Tendencies in Classical Studies" exhibit the classicist pleading *pro domo* with a temperance and self-restraint which are perhaps more persuasive than the flamboyant oratory to which we are accustomed in this matter. We shall not soon receive from any living scholar so rich and varied a volume as this.

Dr. Jane Harrison needs no introduction, being well known to scholars by her "Prolegomena to the Study of Greek Religion," and her "Mythology and Monuments of Ancient Athens." The latter, a discursive commentary on the first book of Pausanias and *vade mecum* of the tourist in Athens, has for some time been out of print and has been largely superseded by Frazer's monumental work or, as a handbook, by Prof. Ernest Gardner's "Ancient Athens." Instead of republishing her earlier work, Miss Harrison now puts forth her own, or rather Dr. Dörpfeld's, views of Athenian topography in the form of a commentary on the famous fifteenth chapter of the second book of Thucydides; "Primitive Athens as Described by Thucydides" (G. P. Putnam's Sons). Miss Harrison tells her story well, and, under the restraining influence of Thucydides, with something less of mythological digression than the gossipy companionship of Pausanias provoked. Starting from the tourist's first impression of the remains of Periclean Athens and his divination that there was something behind it she presents a vivid and readable description of the discovery and conjectural restoration by the scholarship of the past twenty years of pre-Persian, pre-Peisistratean, and Mycenæan Athens. Things are not really quite so simple and certain as they appear to Miss Harrison's loyal enthusiasm for Dr. Dörpfeld's theories. But the points in controversy are too familiar to specialists and too remote from the interests of the general reader for further discussion here. As she herself observes of Athenian society, the mention of the "Enneakrounos Episode" is the signal either for heated debate or embarrassed silence. But there is much that is not controversial. The contents of the Acropolis museum, the snakes, the blue lions, the bluebeards, the calf-carriers, and the archaic maidens which she seems to prefer to the chill perfection of Periclean art; the story of the excavations which restored them to the light and revealed the original shape of the ridge; the account of Dr. Dörpfeld's discovery of Enneakrounos and the precinct which he identifies with Dionysos-in-the-marshes; the history of the Acropolis itself from the earliest remains of the Pelasgic or "Pelargic" walls of "Storkfort" and the "Strong home of Erechtheus" to the vast substructions of the Parthenon and the final levelling up of the southern slope to the plateau enclosed by the wall of Cimon—all this and much more is made perfectly clear to the least archæological of readers by Miss Harrison's maps, illustrations, and lucid text. Whatever our esoteric views about the construing of Thucydides, the position of the Agora, Pericles's original intentions concerning the Erechtheion, the meaning and site of the "more ancient Dionysia," or the identity of Enneakrounos and Callirrhoë, we can recommend to the student or tourist no better introduction to the whole subject than this.

In "The Andes and the Amazon; Life and Travel in Peru" (Charles Scribner's Sons), C. Reginald Enock has given us an excellent book of travel. Every student of Spanish America owes him a debt of gratitude, for he has made a study of modern Peru such as no other foreigner has ever attempted. The book does not aim to discuss historical antecedents, but is confined to an analysis of actual conditions. In his wanderings the author leads us into the remote regions of the Amazon valley, as well as the less frequented portions of the Pacific slope. Wherever he goes he gives us an excellent pen picture of things as they are. Mr. Enock's presentation of facts is so much more suggestive than his judgment on these facts that he might better have confined himself exclusively to description. His generalizations give evidence of many British prejudices; they also indicate a lack of preparatory scientific training, an inability to estimate the relative value of facts, a tendency to emphasize unimportant details. Like most writers on South America, he has felt called upon to consider the larger problems involved in the relations of the Latin American republics toward one another, and toward the United States. As soon as he enters the broader field of international politics he loses his grasp of the subject. His suggestion, for instance, in the concluding chapter, that the failure to develop a consolidated South America is due to the desire for the multiplication of presidential and other elective and official posts, shows a failure to understand the political and economic conditions which have determined the present grouping of these countries. His plan of unification is, to say the least, fantastic; he would unite Peru, Chili, and Bolivia, with a common capital on the high plateau of Titicaca. Fortunately, it is only in the preface and in the last chapter that the author indulges in these generalizations, and it would be unfair to give them too much prominence. The body of the book is useful to students, and enlightening to the general public. The value of the work is increased by a map, four colored plates, and fifty-eight other illustrations.

To compete with Parkman, either in literary form or in solidity of subject matter, is a hard task for any historian. Dr. Elroy M. Avery has had this difficulty to face in the fourth volume of his "History of the United States" (Cleveland: Burrows Bros. Co.), covering the period of the Seven Years' War and Pontiac's conspiracy. So far as statements of fact go, the volume bears scrutiny extremely well. Dr. Avery has evidently worked over the more accessible printed material, including much that has been published since Parkman wrote, at first hand and with painstaking care. The proportions, too, are commendable. As for the illustrations, they are beyond all praise. It would be gratifying if we could add that the author had risen with equal success to the literary opportunities of his dramatic theme; but we cannot. On the contrary, the volume contains some of the poorest writing which this ambitious work has thus far exhibited. Trivial and inelegant expressions, unrefined illustrations and comparisons, and a humor not much above that of a comic "Sunday supplement," disfigure quite too many passages; while the attempt to avoid actual repetition of some of Parkman's telling phrases is only weakly successful. Informing, and as a whole readable, as the book is, one wonders whether, after all, Dr. Avery takes his history seriously; whether he does not think that sarcasm is the same thing as criticism, or that feeble jokes are the mark of a light touch. We cannot but think that the publishers, who are lavishing time and money on this noble piece of bookmaking, should see to it that subsequent volumes receive careful literary revision. If, in addition, they will employ a proofreader who knows how to punctuate, they will eliminate a source of further annoyance.

The story of Doniphan's expedition to Mexico in 1846 has disappeared from the school books, along with the story of Tromp, the Dutch admiral, who put a broom at masthead to indicate that he had swept the English Channel. But William Elsey Connelley of Topeka, Kan., is determined that Col. Doniphan's now almost forgotten exploits shall again be made known, and he has edited and published, at his own expense, with many notes and much explanatory matter, the narrative by John T. Hughes, a member of the expedition. This account was first printed in 1848. Doniphan commanded a regiment of Missouri volunteers, a part of Col. Stephen W. Kearny's little force, which, assembling at Fort Leavenworth, began its march to Santa Fé, in June, 1846. From Santa Fé Doniphan was sent southward, through Chihuahua to the city of the same name. He fought and overcame the Mexicans at Brazito and at Sacramento, and then went on his conquering way towards the mouth of the Rio Grande, where the regiment now 700 strong, embarked on a vessel for New Orleans. This place they reached on June 15, a year after the departure from Fort Leavenworth. On land the regiment had marched a distance of 3,500 miles. The total losses were less than 100 men. Mr. Connelley has been tireless in his pursuit of information relating to the expedition, and the notes concerning officers and men are especially voluminous. He intimates that the authorities at Washington refused access to the papers which should have shown definitely whether the Mexican Governor, Armijo, was bribed by James Magoffin, representing the American government, to make no resistance to the march of the invaders upon Santa Fé. Congress is said to have appropriated $50,000 to reimburse Magoffin; and President Taylor's secretary of war, Crawford, is said to have persuaded Magoffin to accept $30,000. Despite a constant tendency towards diffuseness and superlatives and a monotony of style in the Hughes narrative, as unvarying as the plains themselves, the book possesses a positive value as material from which history is written.

"The Ogden Family in America," by the late William Ogden Wheeler (J. B. Lippincott Co.), covers only the Elizabethtown branch—the descendants of "Good Old John Ogden." The Connecticut branch, with a common English ancestry (dimly made out), is omitted. It has been a prolific stock, some 4,600 descendants of the first emigrant (1640) being here tabulated. We find one family, in the ninth generation, with sixteen children — President Roosevelt, please take notice!

The National Society for the Promotion of Industrial Education has just issued its Bulletin No. 5, consisting of the first part of the proceedings of the annual meeting held in Chicago. Among the addresses printed are those of W. B. Prescott, secretary of the Supplemental Trade Education Commission of the International Typographical Union; of Dr. Henry S. Pritchett, at that time president of the society; and of President C. W. Eliot of Harvard. The apprenticeship system of the New York Central Lines is treated by J. F. Deems, the general superintendent of motive power, and by C. W. Cross, the superintendent of apprentices. The coöperation between the University of Cincinnati and some of the manufacturers of that city is the subject of the paper by Prof. H. Schneider, dean of the College of Engineering.

The extraordinary literary activity of the Boston ministers of the eighteenth century is the subject of the annual address to the Bostonian Society, printed in the Proceedings, by its president, James F. Hunnewell. Cotton Mather, he said, published 382 works, the titles of which are given by his son Samuel. Most of them were small, and of about a third there are no known copies. The works of his father, Increase, number at least 136. Out of the sixty-one ministers who succeeded them, thirty-five were the authors of 557 publications. Though subjects of general interest and public affairs were frequently treated, most of the books and pamphlets were on religion. A number were sermons preached to condemned criminals before execution.

In a recent number of the *Archiv für das Studium der Neueren Sprachen und Literaturen*, Prof. John C. Ransmeier of Tulane University has a careful paper on the influence exerted upon Heine by Sterne's "Sentimental Journey" and "Tristram Shandy." Beginning with Heine's own critical observations on Sterne—among which there is the dictum: "Laurence Sterne shows himself to the public entirely stripped; Jean Paul has only holes in his trousers"—Prof. Ransmeier proceeds to a detailed analysis of descriptions, episodes, characters, and stylistic peculiarities of the "Harzreise," the "Buch Le Grand," and the "Bäder von Lucca," containing elements of Sterne's humor and literary manner. The frequency and closeness of parallels between the two authors, thus brought to light are indeed remarkable. Fortunately, Professor Ransmeier avoids the mistake of making out Heine a mere copyist of his master; all the more forcible is the proof of the inner affinity connecting him with his predecessor.

A singular fate has followed the efforts of the Börsenverein der deutschen Buchhändler to publish a history of the German book trade. Friedrich Kapp, who undertook the task in 1876, died in 1884, before the first volume had yet been completed. Dr. Adolf Koch, who took up the work, was obliged to withdraw in 1890; his successor, F. Hermann Meyer, died in 1892; Dr. Oskar von Hase gave up in 1905; and the work fell to his collaborator, Dr. Johann Goldfriedrich. And now, twenty-two years after the publication of the first volume, the second appears; the third and the fourth are expected before the end of the present year. The volume before us covers the period from the end of the Thirty Years' War to about the year 1764. Among the topics treated are the development of the periodical press and of trade bibliography, piracy as a defence against inflated prices, censorship, and the beginnings of the commission houses. (Leipzig: Verlag des Börsenvereins.).

Of the "Enzyklopädisches Handbuch der Pädagogik," edited by Prof. W. Rein of Jena, and published by Beyer & Söhne, Langensalza, two further volumes have appeared: III., from Französicher Unterricht to Handelshochschulen, and IV., from Handelsschüler to Klassenobersten. Special features of this work are the articles on the schools of foreign peoples, and the biographies of great educators.

W. Wendebourg, in his "Draussen und Daheim" (Hannover: C. Wendebourg), publishes a new collection of lyrics with an undercurrent of Christian sentiment. Home, memories of youth, and kindred topics occupy his attention.

Prof. Ernst Troltsch of Heidelberg, in his now famous address delivered at the Congress of Historians in Stuttgart in 1906 maintained that Luther properly belongs to the Middle Ages, and that his work is not the beginning of modern thought and life. The latest and probably ablest reply is furnished by the Halle professor of church history, Dr. Fr. Loofs, in his brochure, "Luthers Stellung zum Mittelalter und zur Neuzeit," published by E. Strien, Halle. Dr. Loofs ascribes to Luther the beginnings of the leading factors and forces of modern life.

The "Geschichte des neutestamentlichen Kanons," by Dr. Johannes Leipoldt, of the University of Halle, has now been completed by the publication of the second volume, entitled "Mittelalter und Neuzeit" (Leipzig: Hinrichs). The special value of the work lies in the fact that it follows the fate of the canon through those centuries which are usually ignored by other and even larger works on the subject, such as those by Zahn and Jülicher, which confine themselves to the earliest centuries.

The question whether the results of modern Biblical research should be applied to the religious instruction of youth, is answered in the affirmative, yet with some caution, by Pastor K. Thimme, in a small book entitled "Welcher Einfluss gebührt der neueren Bibelauffassung in der Volksschule?" (Leipzig: Hahn). Two other brochures on religious instruction are "Die Reform des Religionsunterrichtes in der Volksschule" (Leipzig: Klinkhardt), by Dr. Johann Dietterle; and "Religionsunterricht oder Moralunterricht?" by Prof. K. Voight.

The "Palästinajahrbuch" of the German Archæological Institute in Jerusalem appears in its third annual volume, edited by the leader of the school, Prof. G. Dalman, and published by E. S. Mittler & Sohn, Berlin. The *pièce de résistance* is the study of the Church of the Holy Sepulchre, by the editor himself. He argues that the tradition which makes this church the site of Christ's burial and resurrection is correct—a position at variance with that generally entertained by modern scholars. Other papers treat of Jerusalem in the times of the crusades, and the economic condition of the desert of Judæa.

The series of scholarly investigations of the Papal Syllabus and Encyclical, which the *Internationale Wochenschrift* of Berlin has been publishing, is brought to a conclusion by two essays by Prof. A. Harnack and Prof. F. Paulsen of the University of Berlin. The whole series will probably be issued in book form.

The brochure of Prof. Gottfried Hoberg of the Catholic theological faculty of the University of Freiburg-im-B., "Über die Pentateuchfrage," reflects the convictions of the best of Catholic scholarship on the Pentateuchal problem. The sub-title declares that this investigation has been made with special reference to the decision of the Papal Commission, in 1906, in which the Mosaic authorship of the Pentateuch as a whole is asserted, but not to the exclusion of post-Mosaic portions.

The Catholic professor of history in the University of Strassburg, Dr. Martin Spahn, has published in large editions a brochure called "Der Kampf um die Schule in Frankreich und Deutschland" (Munich: J. Kösel), in which the Catholic claim to the control of the religious instruction in public schools is defended.

Librarians are always trying to reduce the circulation of cheap and trivial fiction, and to stimulate the reading of the more solid books, in this and other classes. To this end, the following plan is described in the Annual Report of the Free Public Library of East Orange, N. J., just issued:

> To assist persons who are not familiar with many writers to a wider knowledge of fiction that would please them, two lists of novels have been printed. List I. is pasted inside the cover of such writers as never need advertising, for they are recommended by their admirers. Among these writers are E. P. Roe, Mrs. Alexander, Mrs. Wister, translator, and others. Not a book is placed on List I. that would prove disappointing, and nearly all are by authors who have many other favorites to their credit. Another copy of the list is placed between the pages of the book to be kept by the borrower. In this way a person who needs a suggestion finds it in the list, and the list does not go to persons who have a wide knowledge of writers and prefer to choose for themselves.
>
> List II. includes writers who also make the story paramount to the literary style, who are also favorites, but whose stories are a little heavier and add to these characteristics a charm in the telling, an insight into motive and life that give an added zest to the pleasure of the reader. A copy of List II. is therefore similarly placed in every book mentioned on List I., and in other books by the same authors. Books mentioned on the lists are bought to meet demand.

The first list contains books by Barr, Brush, Burnham, Burnett, Davis, Fothergill, Fox, Hornung, Johnston, King, Lynde, McClelland, McCutcheon, Mulock, Westcott, Wister, and Woolson. The second list, books by Allen, Barrie, Besant, Blackmore, Churchill, Crawford, Crockett, Ford, Fox, Frothingham, Glasgow, Goodwin, Greene, Hope, Mason, Merriman, Mitchell, Parker, Smith, Tarkington, Ward, and Weyman. Even List II. does not strike one as a dose of very heavy fiction.

A plan for promoting the efficiency of small libraries is outlined in a report presented at the last meeting of the California Library Association. The plan is that all libraries too poor to employ expert librarians shall arrange themselves into convenient groups and jointly engage an expert who shall divide his time and labor according to the needs of each, or according to the share contributed to his salary. Thus in a group of half a dozen small libraries, each could have the entire attention and service of the superintendent for a period long enough to enable him to put the annual accessions in order and to organize and direct the general policy of the library. The plan is, in short, to do for the isolated village library what the branch system with a common head is doing for the great city libraries.

The committee of the New York Association on Library Institutions has arranged to hold thirty-two meetings in various parts of the State this month. All the libraries of the State (outside of Greater New York) have been divided into groups averaging about fifteen libraries to a group; and at the most accessible library in each group, neighboring librarians and trustees are invited to assemble.

A committee of the United Chapters of Phi Beta Kappa, of which the general secretary, the Rev. Oscar M. Voorhees of High Bridge, N. J., is chairman, is endeavoring to collect the facts with regard to the early forms of the Phi Beta Kappa medal or key. The form of the original medal of the William and Mary Chapter is well known. The earliest one known as yet to the committee, belonging to a Harvard member, is now in the Harvard library, and was the property of Benjamin Pickman of the class of 1784. The earliest medals bore three stars and the date of the original organization, December 5, 1776. For a time the date of the Harvard chapter, September 5, 1781, was used by its members, but the original date was afterward restored. But the number of stars was increased, the key form came into use, and other changes were adopted. The committee desires to learn the facts as to the evolution of the medal, with a view to recommending to the United Chapters a form that shall on adoption become the standard. Those in possession of early medals, say those made before 1860, will confer a favor by sending a description of them to the chairman of the committee. This will be acknowledged and the sender receive a copy of the report of the Ninth Triennial Council, held in Williamsburg, Va., September 11 and 12, 1907.

The Rev. Morgan Dix, rector of Trinity Church in this city, died April 29. He was born in 1827, the son of John A. Dix, at one time Governor of New York. He graduated from Columbia and the General Theological Seminary; he became connected with Trinity parish in 1855, and since 1862 he had been rector. Among his writings are "Sermons, Doctrinal and Practical," "Lectures on the Calling of a Christian Woman," "Memoirs of John A. Dix," "Gospel and Philosophy," "The Sacramental System," "The Seven Deadly Sins," "Lectures on the First Prayer Book of Edward VI.," "The Two Estates—Wedded in the Lord, Single for the Kingdom of Heaven's Sake," "History of Trinity Church," "Expositions of the Epistle to the Romans, Epistles to the Galatians and Colossians," "Lectures on Pantheism," "Lectures on the Authority of the Church," "Good Friday Addresses," "Memoirs of Mother Harriet, Founder of the Sisterhood of St. Mary," "Three Guardians of Supernatural Religion," and "History of the Parish of Trinity Church."

Albert Stickney, a lawyer of this city, died May 4. He was born in Boston in 1839, was graduated from Harvard in 1859, and from the Harvard Law School in 1862. After service in the civil war he practised in this city. Among his books are: "The Lawyer and His Clients," "A True Republic," "Democratic Government: a Study of Politics," "The Political Problem," "The Transvaal Outlook" (1900); and "Organized Democracy" (1906).

The death is announced of Miss Winifred Mary Wyse, who is remembered as the editor of the works of her father, Sir Thomas Wyse, British minister at Athens from 1849 to 1862. After his death Miss Wyse published his "Travels in the Peloponnesus and Impressions of Greece," and later his "Notes on Education Reform in Ireland."

Professor Gustav Adolf Fricke, of the University of Leipzig, recently died at the age of eighty-five. He was a member of the theological faculty, and was the founder of the National Gustav Adolf Verein. For some years he had ceased to lecture, and had discontinued his literary work, which in former decades had been prolific. Among his works are "Lehrbuch der Kirchengeschichte," "Metaphysik und Dogmatik," "Briefe und Reden," and "Ist Gott persönlich?"

PROFESSOR HILPRECHT'S DEFENCE.

The So-Called Peters-Hilprecht Controversy. Part i.: Proceedings of the Committee appointed by the Board of Trustees of the University of Pennsylvania to Act as a Court of Inquiry. Part ii.: Supplemental Documents, Evidence, and Statement. Submitted to the Public by H. V. Hilprecht. Philadelphia: A. J. Holman & Co.

As a result of the official investigation of the Hilprecht case we have at last a volume of 350 odd pages. Charges against Professor Hilprecht's integrity were made by other Assyriologists three years ago. They consisted at first in the statement that Hilprecht had published as objects found in the Nippur "Temple Library" objects which were not found "in what Hilprecht himself described as the Temple Library." The trustees of the University of Pennsylvania appointed a committee to investigate these charges, and Hilprecht's accusers were invited to appear before it. These accusers (who wished to be known as witnesses rather than as accusers) were all well known and highly respected scholars. The method of examination to which these gentlemen had to submit in order to get their evidence before the committee was not such as to improve Hilprecht's case. A skilful lawyer was employed to question them, and under his examination these eminent scholars were made to appear as incapable witnesses. Their testimony as to the inference which had been drawn and would naturally be drawn by the readers of Hilprecht's books was set at naught and their own scholarship was deftly impugned. The fact that Hilprecht did not expressly state what readers were left to infer (and many readers had inferred) was regarded by the committee as wholly exculpatory, and they promptly acquitted him of the charge of literary dishonesty, as well as of the charge (subsequently made) of misappropriating property belonging to the university. They also acquitted him of the "charge that what was found at Nippur has no just claim to be called a Temple Library."

The evidence is now before the public. It appears that, as stated by the accusers, the important tablets known as the Astronomical, the Noorian Multiplication, and the Lushtamar tablets, with which Hilprecht had operated in establishing the existence of the "Temple Library," had all been purchased years before the fourth expedition (whose finds were particularly exploited by Hilprecht) had even started out. The famous "Astronomical tablet from the (Nippur) Temple Library" was not found at Nippur at all, but had been bought eleven years before from a dealer in antiquities whose specimens came, as far as is known, from other places. There is no evidence that this tablet ever was in Nippur. There are two multiplication tablets. One of them had been found at Nippur, not by Professor Hilprecht, but by Dr. John P. Peters, ten or eleven years before, though not, in Dr. Peters's judgment, in that part of the city where Hilprecht had located the temple. This tablet, however, actually came from Nippur, and, according to Hilprecht, from the site of the second temple library. The other tablet had been purchased by Mr. Noorian in 1889, eleven years before the discovery of the Temple Library, and there is no proof that it ever came from Nippur. The Lushtamar letter tablet had also been purchased (by Hilprecht himself, but not at Nippur) in 1889. There is no evidence that it did or that it did not come from Nippur. It may well have come from there, but without explanation it may not well be referred to as if it had been found in a place where it was not found.

In sum, then, certain tablets exploited as proof of a Temple Library at Nippur were not discovered and dug up at Nippur by Hilprecht or by any member of the fourth expedition. They were bought, not excavated, and came from no one knows where. Yet Hilprecht's own statements in his published works give the impression that the most important tablets were excavated at Nippur by his own "fourth expedition," and that they constituted part of the finds of that expedition. Indisputable evidence was given before the committee that this was the impression received, not only by Hilprecht's accusers, but also by disinterested foreign readers of his publications.

Hilprecht now states that he never intended to convey any such impression (p. 207), but that he treated these tablets in his publications as having really come from Nippur because he really and truly believed that they originally belonged there. He denies that he ever intended to claim them as part of his own finds. And it is true that if one goes to Philadelphia and gets permission to examine the tablets one will find out the provenance of the tablets by inspecting the labels. Even if one followed up a cue given in one of Hilprecht's own publications, it would be possible for a scholar to ferret out the truth. But it must be remembered that this publication was meant less for scholars than for the public, and the ugly fact remains that the general public's general opinion on reading Hilprecht's book could not be other than that the tablets were discovered by or through him at Nippur, and in themselves formed the base of his claim that he had discovered a Temple Library.

No blame attaches to Hilprecht or to any one else for acquiring tablets by purchase or for believing that tablets thus purchased came from Nippur. That a library "in the sense of a collection of writings" existed at Nippur, is certain. The point is, does a previous purchase of tablets at Bagdad or Hillah justify one in conveying to general readers the impression that the tablets thus obtained had been discovered by himself at Nippur? Decidedly not. Hilprecht still insists that it is customary to purchase antiquities from thieves and locate their provenance to the best of the purchaser's ability. But it is also customary to refrain from describing them in such a way as to lead one to suppose that these antiquities were excavated by the purchaser.

The Committee of Sixteen, which has figured in this investigation, was, or is, if it has not disbanded, a self-appointed band of Orientalists, who were moved to ask Hilprecht for "a full and frank statement of the facts." In reply Hilprecht has given in this volume an answer as full as was desired, and probably as fair as he could make it. He admits that he has "perhaps not unjustly" been censured for giving undue prominence to the results of the Philadelphia expeditions. This seems tantamount to admitting that he has unduly glorified himself. The truth appears to be that Hilprecht is an able and brilliant scholar, misled in the first instance by a natural vanity and not guiltless of having attempted to make his discoveries, in contrast with those of his modest predecessors, more imposing than they actually were. In this particular Hilprecht will, we regret to say, still stand condemned by all unprejudiced scholars.

The charge that he misappropriated property belonging to his own university, would, from the evidence published in this book, appear to fall to the ground. The authorities of the university, in their supplementary "Findings of the Board of Trustees," expressly say that he was entitled to certain objects as souvenirs of the expedition. Yet in the Philadelphia *Ledger* of April 30 William H. Furness, 3d, secretary of the Board of Managers of the Museum of the University of Pennsylvania, 1904-1905, explains why he and the president and four other members of the board resigned on February 23, 1905. Mr. Furness says that in the winter of 1903-1904 "certain articles of more than usual value entered as above [duty free, as property of the museum] were removed from the museum by Dr. Hilprecht. One of these was a "fragmentary boundary stone," which had "remained in the museum for five years, with no other understanding than that it was museum property." Mr. Furness adds:

> It was then packed up and taken away, solely on Dr. Hilprecht's order, and retained in his possession and claimed by him as personal property when questioned by the museum authorities.

The third charge, from which the committee of his trustees absolves him, "that what was found at Nippur has no just claim to be called a Temple Library," this committee had no competence to pass upon. Nor is any one save an Assyriologist competent to decide this question, and no Assyriologist who valued the weight of his own verdict would pretend to say whether there was at Nippur a Temple Library or not until he knew the contents of the thousands of tablets found there. This is no matter for a "charge." It is a scientific question, to be answered only after an examination of the tablets still unexamined, or examined only by Hilprecht himself. As to this point, Hilprecht avers, and he offers the signed statement of the Director of the Imperial Ottoman Museum in corroboration of the fact, that he has personally examined all the tablets excavated by the fourth expedition in 1901. Unless one is willing on general principles to stigmatize Professor Hilprecht as a liar and Dr. Hamdy Bey as his accomplice, this averment must stand. And further, the asseveration of Hilprecht that he bought the Lushtamar tablet on April 18, 1889, cannot in decency be questioned after his perfectly reasonable explanation as given on page 310 of this book.

In short, we believe that Professor Hilprecht has deliberately misrepresented many of the facts in regard to the finds of the fourth expedition to Nippur, and Dr. Furness's letter shows that in this last volume no mention is made of other facts likely to place Hilprecht's conduct in a less favorable light than that cast upon it by the findings of the trustees. But we believe, on the other hand, that not all the charges against Professor Hilprecht have been sustained, and it must not be forgotten that, whether sustained or not, these charges do not impair the value of the great mass of tablets known to have come from Nippur, and now in the possession of the University of Pennsylvania. For there still remains in Philadelphia a noble monument of enterprise and skill, a collection of tablets which, whether they ever made a Temple Library or not, are of priceless worth. From what is known of them, they are likely to prove a collection of literary as well as scientific value. Whatever doubt exists as to whether Hilprecht was right in anticipating further examination and dubbing the collection a Temple Library on the strength of tablets only presumed to have come from Nippur, the inscriptions actually found there constitute in themselves an inestimable treasure. What the contents may be can only be surmised, but the few specimens seen by other scholars (not to speak of Hilprecht's own estimate) make it probable that the collection is one well worthy to be called a library. The notorious tablets purchased were few. Those dug up at Nippur number over twenty thousand.

CURRENT FICTION.

The Bond. By Neith Boyce. New York: Duffield & Co.

Rather the favorite theme, during the past decade or two, with our urban novelists, has been the "artistic temperament" in more or less discomfiting contact with a crass world. It would be interesting to know how much real appetite the novel-reading public continues to have for this kind of thing. Not a great deal, probably, so far as its masculine portion is concerned; but then its masculine portion is relatively inconsiderable. Is it a sign of the feminization of our popular literature that it should give such earnest attention to the intellectual fribbles and emotional "hoboes" who may be observed in any great city hanging picturesquely upon the skirts of Art? Or is there more pure romance, a finer distillation of human nature, in the experience and the temperament of the young painter or sculptor than in his contemporary the young grocer or stockbroker? Or is it merely that the writer is naturally more interested in his fellow artist than in other species of fellow-man? The author of "The Bond" has resisted some of the more obvious lures of her theme. She has not represented her painters and sculptors as producing annual masterpieces, nor has she cultivated the patter of the studio for its own sake. Rather she seems to have chosen two possessors of "the temperament" as protagonists in her little drama of matrimony because their ingeniousness and emotional intensity make sharp and patent that warfare of sex which, in the case, say, of the broker and brokeress, is fated to smoulder under a surface of dull accommodation.

Our special correspondent at the front does her work faithfully and discerningly, and her story rings true. Her young painter is not a mere arrangement in beard and blouse, but very much a human being. At thirty he is recently married to a charming woman somewhat his junior. The terms upon which they embrace matrimony are sufficiently modern. They are to live together, when the spirit moves, in a flat. His studio is in another quarter, and she retains her "bachelor" apartments in a third; children are of course out of the question. No arrangement could be more flexible, none more likely to free wedlock outright of its remotest suggestion of bondage. Yet bondage there is, how subtle, how strong—how increasingly strong as time passes—it is the story-teller's purpose to reveal. The passion upon which their union is founded is reinforced by liking and interest, but for a long time, neither man nor woman is conscious of the existence of a deeper spiritual bond between them. The realization of it comes first to the woman in connection with the experience of her unwished-for maternity. Later, the jealousy and misunderstanding on both sides, which superficially threaten the stability of their legal relation, serve only to bring home to them the irrefragable nature of their spiritual bond. They do not like each other in all ways, they quarrel a good deal over petty matters, as we are permitted to suppose they will do to the end of the chapter. For the signal fact about the book is that the writer does not work her pair of characters up to a climax of antagonism and so to a plane of absolute understanding and flawless union. The elements of conflict between them are constant; and we are wisely left with a vision of them, in one of their moods of temporary reconcilement, "silent for a time, cheek to cheek, looking into the fire. . . . Each of them was seeing, perhaps, their past together, and its many memories. Each of them was silent before the future."

The Unlucky Family. By Mrs. Henry de la Pasture. New York: E. P. Dutton & Co.

This is very different from the stories for which Mrs. de la Pasture has recently become well-known in America—stories of pleasant and rather old-fashioned sentiment. Here is a domestic extravaganza as absurd, if not quite so humorous, as "The Peterkin Family" or "Rudder Grange." Its pictures are superior to our own of the same type. The principal characters belong to a middle-class family suddenly promoted from the suburban villa to the responsibilities of a luxurious country house, with dukes and admirals and mayors as calling neighbors, and a deliciously inadequate congeries of shiftless or bullying servants in the background. The unluckiness of the Chubb family is of the pleasing and painless kind experienced by Mrs. Lecks and Mrs. Aleshine. The series of ridiculous contretemps involved have the kind of virtual plausibility which distinguishes good nonsense from mere inanity. But it may be guessed that the broad adventures of the Chubb family at Finch Hall will appear flat to such good Americans as see no humor in *Punch*.

The City of Delight. By Elizabeth Miller. Indianapolis: The Bobbs-Merrill Co.

The plan of this "Love Drama of the Siege and Fall of Jerusalem" is a good one, the story interesting, the setting admirably chosen. From Ascalon in the year 69 goes forth with father and attendants a Jewish maiden to meet in Jerusalem the husband whom she has not seen since they were married in childhood. He is of the Maccabees, and means to make Judæa his; she, a beautiful girl and an ardent patriot. She sets out with solemn rejoicing, bearing a rich dowry which is to be part of the cornerstone of a new Israel. Pestilence and thieves overtake the travellers; sorrowing and poor, the survivors reach Jerusalem as Titus is bringing up his legionaries to the walls. Treachery and lies spread nets about the feet of Laodice, and long keep apart her and the husband, who have met on the pilgrimage, and loved, in a not very plausibly maintained ignorance of each other's identity. The siege and fall of the city roar suitably around the love story, and there is rather vivid picturing of the tumultuous period; the conflict of nationalities, the striving of sects, the voices of true prophets and false uplifted on the walls.

If the execution were only as good as the design! Even as it is, the glint of historic interest gives the book a welcome dignity. The wording suffers sadly from that lack of training which expresses itself, now preciously, now inadequately, running away from the simple in both directions. Thus we have "the splendid benevolence of the untroubled day," and yet, "they say she got to trifling with magic and prowling about the temples to see if the gods came true." "Unthoughted" gives pause, and "Pfui" and "Pouf" hardly heighten local color in mouths of Greek and Cyprian.

The Vigil. By Harold Begbie. New York: Dodd, Mead & Co.

If it were not for the heroic figure of Tom Shorder, "Champagne" Shorder, the net impression of the book would be of a clever inconclusiveness. A writer born under Dickens and nurtured under Mrs. Humphry Ward is laboring under some disadvantage; one must not be surprised to find him presenting a Mrs. Gamp and a Robert Elsmere cheek by jowl; here a nip of home-brewed humor, and there a slice of evangelical romance. The problem involved is one of perennial concern to religious minds, but incapable, perhaps, of really fresh treatment.

The young clergyman at whose struggles and final triumph we are invited intimately to assist is not of a particularly engaging type. After taking orders, he has found himself disqualified by intellectual doubt from officiating as a priest of the English Church. He spends some years as a lay-worker in the London slums. Working with him is a woman of his own age whom he has known from childhood, and who has, in effect, devoted her life and her wealth to his service. She loves him deeply, and makes no secret of it; but he is too much wrapped up in his day's task and his spiritual egoism to think of her except as a friend upon whom he can absolutely rely. Presently a revulsion of feeling carries him back to the fold, and he becomes a vicar of a godless town on the western coast of England, where he begins with enthusiasm to preach his gospel of culture and churchmanship. The woman follows him, and what with his personal charm and zeal and her money and zeal, he quickly impresses himself and his views upon the community. After a time he wakes sufficiently from his self-absorption to realize that he loves the woman and that she loves him—an awful state of things, since he has taken the vow of celibacy. He goes through the customary selfish throes of the enthusiast of his type, and decides that he must sacrifice his love. She realizes that he is doing this in the name of the Church and not of God, but he fails to see the difference. A series of violent incidents eventually rouse him to a sense of his Christlessness; and he becomes, in place of the cultivated and intellectual conserver of churchly observance, a voice calling sinners to repentance. His view of celibacy is, of course, laid aside. The trouble with the whole affair is that the man is a weakling: and not all his creator can say in praise of him is able to disguise the fact. Also the woman is a prig, with a horrid habit of being right. Several of the minor figures, on the other hand, possess a good deal of vitality, especially certain rustics, male and female, worthy to keep alive the memory of Tabitha Bramble and Mrs. Poyser. But the one figure, as we say, which makes the book remarkable, is that of Shorder, the irresponsible, boisterous, mocking giant whom one compares in fancy with no other hero whatever, so instant is the impression of the man's power. Everything he says, everything he does, is himself: the writer must have recorded him in a frame of mind very different from that in which he set down the air-drawn agonies of his vicar.

Rambling Recollections. By Sir Henry Drummond Wolff. 2 vols. New York: The Macmillan Co. $7.50 net.

Seldom can a book have borne a more accurate title. Sir Henry gives an outline of his diplomatic and Parliamentary career; throws in a few notes of travel with some sidelights on the political history of his time; but his main interest is personal, and he ambles gently on from man to man that he has known. He aims to be exact, and this accounts for a deal of useless genealogical lumber in his volumes. His desire is plainly to be just: it is the essential character that he would render; but it is the picturesque and the racy that most caught his eye and remain in his memory. Hence the extraordinary number of anecdotes and good sayings which Sir Henry records. Many of them are old, not all of the new ones are worth printing, but the entire mass makes pleasant fireside gossip for an hour or two.

At least one serious purpose the author has in mind. Sir Henry Drummond Wolff was a member of the famous Fourth Party, which comprised Randolph Churchill and Arthur Balfour. It appears that some friends of the latter think that his later dignities require a repudiation of his early connection with those haphazard and impudent skirmishers of politics. Accordingly, they have put it about that Mr. Balfour really was never in sympathy with the irregularities and effronteries of the Fourth Party. They represent him as rather annexed than assenting. But Sir Henry destroys this legend in the making. Besides the well-known photograph of Mr. Balfour lounging at ease on the bench where the Fourth Party sat, there are letters. Some of them are quoted. Late in 1880, Mr. Balfour wrote to Wolff:

> You accuse me of two things—dining in ——'s society and repudiating the Fourth Party. I deny both charges. . . As to the Fourth Party I did not repudiate it. I denied its existence, which is a very different thing If there is a Fourth Party, and in so far as there is one, *I* am a member of it.

Thus does Sir Henry refuse to allow Mr. Balfour to "divest himself of his past."

But the stories are the thing in these 800 pages, and the reviewer can but define by an example. In the way of a *mot*, take this of Kinglake's, uttered of a widow who professed herself insulted by a young man's advances. The latter asked what she would probably do. "Beware! she will pursue you through life with her unrelenting gratitude!" Hayward makes frequent appearances in the "Recollections." Once he was come up with:

> At a time when I was frequenting the Athenæum a good deal, a Cingalese gentleman, who had come to England to read for the bar, was recommended by Sir Roderick Murchison to all his acquaintances. One day, finding him alone, Mr. Hayward and I invited him to our table. Mr. Hayward wished to instruct him as to the constitution of English society, and said, "You will find in England that men of distinction, who belong neither to the aristocracy nor to the richer classes, but have made a mark, either in literature or by their conversational powers, are always received in great houses on a footing of perfect equality. You never go to a great house but you will see some distinguished literary man received as one of the most highly honored guests."
>
> The Cingalese said, very naïvely, "But are these not called sycophants?"
>
> There was complete silence.

Science.

Handbook of the Trees of the Northern United States of America and Canada. By Romeyn Beck Hough, New York: Harper & Bros. $8.

Our Trees and How to Know Them. By A. T. Emerson and C. M. Weed, Philadelphia; J. B. Lippincott Co. $3.

Everybody is beginning to realize that city trees pay for themselves over and over again, in health and pleasure for all; but at the outset, it seems different with the trees in the country, particularly in a new country like ours, where the settler's first duty is to clear ground for his home. Now, however, that enough ground has finally been cleared, the slaughter of the trees should be stopped, and give way to their wise use. It is of the highest importance therefore, at this critical period to acquaint thoughtful citizens with the constituents of our forests. Among the more interesting facts respecting trees are their distribution, their manner of growth, and their products. When to these we add relationship and name, we have outlined the basis on which useful tree-manuals are constructed. Nowadays, a great part of this important information can be given by pictures, often in the form of photographic reproductions.

The two volumes before us supply about all the requisite pictorial information necessary for "matching patterns," that is, for identifying the more common trees at any season of the year. From the mere text of our manuals, it is not easy, in all cases, to determine the name of a tree in midwinter; many trees cannot be readily identified even in the height of summer, when in full foliage; for the evidence of fruit and seed as well as of leaves may be required. The volume by Emerson and Weed is of a more popular type than that by Hough. It offers admirable photographs of the winter conditions of our trees, and also of the foliage in summer or autumn, and of the flowers in their season. The text, which is pleasantly written, gives a good amount of forest lore, and of facts relative to the range of the species, together with a sprinkling of fairly selected verse.

Mr. Hough's treatise is equally well illustrated, but is more distinctly intended for students. In addition to photographs similar to those in the other work, Mr. Hough presents us with figures of the bark, and, here and there, also cross-sections of the wood, magnified. He has, besides, maps showing the geographical distribution, and from acknowledged authorities he has taken important data as to the properties of the more useful woods. He comes to his work well prepared: from his father who was one of the pioneers in exciting interest in forestry in the United States, he inherited an enthusiastic love of the subject; and for years he has been actively engaged in obtaining material for an exhaustive presentation of sections of our North American woods. In this vast undertaking his valuable services are highly appreciated both here and in Europe.

These two treatises are, in a proper sense, companion volumes, and may be advantageously employed together.

Prof. Ludwig Darmstädter has promised to give to the Royal Library in Berlin, on the occasion of its removal to its new building, his remarkable collection of autographs. It is devoted exclusively to the history of science, especially the natural sciences, and contains letters and other autographic pieces by scholars in all parts of the world, most of them of scientific and historical value on account of their contents as well as their associations. With the gift comes a promise of 1,500 marks a year as long as the donor lives, for the upkeep of the collection.

Dr. André Victor Cornil, professor in the Faculté de Médecine of Paris, has died in his seventy-first year. He was at one time editor of the *Journal des Connaissances Médicales*, and his "Manuel d'Histologie Pathologique" is a standard work.

The death of Albert-Auguste de Lapparent, the French geologist, was announced in a dispatch from Paris, May 5. He was born in 1839 and educated at the École Polytechnique. He had been president of the Société géologique de France, the Société française de Minéralogie, and of the Société française de Géographie; and at the time of his death he was perpetual secretary of the Académie des Sciences, and professor of geology and mineralogy at the Institut Catholique de Paris. Among his writings are: "Traité de géologie," "Cours de minéralogie," "Abrégé de géologie," "Précis de minéralogie," "Leçons de géographie," "Le Siècle du fer," and 'Science et apologétique."

Drama.

Information comes to us in regard to another author in the Clarendon Press octavo series of dramatists. Tucker Brooke, a Rhodes scholar, will edit the text of Marlowe, to which Professor Raleigh will furnish an Introduction. Skelton also is to have two editors, Prof. Albert Pollard doing the historic work and Alfred W. Pollard the literary portion.

The rhymed text of "The Jesters," the English adaptation of the charming little French romance of Miguel Zamacoïs, which was presented in the Empire Theatre of this city not long ago, has just been published by Brentano's. Why this translation should have been deemed worthy of preservation in permanent form it is not easy to guess—for it is a most inadequate performance—but a perusal of it proves that a considerable share of the blame allotted to the actors for the halting and broken delivery of the verse should be transferred to the author, John N. Raphael, whose lines exhibit few traces of literary facility or poetic instinct. The fact that so crude a piece of work should have been accepted as suitable for elaborate representation in a first-class theatre is significant of the extent and quality of modern managerial capacity. But the adaptation, rough and unsympathetic as it is, does occasionally offer dim reflections of the graceful fancy and romantic coloring of the original. It enables the discerning reader, for instance, to imagine the romantic fascination of the hero when impersonated by an actress possessing the ardor, eloquence, and histrionic resources of Sarah Bernhardt, who was its first interpreter. This is not the only time that a play of high literary excellence, and the promise of much theatrical potency has been reduced to the dull level of the commonplace by incompetent managing and acting on the local stage.

The English translation of Gerhart Hauptmann's "Hannele" by Charles Henry Meltzer, which has just been issued in book form by Doubleday, Page & Co., is the version which was used when the piece was produced in this city in the spring of 1894. It is satisfactory in the prose parts, which are simply and vigorously written, but less so in the poetic, which are quite devoid of melodic inspiration. As a whole the work has no such distinctive literary merit as would give special value to the subject matter, which is largely dependent for its effect upon its descriptive adornments. Robbed of these, the story with its sensational admixture of melodramatic realism and rhapsodical religious allegory is not impressive. On the stage here it had a very brief success of curiosity.

Music.

Richard Wagner an Minna Wagner. 2 vols. New York: Lemcke & Buechner.

"The number of letters I am compelled to write is horrible," Wagner complained, in January, 1859. Yet he seems to have found letter-writing necessary as a sort of safety valve for his pent-up feelings, and it was only when he was utterly absorbed in composition that he paused. To the many epistles previously published there have now been added two volumes containing his letters to his first wife, the actress Minna Planer, whom he married in 1836, when he was only twenty-three. His first dated communication to her in this collection is of the year 1842; the last 1863, three years before her death. The volume has no index nor a line of prefatory explanation as to who has had these letters since her death, whether any of them have been omitted or edited, and what has become of those which were written in the last three years of her life. That there must have been some is almost certain, for Wagner, from whom she had been separated (but not divorced) for several years before the date of the last of these published letters, kept supplying her with the necessaries and comforts of life. Only two weeks before her death she wrote, at his request, a public letter in which she contradicted malicious rumors circulated in Munich by declaring that "until now I have received a sustentation from my absent husband Richard Wagner which secures me an existence free from care."

Liszt's daughter, Mme. Ollivier, once remarked regarding Richard and Minna Wagner: "Never perhaps were two less compatible persons united in marriage." Six months after their wedding she left him, and he brought suit for divorce on the ground of desertion, but withdrew it, unfortunately. Had the two separated then, both would have been saved thirty years of wretchedness. As he himself said: "She would have been happier with a lesser man," while he would have been spared an incalculable amount of distress and irritation. Of this distress and irritation many of these letters bear painful evidence. Minna was a model German *Hausfrau* in some respects; that is, she knew how to cook to her husband's taste, and she provided otherwise for his material comforts; but, as he wrote to her once: "What is all the bodily comfort you so freely provided for me compared with the spiritual comfort necessary to a man of my excitability?" She had absolutely no comprehension of, or sympathy with, his artistic ideals. In her eyes he was an unmitigated fool because he did not write operatic potboilers—anything for immediate effect and profit. For many years, while he found it difficult to earn or beg money enough to provide for the time he needed to write his later operas—which nobody wanted at that time—he had to support her, too, and her relatives. There were occasions when he squandered money, but these were rare, because he seldom had any. The royalties from his early operas amounted to little, and his concerts in Paris and Vienna resulted in deficits. At St. Petersburg he was more successful, but as we see from his letter dated April 1, 1863, 812 thaler of his profits was promptly sent to Minna.

The roving life Wagner led in giving concerts and trying to place his operas would in any case have often separated him temporarily from his wife. What finally made this separation permanent was absolute incompatibility of temper, aggravated by the persistent illness which pursued both wife and husband. In 1858 Wagner wrote to the Dresden physician, Dr. Pusinelli, that Minna a few years previously had acquired a taste for laudanum, which had incautiously been ordered in small doses for her sleeplessness; as she could detect no result, she increased the doses to several scores of drops, as she subsequently confessed to him. This led to progressive irritability, and the result was frequent conflicts which made their life together unbearable. She continued, however, to nag and irritate him in her letters, and he patiently attempted to pacify her and to allay her wild fancies, partly inspired by opium. Some of these letters are not particularly pleasant reading, as one feels that he is not entirely frank with her, since he vaguely and repeatedly hints at plans for living together again after he had fully made up his mind never to do so, for the sake of her health and his own, as well as of his work. As he wrote to his sister in 1859:

> I recognized that there was only one choice left—between treating her with considerate cajolery, always evading, simply tranquillizing, ignoring all her ebullitions—or—undisguisedly abandoning her to her misery. It stands to reason that I chose the first course.

One of these "tranquillizing" letters takes up eight printed pages! Occasionally, however, his patience deserted him, and once he wrote, brutally: "For heaven's sake . . . do what you will, but do not eternally ruffle the temper of your husband, who belongs not to you alone, but to art, to the world, and the future." From this letter it is pleasant to turn to another where he takes a humorous view of her shrewishness, pointing out that her last "suspicious letter" had arrived opportunely to put him in the right mood for Fricka's diatribe against her spouse Wotan in "Die Walküre."

It is very seldom that he thus allows Minna a glimpse of his workshop; in this respect these letters form a remarkable contrast to those addressed to the more sympathetic Mathilde Wesendonck, who was the obvious cause of much of Minna's morbid irritation. What distinguishes these letters from the other collections, apart from the light they throw on Wagner's attitude toward his first wife, is the details they give of Wagner's successes and failures with his concerts and operas. In these personalities she was keenly interested, and we find among them many which give a more vivid picture of various incidents in his life than can be found even in the letters to Liszt or in the most elaborate biographies. This is true particularly of the London episode—the four months which Wagner spent in that city to conduct a series of Philharmonic concerts for the munificent sum of $1,000, out of which he hoped to save $200! He had plentiful forebodings that his acceptance of this invitation was a piece of sheer folly. He counted the days when it would be over, wrote to Minna: "Now there are only seven more concerts," "now only six more," etc., and at the end he referred to this affair as "an accursed dog-time." London was a "loathsome den," in which he endured "the tortures of hell." He had to conduct the most "awful programmes," made up largely of third-rate German and English music. The public he found "quite incapable of really appreciating music," and he notes this peculiarity:

> A grand, impressive piece is always received rather coldly, but a pretty and indifferent one gives them great joy. That seems to be the fashion; you must not get excited, and for heaven's sake not be carried away—that would not be good form.

He was much annoyed by the habit of leaving *en masse* during the performance of the last piece, and one day, when this piece was one he did not want to have marred, he suddenly stopped, sat down, folded his arms, and said to the leader of the violins: "Let's wait a little; maybe we won't need to play this overture at all!" to the amusement of occupants of the first rows who heard him and nodded their approval.

The Mozart Festival begins at Munich on August 1. Between that date and the ninth "Figaro" and "Don Juan" will be sung twice each, and "The Elopement from the Harem" and "Cosi fan tutte" once each. On August 11 the Wagner Festival begins with "Die Meistersinger," which will also be sung on August 24. The "Tristan" dates are August 13, 26, September 7; "Tannhäuser," August 15, September 4; the "Ring," August 17, 22, 29, September 2, 9, 14.

Art.

THE AMERICAN WATER COLOR SOCIETY

As one enters the American Fine Arts Galleries the first impression is that the art of water color and pastel as displayed here is aiming at the effect of oils, with a touch more, but only a touch, of bright light than is given by the heavier medium. At a second glance one discriminates two ideals that seem to dominate the majority of the painters; on the one hand, are the pictures done with patches of color, running in some cases to an almost painful *papillotage;* on the other are those which seem made for posters, with broad masses of subdued tones—the vibrant and the static, as they might be called. And in the first class, even where the range of color is restricted, it is the sense of life and motion that is likely to attract. One feels this in two marine views that first strike the eye in the South Gallery; one, The Moonlit Sea, a pastel by F. K. M. Rehn, has a dull sky, too dull perhaps, from which the moonlight streaming over the water gives an impression of exultant upward tossing; the other, Reynolds Beal's pastel, Summer at Sea, gives the impression of life chiefly in the sky, where the wind among the clouds almost makes itself felt as a moving presence. With these may go another pastel by Albert L. Groll, called The Road to Acoma, in which sky and land shine with nacreous tints. Other noticeable pastels in this room are Childe Hassam's October, a bit of true out-of-door color; a quiet, unpretentious, but charming little meadow scene by A. T. Van Laer; and Shirley Williamson's End of the Day, showing a road that curves by a farmstead with a few trees on the opposite side, with over all an atmosphere of indescribable peace.

The Central Gallery is given up to etchings, drawings, and other illustrative work. Some of the etchings particularly have the personal, intimate appeal one seeks in that method. We can only particularize a group of Joseph Pennell's in his well-known style, of which Rouen from Bon Secours, with its skilful omission of the insignificant, is specially pleasing; seven or eight charming Florence scenes by Ernest D. Roth; and two strong imaginative pieces by N. Loewenberg, Derelict and The Oaks. Two colored etchings by George Senseney should not be overlooked; they would hang well in any room. Drawing, particularly figure drawing, is perhaps the weakest feature of the whole exhibition, and for that reason one is attracted by the fine work of Carroll Beckwith. Of the five sketches by him, that called simply A Drawing, showing a half-draped woman's figure leaning forward on her arms, has a touch of mastery in its lines. The Letter, a crayon by Elizabeth Ingham, is also a true picture despite its hackneyed name.

As one passes to the Vanderbilt Gallery, where the water-colors are collected, the Fair Amalfi of George Wharton Edwards opposite the door first catches the attention and seems to give its character to the room. Here there is no attempt at atmosphere or distance; the hill and the palace lie flat and shimmering with spots of color, while the scarlet cloak of the woman coming down the steps seems almost to flaunt itself out of the frame. After this almost anything looks a trifle dull in hue, even C. C. Cooper's extremely clever Balloon Ascension, in which the ring of spectators seems to move and quiver like a painted snake. Our pleasure is frankly with the quieter landscapes. Of these, taking them in order, we may note Frank C. Mathewson's October, Mt. Magunticook, rich with deep brown and tawny greens; a clear, simple Twilight, by Ross Turner, a tiny water-color, in which a line of dull red in the sky seems to cast a subdued glow over the land; Isle au Haut, by Carlton T. Chapman, a little thing but full of charm; E. Irving Couse's After the Shower, notable for the skill with which the group of sheep is subdued into the landscape, and also for the clean look of the evening air, as if indeed washed by rain; a small landscape called Bougival, by Childe Hassam, a bit of honest water-color painting, which reproduces the impression of a green bank with delightful accuracy; Dunes at Evening, the best of C. W. Eaton's pieces, showing a gray hillside with a line of dark green trees standing half-way across, with the effect of strange allurement; and W. H. Holmes's Midsummer Day, a dusky scene with a look of showers in the sky which gives a feeling of haste to the harvesters loading the hay.

Landscape is distinctly the field of water-color, and there are few portraits or figures here, or for that matter among the pastels, that can be called satisfactory. Some of these, as, to name a single case, the girl called Romance, are distinctly hard and unpleasant. If we made any criticism of the hanging, it would be that too much prominence is given to the pictures of startling brilliance, whereas some of the quieter scenes, successful in a more difficult if more modest manner, are not allowed to afford the full pleasure they contain.

The opening of this spring's exhibition at the New Gallery in London seems to emphasize the change in the conditions of picture buying and selling, so evident of late at Christie's and in the other London salesrooms. The days are at an end when the initials R.A. and A.R.A. were accepted as a guarantee of excellence. In the sixties, seventies, and eighties, the City Man, who collected at all, had no greater ambition than to become the possessor of the huge "pictures of the year," and this was the period when Academicians built their palaces in St. John's Wood and Kensington. But sales and auctions have for some time been revealing the City Man's mistake. Pictures of the year have gone steadily down in value; and since the City Man does not like to have his investments turn out a failure, he now prefers something that has come more triumphantly out of the test of time. The result is that pictures fresh from the studio do not sell as easily as a few years ago. The managers of the New Gallery, apparently, have discovered the fact. Their annual show has long been little more than an annex to the Academy, a fact which does not mean the success it once did. This year more space than ever is allotted to handicrafts and applied arts. The three galleries down stairs are still hung with pictures, and, in a mass of commonplace, a couple of portraits by Sargent look better than they probably would elsewhere, and a few landscapes by Arthur Lemon, Austen Brown, and Mr. and Mrs. Alfred Withers appear with something like distinction. But a part of the Central Hall and the balcony are devoted to tapestry, embroideries, jewelry, book-bindings, and other forms of decorative art. These things sell better than pictures, and are fast becoming indispensable in the larger exhibitions of London as of Paris. It is like going back to the old days of the New Gallery, when Burne-Jones was the chief prophet, to find a big design by him, the last he made for tapestry, The Passing of Venus, executed by Morris & Co. The figures have more than the usual Burne-Jones affectation, but the color is strong and effective, and, with the passing of time, the tapestry may tell on the walls of cathedral or palace, as so many old pieces do to-day. Lalique and Lucien Gaillard are among the jewellers who exhibit, and, though they became a little fantastic and affected in the search for novelty, they bring to their work the knowledge and technique which the Englishman, or more usually the English young lady, so seldom devotes to the art. Jewelry of this kind in England has come to mean largely, as it has been described, bits of twisted gold or silver wire, from which odd stones dangle; and an affected primitiveness is looked upon as a merit. There are exceptions. Harry Wilson, though whimsical in his use of precious stones and metals and in his designs, is always the artist. So is Paul Cooper, and both are represented. The book-bindings of Mr. Cobden-Sanderson and the embroideries of Miss May Morris are among other good things shown, which make one hope that this new departure may mean an artistic as well as a financial improvement in the regular summer exhibition at the New Gallery.

There should be a welcome for the new edition of Burckhardt's "Cicerone," brought out by the Scribners under the title "An Art Guide to Painting in Italy," the last English edition of that classic work having appeared, as P. G. Konody explains in his preface, nearly a quarter of a century ago. The present reprint is, however, not to be attempted by any but the strongest eyes, the desire of portability having led to double columns and very small type. The few illustrations are fairly well chosen and reproduced.

At a meeting of scholars held in Frankfurt-on-Main recently a Deutsche Gesellschaft für Kunstwissenschaft was organized, for the purpose of awakening wider and deeper interest in art, and also of undertaking a publication, "Monumenta Artis Germaniæ." The prime mover in the project is Friedrich Althoff; he is seconded by Dr. Wilhelm Bode. An executive committee was elected, who have as helpers some fifty specialists in the different departments of art.

"The Quest of the Colonial" is the title of a small book by Robert and Elizabeth Shackleton, devoted to the study of furniture and furnishings. There are 400 pages, with a large number of photographic illustrations, a color frontispiece, and decorative head and tail pieces to the chapters. Although the book is entirely conversational in tone, and the reverse of scientific in its arrangement, it is yet trustworthy. Even a careful collector may find its advice worth noting, and an experienced student may come upon material in it for his further investigation. By "the Colonial" is meant here British-American Colonial and nothing else. It is necessary nowadays to mention such limitations, for we are beginning to discover that there is a French Colonial, and more especially a Dutch Colonial, at the Cape of Good Hope and in Sumatra, as well as in certain islands of the Caribbean. One who may have seen Willemstad, in the lost or forgotten island of Curaçao, will know what is meant by Dutch Colonial art. This book, then, is devoted to "Georgian" furniture and pewter and delft, Franklin stoves, and pre-revolutionary panels and stairs. There could not be a better collection of short maxims and anecdotes easy to understand. The reader is told how the old house was bought and repaired and fitted up, and how the neighbors came to say, "Why, I see you have found the original knocker!" The book is as useful as if it were not highly amusing.

A commission has lately been appointed to investigate the project of recovering the two Roman ships which were discovered many years ago under the waters of the Lake Nemi. These ships, which formed the celebrated floating palaces of the Emperors Tiberius and Caligula, might, if recovered, contain many valuable objects. According to Suetonius, they were magnificently equipped. They carried porticoes with marble colonnades and balconies; doors inlaid with ivory; walls of cedar wood, decorated with finely carved marbles; they contained bath-rooms, a library, hanging gardens, and temples. With the exception of some animals' heads and other bronze objects, which were brought up during investigations made in 1895, and which are now in the National Museum in Rome, it is believed that nothing has been removed from these great vessels. The commission has now decided that in consequence of the enormous expense it would be impossible to bring the ships to the surface, and the present project is either temporarily to lower the water level or to divert the entire waters of the lake for a time. As soon as the question of the proprietorship of the excavations has been settled with Don Enrico Ruspoli, the present owner of the lake, the work of restoring these wonderful relics of the ancient world is to be definitely begun.

Excavations have been started on the site of the ancient Gabii. This city, which was built by the Kings of Alba, is said to have been the place where Romulus and Remus were educated. Juno was the patron deity of the city.

A collection of old masters, the property of C. C. Ruthrauff, will be exhibited at the National Arts Club till May 15.

The death is announced of Martin Rico, one of the best pen-and-ink draughtsmen in Europe. Rico was a pupil of Frederico de Madrazo. He studied also for several years in Paris, and for some time lived with Fortuny in Italy, his pictures of Venice being specially well known. In Spain he contributed many drawings to the leading illustrated magazines.

Finance.

THE PROBLEM OF FINANCIAL RECOVERY.

During the past fortnight the American financial market has shown a vigorous and sustained recovery, in the course of which, advances of 10 to 15 points in leading Stock Exchange securities were not exceptional. For this action—which has caused the usual revival of optimism, even in business quarters not affiliated with Wall Street—the financial community has assigned four causes: First, the ease in money rates and the strong position of the banks; second, absence of serious commercial failures; third, the continued prospect of a large early wheat crop; fourth, the over-subscription, both here and in Europe, for the Pennsylvania Railroad's loan of $40,000,000.

Taken by itself, easy money and plethoric bank reserves mean much less than would at first glance be supposed. Rates for Wall Street loans are at the lowest since 1904, and surplus reserves of New York banks at the highest figure since 1894. Since dear money and bank deficits had a hand in breaking down the "boom" of 1906, and leading to the panic of 1907, it might be inferred that present conditions would logically mean a returning boom. But this inference would be unsafe, for the reason that low money may merely reflect inability or unwillingness of the usual borrowers to make use of capital; while the piling-up of idle bank reserves may be due to the fact that dull times have released from channels of industry the currency which would be kept in use by active business. The condition of the money market, in other words, is rather the effect of existing depression than a necessary cause of recovery. The easiest money rates and the highest surplus bank reserve in the history of New York came in 1894 under conditions resembling to-day's, and were followed by more than a year of trade depression.

As regards business failures, the outcome of last month was undoubtedly encouraging, in that the country passed through the always critical "April settlement" without any disturbances of importance. On the other hand, the mercantile agencies, in their detailed reports, show considerable after-effects of panic. In number, the April bankruptcies were the largest on record for the period: 1,152, against 733 in April, 1907, and 953 even in 1894, while the liabilities, $22,385,000, as against $9,888,000 last year, are much the largest of any April since 1893. This showing is not altogether rose-colored.

The outlook for the crops is excellent: the "condition percentage" in the government's April report was far above the average; it was a figure which has usually been followed by a "bumper crop" of winter-sown wheat; and it is believed that the May report, due to-morrow, will show the condition to have been well maintained. On one occasion—in 1903—similar hopes were blasted by the weather of May and June. The winter crop, starting with an April "condition" 6 per cent. better than this year's, was cut down 17½ per cent. in the two succeeding months by drought and unseasonable cold, and ended nearly 100,000,000 bushels under the early expectations. This fact suggests some temporary reservation of judgment.

The Pennsylvania loan is what has chiefly been alleged on Wall Street as the cause of the rise in prices and of reviving hopes. Last week's opening of bids disclosed the striking fact that the offer of $40,000,000 in 4 per cent. bonds at 96 was applied for twenty times over in New York and thirty times over in London, on which latter market half of the loan was to be placed. Three inferences were drawn at once, in popular discussion. Europe was again willing to invest capital freely in our industries. American railways, which have been struggling for a year or more under a floating debt of more than $250,000,000, will now be able to fund such obligations into long-term bonds. And, as a consequence, railway purchases of steel and other materials, just now cut down to a minimum, will be increased as the new funds come in hand, so that all contributory industries will be helped.

This reasoning is sound; but it may possibly be carried a step too far. The bonds offered by the Pennsylvania happen to be absolutely the best security which it is just now in the power of any American railway to offer. All the other great companies have already used up in credit operations, during or before the "boom" of 1901 and 1902, the whole first mortgage lien on their main line; the Pennsylvania—partly because of its own prudent policy and partly because of approaching maturity of old first mortgage bonds—is able to secure its $40,000,000 issue by a first lien on the track between Philadelphia and Pittsburgh. Under this circumstance, with the price of issue at 96, the great success of the loan, and the 2½ per cent. premium bid for it in London in advance of issue, need have provoked no wonder. The heavy "over-subscription" was a surprise to Wall Street; but "over-subscriptions," nowadays, often mean merely that sagacious capitalists, aware that demand will more than cover the amount offered, put in requests for twice or even ten times as much as they actually want. They know that allotments will be scaled down, and take this means of obtaining what they originally planned for. Nor does this showing of "free capital" available for borrowing companies prove, necessarily, that the financial situation is better than had been imagined. It has been pointed out that three months after London's financial prostration in the "Boer War panic" of 1899, when the British exchequer offered a loan for $150,000,000, it was applied for eleven or twelve times over; that the $100,000,000 United States 4 per cent. loan, offered during the severe depression of January, 1896, in the face of the "Venezuela panic" and on the eve of the free-coinage campaign, elicited 4,640 separate bids, applying in all for $568,000,000; and, finally, that when New York city on the tenth of last September, with the strain on capital at its worst and panic near at hand, placed $40,000,000 4½ per cents upon the market, bids were received for $205,000,000.

In none of these three cases did the "oversubscription," as seen in the light of subsequent events, signify that severe financial depression did not exist, or that it was destined instantly to disappear, or that capital was pressing on all other classes of investment. It would therefore be premature to suppose that the Pennsylvania oversubscription has all of this meaning. To the extent that the new capital thus acquired by railways will be used in purchases from manufacturers, industrial conditions will undoubtedly be helped. It is certain, also, that other railways will follow with bond offers of their own—Union Pacific has already announced an issue of $50,000,000. For the present, however, prudent people will wait to see how these bond offers, with a lien inferior to Pennsylvania's, will appeal to investors; to what extent the proceeds will be used merely to take up floating indebtedness and not for new expenditure, and, not least of all, whether the European subscribers to the loans will keep their allotments, or will merely throw them back on our own market, at a higher price. The tendency is for precisely such "realizing" sales; and in 1895 it was that kind of foreign selling which eventually broke down the American position.

BOOKS OF THE WEEK.

Agar, Thomas Leyden. Homerica; Emendations and Elucidations of the Odyssey. Henry Frowde.
Aristotle, The Works of. Translated by J. A. Smith and W. D. Ross. Part 2. Henry Frowde.
Atherton, Gertrude. Patience Sparhawk and Her Times. Macmillan. $1.50.
Balzac, H. de. Les Chouans. London: George Bell & Sons.

William De Morgan's Novels

Are full of hope, humor, and love of our fellow men, but they are not free from tragedy and are highly original in plot.

Somehow Good

"A book as sound, as sweet, as wholesome, as wise as any in the range of fiction."—The Nation.

"Absolutely masterly. The plot is extremely ingenious."—Dial.

Alice-for-short

"A remarkable example of the art of fiction at its noblest."—Dial.

Joseph Vance

"The first great English novel that has appeared in the Twentieth Century."—N. Y. Times Saturday Review.

Each $1.75 postpaid.

*** Illustrated leaflet about De Morgan on request.

HENRY HOLT & CO., N. Y.

A Companion Volume to "The Upton Letters"

The Schoolmaster

A Commentary Upon the Aims and Methods of an Assistant-Master in a Public School.

By ARTHUR CHRISTOPHER BENSON

8vo. $1.25 net.

Here, as in *The Upton Letters*, Mr. Benson has much to say of education. The kind of teaching with which this book concerns itself by way of definition and criticism is the Eton-Cambridge type, but, as Mr. Benson says, the aims and hopes and difficulties of the teacher are much the same in all schools, and the ideas advanced here regarding his profession hold as true for America as for England.

NEW YORK, THURSDAY, MAY 14, 1908.

The Week.

The country will read with astonishment that leading Senators at Washington are in a high state of Constitutional indignation with the President. It seems that he has written letters to three or four Senators taking them to task for remarks of theirs in open Senate, kindly explaining to them the law, pointing out their ignorance of his rights as commander-in-chief, and frankly warning them in advance that, if they pass Senator Foraker's bill to restore the negro soldiers, he will veto it, and that if they pass it over his veto he will refuse to be bound by it. Yet on this simple and natural showing of facts, Senators are outraged and angry, and are even talking about a resolution condemning Mr. Roosevelt's attitude! All this is absurd. As the President has repeatedly pointed out, power must be lodged somewhere, and "somewhere" means, of course, in the Executive. And if power, then wisdom also. We must have somebody to tell us what is the wise and just and lawful thing, and it is ridiculous for Senators to imagine that they can do this. It is plainly a function of the President. The Senate may rage, but the people understand the case perfectly. They knew what they were about when they elected Mr. Roosevelt to the Presidency, and they desire him to keep right on instructing and correcting Congress. Some hasty gentlemen speak of his course as an innovation. On the contrary, it is a return to the practice of the fathers. Washington once addressed angry words to the Senate. Jackson took the position that he would not enforce any law which he thought unconstitutional. So why all this excitement about Roosevelt? The country put him in office to do exactly what he pleased; and what pleases him, simply delights it.

The decision of the Administration to abandon its proposed labor legislation is wise. The measures under consideration, an anti-injunction bill and an amendment to exempt labor unions from the operation of the Sherman Anti-Trust law, would not have satisfied the labor leaders unless the provisions had been entirely in favor of the workman and against the employer. Representative Townsend explains that Mr. Gompers and his followers have been so insistent on this point that all possibility of harmony among even those most kindly disposed toward labor is destroyed. If Congress should pass the bills which Mr. Gompers wants, the courts would almost certainly declare them unconstitutional as class legislation. The fact is that the chief reason for urging these measures was that the Republicans must "do something for labor" before election. Mr. Taft is not popular with the unions; if his opponent makes demagogic appeals to the labor vote—and this is Mr. Bryan's specialty—there is danger that the large factory towns will be strongly against Taft. It was to guard against that probability—or to lessen the force of Mr. Bryan's attacks—that the Republican leaders conceived their plan of placating Gompers. But perhaps it is just as well for the party of moral ideas not to try to carry water on both shoulders.

It is a little hard on this great law-enforcing Administration that an inquisitive Senate should want to know why it is not enforcing the law. Several Senators have asked why the President, or his Attorney-General, had not executed the "commodity clause" of the Roosevelt railway-rate law, which went into effect on May 1. But the answer is simple. The President never did think that clause wise or necessary; a bill is pending to extend the time before it becomes operative; and so why bother about enforcing the law? The case is much the same as with the Federal law against labor boycotts. The decision of the Supreme Court on that subject remains a dead letter, so far as President Roosevelt is concerned. He does not like that law; he has urged the passage of a bill to exempt labor-unions from the scope of the Anti-Trust Act; and he is meanwhile content to say to the Supreme Court, as Andrew Jackson did. "You have made your decision; now attend to its enforcing yourself."

If the "emergency currency bill," framed by the committee of House Republicans and adopted by the party conference on Monday, had been proposed in the Senate originally, instead of the Aldrich bill, it would in all probability have passed into law. We have not yet the text of the measure, but if the telegraphic summaries may be trusted, it is apparently open to less objection than any yet proposed. It makes use of the machinery of existing clearing house associations, provides for the issue of currency, under their auspices, by banks in their membership; makes all banks in an association jointly responsible for the currency thus issued; and arranges for the formation of such associations in localities where they may not exist already. The plan amounts, in other words, to legalizing the clearing-house loan certificate issues familiar in all our panics, and giving to such certificates the right to circulate outside in the form of banknotes, instead of being used merely as due-bills substituted for "lawful money" in payment of balances between banks in a given clearing house. To insure retirement of this currency, when the emergency is over, a tax is imposed at the annual rate of 4 per cent., increasing by 1 per cent. monthly so long as the notes remain outstanding, up to a rate of 10 per cent. As a further restriction, the same cash reserves must be maintained by a national bank against its "emergency circulation" as against its deposits. On the face of things, the proposition is straightforward and intelligible. Yet there remains the question, whether or not the "Aldrich clique" and the Senate mean to act frankly in the conference committee of the two houses. If an attempt is made to slip into the conference measure any of the disingenuous provisos of the Aldrich bill, in its half-dozen different shapes, that ought to end consideration of the matter in the House.

The signing of an arbitration treaty with Japan comes like a west wind blowing away the fog. After all the bellicose talk about peace by battleships, with the distinct intimation by Administration Senators like Beveridge that a conflict with Japan was imminent, we have the State Department pursuing the rational method of insuring peace by agreeing to settle most disputes that may arise, after the fashion of enlightened nations. There can be little doubt that the treaty will be promptly ratified by the Senate, since it follows the model of the other arbitration treaties already accepted. And there is a special reason why the Senate should make haste to agree to the treaty with Japan. After a long debate, it refused to accede to the President's great peace-measure—four battleships. The reason given was that they were both needless and menacing, and that the true way to avert international trouble was to cultivate a friendly disposition, and to resort to civilized methods of adjusting controversies. Hence, when Secretary Root and Ambassador Takahira put their names to a document removing as far as possible all causes of war between the two nations, the Senate, in sheer consistency, must give a willing and speedy adherence. The outcome shows in a reassuring way how strong, after all the flurries and cries of alarm, are the forces in the modern world which make for peace. It has been common to speak of the last Hague Conference as a disappointing failure. It did, indeed, dash many bright hopes. That it should have gone much farther than it actually did, reasonable men contended at the time. Still, its influence and net effect were wholesome, and it certainly left some fruitful achievements to its credit. Particularly in the matter of making arbitration easier, and its refusal when offered, more difficult, it did much to impose new moral obligations upon nations, and to bring about such a series of agreements to arbitrate as has followed.

The Democrats in Congress signalized the Speaker's seventy-second birthday by a suspension of filibuster tactics, while both sides of the House joined in congratulations to its presiding officer. The incident is not an unusual one, but the outsider who remembers that a few weeks ago John Sharp Williams refused to shake hands with Mr. Cannon, and that only the other day an excited Republican Congressman put his fist quite close to the Speaker's face, will be puzzled sometimes at the importance to be attached to parliamentary amenities and ferocities. At times we catch ourselves wishing that a little more sincerity entered into the conflict between political opponents, out of Congress and in, but particularly in. Then we might have the impression, at least, that Republican and Democrat, majority and minority, Government and Opposition, meant something. We recognize, of course, that even in war there are periods of relaxation. Unionists and Confederates used to exchange news across the Virginia streams, and Japanese and Russians borrowed each other's tobacco across the Shaho. But, still, the opposing armies did have an issue, and at times did hate each other bitterly. A dose of real legislative hate, roused by a vigorous and effective Opposition, would not harm the country at large.
